This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

+ *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.

+ *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.

+ *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.

+ *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at `http://books.google.com/`

There's a Difference

The Billmont complete line is now ready for distribution and offers entirely new selling arguments on socket wrenches for the dealer carrying the line.

BILLMONT WRENCHES

The exclusive Billmont feature of a universal nose piece in each wrench, that will take the entire 24 sizes of Billmont sockets, creates an entirely new and decidedly practical principle in socket wrenches.

No need to have a different speeder for instance for every size nut—the Billmont Speeder will take all sockets—as will any of the rest of the line. Decidedly an advantage to the mechanic and the biggest selling argument on socket wrenches a dealer ever possessed.

Send for details on how to get display board and prices on entire line.

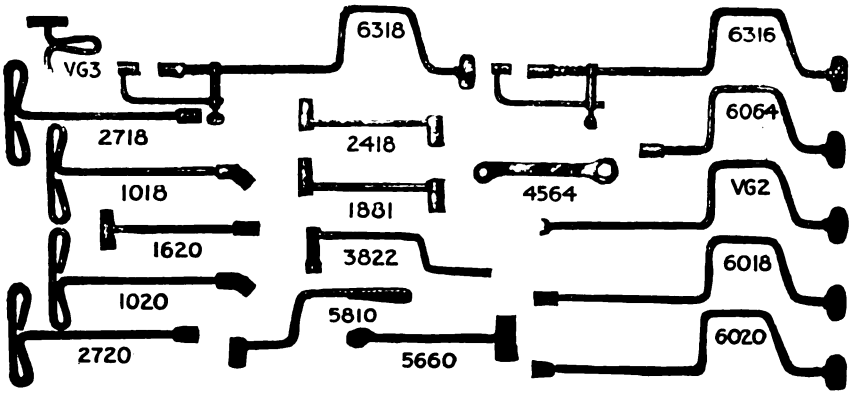
WALDEN-WORCESTER, INC.
WALDEN WORCESTER WRENCHES
WORCESTER, MASS. U.S.A.



Wrenches designed especially for work on Ford Cars are a specialized Walden-Worcester product. These tools, sold singly or in combinations to meet the needs of owners, garages, service stations or shops, have practically universal use.

The series illustrated will serve nearly every requirement for Ford Car adjustment, repair and overhaul.

A Walden-Worcester agency means the establishment of a department that will meet a constantly increasing demand for highest grade dependable tools.

It is worth while for every dealer to write for our 1920 catalogue.

Alarming Increase in Motor Car Fatalities

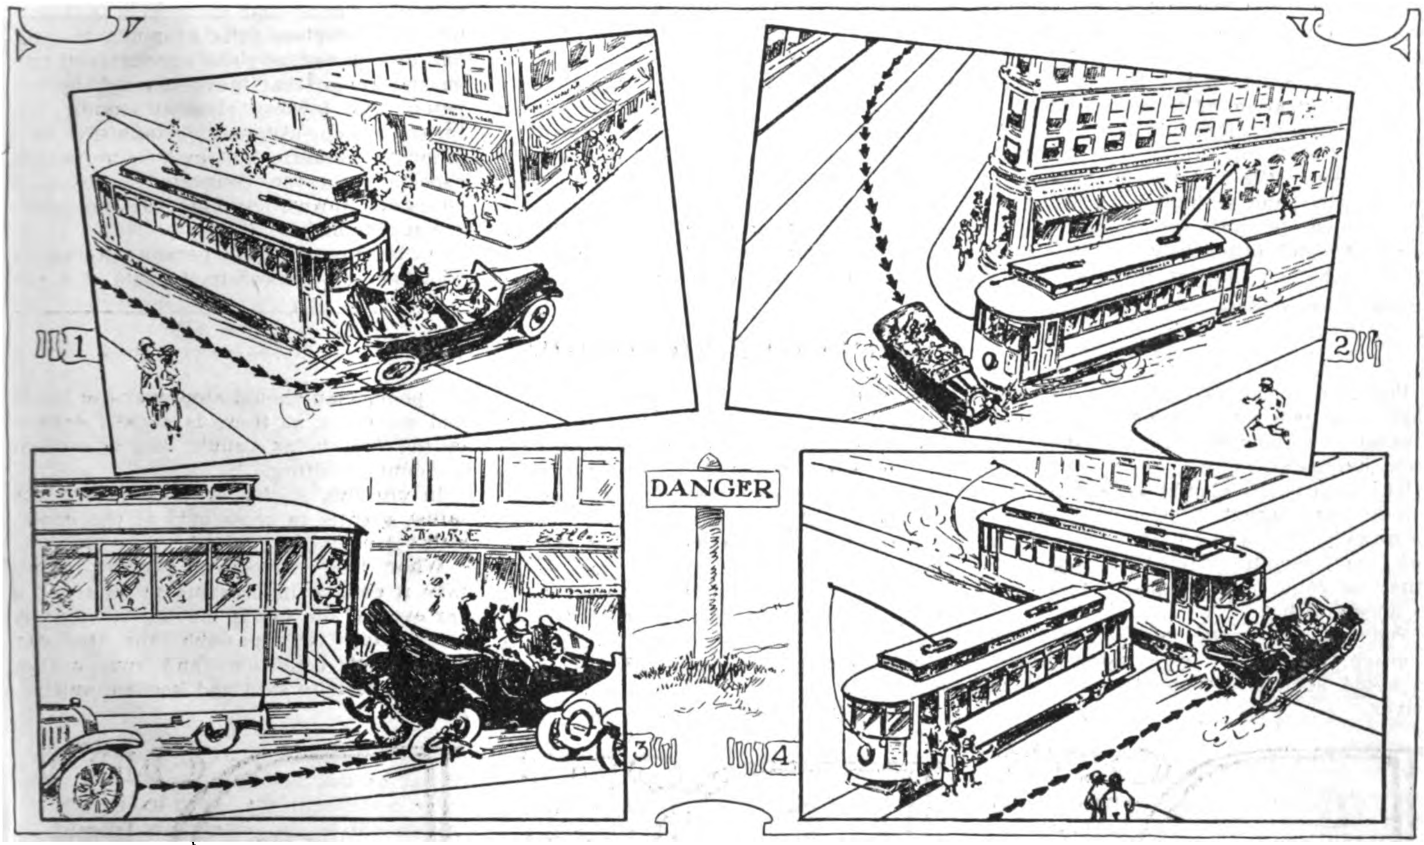
Responsibility of Dealers Pointed Out and Cooperation Urged

STATISTICS from nearly all the larger cities of the country in regard to motor car fatalities show an alarming increase in accidents from this cause in almost exact mathematical ratio to the increase in the number of automobiles.

In 1910 there were 400,000 automobiles in the United States, and out of every 100,000 population during that year 2 1/3 persons were killed by automobiles. In 1917 there were 3,000,000 automobiles in the United States and 9 1/6 persons out of every 100,000 were killed by motor cars. This year it is estimated that 9,000,000 automobiles and trucks will be in use, and the question of how many thousand persons may be killed may well cause serious consideration.

In its monthly report for April of traffic hazards, the National Highways Protective society announces that in New York City 50 persons were killed by automobiles in that month, 19 of them children under 16 years of age. Surface cars caused the death of four and horse-drawn wagons six. Throughout New York state the deaths from automobile acidents reached 82. At this ratio the

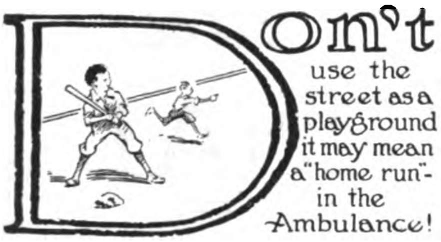
SUGGESTIONS BY RHODE ISLAND CO. FOR COOPERATION OF MOTORISTS IN THE AVOIDANCE OF ACCIDENTS.



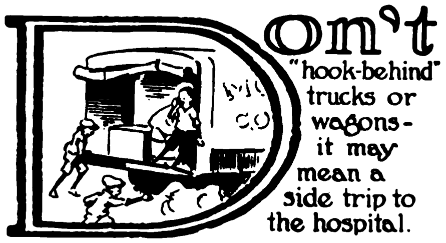
Procedure to Be Avoided in Crossing Car Tracks or Approaching Trolley Cars: 1—Shows the Danger of Turning from Right Hand Side of Street to Left on to a Car Track Without Being Sure That There Is No Car Behind Within Striking Distance. 2—Shows the Manner in Which Most Auto Trolley Accidents Happen—Driver Comes Out of Side Street so Fast That He Cannot Slow Up in Time to Avoid Being Struck by Car Approaching in Either Direction. 3—Shows the Danger in Turning on to Car Track When Leaving Curb. Motorist Should Be Sure No Car Is Within 100 Feet Before Turning on to Track. 4—Be Careful in Passing Trolley Car Standing at an Intersecting Track. The View Is Obstructed and a Car May Be Approaching on the Intersecting Track.

503559

What to Teach Children



Don't
use the street as a playground
it may mean a "home run" - in the Ambulance!



Don't
"hook-behind" trucks or wagons -
it may mean a side trip to the hospital.

That the street is made for traffic and not for a playground. Not to play or roller skate in the street.

When more than one child is crossing the street they should hold hands tightly and keep together. Don't separate and don't run. The driver can maneouver to avoid them even if they become confused, provided they stay together, but if they separate, one or the other is almost sure to be struck.

In playing ball or tennis, if the ball goes into the street, don't run after it without first stopping at the curb to make sure that no cars are approaching.

Above all, they should not run out into the street to hop on behind passing teams, cars or trucks. There is great danger in dropping off as it is impossible for the "ride stealer" to see in both directions and he may fall directly in the path of an approaching vehicle.

---

total fatalities in New York City for the year 1920 will reach 600 and throughout the state, 984.

Figures compiled by the National Safety Council show that, during recent years, automobile accidents have resulted in approximately one-half the total number of deaths caused by industrial accidents of all sorts. It is also reported that the greatest number of deaths from any one accidental cause comes from falls, the rate being 14.8 for every 100,000 people. Next come railroad accidents and injuries in ratios of 11.5 and 9.1 per 100,000, respectively. Motor cars enter the list at this point, the rate of deaths from this source being 8.9 per 100,000.

The Question of Responsibility.

While the responsibility for this lamentable state of affairs is laid largely to the door of the motorist in the general public mind, and perhaps, to a lesser degree, to carelessness on the part of pedestrians and other users of the highways, the fact that at least a portion of the burden of responsibility devolves on the dealer and distributor of motor cars seems to have been entirely overlooked. It will appear, upon consideration by any right-minded person, whether he be automobile manufacturer, dealer, owner or driver, that upon everyone engaged either directly or indirectly in the distribution of the modern motor car which, it cannot be denied, in the face of the statistics above noted, is becoming a veritable Juggernaut in the traffic annals of the country today, rests a share of the moral obligation to do everything in his power to obviate these deplorable conditions.

While the manufacturer undoubtedly uses discretion in the selection of responsible and competent dealers on the basis of sound business principles, the ethical side of the matter is apparently almost entirely ignored there beng no particular attempt to determine whether or not a dealer is competent to be intrusted with the indiscriminate distribution of an engine which, in the hands of inexperienced, incompetent or reckless drivers may become a frightful menace to the entire community.

Obligation of the Dealer.

The great responsibility, however, rests on the dealer or distributor as he is the only agent in a position to ascertain and judge at first hand the qualifications of the purchaser of a motor car. In the face of continually increasing traffic hazards caused by the greatly augmented use of automobiles on the streets, and the substantial rise in rates of insurance demanded by responsible companies for protection against injuries and damages consequent upon the alarming augmentation of casualties, if the dealer is not animated by a moral sense of his serious obligations to the cause of humanity, the question should still have an appeal to him from a strictly business standpoint.

There is already complaint that the regulations governing the operation of motor cars on the public highways are continually becoming more and more drastic. But it will undoubtedly come about that, if there is not a notable abatement in the casualty lists, such serious restrictions will eventually be imposed by federal, state and municipal authorities, animated by a general feeling of indignation and alarm on the part of the great mass of non-car users of the country, as to markedly curtail the sale, use and enjoyment of this great economic and recreational adjunct to modern life. And they will also have the sanction of the many thousands of law-abiding and careful owners and drivers of automobiles who deplore fully as much as anyone else the great risks encountered now on account of that inexperienced, incompetent and lawless element among motorists which, although fortunately in a minority numerically, makes motoring, especially in the congested section of cities and towns, anything but the pleasure it should be.

It behooves every person, therefore, who has any concern in the sale of a mo-

---

Hints to Pedestrians

Pedestrians should realize at all times that their own safety depends in a large measure on their own watchfulness and good judgment.

The pedestrian should remember that a motor car cannot be brought to a stop as quickly as a horse or a wheelbarrow, but that certain mechanical processes must be gone through, which take time to accomplish.

Pedestrians should realize that the average motorist is even more anxious to avoid accidents than they are themselves.

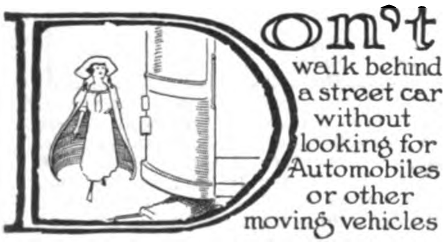
In getting off a trolley car watchful care should be exercised. In most states motor vehicles are not allowed to pass within a certain distance of a trolley loading or unloading passengers, yet pedestrians will often dart out of the safety zone directly into the path of the vehicle which has the right of way.

In a crowded thoroughfare where a traffic officer is on duty, wait for the officer's signal to "go ahead" and then move from point to point only as it is safe to do so.

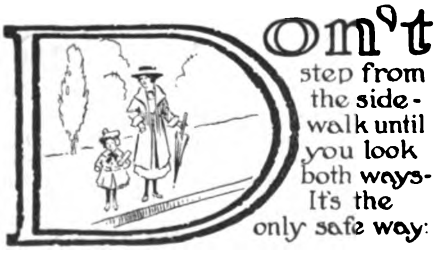
In crossing street car or trolley tracks the pedestrian should step over the track and not on it, as there is always danger of the foot being caught and a serious accident resulting.

In crossing a city or town street the safest plan is to cross only at the crosswalks especially provided.

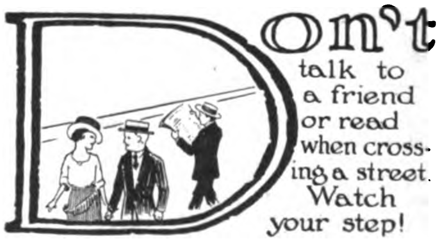
When the streets are slippery, don't take a chance in crossing in front of a car even if the car is moving slowly. A quick stop is impossible for the car under such conditions and your action may cause it to skid and become unmanageable.



Don't
walk behind a street car without looking for Automobiles or other moving vehicles



Don't
step from the side-walk until you look both ways-
It's the only safe way.



Don't
talk to a friend or read when crossing a street.
Watch your step!

Old Man Commonsense says to the Motorist:

Don't violate the traffic regulations, especially the speed law.

Slow down when meeting other cars.

Tend strictly to the business of handling the car at all times and don't attempt to do anything else.

Keep eyes open and think about what you are doing every minute.

When road is wet and there is danger of skidding, drive with special care and take no risk of being crowded into the ditch or against the protection beside a steep bank.

Give plenty of room when passing street cars, trucks or other vehicles.

When there is a pedestrian on the right hand and a motor vehicle on the left with scarce room to pass between, either slow down or stop. Take every precaution to prevent accident.

Don't forget to drive more cautiously at night than in the daytime. Most traffic accidents occur after sunset.

It is up to the motorist to watch children on the streets. Upon him is the burden of avoiding accidents. Give a child the advantage of every doubt.

tor car to exercise especial care in regard to the qualifications and character of a prospective purchaser. It is high time that the indiscriminate sale of a machine to any person who has the price should be superseded by some attention to the mental, physical and moral fitness of a driver as well as to his past record, before turning him loose on the community in charge of such a highly complex and powerful mechanism as the modern motor car. The entire burden of passing on the question of competency should not be left perfunctorily with licensing boards.

The dealer, after he has satisfied himself that his customer is of sufficient mental, physical and moral stamina to successfully operate a car, should take extreme precautions that he has competent and adequate instruction in all the details of its management so as to be well qualified to meet the various emergencies of congested traffic without danger to himself or others. A mere knowledge of the mechanical operation of the machine should not be deemed enough. The new driver should also be informed by the dealer, if he has not already posted himself, on such matters as the traffic rules of the section, and the unwritten, but none the less important, commonly accepted laws of the road, and there should be a thorough schooling in the proper procedure on the part of the motorist to reduce to a minimum the danger of accidents both to himself and other occupants of the car as well as to the other users of the highways.

In fact, the dealer and distributor should always be on the job of spreading the propaganda of "safety first" to every person with whom he comes in contact, pedestrian as well as motorist, drivers of other vehicles as well as of the motor car. If every dealer throughout the length and breadth of the land should begin today to conduct his business on the principles of the general welfare, there is no doubt that the result would be a marked decrease in automobile accidents and fatalities and that life would be much more worth while for everyone who ventures abroad on business or pleasure, whether on wheels or on foot.

UNIFORMITY IN TRAFFIC REGULATIONS.

The urgent need for uniformity in regulations and directions having to do with the control of traffic in cities throughout the country in order that life and limb may be made more safe, continues to be emphasized in the propaganda of the United States Council of National Defense.

Just as the standardization of parts and components of motor cars, trucks, tires, etc., has brought about better conditions in the automotive industry as a whole, so the standardization of traffic regulations, it is pointed out, will bring about better motoring conditions throughout the country.

In the interest of both life and limb, as well as from an economic standpoint, which touches the motor industry, some concerted action seems to be necessary if the number of accidents is to be reduced to the extent they should.

ALWAYS

Watch for the traffic officer's signal and obey it instantly and exactly. That will keep you safe and save others delay.

Wait for traffic to stop before trying to cross it.

Keep well to the right, whether you are awheel or afoot. Leave all the room you can for people coming toward you—just as you want them to do for you.

If you are going to make a long stop, send your car away with instructions to return at a certain time. Then be ready for it.

Remember that the traffic officer has everybody's rights to consider and knows the need of things you may not be able to see. His job is to keep everybody moving safely.

NEVER

Approach a traffic officer so fast that you can't get his signal clearly or have time and room to obey it properly.

Rush at crossings or around corners at high speed. Others don't know your intentions, and accidents result.

"Jay-walk." Cross streets only at corners, and walk on the sidewalk till traffic is moving your way.

Park your car in a crowded street if you can help it, even if the rules allow you to for a short time. It interferes with the legitimate use of the street as a thoroughfare.

Argue with a traffic officer while he is busy. If it seems best after you have thought it over, report your trouble to traffic headquarters.

THE A. B. C. OF MOTORING.
(Always Be Careful.)

Here are some of the "Don'ts" always quoted by Secretary of State Hugo of New York in his continual campaign for care in the use of the highways:

Don't forget to slow down at street or road intersections. It may save a human life.

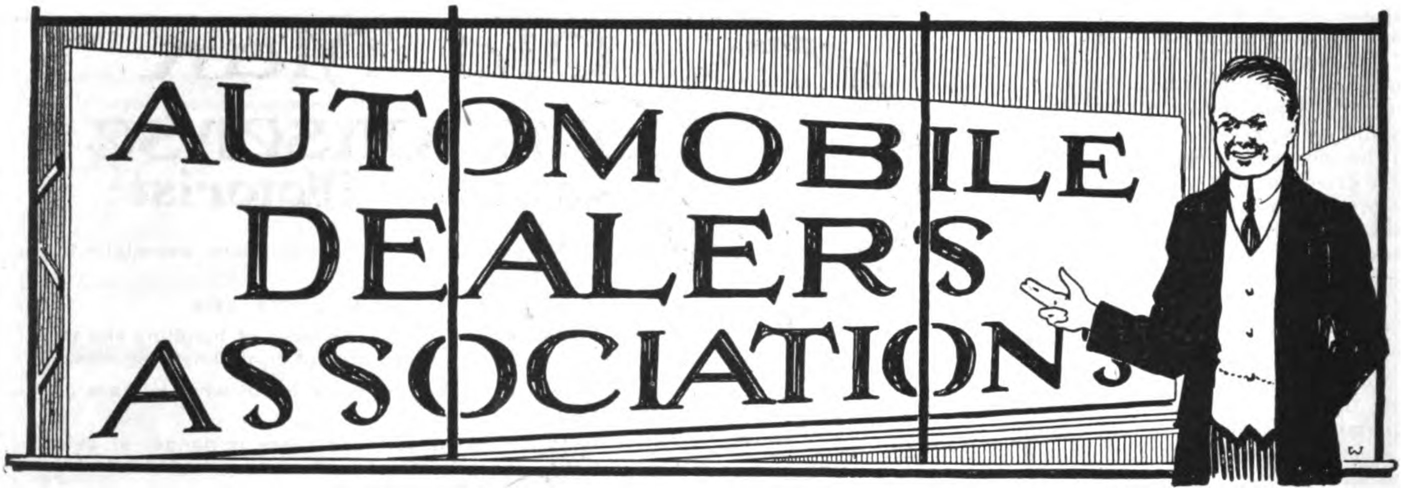
Don't forget to look to the right and left before passing a railroad crossing.

Don't forget, when signalled by a vehicle in your rear, to turn slightly to the right and allow such vehicle to pass on your left.

Don't forget that in case of accident, you must stop immediately and give your name, address and license number to the injured party or a police officer. If no police officer is in the vicinity of the place where the injury or an accident took place, report the same to the nearest police station or judicial officer.

Don't forget that all motor vehicles must be equipped with adequate brakes in good working order and adequate horns or other signalling devices.

Don't forget that your light must be lit within a half hour after sunset.



Milwaukee Dealers Reorganize

The Milwaukee Automotive Dealers, Inc., has reorganized and changed its name to the Milwaukee Automotive Dealers' association. A new board of officers has been elected, as follows: President, Thomas C. McMillan, vice president and treasurer of the Overland Wisconsin Co.; vice president, M. D. Newald, president of the M. D. Newald Co., Stewart truck; secretary, Dr. F. W. B. Achen, distributor of Cleveland and Chandler cars; treasurer, Frank J. Edwards, Dodge representative; directors, Jesse A. Smith, Hudson and Essex; R. C. Chidester, Packard; W. F. Sanger, Franklin; J. C. Millman, Titan truck; W. H. Upham, Upham-Schacht.

Bart J. Ruddle, who has been secretary and manager of the association since its inception in 1908, was reappointed with the title of executive secretary.

Under the new policy of organization the passenger car dealers will have a distinct association, while the truck dealers will likewise have their own division, but will both be included in the parent association. The Milwaukee Automotive Dealers' association will continue to conduct the various Milwaukee-Wisconsin shows in the Auditorium in January and at the State Fair park in September.

MANAGER OF FLORIDA ASSOCIATION.

B. B. Hudnall of St. Louis, formerly assistant general manager of the National Automobile Dealers' association, has been made secretary-general manager of the Florida Automobile Dealers' association, and as soon as headquarters are established he will begin a campaign to make this association 100 per cent. effective throughout the state.

DETROIT DEALERS TO CONTINUE TRUCK SHOW.

The truck division of the Detroit Automobile Dealers' association has voted to continue the display of trucks and commercial cars simultaneously with automobiles at the annual shows.

ILLINOIS STATE DEALERS TO ORGANIZE.

The presidents of 12 local automobile trade associations of Illinois have pledged the support of their organizations to the projected Illinois Automobile Dealers' association at a recent dinner at Springfield, called by Harry G. Moock, general manager of the National Automobile Dealers' association. Presidents attending the meeting were: J. Cassella, Alton; L. A. Pell, Chicago; B. B. Burns, Decatur; Paul Killeen, Galesburg; H. B. Pinkerton, Peoria; Morris Adler, Quincy; R. C. Schell, Beardstown. Also present were Vice President Morris, Springfield, and Mr. Ammerman of Champaign county. Presidents C. U. Williams, McLean county; J. A. Thompson, Kewanee (Tri-County); C. W. Williams, Rockford, wired their approval and support.

COLUMBUS ASSOCIATION TO PROBE PRICE OF GASOLINE.

The Columbus, O., Automobile Trade association has called in the aid of the county prosecutor to prevent the rapid increase in the price of gasoline and, if necessary, to call a grand jury to investigate the matter. C. S. Magruder, manager of the Columbus Automobile Trade association, claims that the increase is not justifiable and is a serious blow to motor transportation.

The Ohio Automobile Trade association has appealed the matter to the attorney general and the federal authorities.

ONTARIO RETAILERS' ASSOCIATION.

At its recent three days' convention at Toronto, Can., the Ontario Retail Automobile, Garage & Accessory Dealers' association voted to change its name to Automotive Retailers' association. The following officers were elected: President, S. H. Rowed, London; first vice president, J. J. Duffus, Peterboro; second vice president, Claude Pearce, Toronto; treasurer, Roy Alexander; secretary, William C. Miller, 2 College street, Toronto.

It was decided to hold the convention next year at Toronto.

Texas Association in Convention

At the fourth annual convention of the Texas Automobile Dealers' association, held at Dallas, Tex., the address of welcome was delivered by Mayor Frank W. Wozencraft and was responded to by H. L. Robertson of Houston, president, and W. A. Williams of San Antonio, vice president and field manager. The convention was called to order by M. Boyd Keith, first vice president of the Dallas Automobile Trades association.

Figures compiled by J. H. Shelton, secretary of the Dallas Automobile Trades association, and read by Mr. Keith, showed the total business of the wholesale and retail automobile industry in Dallas for the 12 months ending March 1 amounted to $210,670,000. The total pay roll was $7,254,000 and the number of persons employed was 4900.

One of the interesting addresses was that by A. H. Kroh of Chicago, representing the Goodyear Tire & Rubber Co., who eulogized the farmer as the bulwark of the nation and urged the need of motorizing farm work as a means of speeding up production to offset the effects of "short hours and long pay" in the cities.

More than 300 Texas dealers attended.

BROOKLYN ASSOCIATION TO REORGANIZE.

The Brooklyn Motor Vehicle Dealers' association met April 28 to ratify the dissolution of the existing organization so that plans for its reorganization on a more extensive basis may be put into effect. All classes of dealers in the automotive business will be enrolled in the membership with the idea of stimulating the growth of all branches on an even basis.

The reorganization committee is composed of the following: George C. Lewis, L. A. D. Motors Corporation, chairman; C. M. Bishop, Bishop, McCormick & Bishop, president of the association; C. J. Maxson, Maxson-Richardson Corporation; W. R. Couch, Couch-Hass Co.; M. Ray Stehley, Reo Motor Car Co.; D. W. Voorhis, Hudson Motor Car Co.

Personal News of the Industry in Brief

Hersey Sales Manager Jenkins Co.

Dwight T. Hersey has assumed the duties of sales manager of the Jenkins Vulcan Spring Co., Richmond, Ind., maker of replacement springs for cars and trucks. Mr. Hersey was, for many years, assistant general sales manager of the Splitdorf Electrical Co., Newark, N. J., and has a wide acquaintance in the automobile accessory trade and a knowledge of merchandising.

Charles W. Doane has been appointed Detroit representative of the Automobile Equipment department of the Westinghouse Electric & Manufacturing Co., 1109 Kresge building, to succeed L. B. Fijux, who has resigned to become vice president of the Turner Moore Co., Detroit. Mr. Doane was for many years in charge of the Westinghouse Automobile Service department for the Detroit district, and is succeeded in that capacity by A. B. Junker.

Christian Girl of the Standard Parts Co., Cleveland, O., has purchased an interest in the Kalamazoo Spring & Axle Co., Kalamazoo, Mich. The plant will be remodeled and extended to manufacture automobile springs chiefly, although the types formerly made by the company will be continued.

S. M. Grosner and **L. F. Revenger** are the directors of the 145th Street Garage Co., which was recently incorporated at Albany, and has leased the two-story garage, 100 by 100 feet, at 510-518 West 145th street, New York City, from the Hulse Garage Co.

Seymour De B. Keim, who recently resigned after 20 years' association with the Locomobile Co. of America, to become general sales manager of the Rolls-Royce Co., Springfield, Mass., is soon to visit the British works of the company at Derby, England.

Harry E. Marvel has purchased the property at Nos. 142-146 St. Mary's street, Boston, near the Brookline line, known as the Longwood Garage. It consists of a two-story concrete building which has been occupied by Mr. Marvel for some time.

Mark Ash has filed plans for the construction of 80 one-story garages, each 10 by 18 feet on the southwest corner of Lawrence Hill terrace and 186th street, New York. They have been estimated to cost $200 each, or a total of $16,000. The architect is J. R. Ashley.

W. H. Gleason of the Utterback-Gleason Co., Boston, Dort car distributor for New England, announces that his company is about to move into new and more commodious quarters on Commonwealth avenue, Boston.

Roy Black, who served overseas during the greater part of the war, has purchased an interest in the Service Tire & Auto Co., Torrence street, Russellville, Ark.

H. A. Bordeau, president of the Monroe Auto Equipment Manufacturing Co., Monroe, Mich., recently died.

Dwight T. Hersey, Sales Manager, Jenkins Vulcan Spring Co., Richmond, Ind.

Phillip S. Cole, head of the firm bearing his name in Oakland, Cal., has taken over the San Francisco branch of the Haynes Automobile Co., Kokomo, Ind., to succeed C. H. Haynes, who for many years has been the head of the San Francisco Haynes office and has retired from active business. Mr. Cole now becomes distributor for Haynes cars throughout the northern half of California and will establish his headquarters at the former Haynes branch, Turk and Polk streets, San Francisco.

Peter Cummings, president of Cummings & Co., Inc., announces that the offices of that concern have been removed to the fourth floor of the building at 23rd and Mechanic streets, Galveston, Tex., and that hereafter the company will conduct an exclusive wholesale and manufacturers' agent's business as representative of several makers and importers of standard lines of automobile accessories and bicycle parts. The retail department, located on the ground floor of the same building, has been sold to Schumacher & Co.

E. T. Sutton has been appointed by L. B. Graham, general sales manager of the Denby Motor Truck Co., Detroit, Mich., as advertising manager. Mr. Sutton has been district sales manager of the Denby company for three years and has thus had an exceptional opportunity for observing from every angle the advertising needs of Denby distributors and dealers.

James E. Baird, advertising manager of the General Motors Truck Co., and W. B. Hall of the Green, Fulton, Cunningham Co., Pontiac, Mich., are making a survey of the midwest farming section, covering Kansas, Nebraska, Iowa, Texas and Oklahoma, to obtain first hand information in regard to the motor truck situation.

Sterling to Head Own Company

J. G. Sterling, for many years chief engineer of the F. B. Stearns Co., maker of the Stearns-Knight motor car, and considered one of the country's authorities on Knight engine construction, has resigned and will head a company that will manufacture a six-cylinder Knight car. Mr. Sterling has associated with him in this new enterprise P. H. Worthington and several well known automobile men and capitalists, and headquarters have been secured in Cleveland, O., where it is proposed to erect a plant.

W. A. Olen, president of the Four Wheel Drive Auto Co., Clintonville, Wis., was among the prominent truck men who attended the National Foreign Trade Council at San Francisco. Mr. Olen is particularly interested in the motor truck as a factor in promoting the industrial development of China and other far eastern countries, a matter discussed by the automotive manufacturers' branch of the council.

Theodore C. Fedders, president of the Fedders Manufacturing Co., Buffalo, N. Y., died at his residence in that city May 2, aged 67 years. He was one of the pioneer makers of automobile radiators, having established the company which bears his name 20 years ago, originally known as the Fedders Sheet Steel Metal Works. He leaves four sons on whom the major management of the business has devolved for the past six years—Louis F., John M., Charles W. and Theodore C. Fedders, Jr.

D. T. Preyer has been appointed by Walter P. Coghlan, general sales manager of the American Hammered Piston Ring Co., Baltimore, Md., to the position of district sales manager for the middle west district, which includes the states of Michigan, Indiana, Kentucky, Illinois and Wisconsin. Mr. Preyer has a wide acquaintance among jobbers and dealers in the automotive field, having been eastern representative for the wholesale division of the Klaxon Co. in Canada and east of the Mississippi river.

L. B. Graham, general sales manager of the Denby Motor Truck Co., Detroit, Mich., is on a trip to the principal distributing points throughout the country, including New York, Philadelphia, Nashville, St. Louis and Dallas, Tex., and it will be extended to the Pacific coast to confer with the Denby managers in that section.

Millard S. Binney is now publicity manager for the Traffic Motor Truck Corporation, St. Louis, Mo. He was connected with the Chalmers Motor Co. prior to the war and since returning from Europe last September has been sales manager of the Omaha, Neb., branch of the Fulton Motor Truck Co.

L. D. Turner, representing the Fairbanks Co., is to open a selling agency at Alton, Ill.

M. A. M. A. Officials Going Abroad

C. E. Thompson, president, and **M. L. Heminway**, general manager of the Motor and Accessory Manufacturers' association, are to sail for Paris, France, on June 5, where they will represent the association at the meeting of the International Chamber of Commerce on June 21. While abroad they will gather information in regard to American opportunities in foreign automobile markets, and will personally investigate conditions in England, France, Italy and adjoining countries. The International Automobile show at Antwerp, Belgium, will also be visited.

W. H. McCloud, who has been connected with the Buick Motor Co., Flint, Mich., for the past 13 years, has resigned to join Walter P. Chrysler with the Willys Corporation at Elizabeth, N. J.

H. G. Edwards, Southeastern District Manager, Acason Motor Truck Co.

Mr. McCloud was director of traffic for the Buick Co. and during the last two years of his association there was vice president under Mr. Chrysler. The Willys corporation is now operating the former plant of the Duesenberg Motor Co. at Elizabeth, to which a large extension has been added.

E. Edward Hunter, aged 32 years, an automobile manufacturer of Middletown, N. Y., died in that city recently. He was president of the E. E. Hunter Co., Inc., and was also a member of the local Automobile association.

Adolph Picken has leased seven four-story buildings at 1981 to 1987 Broadway and 103 to 107 West 67th street, New York City, for 21 years, as a site for a building to house the Hamilton Motors Co., of which he is the head.

James A. Down has leased the two garage buildings at 114 and 166 West 56th street, New York City, to a client who is to build a commercial building thereon.

Ralph Murphy, chief engineer of the H. H. Franklin Manufacturing Co., Syracuse, N. Y., for a number of years, has been appointed assistant to John Wilkinson, vice president of the company. Louis Stellmann, formerly assistant engineer, succeeds Mr. Murphy as chief engineer. Messrs. Murphy and Stellmann both are graduates of the University of Michigan; both joined the Franklin organization in 1909 and have been associated with that concern during their entire business careers. Prior to these new appointments Mr. Murphy had been successively coast engineer, service manager and chief engineer, while Mr. Stellmann has served as experimental engineer and assistant engineer.

John Flint, comptroller of the Maxwell Motor Co., has announced his resignation and will devote his entire personal attention to the interests of the firm of West & Flint, accountant and auditor, 50 Pine street, New York City, of which he is a member.

Carroll B. Bassett, for over a year with the Jack W. Neal Auto Co., has become the authorized representative for the Auburn tire in southwest Texas, with headquarters at 426 Main avenue, San Antonio, Tex.

Ralph B. Dort, supervisor of foreign agencies for the Dort Motor Car Co., Flint, Mich., has left for the Far East on a trip which will occupy approximately 18 months. He will visit the Orient, Australia and Africa.

Elijah G. Poxson, foreign sales manager of the Dort Motor Car Co., Flint, Mich., attended the recent seventh annual foreign trade convention at San Francisco.

A. S. Barrett has been appointed advertising manager for the Studebaker Corporation, with headquarters at South Bend, Ind. He succeeds R. C. Sackett, who has entered the distributing field.

Samuel H. Stone has bought from the Havemeyer estate, the Cedarhurst Garage, a four-story structure, 75 by 102.2 feet, at 141-145 West 83rd street, New York City.

Henry Weiss, president of the Weiss Motors Distributing Corporation, distributor for the Dixie Flyer and Comet Six cars, is to open a service station at 249 West 64th street, New York City.

H. H. Eschedor and **John Maiback** have opened temporary sales rooms at 510 Penn street, Reading, Pa. for the distribution of the Elcar.

J. C. Bennett and **C. E. Bennett** have opened an automobile exchange at Jefferson and Lafayette boulevards, South Bend, Ind.

John Wierer has purchased the tire repair shop of Frank Hershfield at Kewaunee, Wis.

W. E. Steed has opened show rooms for the sale of the Reo car in the Malone building, Albany, Ala.

J. W. Wattinger and **Foster Hord** have purchased the Southwestern Garage, Alpine, Tex., of B. Stewart.

R. C. Fannin and **B. Smith** have bought the Willard battery station at Stillwater, Okla., from C. C. Fox.

L. D. Bone has purchased the Jefferson Highway Garage at Webb City, Mo.

Thompson Manager of F-W-D Co.

J. H. Thompson, a veteran in the automobile industry, has been appointed manager of the recently established factory branch at New York City of the Four Wheel Drive Auto Co., Clintonville, Wis., maker of FWD trucks. This new branch covers a territory from Baltimore, Md., to New England. Mr. Thompson started in the automobile business with the Babcock Electric Carriage Co., Buffalo, N. Y., where he was for a number of years manager and territorial agent. He was later connected with the sales organization of the General Motors Co. and the Mercury Manufacturing Co.

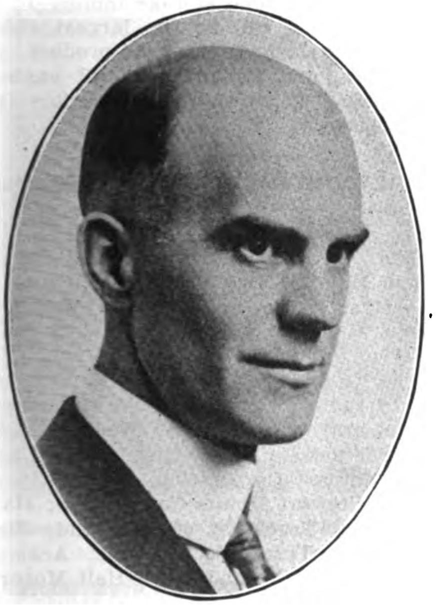
Wilson S. Porter, general manager of Hare's Motors of New England, the new company into which has been merged the Boston Locomobile branch and the Mercer agency, announces the following appointments: J. Roy Hiltz, sales manager of the Locomobile division, formerly with the Locomobile Co. for seven years as salesman, special wholesale representative in New England and branch manager at Providence. Fred J. Klauer, sales manager of the Mercer division, formerly with the Locomobile Co. for six years as retail salesman on new cars, and for the past five years, exchange car manager; E. C. Blake, territorial manager, formerly with the Packard Motor Car Co. of New York as manager of the New York City branch; H. V. Neville, exchange car manager, formerly with the Packard Motor Car Co. of New York for 10 years as truck salesman, manager of the truck department, general used vehicle manager and general accessories manager.

J. H. Thompson, Manager of the F-W-D Factory Branch at New York City.

L. M. Landis has sold the business of the Landis Body Building Co., Lansdale, Pa., to the Heebner-Felver Motor Co., which will operate it in connection with its automobile business. Mr. Landis remains as manager of the body building plant.

Lamb Sales Manager Automatic Light

I. C. Lamb has been appointed sales manager of the Automatic Light Co., Inc., Ludington, Mich., maker of the Holt power light unit. Mr. Lamb was formerly a member of the sales staff of the General Electric Co., where he specialized in fractional horsepower motors. He was still earlier connected with the Western Electric and Westinghouse Electric & Manufacturing Co. during a period of several years. The Holt power light is a compact, self-contained unit of exceptionally simple and rigid construction. It generates a 110-volt current, placing it on a par with central stations, and permits the installation of standard wiring, snap fixtures and the use of standard household electric appliances. It operates without batteries with the exception of a small one for starting the engine. The Automatic Light Co. is primarily a marketing organization. Mr. Lamb's immediate activities will involve the development and perfecton of sales policies, educational work among distributors and dealers and the establishment of definite marketing routines.



J. B. Adair, Branch Manager, J. I. Case Plow Works Co.

T. H. Sharp, representative of the Oldsmobile Co. at Little Rock, Ark., is constructing a building at the northwest corner of Capitol and Arch streets to cost approximately $150,000.

Frank Feinberg of Jersey City, N. J., has leased the seven-story garage at 322-328 East 47th street, New York City, for use as a service station.

Ralph R. Rice, manager of the Cogswell Avenue Garage, Cambridge, Mass., has been appointed agent for the Overland car in his territory.

A. M. and C. G. White of Chicago are to establish a garage, repair shop and automobile sales agency on Thornton street, Three Rivers, Tex.

Archie Webb and William Lack have bought the Paul Calmes garage at Clinton, Okla.

I. C. Lamb, Sales Manager, Automatic Light Co., Ludington, Mich.

O. E. Truesdell has been appointed district manufacturers' representative for the Firestone Steel Products Co., Akron, O. He will take over portions of the territories heretofore handled by L. W. Enos and A. B. Droeger, with headquarters at Chicago and Detroit, respectively. His jurisdiction will now include the states of Ohio and Indiana, and he expects to make his headquarters at the Firestone branch at Indianapolis. Mr. Truesdell has been with the Firestone Steel Products Co. for three years, starting in the trade sales department and later working into the manufacturers' sales division at Akron.

Joseph and William Owen Cooper have taken the agency for Jordan and Briscoe automobiles at Arkansas City, Kan.

George Davison has bought the Ford Garage at Belpre, Kan., from C. B. Peacock.

O. E. Truesdell, District Manufacturers' Representative, Firestone Steel Products Co.

Fleming Treasurer of Cleveland Tractor

C. D. Fleming, formerly of Detroit, Mich., has been appointed treasurer of the Cleveland Tractor Co., Cleveland, O., in charge of finance and accounting. Early in his business career he was recognized as one of the leading public accountants of Detroit, which profession he followed for several years. He later became associated with the Detroit Trust Co. in this line of work. Some seven years ago he became affiliated with the Studebaker Corporation as assistant treasurer and had charge of the accounting and costs departments of the plants of that company at Detroit until his present connection with the Cleveland Tractor Co.

John D. Coss has been appointed branch manager at Philadelphia of the Buick Motor Co., Flint, Mich. Mr. Coss has been associated with the Buick company for a number of years and goes to Philadelphia from Memphis, Tenn., where he was branch manager. J. G. Wilmoth, who is succeeded by Mr. Coss, has joined the General Motors Co.

C. D. Fleming, Treasurer, Cleveland Tractor Co., Cleveland, O.

C. W. Hollingsworth is the new manager of the tire department of the Seitz Auto Co., 2-8 East North avenue, Baltimore, Md., distributor for Service and Norwalk trucks and Velie and Norwalk passenger cars, Canton-Blackstone solid tires and Norwalk pneumatic tires and high-pressure tubes.

N. F. Holbrook, president of the Perfect Body Corporation, a subsidiary of the Sanger Motor Car Co., has leased the one-story building at Madison avenue, 136th to 137th streets, Bronx, covering an area of 40,000 square feet.

John S. Mullin has bought the garage of Joseph O. Colladay at 3412-3414 Brandywine street, Philadelphia.

N. W. Ray has purchased a garage in Comanche, Okla.

Charles V. Warford has opened a garage at Gallatin, Mo.

Notes of the Industry and Trade

American Motors Has Own Body Plant

Another step in the rapid development of the American Motors Corporation, maker of the American Balanced Six car, was taken recently in the organization of the Plainfield Body Corporation of Plainfield, N. J., which will supply bodies for both the Plainfield and Greensboro, N. C., plants of the company.

The body concern is capitalized at $250,000 of eight per cent. participating preferred stock and 25,000 shares of common stock having no par value. Through ownership of the common stock it is understood that the American Motors Corporation will exercise control of the company, which will be financed entirely through interests identified with the parent concern. Temporarily the Plainfield Body Corporation will occupy the recently completed south wing of the American Motors Plainfield plant, but construction will be started immediately on a new building containing more than 40,000 square feet of floor space, which will be devoted exclusively to the manufacturing operations of the body company. The plant will have a capacity of upwards of 7500 jobs a year. During the first year output of the body plant will be restricted to touring car and roadster bodies for the new American "6-60" model just going into production.

Officers and directors of the Plainfield Body Corporation include Robert Bursner, president; Guy Morgan, vice president and general manager; Proctor W. Hansl, secretary and treasurer; C. B. Penney, president American-Southern Motors Corporation; R. D. Mock, vice president and treasurer Hydraulic Steel Corporation, Cleveland, O., and George W. Cravens, president Universal Body Corporation, Garwood, N. J.

Factory operations will be under the personal supervision of Hiram F. Browne, formerly factory manager of the Lexington Motor Car Co., who recently joined the forces of American Motors Corporation as manufacturing manager, and R. K. Blair, formerly superintendent of the Brewster body plant.

D. G. Caywood, New Northeastern District Manager, Black & Decker Manufacturing Company.

BLACK & DECKER NORTHEASTERN BRANCH.

The Black & Decker Manufacturing Co., Towson Heights, Baltimore, Md., maker of portable electric tools, electric air compressors and special machinery, has opened a northeastern branch office at 169 Massachusetts avenue, Boston, Mass., in charge of D. G. Caywood as northeastern district manager.

A service station for Black & Decker products will be maintained at the same address to give prompt and efficient service for the New England trade.

NEW LOCATION OF MUELLER ELECTRIC CO.

The Mueller Electric Co., Cleveland, O., has just moved into its new headquarters, a two-story brick building at 2139-2143 Fairmount road.

This new plant gives necessary floor space for the increasing production of the Mueller line of battery clips, test clips and attachment plugs, as well as the new type of battery parts such as handles, terminals, etc.

New Tank Shop for Wayne Co.

The accompanying illustration shows the plant of the Wayne Oil Tank & Pump Co. at Fort Wayne, Ind. This company manufactures the well-known Wayne line of self-measuring pumps, liquid storage and oil filtration systems, oil-burning, metal-forging, heat-treating and metal-melting furnaces, etc.

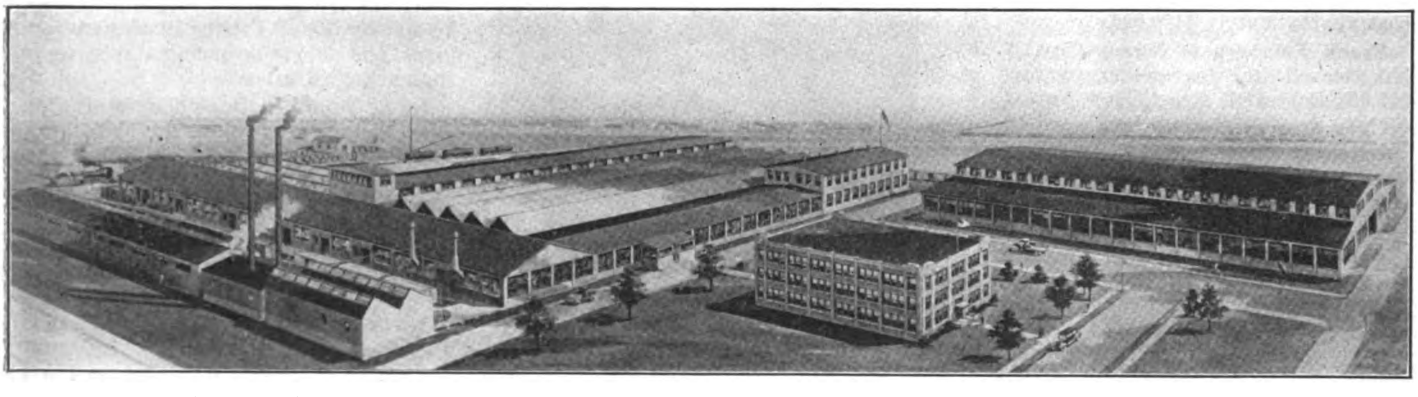
At the extreme right of the illustration is seen the latest addition to this immense plant, the new heavy metal tank shop, which is incomplete as yet. This building will measure 360 feet by 130 feet, is to be made entirely of brick and steel, and will be equipped with the most up-to date appliances for the manufacture of heavy metal storage tanks. It is stated that it will be the largest shop devoted exclusively to this product in the West, and its addition will enable the Wayne Co. to more than double its floor space.

MORE CONTRACTS FOR EISEMANN PRODUCTS.

The Detroit Transportation and Truck Co. of Munroe, Mich., has recently signed a contract with the Eisemann Magneto Corporation to use the Eisemann type GS-4 magneto.

The Eisemann Corporation has also received contracts from the following truck manufacturing concerns: New Orleans Motor Truck Co., New Orleans, La.; Capitol Motors Corporation, Fall River, Mass.; Stewart Motors Corporation; Hal-Fur Motor Truck Co. of Cleveland; Signal Motor Truck Co., Detroit; Acason Motor Truck Co. and Lewis-Hall Motors Corporation.

Contracts have been signed by the Eisemann Magneto Corporation with the following makers of tractors: Holton Tractor Co., Indianapolis, Ind.; Power Truck & Tractor Co., Detroit; Dual Truck and Tractor Co., Decatur, Ill.; Dayton-Dowd Co. of Quincy, Ill., manufacturer of the Leader tractor; Franklin Tractor Co., Greenville, O., and Stutes-Mar Tractor Co., San Jose, Cal.



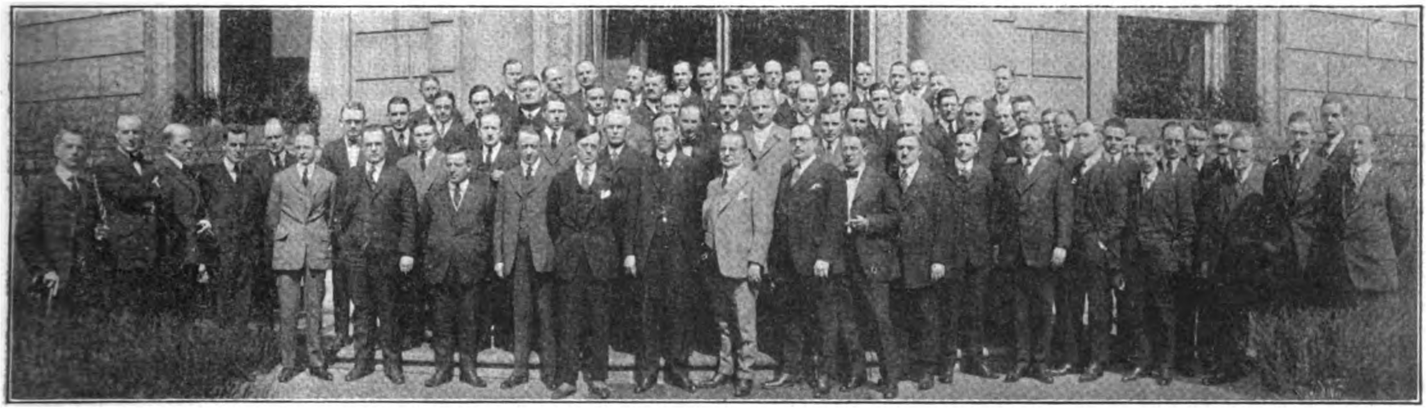
Plant of Wayne Oil Tank & Pump Co., Fort Wayne, Ind.—At Extreme Right Is New Tank Shop.

Truck Manufacturers at Timken Detroit Conference

It was the unanimous opinion of 52 truck manufacturers who were recent guests of the Timken-Detroit Axle Co. at Detroit that the present method of giving trucks a definite rating, or a chassis rating, is best, and that any change would be a source of endless trouble for the truck builder and the parts maker. It was agreed that the attempt to convert passenger cars into trucks has been a failure. That there is a market for speed trucks of 1500 pounds capacity was the view of nearly all the manufacturers.

While the various problems of motor truck manufacturing and marketing were discussed at the informal session, the question uppermost in the minds of many of the guests repeatedly came to the surface. This was: "When can we get more axles?"

President A. R. Demory, General Manager Fred Glover and Sales Manager P. W. Hood were all heard on this topic. Due to the difficulty in securing quality materials, none was over optimistic. If contracts already signed are carried out, however, they promised an increase of from 12½ to 25 per cent in production this year and a 50 per cent increase in 1921.



Group of 52 Representatives of Truck Manufacturers Assembled at the Plant of the Timken-Detroit Axle Co., Detroit, to Consider Load Rating and Material Supplies.

REMOVAL OF PHILADELPHIA BLACK & DECKER BRANCH.

The Black & Decker Manufacturing Co., Towson Heights, Baltimore, Md., manufacturer of portable electric tools, electrical air compressors and special machinery, has moved its Philadelphia branch from the West End Trust building to more spacious quarters at 318 North Broad street.

The new office has a show window and show room, as well as a completely equipped service station for the convenience of users of Black & Decker equipment, and will enable a more extensive cooperation with the company's jobbers in that section. The office is in charge of W. C. Allen, branch manager.

RECENT APPOINTMENTS OF MOTO-METER CO.

The Moto-Meter Co., Inc., Long Island City, N. Y., manufacturer of Boyce motometers, has recently made the following appointments in its sales department:

George Feher, for the past six years connected with the selling organization of the American Ever Ready Works of the National Carbon Co., has been made assistant sales manager.

S. J. Green becomes district manager in the northwestern territory. He was formerly sales manager of the Detroit Battery Co., and later district manager for the American Ever Ready Works for eight years.

E. V. Hennecks, sales manager of the Moto-Meter Co., is now on an extended western trip, in the course of which he expects to visit all of the principal jobbing centers and to attend the Jobbers' convention at Del Monte. Cal., June 7-12.

ELLIS WITH NIELSEN CO.

In the March issue of the Accessory and Garage Journal, it was erroneously stated that Robert M. Ellis had assumed the management of the Splitdorf Electrical Co. of Boston.

Mr. Ellis, who was formerly identified with the Boston branch of the Splitdorf Electrical Co. as manager, treasurer and director, has become secretary of the V. A. Nielsen Co., manufactures' sales agent at 708 Beacon street, Boston, and in his new capacity will have charge of sales, while Mr. Nielsen will continue in charge of the service department.

The position of manager of the Boston branch of the Splitdorf Electrical Co. is now held by T. P. Nickell, who succeeded Mr. Ellis Jan. 1 of this year.

AUTOMOBILES IN LIBERIA.

About two years ago four American automobiles were imported into Liberia, Africa, for the purpose of stimulating road construction. Considerable interest was aroused among the inhabitants and government officials and it is believed that in the near future a comprehensive system of road construction will be commenced, with a consequent opening up of a market for American motor vehicles.

Simms Co. to Build Light Four Car

One of the most important recent announcements in the automobile field in the southern section of the country is the entry of the Simms Motor Car Corporation into the motor car manufacturing industry at Atlanta, Ga. This concern contemplates the manufacturing and marketing of a light four-cylinder car, with valve-in-head engine, to be known as the Simms Light Four and to sell for $1200.

The personnel of the Simms Motor Car Co. is as follows: President, Thomas H. Mars, formerly general manager of manufacturing for the Edward Valve & Manufacturing Co., East Chicago; vice president and general manager of sales, Jackson H. Simms, formerly with the American Locomotive Co. and later manager of the southeastern district for the Chevrolet car; vice president and chief engineer, E. W. Van Duzen, formerly connected with the Pullman Motor, Columbia Motor Car, Mitchell-Lewis, Reo Motor and Hanson Motor companies; secretary and general counsel, Erie M. Donaldson, formerly United States attorney for the southern district of Georgia.

The board of directors is composed, in addition to Messrs. Mars, Simms, Van Duzen and Donaldson, of the following: J. A. Vail, general manager of the Northwestern Expanded Metal Co. and former chairman of the board of directors of the Maxwell Motor Car Corporation; W. L. Mathers, president of the Mathers Motor Co. of Atlanta and of the Georgia State Automobile Dealers' association; Marion Smith of the law firm of Little, Howell, Smith & Goldstein, who will also act as special counsel for the Simms company; Walter P. Andrews, prominent lawyer and capitalist of Atlanta.

The advertising manager is D. K. Roberts, who has been identified with newspaper and automobile trade journal work for many years, recently in New Orleans, La., and Atlanta. Harry L. Innes will be the production manager; R. A. Kettley, comptroller; J. M. Wilson, general manager of parts and service department, and C. D. Center, traffic manager.

UNIVERSAL BATTERY CATALOGUE READY FOR DISTRIBUTION.

The Universal Battery Co., Chicago, Ill., has its 1920 catalogue of starting, lighting and ignition batteries (bulletin No. 30) ready for distribution. It includes a complete table of specifications of Universal batteries for all makes and models of cars, as well as a comparative battery list of the Universal starting and lighting units and the corresponding types of other makes, and also gives general information in regard to shipping, assembling, etc.

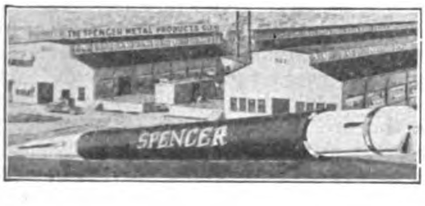
A copy of this valuable reference booklet will be sent to any service station or battery dealer on application to the main office and factory of the Universal Battery Co., 3410-3424 South La Salle street. Chicago, Ill.

JEFFERSON ELECTRIC CO.'S NEW CATALOGUE.

The Jefferson Electric Manufacturing Co., 426-430 South Green street, Chicago, is distributing its catalogue No. 15 of Jefferson automotive equipment, electric specialties, etc. This is one of the most comprehensive catalogues in its line in publication, including as it does among other features, authentic information concerning coil replacements, a complete ignition coil guide showing cars equipped with coil ignition and the type of Jefferson coil to be used in replacement. Description, specifications, prices, etc., of the Jefferson lines are accompanied by copious illustrative features, and the arrangement of contents is concise and such as to render it most available to anyone interested.

PROMPT DELIVERY OF SPENCER AXLE SHAFTS.

During the past year the shortage of replacement parts has been an increasing source of embarrassment to the car dealer. With output facilities taxed to the limit by the unprecedented demand for new cars, the manufacturer has been unable to offer much promise of relief. In this emergency dealers are turning to the jobber and should find him ready to give them prompt delivery on parts on which they have been experiencing long delays. As an instance of this, it is cited that leading jobbers carry a complete line of Spencer axle shafts, drive shafts and other replacement parts made by the Spencer Metal Products Co., Chicago, which are guaranteed to be at least of as good quality as those they replace, and the dealer can feel ample assurance that he is giving his customers good service in that respect as well as quicker deliveries.



Kenneth Cloud, Head of Cloud Accessories Corporation, Chicago.

Cloud Accessories Company Formed

The Morgan cord fan belt, Silver lining for Ford transmissions and Cloud "75" spark plug, are some of the specialties to be sold by the Cloud Accessories Corporation of Chicago, recently organized.

The new organization is composed of a group of successful automobile accessory men, headed by Kenneth Cloud of Chicago, who has been associated with the sale and manufacture of accessories for the last six years. He started in the accessory business in Long Beach, Cal., as a member of the Corey-Fitzgerald-Cloud Co., which put the "Myle Maker" and the "Forty-More" generator on the market. In connection with his work on these products he discovered "cork insert" transmission lining, and was instrumental in organizing the Advance Automobile Accessories Corporation, which took up the sale of this lining. Not only did Mr. Cloud handle sales, advertising and merchandising for the corporation, but he created the Advance house organ, "Let's Go," which is well known throughout the trade.

Later Mr. Cloud joined the Charles H. Touzalin advertising agency of Chicago, as accessory merchandising man. When the war broke out he entered the motor transport division as a chauffeur, and was discharged after the armistice as a lieutenant. He returned to the Touzalin agency, confining his efforts to the Advance Automobile Accessories Co., Auto Components, Inc., and Motor Oils, Inc. He returned to the Advance company from this connection, from which position he resigned to organize the Cloud Accessories Corporation. The main offices and store rooms of this company are at 1408 South Wabash avenue, Chicago.

The Morgan cord fan belt is built on the principle of a cord tire with a series of small cords next to the wearing surface, and five larger, heavier cords bordering the outer surfaces, all encased in rubber fabric. The cords give the fan belt unusual strength and the rubber supplies exceptional wearing quality. The Morgan cord fan belt is made in Ford size only for the present. It is guaranteed for one year.

A special weave and treatment gives the Silver lining for Ford transmissions great longevity.

PEERLESS AUTOMOBILE SPECIALTIES.

The Columbus Varnish Co., Columbus, O., reports an unusually large demand for its Peerless automobile specialties this season, as most of these products deal with the upkeep of the car rather than being adapted to new vehicles and the work of renovating old cars has been particularly heavy this year on account of the difficulty in many cases of securing delivery of new cars. The Columbus factory is way behind on its orders, but is giving everyone the best service possible, rushing goods to its customers by express instead of by freight as ordinarily.

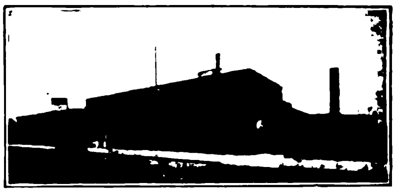
The biggest demand is for such products as top dressings, including both the mohair and leather, the enamels, and particularly the gasket shellac. Cooperative work is done from the factory by supplying garages and dealers with window display material, mailing inserts, catalogues, etc.

AN AMERICAN PATENT CO.

The American Patents, Manufacturing & Sales Co., Inc., 138 East Wyoming avenue, Olney, Philadelphia, Pa., which is in the field for the purpose of buying and selling American patents, announces the opening of a special sales service department. By virtue of its geographical location, tapping as it does the great industrial centers, this concern states that it is in a position to conduct satisfactory sales service between the inventor, manufacturer, investor, etc., and solicits business solely upon that basis.

GEMCO EXPANSION.

The Gemco Manufacturing Co., Milwaukee, Wis., has about completed the erection of a large addition to its plant, which will enable it to greatly increase its production of automobile bumpers and other automotive parts and accessories. The new building is designed, equipped and built in accordance with the most modern ideas and includes separate recreation rooms for men and women employees, complete in every detail.



AMERICAN GRINDER MANUFACTURING CO. EXPANDS.

Due to the phenomenal growth of the wrench business of the American Grinder Co., Milwaukee, Wis., it has been necessary to recapitalize this concern in order that production may be extended to fill the demand for Blackhawk steel socket wrenches for automotive use. Thus it is that Herbert, Herman and George Brumder, bankers, and George, Adam and Fred Mayer, owners of the F. Mayer Boot & Shoe Co., have become affiliated with the American Grinder Co., Herbert Brumder becoming treasurer.

Sales of Blackhawk wrenches are in the hands of C. N. and F. W. Jonas, a widely known sales organization, with headquarters at Chicago and branches at Los Angeles, Cal.; Seattle, Wash.; San Francisco, Dallas, Tex., and Atlanta, Ga. The Jonas concern also sells the American Grinder Co.'s line of American hand and power grinders west of the Mississippi, while east of that river sales of these machines are in the hands of John H. Graham & Co., which is also responsible for the foreign sales of Blackhawk wrenches.

ATTRACTIVE SAXON PUBLICITY.

The Saxon Motor Car Corporation, Detroit, Mich., is distributing a very attractive piece of publicity in the form of an interesting booklet entitled "Duplex Engineering—a Two-Year Advance Saxon," which purports to tell the inside story of Duplex engineering as applied to the Saxon product. It has handsomely designed covers in colors, and half tones of the entire executive organization are included, together with a vital message from C. A. Pfeffei, the president, and Saxon merchandising and advertising plans for the current year.

COTTA ORGANIZES ADVERTISING DEPARTMENT.

The Cotta Transmission Co., Rockford, Ill., has organized and completely equipped an advertising department with F. W. Ramey, formerly of the sales department, at its head.

This development is in line with the recently announced expansion of the Cotta organization, which at the present time has more than three times the number of commercial trucks accounts, than they were supplying when the war ended.

CARBONOX KNOWN ABROAD.

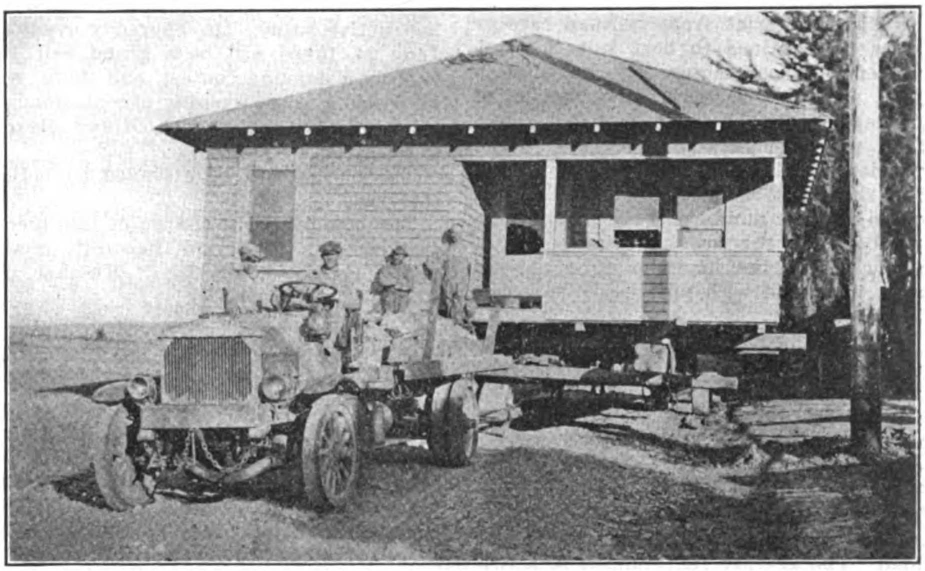
The Northwestern Chemical Co., Marietta, O., recently received an order from a firm in Norway, Europe, specifying 12,000 pint packages of Carbonox, the well known carbon removing compound manufactured and guaranteed by the Northwestern Co. This is only an instance of the development in the merchandising of the products of this company over the entire globe.

One out of every two houses in the rural districts of Ontario, Canada, has a telephone, while one farmer out of every four owns a motor car.

Moving a Bungalow by Motor Truck

When the average citizen moves his home he hires a truck or a cart or wagon and several experienced able-bodied furniture manglers to do packing and loading and unloading and setting up, and confidently expects that at least half of his property will be serviceable when he is "settled." This is because the average house is owned by others or is too weighty or bulky to be taken along with the furniture.

But seemingly the ideal removal was made a short time since by a San Diego, Cal., resident, who was dissatisfied with his location. He bought a property four miles distant and because his bungalow suited him perfectly he wanted to set this up on the new lot. Removing it appeared impossible, but H. E. Cooper, a truckman, allowed it was a practical undertaking. The building was jacked and mounted on wheels and with a big Federal truck it was hauled over the road in about six hours.



Moving a Bungalow Four Miles to a New Site at San Diego, Cal., Without Removing Contents with a Federal Truck Saves an Owner Large Expens.

Not only was the house and furnishings intact, but the cost was exceedingly small and housekeeping was not seriously interrupted. From this it is evident that while the bungalow has its limitations as a dwelling, it also has advantages that largely compensate these.

THE GREAT FLEXIBILITY OF THE "EIGHT."

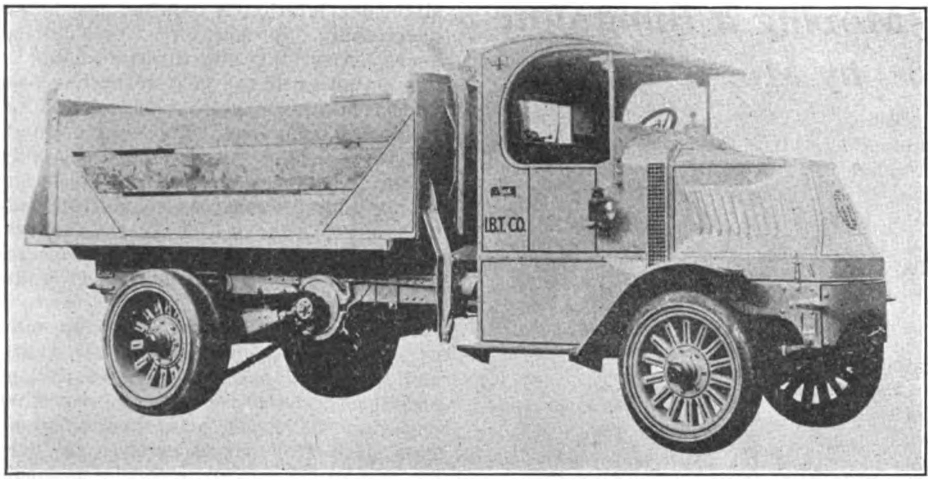
Now that many motorists who formerly drove four or six-cylinder cars are running machines of the eight and 12-cylinder type, it is well to call attention to the wonderful flexibility characteristic of eight and 12-cylinder engines.

In starting the eight or 12-cylinder car the driver naturally uses low gear as in any other type, but it is unnecessary to speed up the engine to any great extent as the clutch is engaging, as is usually required with other types. After the car is under way on low gear only a very slight acceleration is required just before declutching preparatory to shifting gears. After this the throttle should be left closed until the gear lever has been placed in intermediate position and the clutch fully engaged. The engine should not be raced as the clutch is engaging. Again accelerate but a very little before declutching preparatory to shifting into high gear, after which leave the gas closed until the shift has been made, the clutch again engaged and the car under way on high gear.

If the throttle is handled in this manner the driver can start his car gently and quietly, can shift gears easily and noiselessly and never jerk the car when engaging the clutch after gear changes. This method of driving relieves the driving apparatus of all strains, increases the comfort and pleasure of the occupants of the car and because of its quiet, steady movement, favorably impresses all observers both as to the ability of the driver and the high class of the car.

One should never drive with the left foot resting continually against the clutch pedal. It is harmful to begin with and is unnecessary because at least 95 per cent. of one's driving with an eight or 12-cylinder can be done without touching the clutch pedal. When slowing down merely transfer the right foot from the accelerator pedal to the brake pedal, assuming, of course, that the hand throttle is closed. Use the brake alone until the car has come down to less than five miles an hour. If lower speed is required, declutch. If the reason for reducing the car speed is removed while the car is still rolling at five miles an hour or more, the clutch should be engaged with the throttle still closed. Immediately after this engagement the throttle can be opened as desired. Never, under any circumstances, race the engine while the clutch is engaging.

Receipts of the automobile division of the Pennsylvania State Highway department during 1919 reached a total of $5,090,645.69.



Special Type of Body Built to Show Count of Brick in Load in Service of the Illinois Brick Teaming Co. of Chicago.

Special Body for Hauling Bricks

In hauling brick from railroad cars or kilns to locations to best suit the convenience of contractors on construction jobs, the Illinois Brick Teaming Co. of Chicago had to meet a peculiar condition, for the contractors insisted on the precise packing of loads to save counting the brick at every load. That is, with a given number in a row, by simply counting the rows, the total number of bricks in the load could be arrived at quickly and with practically no possibility of error.

The type of body that would best serve was studied and a Mack AC dump truck was equipped with specially built removable side boards. With this the brick can be loaded from either side by taking off the side boards and walking from the brick car into the truck body. The body has capacity for 4000 brick, which will weigh approximately eight tons, to a load. The average trip consists of a two-mile run and dumping the load at the job. This truck is hauling an average of 28.000 brick a day, or about 56 tons.

SOCIETY OF AUTOMOTIVE ENGINEERS' SUMMER MEETING.

The 1920 summer meeting of the Society of Automotive Engineers will be held at Ottawa Beach, on Lake Michigan, June 21-25 inclusive, the tentative programme being as follows:

Monday, June 21, standards and business session; Tuesday, June 22, fuel session; Wednesday, June 23, transportation session; Thursday, June 24, farm power session; Friday, June 25, production session.

It will thus be seen that there will be one professional session each day and that there will be ample opportunity for the programme of sports and recreation each afternoon and the lectures and dancing each evening. Over 200 prizes will be given in the sports programme, which will be conducted Tuesday, Wednesday and Thursday afternoons. The contests will include tennis, golf, baseball, trap shooting, races, water sports and special sports, directed by experts in amateur sports.

On every evening, immediately after dinner, there will be a one-hour lecture by an authority on a popular subject of instructive value. On Thursday evening, June 24, there will be a grand ball, including a dancing contest, and there will be dancing every evening except Monday in the ball room of the Ottawa Beach hotel after 9 o'clock.

The outing will be attended by ladies this year as last.

The committee in charge of this meeting consists of David Beecroft, chairman; C. F. Scott, B. C. Koether, A. Ames, B. B. Ayers.

NEW PLANT OF DORT MOTOR CAR COMPANY.

E. W. Nice, construction engineer, announces that the new motor plant of the Dort Car Co. at Flint, Mich., will be ready for occupancy in August. This is the first unit of the mammoth factory project which will be carried out on 70 acres of land on the edge of the city of Flint.

Herschell-Spillman Engine Test

The All-American Truck Co., Chicago, recently had its machinery all set at its new plant, and was forced to commence getting out rush work before its steam power plant could be installed. To meet this emergency three Herschell-Spillman Model 7000, 3½ by five, four-cylinder stock motors, made by the Herschell-Spillman Motor Co., North Tonawanda, N. Y., were utilized temporarily.

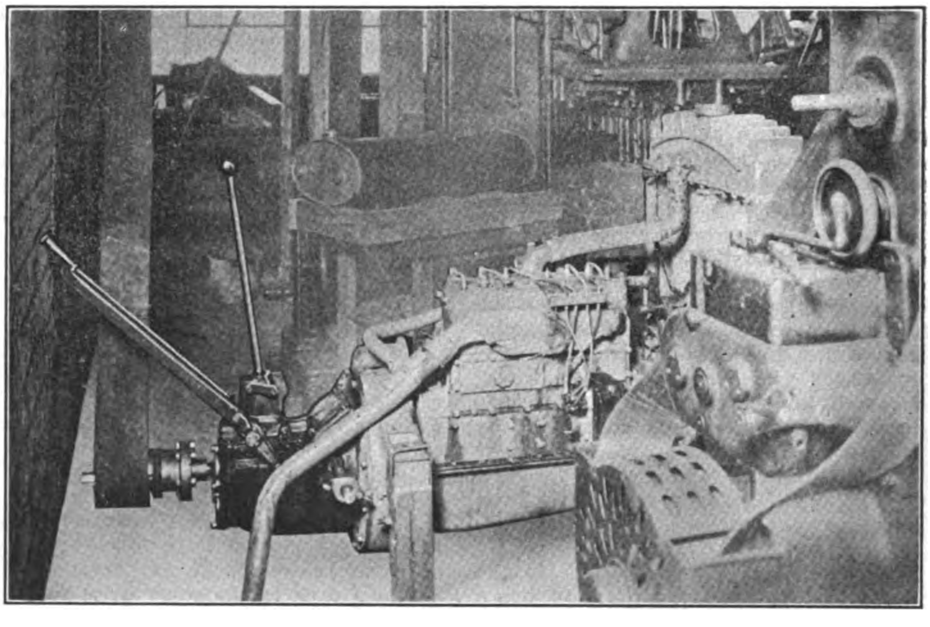
For 21 days, 11 hours a day, these engines were worked and more than met every requirement. Each motor made 1600 revolutions per minute, 1,056,000 a day, which was equivalent to running an All-American truck, model 2½, a distance of 286 miles in 11 hours, at a constant speed of 23 miles an hour, pulling a load of more than three tons in high gear.

A remarkable feature, because no water was circulating through the radiators, evaporation being taken care of by merely replenishing the water supply from time to time, was the fact that no difficulty was experienced in properly lubricating and cooling engines during run.

The Hershell-Spillman Motor Co.'s plant at North Tonawanda, N. Y., is being enlarged to supply the demand by automotive vehicle builders for four and six-cylinder engines. Before the dawn of 1921 this company will have 185,000 feet of manufacturing floor space and will be able to turn out 400 engines a day.

NEW ORLEANS AUTO SUPPLY CO. INCORPORATED.

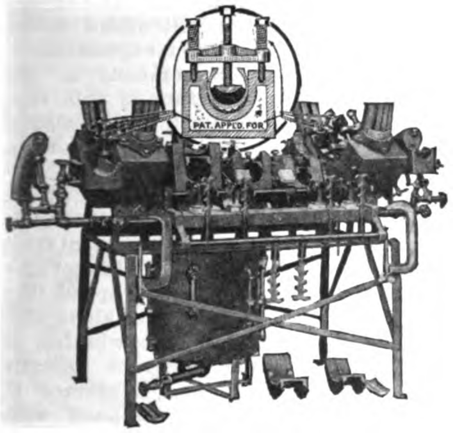
The Original Wrecking Auto Co., 1130-1140 Dryades street, New Orleans, La., has been incorporated under the name of New Orleans Auto Supply Co., Inc., with a paid up capital of $40,000. It will cater to both the wholesale and retail trade under the same management as formerly. N. Weaker, president and manager; R. E. Zerlin, secretary-treasurer.



One of the Herschell-Spillman Engines Recently Used for Emergency Power Production at the All-American Truck Co.'s Factory, Chicago.

Vanderpool Vulcanizer Springs

The Vanderpool Vulcanizing Co., Springfield, O., is marketing the patented Improved springs for use on the Vanderpool 1920 Five-Cavity vulcanizer. These springs are said to eliminate the danger of separation and blister and will enable a perfect job of retreading to be done, and they are continually forcing the rubber into the retread molds as fast as it softens, automatically giving the proper pressure, and does away with the continual adjustment of bolts.



The insert in the sketch shows a sectional view of the Vanderpool springs.

The improved type of Vanderpool vulcanizer has a capacity for the repair and retread of nine tires and five tubes at one time. Another practical feature that appeals to tire repair men is the short time in which steam can be gotten up for a rush job. The steam can be shut off from any or all parts of the machine so that one retread can be heated ready for business in from 30 to 40 minutes in the coldest weather.

NEW DEALERS FOR MIDWEST ENGINE CO.

The Midwest Engine Co., Indianapolis, Ind., maker of truck and tractor engines, has recently secured the following dealers:

Campbell Motors Corporation, Boston, Mass.; S. L. Crosby Co., Bangor, Me.; Walton Foundry Co., New York City; Clide Automobile Co., Troy, N. Y.; A. R. Robertson, Buffalo, N. Y.; DeWaters Brothers, Elmira, N. Y.; Philadelphia Tractor & Implement Co., Philadelphia, Pa.; C. P. Wenner, Allentown, Pa.; Dayton Automotive Co., Dayton, O.; Transport-Utilitor Sales, Toledo, O.; W. G. Gabriel Carriage & Wagon Co., Cleveland, O.; E. J. Knudsen, Ashtabula, O.; Winders Motor Sales Co., Columbus, O.; Brooks & Fierge, Athens, O.; Thompson Auto Co., Detroit, Mich.; City Garage, Ann Arbor, Mich.; R. S. Tracy, Princess Anne, Md.; S. M. Underhill, Cambridge, Md.; Farm Utilities Corporation, Washington, D. C.; Farwest Sales Co., Los Angeles, Cal.; Graham Motor Co., Chicago, Ill.; D. C. Schroeder, Barrington, Ill.; Fort Wayne Utilitor & Implement Co., Fort Wayne, Ind.; San Kuhns, Albion, Ind.; Utilitor-Indiana Co., Indianapolis, Ind.; Smith Power Farming Store, Anderson, Ind.; Jefferson Motor Co., Inc., Louisville, Ky.; C. F. Lyons, Beuchel, Ky.; P. R. Turner, Richmond, Va.; S. B. Karnes, Danville, Ind.; Sherwood & Hills, McAllen, Tex.; Ideal Auto Garage & Sales Co., San Antonio, Tex.; W. A. McBrayer & Co., Greenville, S. C.; Hook Brothers, New Brookland, S. C.; Utilitor Sales Corporation, Ayden, N. C.; Barnett Wilson Motor Co., Burlington, N. C.; Walter H. Bishop, Athens, Ga.; F. A. Dennis, Eatonton, Ga.; Delta Motor Corporation, Inc., New Orleans, La.; Addis Mercantile Co., Addis, La.; C. F. Woods, Meridian, Miss.; J. D. Stennis, Jr., Bailey, Miss.; Home & Farm Utilities Co., Tampa, Fla.; Capital Utilities Co., Tallahassee, Fla.; Farm Power Equipment Co., Birmingham, Ala.; Alabama Utilitor Co., Montgomery, Ala.; L. B. Wilkinson, Sharters, Ala.; Bernhardt Motor Co., Pine Bluff, Ark.; I. H. Rudolph, Arkadelphia, Ark.; Cashkut Supply Co., Texarkana, Ark.; Newell Motor Car Co., Kansas City, Mo.; Joseph Werndl, Coffeyville, Kan.; Newell Motor Car Co., St. Louis, Mo.; Northwest Utilitor Co., Seattle, Wash.; Pacific Tractor Co., Vancouver, B. C., Canada; George H. Lowe, Jr., Boston, Mass.; Framingham Motors Co., Framingham, Mass.; Rose Williams, Newark, N. Y.; Wedden Hardware Co., Falconer, N. Y.; Sears & Bowers, Easton, Pa.; Wagner Brothers Hardware Co., Hazelton, Pa.; Canton Tractor Co., Canton, O.

CAROLINA AUTO SPRING CO.

The Carolina Auto Spring Co. has just been formed at Sumter, S. C., for the purpose of distributing automobile replacement springs. The authorized capital is $75,000, and the officers are as follows:

President, W. A. Bowman; vice president, L. H. Deas; secretary, A. K. Bowman; treasurer, F. A. Bultman; manager, W. P. Middleton.

For the past six years Manager Middleton has been connected with one of the largest replacement spring companies in the United States.

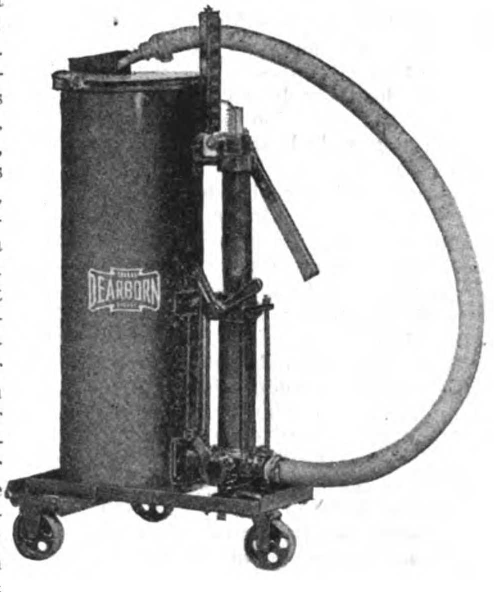
Dearborn Improved Grease Pump

The Dearborn Engineering & Equipment Co., 1703-1704 Tower Building, Chicago, Ill., has taken over the manufacture of the O'Brien heavy duty grease pump and hereafter it will be known as the Dearborn pump. This pump is especially adapted for heavy duty in truck service stations. The tank is constructed from 18 gauge steel reinforced, with provision made for locking the cover, and has capacities of ¼ barrel, ½ barrel and one barrel and may be ordered special at an extra charge for larger sizes. The truck on which the tank and fittings are mounted is made of heavy angle steel throughout and is equipped with three large heavy duty casters. The floor space required is 18 by 21 inches.

The specifications of the pump are as follows: Cylinder, 11 gauge by 3¼ inches seamless cold drawn tubing; piston, special design, accurately machined, adjustable for wear, equipped with three rings of compositon packing; rack, cut steel, 10 pitch, one inch face; pinions, same; valve, hand operated,, accurately machined, absolutely positive in action, having large port area; handle, steel with reversing ratchet, leverage 16 inches total; gauge, conveniently located so it may be easily read, graduated for light, medium and heavy lubricant; capacity, one quart of light or two pounds of medium or heavy grease per stroke; hose, special heavy duty, long lived, one inch diameter, three nozzles.



SCHUSLER MOTOR EXPANDING.

The Schusler Motor Co., distributor of Stevens-Duryea and Templar cars at Pittsburgh, Pa., is to have new sales rooms in the heart of the automobile district on Baum boulevard, between Rebecca and Liberty avenues. The service department will be maintained at Station and Collins avenue.

France has 47 different manufacturers of motor cars.

Nazett Method Burning-In Bearings

The Ford repair man has been quick to grasp the advantages of up-to-date machinery in his shop, and foremost in demand in the list of equipment today are burning-in and work-out machines. The old method has been slow and inaccurate. The best mechanics were formerly required to scrape bearings and it took six hours to scrape in a set of main bearings on a Ford car, and then only a 40 per cent. job could be hoped for. The Nazett method requires less than one hour, occupies the time of one medium class mechanic only, and the complete job is perfect in every respect, averaging from 95 to 100 per cent. bearing surface.

Nazett machines are especially designed for repairing model T Ford and Fordson motors. The model E Nazett is for the model T motor only. The model F is for both the model T Ford and the Fordson motors. While burning in the bearing of either model, the motor is in the upside-down position and the main bearings are exposed to the view of the operator at all times. It is recommended that the main bearings be burned in first. After this job is completed the connecting rod bearings can then be burned in.

Nazett machines also make ideal motor stands. The cylinder block is firmly clamped at just the right height for the mechanic to work on the crankshaft, connecting rods and camshaft bearings in a natural standing position. An opening is provided in the main bed, which permits the removal and replacement of pistons from the cylinder block without unclamping or removing it from the stand. It is not necessary even to remove the valves from the block. The cylinder block is quickly clamped on the machine by the use of hand wheels operated from either side. No obstructing clamp is used over the center main bearings. The bearings are accessible at all times and can be taken up while the machine is operating if desired.

The Nazett machine is provided with three-point expanding clutch, lined with kiln dried hard wood shoes, practically indestructible. Provision for adjustment is made. The clutch lever is 24 inches long and three-fourths of an inch in diameter, with a knurled handle which is easily operated with one hand. The lever is removable and when inserted in the socket on the clutch spider provides a means for turning the crankshaft to test the stiffness of the bearings.

The Nazett is stated to be the only machine on which the mechanic can remove the crankshaft from the block without unclamping the block from the stand. This is an important feature, as it is often desirable to examine the bearings during the process of burning in, and no bearings should be finally passed upon until they are examined. All that is necessary to do on the Nazett is to throw the pin clutch lever out, which disengages the crankshaft from the machine. This pin clutch contains four pins for the Ford motor and six for the Fordson motor, the same number as used on the Ford and Fordson crankshaft assembly, which insures a rigid crankshaft held accurately in position during the operation of burning in.

To convert the Nazett machine for burning in the Fordson tractor block, it is necessary only to place the small machined block on the stand. To burn in the Fordson bearings, the crankshaft is driven at a lower speed. The reduction is accomplished through cut steel gears, which are completely encased and run in grease. The side arms which support the motor when it is being worked out are lowered out of the way when the machine is operated for burning in. To obtain the best results the bearings should be burned in without oil, and the crankshaft carefully cleaned before the operation is commenced. If any oil is present during the process it is liable to tear the babbitt and result in an imperfect bearing.

A special attachment to be used in conjunction with the Nazett model F machine is provided for working out the Fordson motor. It consists of a flanged connection driven from the upper pin clutch through two universal joints and a drive shaft connecting to a split steel casting, which is clamped on the Fordson starting crank for starting new tractors as well as working out those which have been overhauled.

DECISION RENDERED IN CORK INSERT CASE.

It is reported that a decision has been rendered by Judge Tuttle in the Federal court at Detroit in the case of the Advance Automobile Accessories Corporation of Chicago, et al., vs. the Howard K. Ford Manufacturing Co. of Coldwater, Mich., holding that the cork insert patent, under which the Advance cork insert transmission and brake lining for Ford car is manufactured and sold, is valid; and that the Ford cork set transmission lining made by the defendant is an infringement of the cork insert patent. It is also stated that the court ordered a permanent and perpetual injunction to be issued, and an accounting for damages and profits.

It is further reported that the Detroit Cork Co. has consented to an entry of a decree against it in a similar suit.

SHIP NEW ERA SPRING BUMPERS BY TRUCK.

The Linscott Supply Co., Boston. Mass., distributor of Reo trucks throughout New England, and extensive jobber in automobile accessories, recently brought a fleet of Reo trucks from the factory at Lansing, Mich., overland to Boston. The cortege stopped en route at Grand Rapids, Mich., and at the new factory of the New Era Spring & Specialty Co., 51-55 Cottage Grove avenue, southwest, took on freight in the form of several hundred of the New Era "Better" spring bumpers, thus participating in the "ship-by-truck" propoganda.

Laurel Motors Concern to Expand

The Laurel Motors Coporation, Anderson, Ind., manufacturer of the Roof 16 overhead valve equipment, has recently acquired several acres of land adjacent to its factory site on which it intends to erect immediately a modern factory and office building, which will afford necessary space for production expansion.

It is said that this company is the pioneer in the manufacture of this type of equipment, as Mr. Roof, who designed the first aeroplane motor to be used in this country that attained the first altitude record made by Earl Slack at St. Louis in 1910, is affiliated with it, and is continually supervising experimentation on motors in an endeavor to get the greatest amount of power and speed that can be produced. His success along this line is demonstrated by the winning of the free-for-all automobile race recently at St. Petersburg, Fla., by James C. Hackney, driving a car equipped with one of the Roof 16 overhead valve motors, manufactured by the Laurel Motors Corporation.

NEW ENGLAND MILLS INCREASES CAPITAL.

The rapid growth of the New England Mills Co., 1027-1033 West Van Buren street, Chicago, Ill., until today it is one of the country's leading automobile accessories jobbers, is phenomenal. It has increased from a stock room of 1100 square feet with $15,000 capital to 20,000 square feet, besides large warehouse space and a capital of $150,000. The company states that its success is due to superior service. Its operating policy is "orders in today and out today, enforced through careful buying and keeping its warehouse full of standard merchandise. The monthly catalogue, "The Little Salesman," is sent out regularly to dealers, keeping them as well posted on current prices as if they were standing at the counter of the world's greatest market.

The New England Mills Co. served over 15,000 dealers the past year.

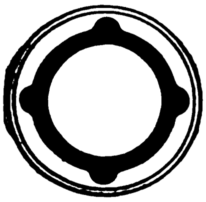
THE NIEHOFF MAG-CHARGER.

Paul G. Niehoff & Co., Inc., 232-242 East Ohio street, Chicago, Ill., is now marketing the Niehoff Mag-Charger, which is especially designed to fulfill a long felt want for recharging Ford magnets and burning out shorts in the Ford magneto case. The entire recharging is done, it is claimed, in a few minutes, and any ordinary mechanic can operate successfully.

The Niehoff Ford recharging apparatus is a complete electrical testing outfit as well, and may be used for testing Ford coil units, electric bulbs and spark plugs. With this outfit established in a convenient place so that the car can be run alongside, it is stated that in less than 15 minutes the garage man can recharge, burn out all shorts and make an entire test of the ignition system.

BECKLEY-RALSTON CO. IMPROVED HYDROMETER SYRINGE.

After years of experience with different types of hydrometer syringes for testing battery solutions, the Beckley-Ralston Co., Chicago, Ill., announces that it has perfected a new type of instrument, which is heralded as being the most accurate hydrometer made. The Master hydrometer syringe, as this new instrument is called, is built on entirely new principles. Working along the line that the principal fault of the ordinary hydrometer lies in the tendency of the float to tip against the sides of the glass tube and stick, the Beckley-Ralston Co. states that it has eliminated this defect in the construction of the new tester.



Sectional View of Celluloid Rings.

Celluloid rings, with projecting guide fingers, are attached to the float. Resting lightly against the sides of the test tube, they hold the float erect and enable it to ride freely.

It is stated that when the float tips against the glass tubing in the ordinary hydrometer, its ability to ride freely is hampered by capillary attraction, and it can thus be easily understood how the float, resting at an angle against the glass tubing, is liable to give an inaccurate reading.

The glass barrel of the Master hydrometer is extra large and of heavy glass, and the sides are absolutely straight from end to end. Large, soft rubber rings at either end afford protection from breaking should the instrument be accidentally dropped.

The Beckley-Ralston Co. has also perfected another entirely new instrument, a radiator anti-freeze solution tester, known as the Radiatometer, which will be under production in time for the opening of cold weather next fall. This is built on the same free-floating principle as the Master hydrometer and gives a car driver exact knowledge of the necessary strength of a radiator solution to prevent freezing at various temperatures.

COVERT CENTRALIZES EFFORT.

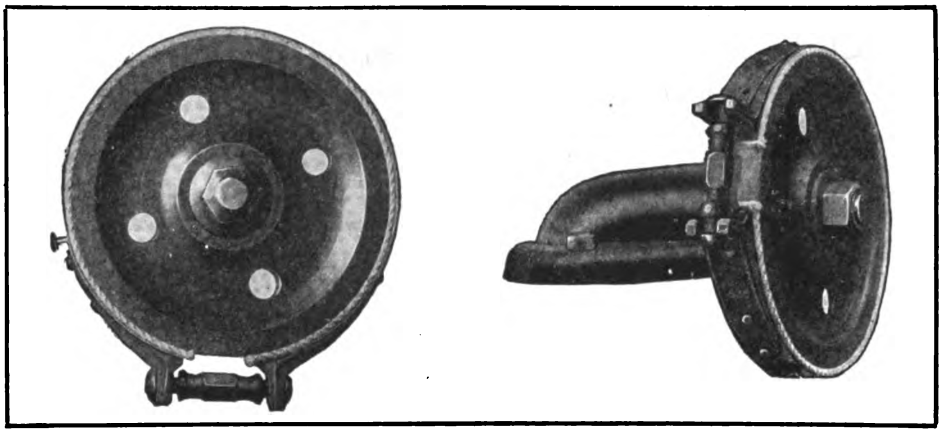
On account of the rapid expansion of its business and the resulting need for more centralized administration, President Alwin A. Gloetzner of the Covert Gear Co., Inc., announces the consolidation of all the company's departments, including sales, service and engineering, at its manufacturing headquarters in Lockport, N. Y., where recent factory additions now allow them to be adequately housed and equipped.

R. C. Merchant, sales manager, moved his offices from Detroit to Lockport several weeks ago. The Covert Gear Co.'s Detroit headquarters in the Hayward building, 967½ Woodward avenue, will be continued in cooperation with the Lonney & Carmichael Sales Co.

Approximately 8,000,000 autos have been made in the United States during the last 20 years.

Universal Tool Co. Adds to Line

The Universal Tool Co., Inc., Detroit, Mich., manufacturer of the Universal cylinder reboring tool and the Universal main bearing babbitting and boring equipment, has introduced a new brake band mandrel. This is made in three sizes, for Ford cars, for larger cars and a combination of both. This tool is stated to be so simple in construction that any ordinary mechanic can operate it with ease, enabling him to clamp the brake lining and band firmly on a circular mandrel which is the same size as the brake drum, assuring its proper alignment and conformation to the drum, upon which it is intended to function, before even starting a rivet.



Front and Side View of Universal Brake Band Mandrel.

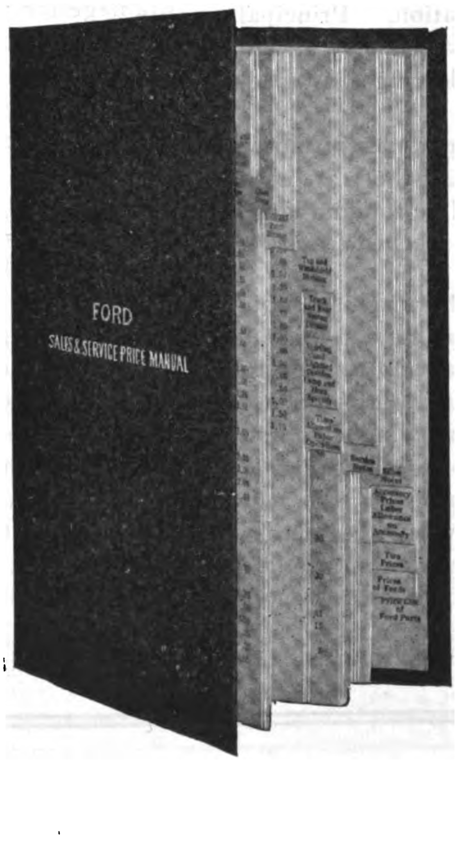
The riveting operation is also quickly and easily accomplished. The mandrel is turned until the rivet holes in the band come to an upright position; then a split rivet is driven in with a hammer blow, clinching the rivet against the mandrel on the inside, the operation being repeated until all the rivets are in place. Points claimed in favor of the tool are that it does away with any drawing of the lining between the rivets which might cause the brake to drag; that it prevents the lining wrinkling and wearing in spots; that it insures a full, even braking surface; that it makes it possible to secure a perfect adjustment of the brakes at the time of replacement, and that the job of replacement and riveting is completed in less than half the time consumed by any other method of doing work.

FORD SALES AND SERVICE MANUAL JUST ISSUED.

The Auto Service Publishing Co., 141 East 44th street, New York, has just issued the Ford Sales and Service Price Manual, which is exclusively distributed by the Fairbanks Co., Broome and Lafayette streets, New York. This manual has been compiled from data collected from the Ford Motor Co. and dealers in all sections of the country operating under widely varied conditions. The information is presented under various divisions such as motor, rear and front system, chassis, etc., and under these division headings labor charges and time allowed on labor operations on every Ford repair job have been grouped.

The book also contains a section entitled "Facts About Ford Cars," which gives many interesting points in regard to production, raw material used, motors, springs, starting and lighting systems, etc. The general plan to be followed by dealers in handling replacements, and data on shipping weights, obtaining licenses, exchange prices, etc., are also included.

Space is provided for inserting the standard Ford parts catalogue, and the size of the manual permits of its being carried in the coat pocket.



NATIONAL IN GOOD SHAPE.

The National Motor Car and Vehicle Corporation, Indianapolis, Ind., had net sales of $3,997,287 for the year ending Sept. 30, 1919, an increase of considerably more than a million dollars over the previous year. The corporation has purchased a new forge plant, body plant, extra machine shop and other facilities from the government and is in strong shape to handle future business.

PLATE XXVI.

MOTOR TRUCK SERVICE STATION

Structure Designed for Corner Location, Equipped with Every Facility for Efficiently and Economically Serving Truckmen.

SERVICE as demanded by the power truck owner differs widely from that required by the passenger car owner. Many truck dealers have established service stations for serving owners of the trucks they have sold, and have generally sought the patronage of owners of other makes of trucks when service could consistently be afforded.

The power truck service station should preferably be in building erected expressly for the business, for this will mean, if the arrangement of the structure is well thought out, economies of many items of expense, such as lighting, heating, handling vehicles, labor and time, as well as improving the efficiency of the organization and insuring satisfaction to customers.

Necessarily a plan must be definite and specific, and in the accompanying plate the architect has made provision for a structure on an ideal site, but this may be modified and the details may be amended to meet other conditions. The purpose is to suggest what shall be regarded as a structure that will meet all ordinary requirements and afford every desired facility for economical conduct of a business.

The proposed structure is shown on a corner lot, 100 by 100 feet. The dealer will at once appreciate the desirability of selecting a corner location for his building, as it has many advantages for a motor truck service station. Principal among these is the fact that entrances may be had from both streets (see plan), allowing easy placing of trucks for storage.

Special attention to the larger types of motor trucks is given in the design. At the rear, with an entrance from the street, will be found a large repair shop, which may also be reached from the inside.

Directly opposite is found the machine shop, where work of any kind may be carried on. A large door leads from this so that any unit or an entire truck may be carried to the shop for any necessary work. Between the machine shop and the repair shop is a large combination turntable and wash stand. With this trucks may be sent to the repair shop and withdrawn without leaving the building, and there would be no need of floor maneouvering that would otherwise be necessary in driving into the repair shop.

Two toilet rooms and a locker comprise the layout in the rear. From the locker room a stairway leads to the boiler room, which occupies a place underneath the machine shop, toilet and locker room.

Ample room for storage is provided in the garage proper. It has been so planned that there are comparatively few columns supporting roof.

At the front of the building will be found the main office with private office and waiting room. A salesroom for accessories and equipment will be found in the corner, having large window areas on both streets. There would be gasoline pumps outside the entrance in the highway.

The structure is of brick, one-story high, with foundations of concrete. The trimmings of the concrete are stone or terra cotta. There is a large wood door on the main street and steel rolling doors on the side elevation. There are also small doors of wood.

Windows are of metal type and of approved design. The roof is of slow burning construction, plank with tar and gravel, supported by steel I beams and C. I. columns of approved design.

A steam wall radiation system is advisable for heating, with pipe or regular radiators. Large skylights are used to give light to the machine shop, repair shop, toilets and locker room.

All floors are of concrete construction. Special attention has been given to provide adequate drainage for the floors in all the departments.

The approximate cost of construction, as shown, would be $12,000.

This design presents so many attractive features that the dealer who is planning to erect a motor truck service station will undoubtedly profit by giving attention to its details. The building would present a decidedly attractive appearance, and within there would be practically every convenience that would be necessary or desirable.

Everything is laid out with a view of affording strict efficiency and economy in all operations. Many of the conditions that tend to unnecessary delay and waste of time and labor which are to be found in many service stations, are obviated, and provision is made for handling the trucks in a manner that is bound to bring about successful results.

Any further information in regard to any of the details of construction may be secured by application to this department.

PLAN

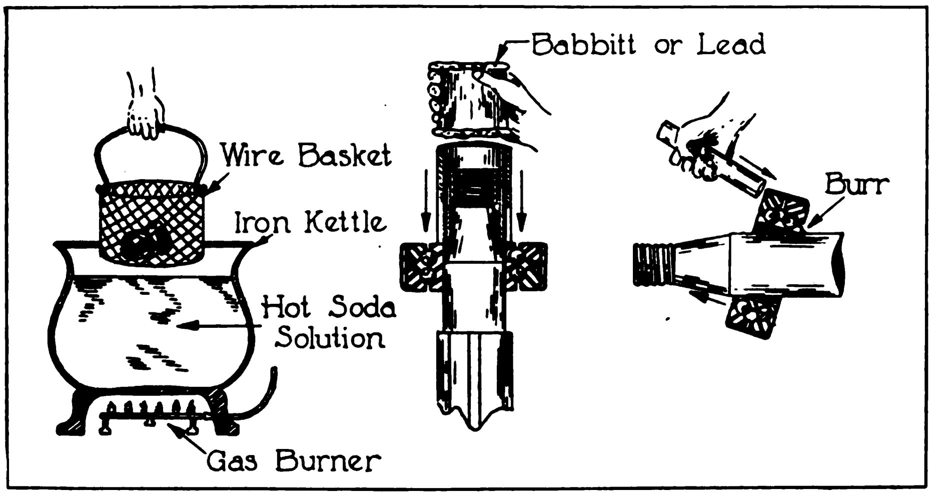
Proper Care of the Bearings of the Motor Car

(By N. B. Keller, Bearings Service Co.)

BY ALL means now is the time manufacturers, trucking companies, bus lines, individual car owners—all of them are getting their cars in ship-shape condition after the hard winter going. Motors are jerked out, rear axles torn down, fenders straightened, a dab of paint here and there, everything is O. K., and then a little later—G-r-r-Bam! Why? Somebody forgot to look at the bearings.

Those comparatively small, but exceedingly important parts of a car's mechanism—the bearings—need attention now.

Here are a few suggestions:



At Right, Ideal Apparatus for Cleaning Bearings; Center, Correct Method of Replacement by Use of Piece of Tubing; at Left Is Shown What Happens When the Incorrect Method Is Used.

Bearings are often ruined by carelessness on the part of mechanics in removing them. When removing the races of press-fit bearings a puller should be used if available. The force of the puller should be directed against the sticking race. If prying or driving is necessary, care should be used that the force is not applied to the free race and thus through the balls or rollers to the sticking race. If driving is necessary a wooden or brass instrument should be used in conjunction with a babbitt hammer, or mallet, so that the blow, while being sufficient to loosen the race, will not be hard, causing possible injury to the part.

Only the purest mineral oils and greases should be used in lubricating anti-friction bearings. When bearings are enclosed and operating at high speed under small loads, a light oil may be used. In other installations a good, light grease, or a medium grease, is more satisfactory.

Avoid carelessness in cleaning a bearing for inspection after removal. If dirty gasoline or kerosene is used, the grit and dirt is usually washed into, rather than out of the bearings. One of the most efficient methods of cleaning bearings is to dip them in a pail of boiling water containing a cupful of washing soda. This solution will cut the grease and oil and remove any grit or dirt that may be present. If the bearing is to be used again, it should be dipped in kerosene immediately after removal from the washing fluid. This will remove the cleaning solution. It should then be packed with grease.

The instructions on the care necessary to remove a bearing similarly apply when it is to be replaced. Bearing outer races are usually press-fit in the housing, while the inner races are, in general, a light drive fit on the shaft. The pressure necessary to replace the bearing should, as when removing, be applied directly to the sticking race. In replacing the inner race of a bearing consisting of two or more parts, such as Timken and Hyatt bearings, or a bearing of the single unit type, such as manufactured by the New Departure Manufacturing Co., a piece of tubing just large enough to fit over the shaft and press against the inner race is a practical tool to use. In forcing the bearing into position with this tool the pressure is applied in such a way as to distribute the force equally over the race, thus preventing a tendency to wedge. The condition of the bearing housing and shaft is a matter which should be watched carefully when replacing bearings. The housing may be worn, allowing the bearing to fit loosely, and some play might be noticeable. If this condition exists a new housing should be secured, or possibly the old housing may be bushed; shims, however, should never be used. The inner race being generally a light press-fit on the shaft, if too tight, and forced, might throw the whole bearing out of alignment and thus cause it to bind. In a case of this kind the shaft should be dressed down. Never grind down or knurl the outer circumference of a bearing in order to make it fit the housing or shaft.

Annular ball bearings cannot be adjusted. This naturally means that if a bearing is noticeably worn it should be replaced with a new one. At first thought it would seem that annular ball bearing equipment is consequently unusually expensive to maintain. However, this is not true, as a bearing of this type will give unlimited service, often outlasting the car, if properly installed and cared for.

Hyatt bearings are not adjustable and when wear occurs the worn parts must be replaced. These bearings may consist of one or more parts, as a complete Hyatt bearing may be one, or a combination of two or three parts; for example, the roller assembly and inner race may be a complete Hyatt bearing of a given number, or the roller assembly and outer race may complete a bearing. Some Hyatt bearings consist of all of these three parts as previously mentioned, while on the other hand the roller assembly only may be used, the shaft and housing taking the place of the inner or outer races, respectively, as the case may be. It does not mean that it is necessary to replace a Hyatt bearing completely if only one part is worn. A new inner race, for example, may be used with the old roller assembly provided, of course, the latter is in good condition. Examination should show the surface of the races and rollers to be smooth and in good condition if the part is to be used again. Particular attention should be given to the cage which holds the rollers in position and keeps them in alignment. The cage should be rigid, but if racked the entire roller assembly should be replaced with a new one. When reinstalling care should be used not to squeeze the cage, as it is essential that the cage containing the rollers rotate freely, which is not possible if it is jammed. Care should also be taken to see that the set screw, which is used on some Hyatt bearings, does not project through the race thus interfering with the operation of the rollers.

Timken bearings are adjustable. The following method should be practiced when adjusting them: After packing the bearing with grease screw the cone and roller assembly on the shaft tightly against the cup or race, being careful, however, not to exert too much pressure. The pressure should be only sufficient to cause the bearing to bind slightly; and the shaft, or wheel, should be rotated to see that it does not stick at any point. The cone and roller assembly should then be backed off so that the shaft or wheel turns freely, but not enough to cause any perceptible end play. The locking device should then be made secure without disturbing the adjustment. A point to be considered, when replacing the inner front wheel bearings, is the careful installation of the dust ring, which should be backed solidly on the spindle. Care also must be given to the installation of the cup in the housing. The cup must be seated firmly and the exactness of the seating checked by measuring the distance all the way around from the edge of the cup to the lip of the housing. These distances should be equal, as otherwise the cup will not be squarely seated, but will be cut of alignment with cone and roller.

FINANCIAL NOTES OF AUTOMOTIVE INDUSTRY

Allen Motor Increases Capitalization

The Allen Motor Co., Columbus, O., is carrying out a financial programme to add to its working capital as part of plans for increasing production. Under the proposed plan, which was legalized at a meeting of stockholders May 11, 14,817 shares of the present outstanding common stock, with a par value of $100 a share, will be retired and 300,000 shares of non-par common will be substituted. Arrangements for the immediate sale of 100,000 shares have been made with an underwriting syndicate headed by a group of Columbus bankers, and a large proportion of this will be taken by present stockholders of the company. This plan will provide $700,000, which will be put into the treasury immediately to increase the working capital. The balance of the issue will be reserved as treasury stock for future capitalization purposes.

The refinancing plan also contemplates the issuance of $1,000,000 in seven per cent. serial notes to be retired in five years.

WILLYS-OVERLAND'S EARNINGS.

The Willys-Overland Co., Toledo, O., earned in the four months ending April 30, in excess of $6,000,000, before depreciation and Federal taxes. After the deduction of all special charges and taxes the profits were approximately $3,600,000. The dividends on both classes of preferred and common stock for the full year call for something in excess of $8,100,000; thus, in the first third of the year the company earned its preferred and common dividends with a 15 per cent. surplus.

STEWART-WARNER STOCK INCREASE.

The Stewart-Warner Speedometer Corporation, Chicago, has increased its common stock by 200,000 new shares, no par, of which 60,000 will be exchanged for Stewart Manufacturing Corporation common stock, no par, share for share, the remainder to be kept in the treasury for later issues.

A special meeting of the stockholders will be held in Richmond, June 4, to approve of the new issue of common stock.

STROMBERG CARBURETOR SURPLUS.

The Stromberg Carburetor Co. of America, reports, for the first three months of the year a surplus, after Federal taxes, of $204,478, equivalent to $2.72 a share on the capital stock. This compares with $86,702, or $1.73 a share for the quarter ending March 31, 1919. The Federal tax reserve for the quarter just ended was $35,000, or $10,000 more than for the corresponding period of the previous year.

OLD MOTORS STOCK RETIRED.

The old stock of the General Motors Corporation has been retired from the New York clearing house list, its place being taken by the new General Motors certificates, issued on the basis of 10 shares of the new for one of the old.

For violent fluctuations on the market, it is stated that General Motors old stock probably held the record. Its widest decline was 65 points in a single day in the November break; it has made gains, however, almost as great in a single day. On the day it was retired, May 5, it was quoted at 312, having made a characteristic advance for the day of 21½ points.

It is reported that a strong pool has been formed to look after the interests of the new stock. In the curb market, before being listed, it sold above 41. Its range on the big board has been between 28 and 40. It closed May 5 at 31, a gain of two points for the day.

SPICER RECAPITALIZATION APPROVED.

At a recent special meeting of the stockholders of the Spicer Manufacturing Corporation, South Plainfield, N. J., the proposed recapitalization plan was approved, which provides for the authorization of 100,000 shares of new eight per cent. preferred stock, of which 30,000 shares are to be issued immediately, and 600,000 shares of common stock of no par value, of which 280,000 shares are to be issued at present.

The Spicer Co. called for payment on April 1 all of its first preferred stock outstanding at $115 a share and accrued dividends.

At the annual meeting Charles E. Merrill was elected a member of the board of directors, succeeding E. C. Lynch. Other directors were re-elected.

$10,000,000 TIRE CONCERN.

W. W. Wildman, former president of the Portage Rubber Co., heads the new Wildman Rubber Co., which has taken over a tract of 60 acres in Bay City, Mich., where a $2,500,000 plant will be erected, in anticipation of a daily production of 7500 tires and tubes. It is planned to employ 1500 men in the first unit, which must be built within 18 months at a cost of $1,000,000, according to an agreement with the Bay City Board of Commerce, the site being furnished free on that condition. The company's Delaware corporation is capitalized at $10,000,000.

MERCER'S NET $152,763 FOR QUARTER.

The Mercer Motors Co., Trenton, N. J., reports net earnings, for the quarter ending March 31 of $152,763, before payment of Federal taxes. This is at an annual rate of $601,000, or better than $6 a share on the outstanding stock.

New Business Enterprises in April

From returns, compiled by the New York Journal of Commerce, it is shown that 1262 companies, each with an authorized capital stock of $100,000 or over, were incorporated under the laws of the principal states in April, representing $1,354,262,400. This compares with a total capitalization of $515,665,300 in the same period a year ago, when 700 companies were organized. The March returns this year indicated that 1273 new enterprises took out charters with an authorized capital stock of $1,375,797,000.

Since Jan. 1 incorporations have involved the phenomenal sum of $6,169,381,000, or an increase of 262 per cent. over the figures of 1919, and 570 per cent. as compared with the corresponding period of 1918.

REORGANIZATION OF MARION TIRE & RUBBER CO.

The Marion Tire & Rubber Co., Marion, O., maker of pneumatic automobile tires and tubes, was recently bought by capitalists in Akron, O., and reorganized, the capital being increased from $300,000 to $750,000. The officers of the new organization are:

President, Allen F. Ayers, vice president of the Ohio Savings & Trust Co., Akron; vice president, W. E. Cameron, Marion; secretary, W. E. McLaughlin, treasurer of the Mohawk Tire & Rubber Co., Akron; treasurer, Sam F. Zillox, president of the Commercial Printing & Lithographing Co., Akron.

The company plans increased production and a sales campaign for the distribution of the Marion products through dealers.

MAXWELL-CHALMERS MERGER.

The time for the deposit of securities in the Maxwell-Chalmers merger has been extended to Aug. 1 in order to permit the organizers an opportunity to make any changes in the plans which have been under consideration. It may be decided on, it is reported, to issue $15,000,000 seven per cent. notes instead of $10,000,000 as provided in original plan.

INTERNATIONAL MOTOR PROFITS.

For the quarter ending March 31, the International Motors Co. reports net profits of $968,057, after allowing for interest charges and Federal taxes. This income was obtained on the production of 1870 trucks, it is reported.

VESTA BATTERY'S INCREASE.

The Vesta Battery Co., Chicago, formerly the Vesta Accumulator Co., announces an issue of seven per cent. cumulative preferred stock to the amount of $450,000, and 30,000 shares of common stock.

Nelson, formerly with the Kansas City Auto Supply Co., has bought the business of the Weldon Sales Co., local distributor of Oildag and Gredag lubricants. Mr. Weldon will retain a financial interest in the Southwest Sales Co., but is directing his personal efforts to the sale of axles and gears manufactured by the Replacement Parts Co., which concern has a contract covering the entire territory west of the Mississippi river.

Kansas City, Mo.; The firm of Smith & Rukes, expert repairer on Cadillac and Buick cars, has moved from McGee street, near 15th, further down McGee street to No. 2326, near the corner of 24th street.

Kansas City, Mo.; The Butler Motor Co. is moving into its new building on Walnut and Grand streets, between 26th and 27th streets.

Kirkville, Mo.; Fred Still and Harry Jones have purchased the garage owned by Bret Stephenson and will add one or more stories and when completed this will give the Auto Sales Co. the largest floor space of any automobile establishment in this section of the state.

Marshall, Mo.; Russell Nicholas has moved his garage from the Star mill to a building on the south side of West North street which he is equipping with modern automobile repair tools and appliances.

Mayview, Mo.; The Bertson & Roack Garage has been purchased by Carl Brothers.

Peculiar, Mo.; The Farmers' Garage has been sold to Thomas Hill and Charles Trog. Mr. Hill has been in charge of the business since its inception. The new concern will purchase new equipment and supplies.

Rolla, Mo.; R. T. Montgomery has sold his interests in the Ozark Garage Co. to George W. Castleman, Robert Castleman and Rowe E. Carney.

Stanberry, Mo.; Rose L. Wharton has bought the garage of Mr. Murry on Park street and will make extensive improvements.

Bigheart, Okla.; Vandervort & Crawford has opened a vulcanizing shop in the building opposite the Times office.

Chickasha, Okla.; The Brawley Motor Co. has been formed, headed by Sidney Brawley, which will represent the Chandler and Buick lines. It will be located in the building opposite the Early hotel, recently vacated by the Buick agency, which has moved into its new quarters opposite the postoffice. Earl Barton of Barton Brothers is also interested in the Brawley Motor Co., which will operate a garage and service station.

Deer Creek, Okla.; The Motor Sales Co.'s garage is nearly ready for occupancy. The new building will afford 15 by 40 feet of office space, a 30 by 40-foot show room. 50 by 40 for the mechanical department and 50 by 50 for storage.

Guyman, Okla.; J. W. Jordon is soon to commence the erection of a large garage and supply store.

Idabel, Okla.; J. B. Wyrick is constructing a building to house his rapidly growing automobile business.

Pawhuska, Okla.; The J. R. Laws Ford Sales & Service Co. is to erect a garage at the corner of Leahy street and the Midland Valley right of way just south of the new home of the Hudson-Osage Motor Co. The new building will be 140 feet square and will afford 19,600 feet of floor space. The contractor is the Love & Martin Construction Co., Oklahoma City, and the cost will be approximately $60,000.

Tires & Tire News

Smith Superintendent Syracuse Rubber

One of the notable instances of success among young men in the tire and rubber industry is that of K. D. Smith, the newly appointed factory superintendent of the Syracuse Rubber Co., Inc., Syracuse, N. Y. Mr. Smith was formerly with the Miller Rubber Co., Akron, O., and has had 11 years' experience in both the chemical and manufacturing end of the industry. From 1909 to 1915 he was engaged in experimental, analytical and research work for rubber corporations of the Akron group. In 1916 he went to the Miller company as a compounding chemist, where he remained until November, 1919, when he joined the Syracuse Rubber Co. Under his supervision production at the Syra-Cord tire plant has been increased from 100 to 200 to 700 a day, and by fall Mr. Smith states, it is planned to again double this capacity.

GOODRICH TIRE REPAIR SCHOOL.

Every 30 days a new contingent of men from various trades arrive in Akron. O., to attend the tire school of the B. F. Goodrich Rubber Co. at its factory. Classes are started at definite periods, the next opening date being May 24. Approved factory methods of repairing fabric and cord tires and tubes are learned by actual service with tools and apparatus at the bench, and the course includes lectures on advertising, accounting and every subject the prospective tire merchant or repairer will need when he starts his own business.

Complete information may be obtained by addressing the Goodrich Tire Repair School, Akron, O., or any of the Goodrich branches in the principal cities.

BURDICK TIRE CO. TO INCREASE PRODUCTION.

The Burdick Tire & Rubber Co., Noblesville, Ind., hopes to have its new plant ready for occupancy by the first of June and, by the last of July, to be turning out 250 casings and 500 inner tubes a day. The new unit will be one story, of brick, 15 by 120 feet. By the end of the present year the company plans to increase its production to capacity, which will be 200 tires and 5000 inner tubes daily, and 450 people will be employed.

GOODYEAR AERIAL FIELD AT LOS ANGELES.

To stimulate public interest in aerial transportation, the Goodyear Tire & Rubber Co. of California, cooperating with the city of Los Angeles, has established a municipal aviation field at its new factory now under construction in that city. It comprises over 80 acres and has four hangars for the accommodation of airplanes and a fifth is to be added in the course of the next month.

It is the intention of the Los Angeles officials to have this coast, Wingfoot field, open for use by any planes wishing to land to discharge or take on passengers, or for refuelling. It is three-quarters of a mile long and half a mile wide, entirely level and composed of hard ground, allowing landings to be made anywhere. To mark the field so that it may be easily distinguished by aviators there will be a stretch of fine turf, 400 feet wide, running diagonally across it. Painted stripes on one of the 130-foot smoke stacks of the Goodyear factory will also serve as further guide to fliers.

K. D. Smith, Factory Superintendent, Syracuse Rubber Co., Syracuse, N. Y.

Growth of Akron as Rubber Center

Recent reports from the United States Census Bureau give justice to the claims of the residents of Akron, O., that it is the fastest growing, most remarkable city in America. Ten years ago it had a population of 69,067; according to the latest census returns, it now has 208,435, an increase of 201.8 per cent., which is considerably more than that shown by any other city of 50,000 inhabitants or more.

The mushroom growth of Akron started about 12 years ago, just about the time the rubber industry passed out of the chrysalis stage and began to show certain signs of becoming what it is today—one of the foremost industries of the country. And it is averred that all that Akron is today it owes to rubber. The first rubber factory in Akron is stated to have been founded in 1870, just 50 years ago, by Dr. B. F. Goodrich, a resident of New York. He started with 35 employees in a building 40 by 100 feet. Today the B. F. Goodrich Rubber Co. has 28,000 employees and 62 buildings with hundreds of acres of floor space.

The rubber industry received its first pronounced impetus when the bicycle was invented and rubber tires were first needed. The tremendous growth did not come, however, until automobiles were invented. Factories were expanded and thousands of new workers added to meet the demand for automobile tires. The demand has never been fully met and today the rubber companies are growing as fast or faster than they ever grew before.

In 1910 the rubber companies had 13,631 employees and produced goods valued at $40,000,000. Last year the employees numbered 72,282 and the production was valued at $427,796,000. During the same 10-year period the annual tire production increased from 4,000,000 to 20,000,000. At present the Akron rubber companies have about 80,000 employees and are manufacturing tires at the clip of a tire a second.

Word has been received of the death of C. R. Hatcher, general southern representative for Portage tires in Raleigh, N. C. He had been connected with the Portage Co. for three years.

Rudisell Heads Overland Tire Co.

Among the tire manufacturing companies that have just gone into production is the recently organized Overland Tire & Rubber Co., Omaha, Neb. This concern is headed by Fred C. Rudisell, who is known throughout the western territory as a tire salesman of superior ability, his official title being general manager, secretary and treasurer.

Ten years ago Mr. Rudisell started in the tire business as a salesman for the Gustin Bacon Manufacturing Co., Kansas City, Mo., distributor of Diamond tires in that territory. Shortly afterwards he was appointed manager of the Diamond branch in Omaha, Neb. Seven years ago he left the Diamond company to take charge of the Firestone interests in Omaha as branch manager, with territory embracing the states of Nebraska. Colorado, Wyoming, southern South Dakota and western Iowa. While in charge of Firestone affairs in Omaha, that territory rose from a place 11th in volume of Firestone sales and ninth in cost of operation, until five years later it was first in volume of sales, first in economy and lowest in percentage of operating cost, and the amount of business during his last year with Firestone was $2,000,000.

When Mr. Rudisell considered embarking in the tire manufacturing business on a personal basis, the formation of the Overland Tire & Rubber Co. offered the desired opportunity. As an example of the confidence placed in Mr. Rudisell by the tire trade in general it may be cited that several of the new company's most important distribution centers were contracted for even before an Overland tire had been seen by the distributors. The company today is working at full capacity with plans agreed upon for a largely increased production next year.

Since August, 1914. hourly earnings at the Goodyear plant at Akron. O., have increased at the rate of 119 per cent.

W. R. McCarthy, Sales Manager, Standard Tire Co., Willoughby, O.

Fred C. Rudisell, General Manager, Secretary and Treasurer, Overland Tire & Rubber Co., Omaha, Neb.

NEW SALES MANAGER FOR STANDARD TIRE.

W. R. McCarthy has recently assumed the duties of sales manager for the Standard Tire Co. of Willoughby, O., maker of "Tiger-Foot" tires. Mr. McCarthy has been connected for a number of years as branch manager with such well known tire concerns as the Firestone Tire & Rubber, Rubber Products and Portage Rubber companies. His activities have always been confined to the sales department, in which he has gained an enviable reputation as an organizer and executive.

The Standard Tire Co. is erecting buildings to take care of its increased business and the total sales for 1920 bid fair to exceed the allotted quota for that period.

SYRA-CORD TIRES SURMOUNT FREIGHT EMBARGO.

The Syracuse Rubber Co., Syracuse, N. Y., during the recent freight embargo, used its test car, a Pierce-Arrow "66" for a double purpose, by employing it for the delivery of Syra-Cord tires to dealers to such points as Altoona, Pa.; Cincinnati and Cleveland, O.; Chicago and a number of other cities and towns in the middle west, and at the same time the tires on the machine were given the severest of tests. The tires with which the Pierce-Arrow machine is equipped have now traveled 8000 miles and show little signs of wear. It is also interesting to note that, although 36 by 5½-inch tires are recommended for this model of car, the tires were 35 by five-inch, to make the test more severe.

REMOVAL OF STANWOOD RUBBER.

The executive offices of the Stanwood Rubber Co. have been moved from 9 East 40th street to 6 East 39th street, New York City.

Portage Rubber Co.'s New House Organ

The initial number of the Portager, a very attractive house organ, to be issued monthly under the editorship of Clyde S. Thompson, by the Portage Tire & Rubber Co., Akron, O., bespeaks a warm welcome among all Portage dealers, distributors and branches for whose benefit and service it is primarily intended. Its scope and purpose are clearly outlined in the salutatory and the publication promises to be somewhat unique in its field both in the treatment of subjects and matter of make-up.

The "Portage Creed" by John W. Maguire, vice president and general manager, on the last cover page, makes a fitting climax to its contents, as follows:

> "To make a tire is not enough; to wrap it and pack it and ship it is not enough; to sell it to the dealer is not enough. We must all cooperate so that the tire will be the best, the handling the best, the advertising the best, the salesmanship the best and our customers the best satisfied users of tires in motordom."

NEW FIRESTONE BRANCHES.

The Firestone Tire & Rubber Co., Akron, O., has opened branches, for the distribution of its product, at Duluth, Minn.; Portland, Me., and Denver, Col., bringing the total number of Firestone branches up to 65 in the United States, which serve more than 47,000 dealers.

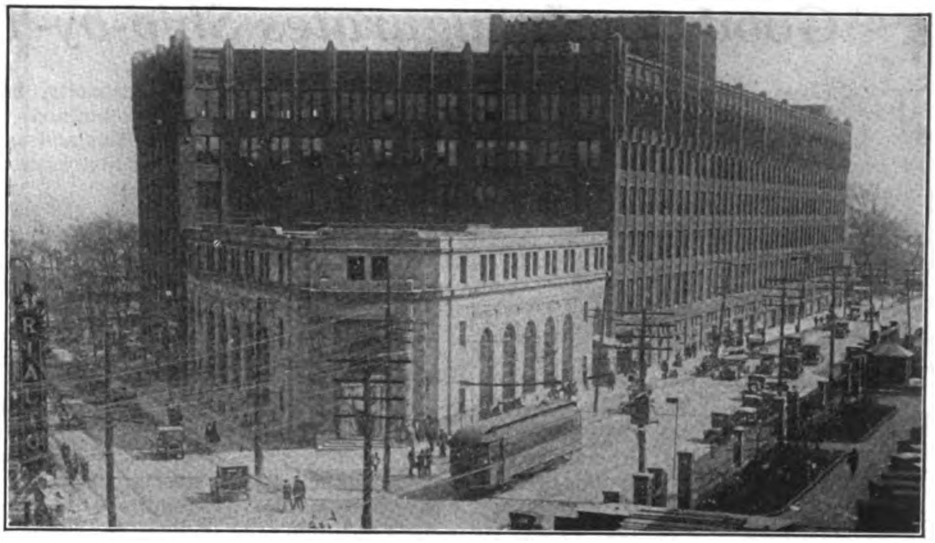
The company's sales forecast for the present year places the value of its production for that period at $150,000,000.

HOAGLAND WITH MALAY RUBBER.

The Malay Rubber Co., the new distributing tire company of Cleveland, has retained the services of E. M. Hoagland, formerly western district manager of the Amazon Rubber Co.

E. M. Hoagland, Malay Rubber Co., Cleveland, O.

Beautiful Goodyear Hall at Akron, O.



Goodyear Hall, Headquarters of New Industrial University and Recreational Activities of Goodyear Tire & Rubber Co. at Akron, O.

Conceded to be perhaps the finest industrial university and recreational institution in the world, Goodyear Hall represents one of the most pretentious buildings ever erected by an industrial concern for the welfare of its employees. Complete in every detail, the building includes an auditorium of handsome appointments and with a seating capacity of 1686, the largest stage and theater in Akron and one of the largest in Ohio; a gymnasium which ranks in completeness of equipment and size with the greatest college indoor athletic stadiums in the United States, bowling alleys, target and rifle ranges, bath rooms and lavatories for Goodyear university, a cafeteria capable of accommodating 8000 daily. And dormitory rooms for both men and women, in addition to recreational rooms and the spacious library.

In the basement are locker rooms with 5500 lockers, 12 bowling alleys, six rifle ranges, a large clothes checking room and barber shop. Wide corridors bisect the main floor longitudinally, separating the 12 store rooms and the auditorium and gymnasium. The auditorium is regarded by architectural experts and interior decorators as one of the most elegantly appointed auditoriums in the state. The main floor and suspended balcony will seat 1686. The stage is 40 feet across, with double apertures, so as to permit its use by both the main auditorium and gymnasium. The gymnasium will seat 5000 people. An indirect lighting system is used throughout the auditorium with the exception of hanging candle fixtures casting a mellow glow upon mural panels arranged in attractive manner on the side wall. French Renaissance decoration scheme is used.

The immense gymnasium, with gallery, has a floor space of 172 by 100 feet, large enough to permit five basketball games simultaneously.

On the second floor, in addition to the auditorium balcony and emporium and balcony to the gymnasium, are tool rooms, writing and music rooms, a spacious and well equipped library and a large community room for men. In the triangular space near the intersection of Goodyear avenue and East Market street are located dormitories for 300 men.

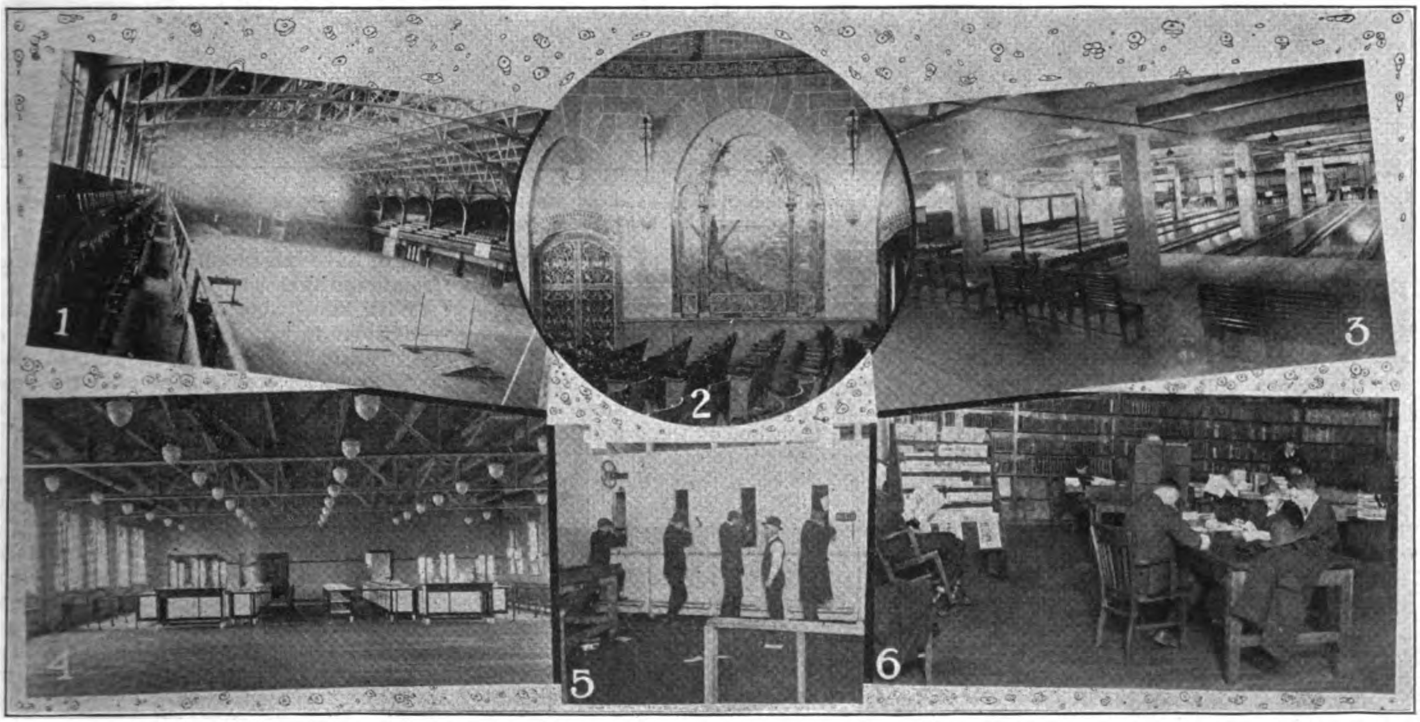
On the third floor are located the legislative chambers of the House of Representatives and Senate of the Goodyear Industrial Republic.

The remainder of the same floor is devoted to women's recreational rooms, including a large and airy assembly room, planned for sewing and domestic science classes. This floor also includes dormitory provisions for women.

The Goodyear Industrial university will occupy the entire fourth floor. It includes accommodations to permit an enrollment of 5500, the 65 class rooms and studies being augmented by fully equipped laboratories on the fourth and fifth floors for various courses of study. Near the front of the building a large student's assembly room also is provided

An industrial cafeteria, equipped with every up-to-date culinary appliance, will occupy the second floor.

On the seventh floor are well equipped picture departments.



Interior Views of Goodyear Hall: 1—Gymnasium, One of Largest in Country; Will Seat 5000; Floor Permits Playing of Five Games of Basket Ball Simultaneously. 2—One of Two Murals in Auditorium; Painting Is of the Bay of Naples. 3—Bowling Alleys, 12 in Number. 4—Cafeteria, One of the Largest in the Country; Will Accommodate 2000 an Hour, and Is Equipped with Conveyors for Dirty Dishes and Automatic Dish Washing and Drying Machines. 5—Six Rifle Ranges in Basement. 6—Goodyear Library for Employees.

Goodyear Inaugurates Ship-by-Truck Movement

THE resourcefulness of the Goodyear Tire & Rubber Co., Akron, O., in the organization and dispatching of truck trains for the transportation of fabric and other materials overland from the East during the railroad labor troubles and consequent freight embargo has been a matter of general interest.

The Goodyear plant employs about 33,000 workers. The output of tires is upwards of 30,000 daily, but this is not sufficient to meet the enormous demand, and if the works should be closed for even a brief period the production loss would be reflected in every branch and accessory. Obviously the main object was to maintain the production of tires, the shipping problem being of secondary consideration, for even the utmost efforts of the company could not make general distribution possible or practicable until normal railroad operating conditions could be restored.

The Section of the First Train Loaded at Goodyear, Conn., Composed of Mack Trucks Chartered in New York City, and Driven 175 Miles to Be Freighted, Awaiting the Last Units in the Highway Near the Mill.

In a number of towns and cities in New England are located mills which produce cotton fabric used in the manufacture of Goodyear cord and fabric tires. Among the prominent plants are the Goodyear mill at Goodyear, Conn., formerly Williamsville; the Connecticut mills at Danielson, Conn.; the Jenckes Spinning Co. at Pawtucket, R. I.; the Naushon Weaving Co. and the Passaic cotton mills at New Bedford, and the Ninigret mills and the Westerly Textile Co. at Westerly, R. I. Some of these mills were working constantly to keep up production to the delivery schedule. Production, therefore, was not threatened, but deliveries were delayed on account of embargoes outside of New England.

From the viewpoint of Goodyear officials this was the greatest industrial emergency they had ever faced. The Goodyear plants at Akron must have the fabric to continue operating; the mills were turning it out to capacity, but transportation could not be obtained.

Between the mills of New England and the Goodyear plant were the highways of the nation, open to all, unobstructed, and traffic over them could move to the limitation of the vehicles. At the beginning of the war the Goodyear company had inaugurated a truck service, hauling fabric from Goodyear, Conn., to Akron, and shipping tires from Akron to various points between that city and Boston. This had been continued during the war and then reduced as the railroad transportation had improved.

The officials of the company saw that if production of tires was to continue uninterrupted, the resumption of truck transportation was imperative, but on a scale more extensive than that adopted during the war, and it was decided to undertake what was to be the largest emergency freightage enterprise ever engaged in by an individual concern, and which, from the results obtained, will no doubt have material bearing on the future of long distance highway haulage in this country.

Decision to haul fabric from New England to Akron was, however, by no means a solution of the condition. The company did not own a sufficient number of trucks to carry the tonnage required. Vehicles must be obtained. There was no certain source of supply. To assemble them in the vicinity of Akron and send them East would require time, and time was extremely valuable, to say nothing of the cost. To obviate this delay the trucks must be chartered in some of the eastern cities. There was no organization that could be depended upon to undertake such a contract. The Goodyear company must develop its organization and obtain equipment, and quick work was necessary.

When decision was reached to do its own freightage the project was referred to three departments, transportation, fabric and publicity, and the heads of these were summoned and instructed to leave for the East at once and ship Goodyear fabric as quickly as possible. The transportation department was represented by C. W. Cockrell, who normally would deal with railroads, and by M. D. Scott, who has directed the operation of the Goodyear Boston-Akron truck freight service; the publicity by Carl H. Stubig, and the fabric department by the representative stationed in New England, who divides his time between the mills.

Engaging trucks and organizing the trains was assigned to M. D. Scott, who is known as the Goodyear transportation engineer. Mr. Cockrell was to make the contracts and look after the detail of shopping and distribute the trucks to the different mills after conference with the fabric department's representative, who was to have information of the volume of freightage that was available.

With knowledge of the roads and the conditions in which the truck trains must be operated, Mr. Scott determined that each group of trucks sent over the road should be led by a pilot, who would be practically in charge, and who would necessarily have a car.

Assembling Trucks Quickly Imperative.

As there was no knowledge of trucking contractors in New England or the trucks that might be available, decision was reached to hire a considerable number of machines in New York and send them over the road to Providence, rather than lose the time that might be required to obtain them nearer the mills. There was every reason to make the smallest number of contracts for trucks, and good ground to assume that contractors of fleets with standardized vehicles would be better able to engage in such haulage than owners of one or two trucks, whose

A Group of the Houses Erected at Goodyear Expressly for Employees of the Goodyear Mill and Rented for Nominal Weekly Payments.

experience was limited to comparatively short distances. Contracts were made for three groups of machines. One was with the Pierce-Arrow Trucking Co., Brooklyn. Another was with Callan Bros., and a third was with the Forwarding Auto Trucking Co.

All Trucks Five-Ton Units.

The trucks accepted for the work were nothing but five-ton units.

As each truck accepted was loaded with approximately 10,000 pounds of fabric, worth about $2.30 a pound, having a gross valuation of from $23,000 to $25,000, and this was insured against fire, damage of different kinds, theft, etc., much care was taken in covering and protecting the bales against every probable source of danger.

The Goodyear truck train organizers made headquarters at Providence, where a Goodyear branch is located, and practically in the center of the group of mills.

Between Tuesday morning, April 13, and the following Saturday afternoon the Goodyear traffic department started five truck trains, all five-ton machines, each loaded to capacity and carrying an aggregate of 800,000 pounds of tire fabric, valued at $2.30 a pound. Assuming 10,000 pounds of fabric to a load, which is as near an estimate as is practicable, the total shipments had a valuation of about $1,840,000, which far exceeds the value of any truck fleet freightage ever made for any concern.

Planned to Carry Return Loads.

It was planned to have the trucks carry capacity return freights of rubber products from the factory at Akron, such as shoe soles and heels and rubber mechanical goods for distribution in some of the eastern commercial centers in order to cut down as much as possible the cost of transportation of the fabric from the East. But there was no probability that they would bring full loads of tires, for these goods are too bulky for the average truck body.

The total number of trucks loaded, making up the first five trains, was 80; 23 at Pawtucket, 20 at Goodyear, 20 at Danielson, 12 at New Bedford and five at Westerly.

The progress of the trucks was followed very carefully by the traffic department of the Goodyear company, each pilot making report by telephone or night letter to Providence, and later on to the Goodyear factory at Akron, giving the mileage and the condition of the trucks, the weather, mishaps and the prospects.

The route chosen was the Lincoln highway from New York, and the best known roads and those that were considered to be in the best condition were used for the connecting points.

The first fleet was absent 24 days from the time the start was made from New England to the date of the return, and the mileage reported for the round trip was 1610 miles. However, owing to condition of the roads, which necessitated a number of detours, and various mishaps to the vehicles en route, serious delays were found inevitable, as it was necessary for all the components of each fleet to proceed as a unit under the direction of a pilot experienced in service over the regular Goodyear Akron-Boston express route.

GOODYEAR PROTECTS EMPLOYEES AGAINST PROFITEERS.

The Goodyear Tire & Rubber Co., Akron, O., believes in protecting its 31,000 employees in Akron as far as possible from profiteers; so, through a committee of its Industrial Assembly, food has been bought for distribution at cost prices. Three car loads of sugar and one of ham were bought recently, and during the winter all kinds of food was resold at reasonable prices and the activities in this field extended even to made-to-measure clothing.

GOODRICH MAINTAINS MODEL POLICE FORCE.

A police force as large as that maintained by the average city of 50,000 inhabitants is employed by the B. F. Goodrich Co., Akron, O., to safeguard the interests of the company and its 25,000 employees. The system of surveillance that has been established is very comprehensive and efficient and, although the company's buildings cover more than 100 acres, every nook and corner of each building is visited hourly throughout the day and night. The force is always on hand to quell disturbances or recover stolen property. Detection of fires is also part of the patrolman's duties.

INTERCONTINENTAL REPORT.

The report of the Intercontinental Rubber Co. for 1919 shows net profits, after deducting all charges and federal taxes of $101,111, equal to 35 cents a share eaned on the $29,031,000 capital. The surplus account for the year shows total profits and income from investments amounting to $215,237. The profit and loss surplus at the close of the year was $4,446,079.

M. J. O'Connor, who has been identified with the McLean Tire & Rubber Co., E. Liverpool, O., since its organization, 14 years ago, has been appointed general sales representative in New England, with headquarters in Boston.

Up-to-Date Methods of Vulcanization and Tire and Tube Suggestions

(From Goodyear News.)

TRUCK SIZE TUBES NEED LONGER CURE.

The method of repairing Goodyear truck tire tubes is very much the same as that followed in the repair of automobile size tubes.

In order to make a proper repair, vulcanizers must increase the length of the cure and instead of using G-180 as a tube stock, G-170 should be used.

In repairing a break or puncture the opening should be kept as small as possible and should be beveled so that the bottom of the hole will be smaller than the top. This should next be buffed carefully, making sure that the inside of the tube is roughened with a rat-tail file for at least a distance of 1½ inches around the hole.

C-25 cement should then be used, applying one fairly heavy coat to the side of the hole and also to the buffed surface on the inside of the tube.

G-190, 5/64 inch gauge should then be inserted through the break or puncture by means of a pair of sharp-nose pliers. Care should be taken that this patch is cut large enough so that it will overlap the break by at least one inch.

The stock should be washed well with benzine and slipped through the hole before it is dried completely. When this is done and before stitching the patch down, great care should be taken to hold the G-190 away from the cemented surface inside the tube until the benzine has evaporated completely. It is essential that the uncured side of the G-190 be placed against the cement on the inside of the tube.

After this the hole should be filled with small strips of G-170 and stitched. The repair should be built up so that it is slightly higher than the surface of the tube. When this is done it can be placed on a hot plate with a piece of holland over the repair and cured.

It has been found that in curing repairs on six-inch and seven-inch truck tire tubes, best results can be secured by curing the repair for 25 minutes at 60 pounds steam pressure, while repairs on eight-inch, nine-inch and 10-inch tubes should be cured 30 minutes at 60 pounds.

NEW HOLE FOR VALVE STEM.

When repairing a torn or broken valve hole the valve stem should be pressed back into the tube and a new hole cut in the tube somewhat smaller than the valve stem.

The surface around the hole in the tube should then be buffed and a Goodyear valve patch applied. In applying the valve patch, C-25 cement can be used or it may be put on with a small amount of C-35 Self-Cure or Acid Air cement.

The old valve hole should be repaired the same as in repairing punctures or cuts.

When it is found necessary to put in a new valve stem, a hole should be cut in the tube large enough to get the old valve out and to insert the new one.

The hole should be cut on a level and repaired as described. A repair man should never try to remove the valve through the regular valve hole and insert a new one, as there is danger of tearing the valve patch and ruining the tube.

STEAM SHOULD NOT BE USED IN AIR BAGS.

One repair man has asked if it would be all right to use steam instead of air pressure in bags used for sectional repairs to eliminate the necessity of curing on an inside vulcanizer.

It is not advisable to use an ordinary air bag for this purpose for the reason that it is not constructed for use as a steam container. As it has no outlet, condensation would result and water would form in the bag. Never apply the section to an inside patch vulcanizer to finish the cure. The time specified gives 40 pounds steam pressure with Goodyear repair material without the aid of the inside patch vulcanizer.

CASINGS SHOULD BE DRY BEFORE REPAIRS ARE BEGUN.

Certain porous conditions resulting from moisture in the casing to be repaired can often be traced to numerous tread cuts through which water has penetrated and soaked the fabric of the carcass. Before repairing, casings should be carefully inspected for tread cuts and consequent moisture in the carcass and allowed sufficient time to dry thoroughly. If there is moisture in the casing when it is built up the heat applied in curing will cause steam to form between the plies and the result will be bubbles and an imperfect cure.

DON'T DELAY CURES.

Should repair jobs hang 10 days after being built up? asks a northern repair man. No; there are two good reasons why repairs should not be allowed to stand or hang longer than 24 hours. Hanging without pressure will probably result first in loose spots upon which bloom will collect and, secondly, reduce the adhesion of the repaired parts when the cure is applied. The outside repair material toughens with age and will prevent a smooth repair.

BUFF OFF AT SLANT.

In cutting off rubber for spots on a casing it is well to remember that the buffing should be done at a slant, not perfectly straight, to insure the best results.

TO PREVENT RUSTY RIMS FROM DAMAGING CASINGS.

Iron rust eats into canvas very quickly and for this reason the rims should be examined and cleaned a few times each season. Assuming that the rim is clean, as it should be when the tire is attached, it may be kept so indefinitely if proper attention is given to keep the rims straight and if the locking nut on the valve stem is drawn tight so that no water can work in through the hole in the rim.

If, on inspection, the rim is found to be rusty, even though merely in small spots, the rust should be sand papered off and the rim given a coat of graphite or thin shellac. Ordinarily stove polish, which contains graphite, is also excellent for preventing rust and making it easy to remove a tire in case of an emergency.

Any dent or bend in a rim should be corrected as soon as discovered, for if the bend is inward a great strain is brought on the bend and side of the casing. If the bend happens to be outward there is a fine chance for water, oil and dirt to work in between tire and rim.

FABRIC KNIFE FROM RAZOR BLADES.

A repair man writes that an excellent fabric knife can be made from a safety razor blade. The handle can be made of wood, into which a piece of iron or steel block has been inserted with two holes bored. This blade can be gauged to any thickness of stock and, being very thin, will handle neat trimming jobs.

POROUS CONDITIONS AFTER CURING.

One repair man has complained several times about the porous conditions of repair jobs after curing. Upon investigation the fault was found to be damaged bead molds. The bead molds had been battered and bent until they would no longer fit the cavity snugly and would not slide forward. The sectional mold being tapered, the beads wedged before being placed into position. The clinch on the bead held the casing firmly and did not allow it to rest on the bottom mold of the cavity.

STEAM IN SECTIONAL MOLDS.

In the use of a sectional mold in which air bags are employed in the curing of pneumatic truck casings, the question has been asked, how is the steam turned on into the mold?

In the type usually used for this sort of work a steam trap and regulator are part of the equipment and the steam is turned on in the mold by means of a separate steam line.

ACCESSORIES, EQUIPMENT AND TOOLS FOR THE GARAGE AND REPAIR SHOP

The Bestall Coil Tester has been designed for the service station repairer, its chief feature being that coils that have become short circuited or damaged can be tested on the car without the necessary work of removal. This feature proves a time saver in determining what is wrong with the coil and makes testing practically an instantaneous operation.

The equipment is compact in the extreme. the entire outfit measuring only 11x6x4 inches, put up in a neat mahogany finished, nickel trimmed case and equipped with all the necessary wire leads with slip and clip terminals.

The simplicity of the equipment is unusual in view of its high efficiency.

Manufactured by the Bestall Electric Co., 14 East Jackson boulevard, Chicago, Ill. Prices and literature on application.

The Roberts Cut Out and Safety Valve is designed to prevent bursting the muffler shell when an excess of raw gas collects in the muffler. The device is equipped with a spring controlled pop valve which acts automatically. When raw or burnt gases enter the exhaust pipe faster than they can pass through the muffler, the pressure opens the spring valve, permitting the gas to pass out without damaging the muffler. As soon as the pressure is relieved the valve automatically returns to its seat.

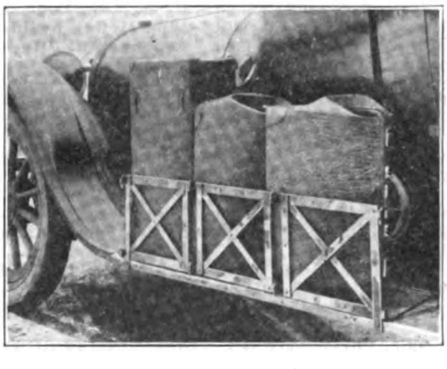
PATENT PEND
ROBERTS CUTOUT & SAFETY VALVE
G.E. ROBERTS 172 FIFTH ST. MILWAUKEE WIS.

This attachment also serves as a cut out operated by hand control at the driver's seat, which is attached to the valve by a light cable. It is claimed that this attachment can be made to the exhaust pipe without cutting the pipe. The cut out valve is located at the exhaust end of the muffler and when open there is a clear, unobstructed passage for the gas. The device is stated to be leak-proof and will not rattle or work loose. The attachment can be very easily made in a few moments time, as all that is necessary is to remove the old muffler head and loosen the nut on the center rod.

Manufactured by the G. E. Roberts Co., 172 Fifth Street, Milwaukee, Wis. Prices on request.

"Kompak" Luggage Carriers are designed to be fastened to the running board of the car, to carry the extra luggage of the occupants. The carrier consists of three sections joined to each other by hinges which fasten in a vertical position to the edge of the running board. Metal strips slip under the running board at the ends of the carrier frame, while the fastening bolts fit the top of the running board.

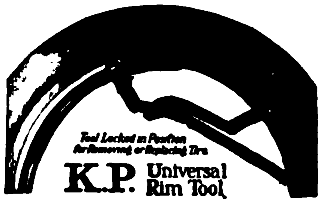
The device can be folded compactly for storing the car, and when wanted for use can be opened and extended in a few minutes time. The manufacturer states that the fastening device is so simple that a child can operate it, the luggage being held in position securely by the upright frame and the fastening device.



Manufactured by the Bersted Manufacturing Co., 765-771 Mather Street, Chicago, Ill. Price, $4.50.

The K. P. Rim Tool is designed for the rapid removal or replacement of the tire on the demountable rim, locking the rim in an open position when removing the tire and holding the rim in such a position when replacing the tire that the tire and tube are easily slipped on to the rim without the use of other tools. It is stated that tube pinching is done away with when this tool is used, as it is unnecessary to use a tool to pry the tire on or off the rim. The device consists of two adjustable jaws which can be clamped firmly to the rim at either side of the break, and are drawn up tight by two thumb screws and two bolts passing through the sides of the clamp jaws. The jaws are connected to the handle by two toggle connections in such a manner that the pressure exerted on the handle will open the rim and pass one end over the other, freeing the tire from the rim and allowing its removal.

The manufacturer states that this tool fits all sizes and makes of rims, including the Kelsey, Stanweld, Firestone, Goodrich and Baker, and locks the rim in a collapsed position while the tire is being removed or replaced.



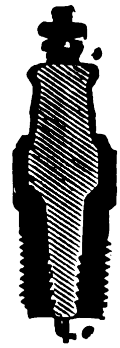
Tool Locked in Position for Removing or Replacing Tire
K.P. Universal Rim Tool

Rapping the inside of the rim at the point where it is fastened will loosen the locking device and cause the rim to open easily, it is claimed.

Manufactured by the K. P. Products Co., Inc., 250 West 54th Street, New York. Price at dealers, $4.

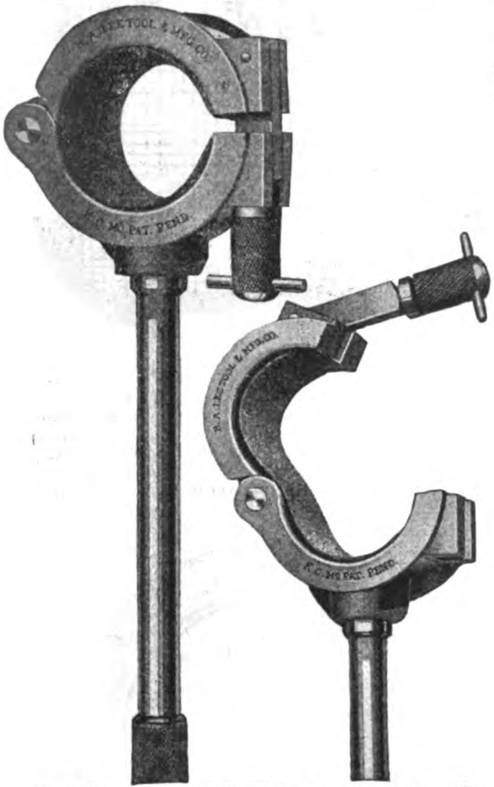
New Carbon Proof A C Plug for the Ford Car differs from the regular A C plug in the grade and shape of the porcelain used in its construction, which, it is stated, will not be cracked by heat and is superior, as it prevents the current from leaking through the insulation.

The plug is of the familiar one-piece construction adopted by the A C company as standard, having the porcelain insulator embedded in the steel bushing. The lower end of the insulator is tapering in shape towards the tip of the center electrode, the end for about one inch having a corrugated surface. It is stated that plugs constructed in this manner will not show short-circuiting defects nor will they collect carbon readily. The corrugated or saw tooth edges, it is stated, attain a sufficiently high degree of heat to burn away the carbon formed on them, thereby keeping the edges free from deposits and breaking up any short circuit.



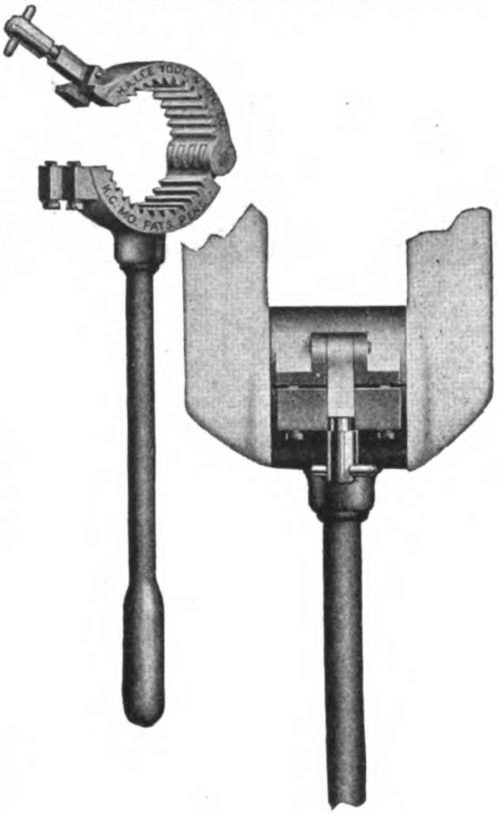
Manufactured by the Champion Ignition Co., Flint, Mich. Price, $1.

The Halee Crankshaft Reamer and Polishing Tool is designed primarily for the service station repairer and by its use that class of work, often sent out to the machine shop, can be performed by the repairer in a few minutes time in the service station. The reamer is designed for cutting down the ridges on the bearing surfaces of the crankshaft and trueing the surface, while the polishing tool, which accompanies the reamer, is used for imparting to the surface a mirror like finish.



H. A. LEE TOOL & MFG. CO.
K. C. MO. PAT. PEND.

The use of these tools is especially desirable on cars employing the pressure system of oil distribution to the bearings, as play or looseness at the bearings will cause the oil to flow out at the side of the bearings too freely, preventing the bearings from receiving proper lubrication and causing them to score or burn out rapidly. It is stated that these tools enable the repairer to do perfect work in a fraction of the time ordinarily taken, and that the necessary work can be performed by the operator from underneath the car, without disassembling the engine, by simply removing the pan, and the lower half of the crankcase. It is claimed that the Halee reamer, which is a portable hand tool, will true up worn or out of round crankshaft throw bearings to an accuracy of less than .001 of an inch in approximately 20 minutes time per bearing, leaving a very smooth, true finish.



HALEE TOOL
K. C. MO. PATS. PEND.

Manufactured by the H. A. Lee Tool & Manufacturing Co., 1505-1509 McGee building, Kansas City, Mo. Prices and literature on application.

The Red Spot Display Stand is designed for a counter display of the Red Spot Double-Duty searchlight and, as illustrated, suggests to the customer to light the searchlight by pressing the button located on the base. Two searchlights are mounted on an upright steel shaft, the lamps being connected by wires with a storage battery or other source of current, the circuit being completed by pressing the button.

This method of showing the searchlight to the trade is unique and gives the customer an idea how the light acts when in use.

Putting a display stand with a "Try it yourself" invitation within reach of the waiting customer tempts him to see how it works. He touches the button, catches on to the unique feature of the Red Spot and is half sold, the maker claims, before the clerk has a chance to say a word.

Red Spot searchlights are distributed exclusively through jobbers, who also supply the Red Spot display stands to dealers.

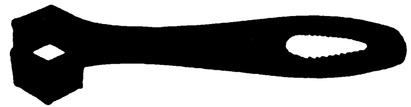
Manufactured by the F. W. Wakefield Brass Co., Vermillion, O. Prices and literature on application.

The Permaseal Oil Groove Piston Ring is a new product that is being manufactured by the same company that makes the Permaseal piston ring. This later product takes the form of an oil wiping ring for use in engines of all types where oil trouble is excessive and beyond normal. This ring is practically the same as the standard Permaseal ring, possessing its one-piece feature and dove-tail, interlocking joint, with the exception that it has a groove machined into it, which upon coming in contact with the wall of the cylinder, creates a vacuum within the groove, which wipes off all excess oil and returns it to the base of the engine. Similar to all Permaseal rings the oil groove ring has a turned, not a ground surface, this, the manufacturer claims, practically eliminating the necessity of "running or lapping in," and makes the ring quick and even seating. The Permaseal oil groove ring is now in production and the trade is being supplied through the usual channels.

Manufactured by the Grundy Manufacturing Corporation, Detroit, Mich. Prices and literature on application.

The Five-In-One Tool, a patented wrench device, is designed for many uses about the Ford car, but may also be used for work on other cars. It is made of the best malleable iron and is so arranged that when the hexagon wrench is being used for the removal of a spark plug the plug is held firmly and the porcelain is protected by the upper part of the socket.

The five-in-one tool consists of a socket at one end provided with two different sized openings, one for plugs, ½ or ⅝ inch, while the smaller opening is of correct size for the smaller hexagon nut holding the porcelain in place in the plug shell. The alligator part in the handle removes the round and square nut which holds the wire to the plug. The smaller machined part in the extreme end of the handle may be used as a spacer, giving the proper distance for the ignition of the plug. This part can also be used as a screw driver for light work.

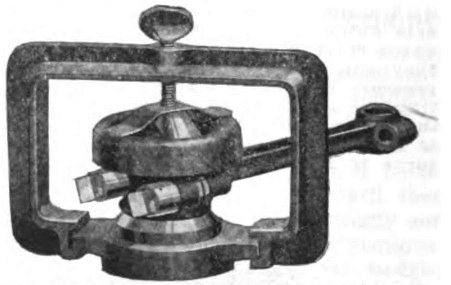


Besides being particularly adapted to the various nuts and fastenings of the spark plug, the tool will fit many of the nuts about the chassis of the car and the drain plugs under the transmission and differential.

Manufactured by William E. Rosel & Co., 858 South 17th Street, Columbus, O. Price, 50 cents.

The Babbitter for Ford Rods is especially designed for rebabbitting Ford engine connecting rod bearings. By means of the specially formed metal mandrel the bearings are cast to the exact size and shape to fit the crankshaft without any scraping or fitting. All that is necessary to be done after the rod has been removed from the babbitter is to remove the sharp corners and fins with a few strokes of a coarse file and the rod is then claimed to be ready for the crankshaft.

It is stated that the metal, being machined to the thousandth part of an inch, it is possible to cast all Ford bearings ready to fit the shaft for the usual burning-in process.



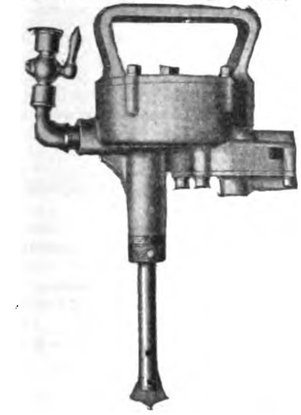
After the metal is cast and hardened the top of the mandrel is struck a blow with a hammer to shear the babbitt in the rod from that in the pouring funnel. It is stated that three to four rods an hour can be rebabbitted with this device at a considerable saving.

Manufactured by the O. A. Bremer Co., 222 Division Street, Burlington, Ia. Prices and literature on request.

If for any reason it is difficult to observe the rate of flow through the sight feed oilers mounted on the dash, try slipping a piece of white paper between the tubes to give a light background, against which the contents of the glass will show with considerable distinctness, even in a poor light.

The Jackson Pneumatic Valve Grinder consists of a compact air driven motor enclosed in an aluminum alloy case and is driven from the air pressure obtained from the ordinary garage outfit. The pneumatic valve grinder, while lower in price than the electric grinder, will after a few weeks use, it is claimed, pay for itself, and then continue to be a source of profit to the owner.

The capacity of the valve grinder is sufficient to take valves up to 3½ inches in diameter. All working parts, the motor and grinding shafts, operate in phosphor bronze bearings, while all steel wearing parts are hardened.



The grinder is furnished complete with standard bits for slotted valve, spanner for Ford valves, valve lift springs and shut off valve.

The Jackson pneumatic valve grinder, it is stated, can be used with any medium sized compressed air tire pump at a pressure of 60 pounds, as it consumes from two to three cubic feet of air a minute and has sufficient power to grind any size valve or valve cage.

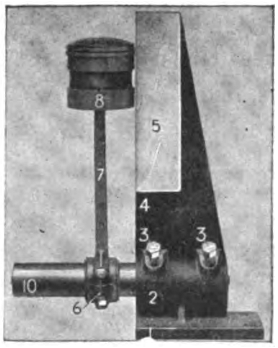
Manufactured by the Kalamazoo Railroad Supply Co., Kalamazoo, Mich. Price, $28.

The Co-Zee Battery Apron is designed for repairers who work in and about battery service stations, and come in contact with more or less acid. They are made from the best rubber stock, reinforced by a heavy backing of a special material that is extra strong and, it is stated, will not tear in ordinary use. It is claimed that acid has no effect on the rubber of the Co-Zee apron, as it has been specially treated with a substance making it acid proof.

Manufactured by the Omaha Auto Top Co., Omaha, Neb. Prices on application.

Stevens Piston Aligning and Bearing Fitting Gauge is designed to furnish the repair shop mechanic with a device which insures precision in fitting and aligning connecting rod bearings, or wristpin bushings and pistons.

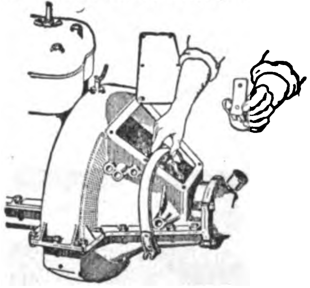
The aligning gauge consists of the following: 1, foot on which the aligning stand rests and by which the stand is fastened to the work bench; 2, body of stand with 1½-inch hole for arbors; 3, set screws for holding arbors; 4, front surface machined perfectly square with axis of arbor; 5, machined surface perfectly parallel with axis of shaft, used for testing if connecting rod is twisted, 6, connecting rod with bearing; 7, connecting rod stem; 8, piston; 10, arbors are made standard crankshaft size.

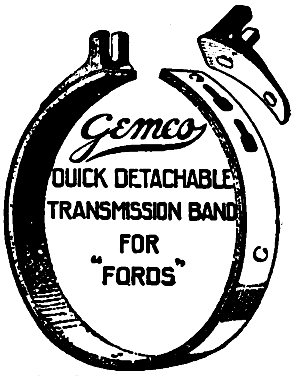


Special easily understood instructions accompany each aligning gauge, so that the mechanic will have no difficulty in testing connecting rods, bearings, wristpins or pistons for misalignment. These gauges are machined to .0001 of an inch and are extremely accurate.

Manufactured by Stevens & Co., 375 Broadway, New York City. Price, Stevens gauge with any size machined arbor, $24; extra machined arbor up to 2⅜-inch diameter, $5; special gauge for Fords, $10; special reamer for Ford gauge, $6.25; special arbors to fit Ford gauge, $5. Discount to the trade.

Quick Detachable Transmission Band for the Ford Car is a new device designed to facilitate the removal and replacement of Ford transmission bands. It consists of a steel band of heavy spring steel, lined with the best grade of brake lining. Attached to the band are two drop forged ears, one of which is removable. This allows the band to be easily inserted into place on the drum, cutting down considerably the time required to put it in position. After the band has been located the detachable ear is fitted to it by projections on the ear and slots in the band, which form a very convenient fastening, holding it in position equally as well as if the end were riveted.

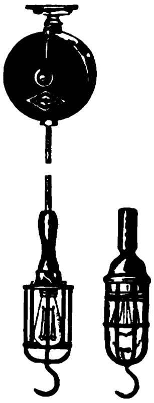




Manufactured by the Gemco Manufacturing Co., Milwaukee, Wis. Prices on request.

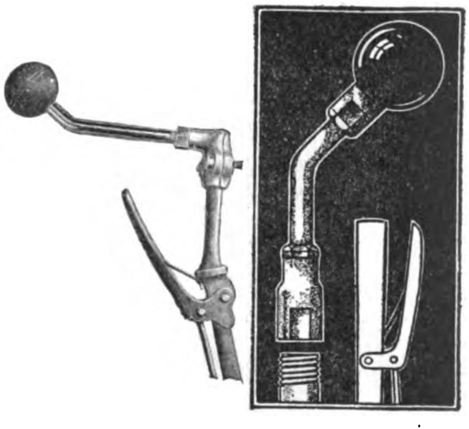
The Reelite consists of a reel unit carrying an approved reinforced cord, suspended from the ceiling of the garage or service station and equipped with an extension cord, allowing the lamp to be used anywhere within reach of the cord about the garage. The reel works similar to a curtain rod, allowing the cord to unwind and rewind without unnecessary effort.

The Reelite is made in two types, a portable and a fixed type. The fixed type has a 12-foot cable, providing flexible lighting for the machine shop, while the portable type has 25 feet of cord and may be fitted to any convenient lamp socket, providing light for garages, service stations, etc., where work is to be performed on a larger scale.



Manufactured by the Anderson Electric Supply Co., 118-124 S. Clinton St., Chicago, Ill. Prices, drop cord type, $8; portable type, $15.

Gear Shift Extension. The gear shift lever on practically all of the present day cars is not adjustable, therefore the person with short arms finds that considerable body movement is often necessary in changing the gears. To obviate this difficulty Mellin's adjustable gear shift extension has been designed. This device is practically an extension lever, in three sections, that may be adjusted to suit any driver and by means of which the operator with a single arm movement can shift gears easily and without moving the body. The device is ornamental and neatly finished in nickel plate.

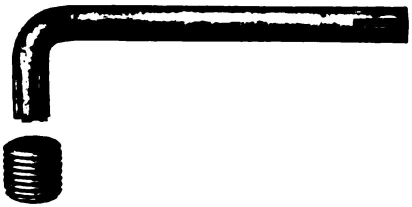


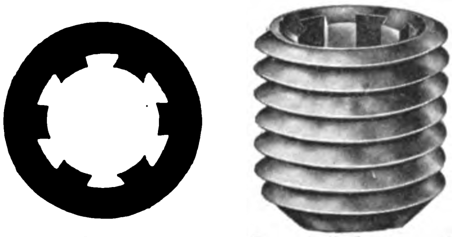
Adjustable
Gear Shift Extension

Manufactured by M. & H. Novelty Co., 1466 West 28th street, Los Angeles, Cal. Prices, No. 2, $1.25; No.'s 14, 15 and 19, $2; all others, $1.50 each.

The Bristo Patented Safety Set Screws were designed to take the place of the many different types of set screws used in the automotive industry and are constructed along lines making them standard for this class of work.

The Bristo Safety Set Screw is equipped with dove tailed slots or flutes into which the corresponding dove tail projections of the wrench fit. When these screws are being set up by means of this special wrench there is no tendency for the wrench to expand or split the screw, it is stated, even if great pressure is applied to the handle of the wrench, but instead there is a tendency for the wrench to contract the screw on account of the angles at which the faces of the dove tail flutes and slots bear against each other.

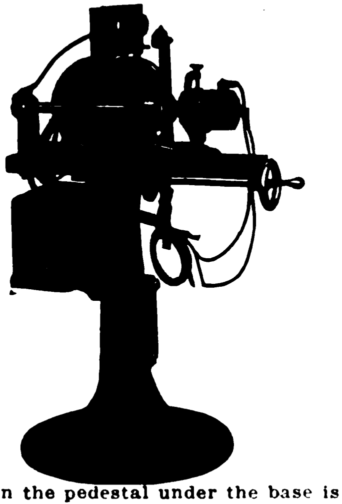




Bristo Safety Set Screws are specially heat treated which, it is stated, makes them very tough, insuring long wearing qualities even though the screw is constantly being released and tightened.

Manufactured by the Bristol Co., Waterbury, Conn. Prices and literature on request.

Model TF-1 Electric Test Unit is designed for the quick and accurate testing of generators, motors and the electrical units of the passenger car. It consists of a stand on which is mounted the various units used in carrying out the test, these including a one-half horsepower motor, friction drive, flexible coupling, universal bracket, Weston ammeter, Weston voltmeter and tachometer, all assembled on a base, which is mounted on a metal pedestal. On the pedestal under the base is the double six-volt battery with battery box.

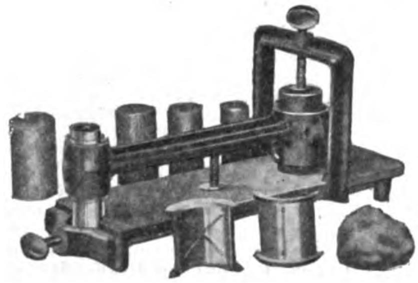


The model TF-1 is a "universal" machine, motor driven, having variable speeds ranging from 0 to 3000 in either direction of rotation. It is furnished with a double six-volt battery with a series multiple switch for testing both six and 12-volt generators and motors. It has a universal clamp for testing all types of motors and generators in size from four to seven inches in diameter. It is stated that it is possible with this machine to test all types of magnetos. It is equipped with a universal flexible coupling which, it is claimed, does not cramp the bearings, and a chuck which takes shafts 5/16 inch to 1¼ inch and gears 1¼ to 3¼ inch. Only five leads are used in making all the tests—two for the generator, a voltmeter lead and two heavy leads for starting tests. Instructions for operating the machine on the different tests accompany each machine, so that a repairer who has had slight experience in this line of work will have excellent results, the manufacturer states.

Manufactured by the Service Products Co., Springfield, O. Prices and literature on request.

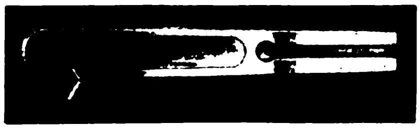
The N-A Size Babbitter, it is claimed, rebabbitts any size of automobile engine connecting rod bearing up to 12½ inches in length from center to center, and of any bore from ½ to 2½ inches. It casts the bearing very accurately to the size required, either solid in the rod or the removable type, and but very little scrapping or fitting is required to make a perfect fit on the crankshaft.

The N-A size babbitters are packed in wooden boxes complete with instructions and four different diameter wooden mandrels as follows: 1¼ inch, 1½ inch, 1¾ inch and two inch. Other special sizes may be purchased as desired.



Manufactured by the O. A. Bremer Co., 222 Division Street, Burlington, Ia. Prices and literature on request.

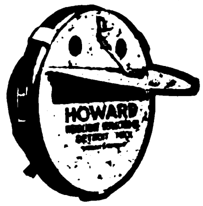
The Spring Oiler is a small device that is easily carried in the tool box, for separating and oiling the spring leaves of the automobile. The tool consists of a steel stamping wedge shaped at one end, having a groove cut in the bevel of the wedge through which oil flows and the opposite end fitted with a flat wrench. The wedge is used to open the spring leaves after the car body has been raised with a jack while the lubricant is supplied to the leaves by squirting oil from a cup into the groove the oil flowing in between the leaves by gravity. The wrench is used to tighten the spring clip nuts, while the thick portion may be used as a light hammer.



The spring oiler is made in two sizes, six-inch for light cars and eight-inch for heavy cars and trucks.

Manufactured by Cochran Manufacturing & Forging Co., 7800 Woodlawn Avenue, Chicago, Ill. Prices and literature on request.

The "Howard" Deflector for automobiles, trucks and motorcycles snaps over the front of any standard headlight and is held in place by three powerful spring steel clamps. A slot a few inches wide and about two inches high allows the rays of light from the electric lamp to show through to illuminate the road, while the rays are prevented from being thrown upward by a half circle hinged cover that may be adjusted either up or down by means of a short brace fastened to the cover at one end and to the upper front of the deflector by a bolt and wing nut. The two holes above the deflector provide protection to pedestrians on brightly lighted streets. Without the auxiliary holes, it is stated, the car is not perceptible within a distance of 30 feet.

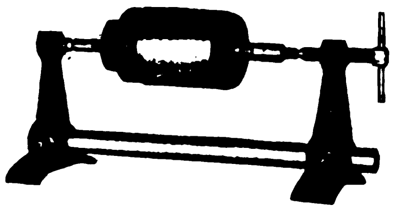


Special instructions are included with the deflectors, describing the different ways in which they may be adjusted on the lamps to get desired results.

Manufactured by the Howard Headlight Deflector Co., Detroit, Mich. Price, $2.25 a pair.

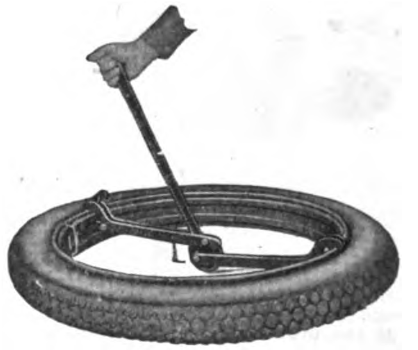
The Onan Armature Stand is designed to facilitate the work of the electrical repairer of automobile electric starting and lighting systems, in undercutting mica, banding, soldering leads and rewinding.

This device takes the place of a vise for this class of work doing it, it is claimed, in a much more satisfactory manner and with greater speed. It is a bench tool that is adjustable for various lengths of armature shafts and holds the armature easily, allowing it to be turned freely or with a slight drag as desired. By adjusting the large thumb screw at the end of the shaft the shaft may be tightened or loosened as desired.



Manufactured by David W. Onan, 1224 Penn Avenue, Minneapolis, Minn. Price, $4.50.

The Duplex Rim Device is designed to facilitate the removal and replacement of pneumatic tires on demountable rims. The device consists of two arms and a lever. The arms are shaped on the ends in the form of a hook which fits over the rim, giving a firm grip. Their centers are joined to an eccentric plate at the end of the handle and are operated by movement of the handle, the eccentric motion opening or closing the break in the rim as desired. The rim is held in the open position while the tire is being removed or replaced, by fitting a small pin, attached to a chain, to an opening through one of the arms and the eccentric plate.



The Duplex rim changing device is made unusually strong for its purpose, and when not in use can be folded into small space and stored in the tool box or under the seat. It is claimed that in case a tire is rusted to the rim this device will open the rim without straining or injuring the sides.

Distributed by the Fairbanks Co., Broome and Lafayette Streets, New York City. Price, No. 1 car size, $6; west of the Rockies, $6.50. No. 2 garage size, $7; west of the Rockies, $7.50.

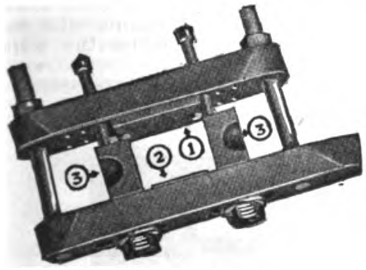
The Peerless Radiator No. 14 for Chevrolet Cars is designed for replacement on Chevrolet cars and in design and quality of finish is equal to the well known line of other Peerless products.

This radiator is equipped with the efficient Peerless honeycomb core, which is employed on the highest class of cars. A new feature is the mounting of the angle brackets on spring steel side frames. They absorb the severest road shocks, it is stated, thereby preventing damage to the radiator. All parts coming in contact with water are of durable brass and the flexibility of the core construction allows ample expansion—permitting core to thaw if frozen, without strain or breakage. The dimensions of the Peerless radiator are the same as those of the regular Chevrolet radiator, insuring quick and easy installation. The Peerless No. 14 guaranteed radiator is equipped with a cap for the filler neck, which is not regularly included as part of replacement radiators.

Manufactured by the Corcoran Manufacturing Co., Cincinnati, O., Department F. Prices and literature on request.

The Atlas Abrasive Tool is designed for repair shops and garages. It is small in size, inexpensive and, it is claimed, very easy to operate. With this tool, it is stated, the repairer can smooth crank pins that have become roughened or scored, with fully as good results as those attained by the machinist after spending many hours on the same type of job with a lathe.

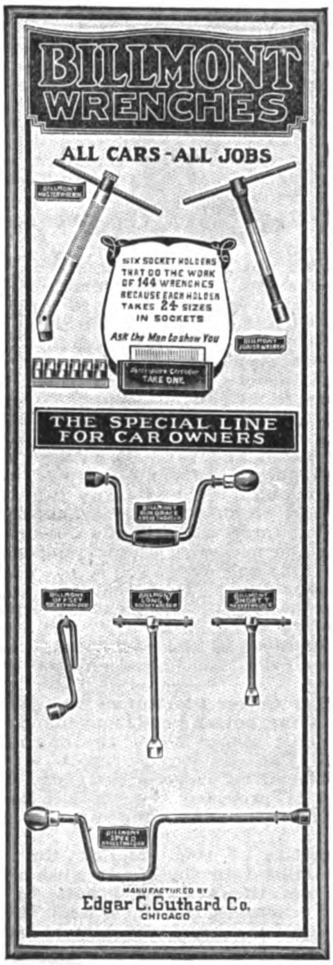
Only one cutter is used in the Atlas abrasive tool and each cutter is good for from 10 to 20 jobs before it becomes necessary to fit a new one. The cutter works only in one direction and, it is stated, that no other tools are required to complete the job as Atlas abrasive tool finishes it to a close degree of accuracy. On account of its small size the necessary work on the crank pins can be performed without removing the crankshaft from the car.



Manufactured by the Atlas Manufacturing Co., Pittsburgh, Pa. Price of tool, $10; extra cutters, 30 cents each.

Billmont Master Wrench and Socket Wrench Set comprises a complete outfit for the service station. It includes the Billmont Master wrench, the Billmont Junior, the Long T and Short T socket holders, the Speeder, rim brace and offset socket holders, the outstanding feature of which are the universal nose pieces that are so constructed as to permit the use of 24 sizes of sockets, both hexagonal and square.

The Billmont master wrench is a universal socket tool, driving through an outside stationary member having a heavily knurled hand grip. The inner driving part, with its curved, revolving nose, is turned by a T bar handle, which slides back and forth so that a complete turn can be made on any nut without removing the wrench. The nose piece takes any of the Billmont sockets of 24 sizes, and the special Billmont adapter permits the use of any standard size socket. The Master wrench is put up in three styles, namely, with six sockets in hard wood case or with 24 sizes in sockets in case.

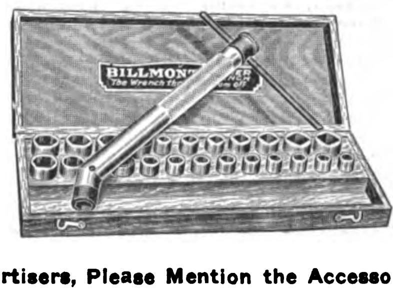


BILLMONT WRENCHES
ALL CARS - ALL JOBS
SIX SOCKET HOLDERS THAT DO THE WORK OF 144 WRENCHES BECAUSE EACH HOLDER TAKES 24 SIZES IN SOCKETS
Ask the Man to show You
TAKE ONE
THE SPECIAL LINE FOR CAR OWNERS
MANUFACTURED BY
Edgar C. Guthard Co.
CHICAGO

Next in popularity is the Billmont Junior. This is a large wrench, 11½ inches long, powerful enough to handle the most stubborn hexagon nut up to 31/32 inch or square up to ¾ inch, the manufacturer states. The Junior is similar to the Master except that the nose is straight. The sliding T bar handle permits tremendous pressure to be brought to bear on the nut, while the nut is turned completely around with great speed. A nickeled hand grip gives the operator a firm hand hold.

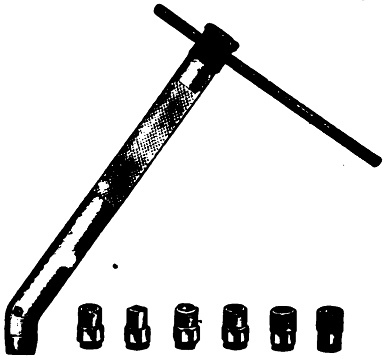
The long T and short T socket holders are identical in construction except that the former is 12, while the latter is six inches long. The T bar handle, which is a feature of the four wrenches described, equalizes torsional strain, making these wrenches very powerful tools.

Another popular tool is the Billmont rim brace, having adaptability for 24 sizes, which cuts down the original outlay to the purchase of one brace and 24 sockets, and affords the repairer a wide range of uses.



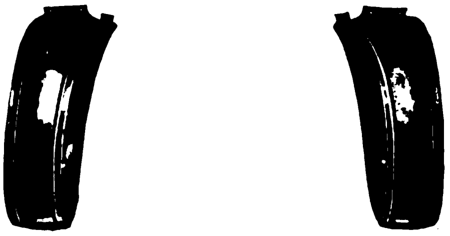
To give proper display and help dealers move the line, the manufacturer furnishes a large display board, lithographed in three colors on sheet steel, backed and mounted with finely finished hard wood, which can be used as an easel or a hanger. The wrenches are attached to this board and brief lettering on the board gives the prospective customer, as well as the clerk, all needful information relating to the wrenches. The company makes the claim that this equipment is adapted for all cars of all makes and with the complete line the buyer has an equipment equal to 144 different wrenches.

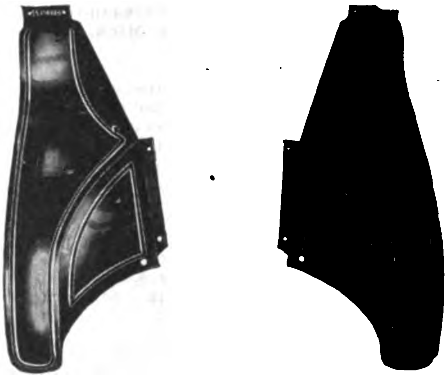
BILLMONT *MASTER WRENCH*
"The Wrench that Spins'em off"



Manufactured by Edgar C. Guthard Co., Chicago, Ill. Prices on application or through dealers.

Peerless Fenders for Ford Cars are designed for replacement purposes on any model T Ford made during the various years that this model has been on the market. They are constructed especially to withstand the severe jarring and vibration of the Ford engine. They are built throughout of No. 20 gauge steel and finished with two coats of lustrous black enamel baked on, which gives to the fenders a durable finish.

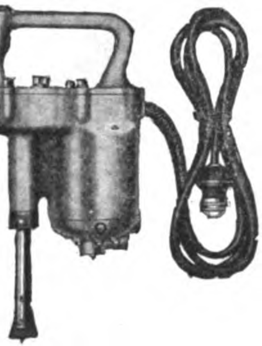




Peerless crown fenders are made to fit all models of Ford cars, but it is necessary, when ordering, to give the model and year in which the car was made and the model number. It is stated that Peerless fenders are built to the standard of excellence for which Peerless products are noted.

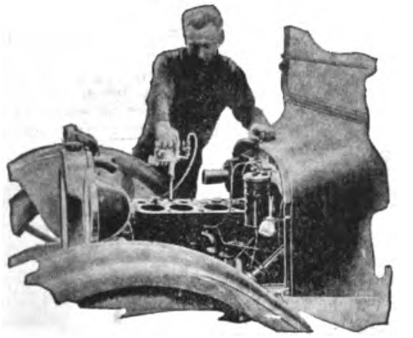
Manufactured by the Corcoran Manufacturing Co, Cincinnati, O. Prices and literature on application.

The Jackson Electric Valve Grinder is designed for either garage or service station use, and it is stated that it has already won an enviable reputation for itself during the war, especially for its ability to stand up under rough, hard usage. It is claimed that a repairer is able to grind a valve to its seat perfectly in from 15 to 30 seconds. The plug and cord are connected to the nearest electric light socket and the tool is ready for instant use. The motor is of a special design, operating either on direct or alternating current, and consuming approximately 75 watts. The casing is constructed of a tough aluminum alloy, while all working parts, motor shaft and grinding shaft operate in phosphor bronze bearings, with all wearing parts hardened.



The grinder has a capacity to include valves up to 3½ inches, while special attachments can be obtained making the grinder adaptable for grinding valves of the valve-in-the-head type of engine.

The complete outfit contains the grinder, standard bits for slotted valve, spanner bit for the Ford engine, valve lift springs, flexible cord and attaching plug.



The grinder is guaranteed as to performance and construction for a period of one year, and if unsatisfactory, may be returned to the factory within a reasonable length of time.

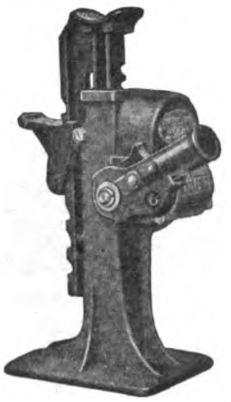
Manufactured by the Kalamazoo Railroad Supply Co., Kalamazoo, Mich. Price, $45.

The New Duff Universal Automobile Jack (No. 411), possesses many novel features that will appeal to the wide-awake dealer. The operating handle is twice as long as the ordinary jack handle, making it easy to operate on account of the greater leverage.

The long handle easily clears all obstructions at either the front or rear of the car. In placing the ordinary type of jack, operated by a chain or short handle, under the car, or removing it, necessitates crawling on the ground with the risk of accident or soiling clothing. The new Duff jack is placed in position and removed by means of the long handle, eliminating this annoyance. When not in use the long handle uncouples to half of its length, easily fitting into the smallest tool compartment.

The jack may be operated by as long or as short a stroke as desired and with the operating handle inclined at any angle, a feature particularly desirable in the case of cars having gasoline tank, tires or other obstructions in the rear.

The Duff jack may be either raised or lowered without reaching under the car, by simply turning the handle half way around. To raise the operating handle is inserted in the socket with the side of the operating handle marked "raise" on top. To lower, the operating handle is withdrawn until it disengages the operating mechanism, but still remains in the socket, and is then turned half way around with the side marked "lower" up. A spring maintains the socket in a raised or horizontal position, so that the operator can insert the handle without bending down to adjust the socket.



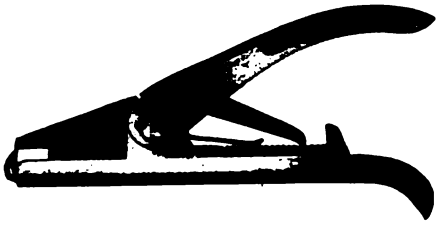
By means of an adjustable foot lift this jack can be instantly made to fit under the lower axle of any car. The range of adjustment possible, from four to 18 inches, is wide enough to handle any car in any position on or off the road. This feature is of great importance to the dealer, as it obviates the necessity of carrying a large stock of various sizes.

The capacity of the jack, 1½ tons, is ample to handle the heaviest modern passenger car.

Manufactured by the Duff Manufacturing Co., Pittsburgh, Pa. Prices on application.

The May Cotter Pin Puller was designed for removing cotter pins from inaccessible and difficult places about the engine and chassis. The device is made of steel, nickel plated to prevent rust from forming and is provided with a handle grip to facilitate the drawing of the cotter pins.

It consists of two handles, the upper being fastened to the lower a short distance from the end by a bolt and nut forming a bearing for the jaws. The cotter pin puller consists of a steel bar fitting a recess in the lower handle, is in the form of a hook in the jaw and is slidable in the handle for different sized pins. The bar is positioned and held fast by a pawl and ratchet arrangement on the top of the bar and under the upper handle After the puller is attached to the cotter pin the pin is easily removed and held in the puller, preventing the pin from dropping into the chassis or engine.



Manufactured by the Brewer-Titchener Corporation, Cortland, N. Y. Prices and literature on application.

A New Electric Automobile Engine Heater has been designed which is claimed to keep the engine warm during normal winter weather, when the car is standing in the garage, thus filling a long felt want among automobile owners.

By the use of this method the heat is concentrated at the engine and carburetor, where it will do the most good. Thus, on cold mornings, no difficulty will be experienced in starting the engine, as the temperature of the latter will always be well above that of the outside air.

The appliance is ruggedly built and practicaly indestructible. The heating unit is protected by a strong perforated sheet metal guard entirely surrounding the heater. A rigid metal hook allows the heater to be hung anywhere under the hood. The flexible cord is long and the plug can be attached to any lamp socket. Altogether, it is well built with no delicate parts to get out of order.

The power consumption is only 100 watts. The initial cost and the expense while in use are stated to be almost negligible. The cost of operating is less than one cent an hour (based on power rate of 10 cents a kilowatt-hour).

Manufactured by the Westinghouse Electric & Manufacturing Co., East Pittsburgh, Pa. Prices and literature on request.

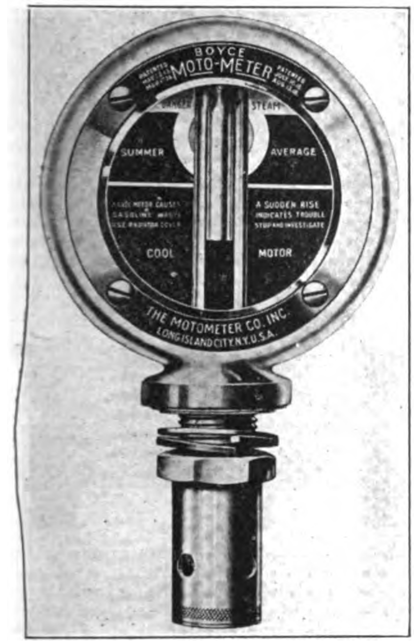
The "Eck" Vaporizer and Primer consists of a small metal container fastened to the inside of the dash of an automobile or truck and is used for priming the engine for starting during cold weather and also to supply the engine with moisture when operating during the warmer months of the year.

The vaporizer and primer is fitted with special tubes that require adjusting when using either gasoline for priming or water when supplying moisture to the engine, and these tubes are easily reached at the top of the container for adjusting.

A valve is fitted below the tank and this is controlled by means of an offset handle fitting the valve and a pull wire connected through a copper tube to a button on the dash, so that the flow of gasoline or water can be continuous or shut off when desired.

Manufactured by Chester C. Eckhardt, Rochester, N. Y. Price, $6.

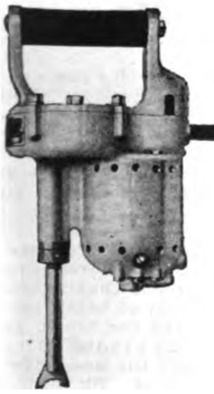
De Luxe Model Boyce Moto-Meter is the latest creation of the manufacturer and is designed for the highest grade passenger cars. The temperature tube is one-half inch in diameter, having a broad column of red liquid readable at a great distance. The case is silver plated and the finish of the entire instrument is of the highest quality of workmanship. The wording is of large size so as to be readily seen by the operator when driving. The Moto-Meter is easily attached to the filler cap of the radiator by drilling a hole for the insertion of the tube, a suitable lock nut and washer being provided by which it is fastened.



Manufactured by the Moto-Meter Co., Inc., Long Island City, N. Y. Size, 3⅝x5¾ inches. Weight (packed in cartons) 20 ounces. Price, $15.

The Jackson Special Ventilated Valve Grinder No. 4 was designed for continuous heavy use in factory service. This model, it is stated, has been tested under the most severe grinding conditions, and in every instance has proven to be a most capable device.

The grinder has a capacity up to and including valves of 3½ inches in diameter, weighs but six pounds. The motor is of special design, universal type, operating on either direct or alternating current at a full load rating of 75 watts. The gears are packed in grease, while the bearings are provided with wick oilers. The motor casing is constructed from tough aluminum alloy, with all the steel parts of the grinder hardened and highly finished and provided with bronze bushings throughout.

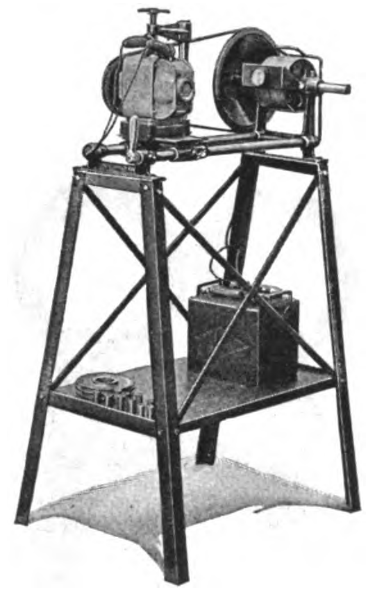


This grinder carries the regular guarantee as to performance and construction and if, after a fair trial, any Jackson drill or grinder does not effect the saving claimed for it, or if it fails to give satisfaction to the customer, it may be returned for credit at the end of a reasonable period. The material and workmanship are guaranteed for a period of one year.

Manufactured by the Kalamazoo Railway Supply Co., Kalamazoo, Mich. Price, $50.

The Onan Testing Device is equipped with the necessary apparatus to successfully drive and test all kinds of electrical units after they have been removed from the engine, and is especially adapted for garages and service stations. With this device it is possible to test starting, lighting and ignition equipment under such conditions as when functioning on the engine and from this test to determine the accuracy of the assembled unit.

The Onan testing device consists of two feet or legs, which can be fastened to a bench or special stand, which can be obtained with the device at additional cost; two lengths of hollow tubing forming the frame; bearing supports fastened at one end of the frame, supporting the drive shaft and bearings, equipped with tight and loose pulleys and a five-step cone pulley by which the speed of the tester is varied; a slidable stand fitting the frame tubes, held in any position by thumb screws at the sides, and a vertical tube to which is attached a clamp holding the generator or motor to be tested. The pulleys included in the outfit include members to fit the Northeast unit of the Dodge, Society of Automotive Engineers tapers and one with a set of special bushings to fit the different sizes and styles of shafts.



In using the Onan testing device it is necessary to connect a storage battery in the circuit with the generator, an ammeter being provided, which shows the condition of the generator when being driven at varying speeds. A round leather belt supplies the final drive to the generator or motor and is claimed to be noiseless in operation.

The Onan testing device is stated to be particularly valuable for such work as installing brushes in generators, platinum points bearings, etc., in magnetos in such manner that they will give long and satisfactory service.

Manufactured by David W. Onan, 1224 Penn Avenue, Minneapolis, Minn. Prices, complete with meter, mounting, cables and stand, $75; with meter mounting and cables, $65; without meter or cables, $55.

The Wellman Spark Plug has been developed after three years of careful experimenting on the part of the manufacturer and testing the plug under gruelling conditions. It is stated that the plug can positively be cleaned without removing it from the engine cylinder. It is of the one-piece type and is fitted with two sharp knives by means of which all carbon and oil deposits on the porcelain can be quickly cut away. This operation is claimed to be very simple, requiring but a few simple turns of the head of the plug.

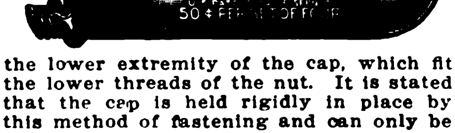
The Wellman spark plug embodies a positive priming channel running down through the central body of the plug and conveying the fuel direct to the spark gap. No petcock is provided for this purpose. Its one-piece full nickel electrode is constructed with an air chamber, which permits of free expansion and contraction, thereby reducing the chance of breakage from excessive heat or cold. Because of this construction it is believed that the plug is practically unbreakable from sudden changes of temperature within the plug, and by means of a heavy brass reinforcing sleeve within the porcelain, damage from external blows is prevented.

WELLMAN
PATENTED

Manufactured by the Wellman-Muter Corporation, Chicago, Ill. Prices and literature on application.

The Kwik-On-an-Off Dust Cap is designed to fit all Universal and Schrader valve stems and was recently patented by the Schrader Co. The object of the device is to provide a means of instantly removing or replacing the dust cap on a valve stem in a few seconds time by slipping the cap down over the valve stem and giving it a slight twist, locking it tightly in place. While its removal is accomplished by turning in the opposite direction and slipping the cap from the valve stem.

The device consists of a ribbed cap similar to those usually in use, having at the bottom a wire spring, open at the ends, which slips over the threads of the fastening nut, while threads are provided on the lower extremity of the cap, which fit the lower threads of the nut. It is stated that the cap is held rigidly in place by this method of fastening and can only be removed when given the slight twist of the hand. This is claimed to be a decided improvement over previous caps designed by this firm and is, besides, a time saver.



Manufactured by A. Schrader's Son, Inc., 783-91 Atlantic Avenue, Brooklyn, N. Y., and 1200 Michigan Avenue, Chicago, Ill. Prices and literature on request.

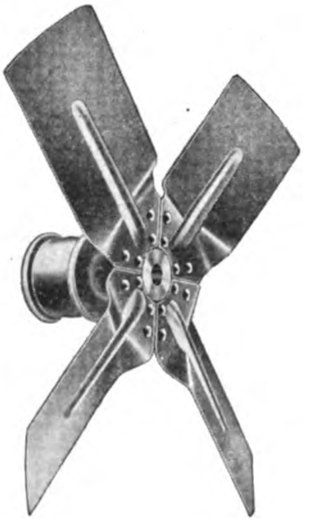
The Norwesco Three-An-One Valve Grinding Compound is put up in a container consisting of three ounces of coarse abrasive and one ounce of fine abrasive. The manufacturer states that it has been found upon inquiry among garages and service stations that the average repairer uses three ounces of coarse grinding compound and one ounce of fine when grinding valves. The old form of container held two ounces each of coarse and fine and it is claimed that there was waste by this method, while the new container proves more economical to the repairer, as the item of waste is eliminated.

VALVE GRINDING COMPOUND
NORWESCO
THREE-AN-ONE PACKAGE
THE NORTHWESTERN CHEMICAL CO.
MARIETTA, OHIO
MADE IN U.S.A.

The position of the two containers, in which the coarse and fine abrasive is packed is such that either container can be removed without reversing the larger container. The grinding compound, it is stated, contains no ground glass, sand or emery, but does contain the highest grade valve grinding compound obtainable.

Manufactured by the Northwestern Chemical Co., Marietta, O. Prices on application.

Spencer Fan Pulley Assembly for Ford Cars is designed primarily for replacement purposes. The fan blades are made from pressed steel, while the bushings are high grade bronze and all parts are thoroughly machined and guaranteed to fit. The hub and fan assembly is in one unit, so that fitting to the Ford engine is easily accomplished by anyone handy with tools.

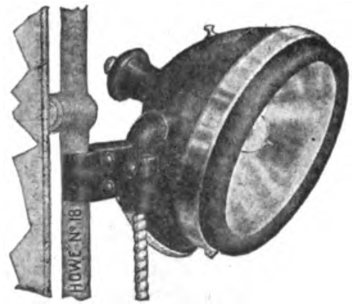


Manufactured by the Spencer Metal Products Co., Spencer, O. Price, No. 3960 for Fords cars, on request.

The Howe Searchlight, No. 18, consists of a spotlight for the windshield made entirely of brass, with the exception of the windshield clamps, which are of cast metal. The light is equipped with a heavy French plate mirror substantially mounted at the rear. The switch is of the turn button type, enclosed and water proof, with all wires leading to it enclosed in armored conduits. The lens is a heavy convex plate, mounted in the door in a substantial manner. The door is held in place by a wide detachable nickel plated band, making the lamp, it is stated, dust and water proof.

HOWE Searchlight

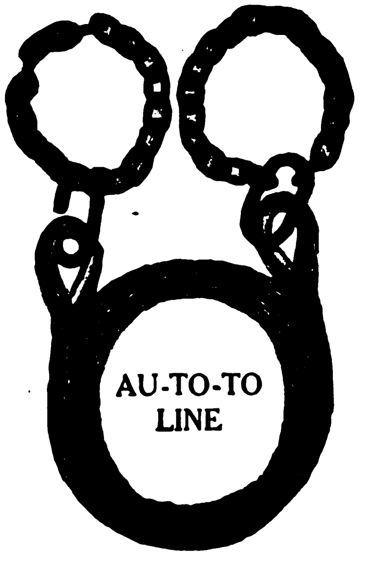
The reflector is of the parabola type, triple silver plated, while the body of the lamp is finished in black enamel, baked on with a semi-gloss finish.



Manufactured by the Howe Lamp & Manufacturing Co., 115-123 E. Ontario Street, Chicago, Ill. Price, $12.50.

The Au-To-To Line is recognized, wherever known, as the "tow line without a jerk," so its manufacturer claims. This feature is made possible by the use of a special combination of fiber woven into steel cable wire, doubling the strength of the complete cable and making possible the towing of unusually heavy weights for the size of the cable.

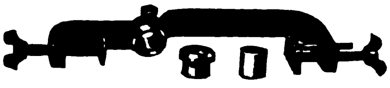
This cable has only been on the market a short time, but is reported to have become very popular. It is stated that tests have demonstrated the fact that the manufacturer has not over-estimated the strength of the cable.



The Au-To-To line is made in two sizes, passenger car and trucks. The length is 17 feet, while the weight, including a canvas bag, is about five pounds. It is guaranteed on the passenger car size to pull without a jerk and has been tested for a tow load of 6000 pounds. If for any reason the line should fail to give satisfaction it will be replaced with a new one free of charge.

Manufactured by the Waite-Rhodes Co., Denver, Col. Price on request.

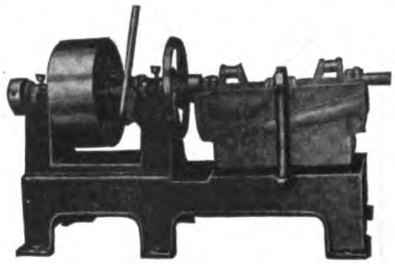
The Battery Post Builder Model TF-503 has been designed to meet the requirements of battery service stations for supporting post building molds. With the different forms of constructions now being used on batteries, it is necessary that there should be very good work performed on the post building and, it is stated, this unit will build the posts up square and eliminate tipping. The unit clamps the mold firmly in place and permits the work man to do a perfect job. It can be furnished with different types of molds and is made in such a manner that most standard molds can be fitted into it by service stations.

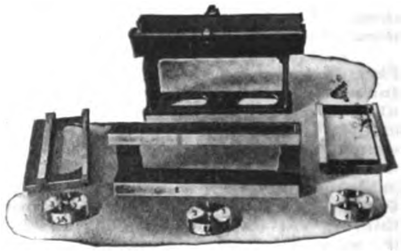


Manufactured by the Service Products Co., Springfield, O. Price and literature on request.

Model FS-50 Burning-In and Running-In Machine, belt driven, possesses the advantage of being adapted either to burning-in or running-in the Fordson tractor and the Ford model T engine, as well as to practically all of the other popular priced car engines, furnished with detachable heads. A unit is now being furnished with adapters for burning-in Dodge, Chevrolet, Maxwell and the new Overland Four.

The Model FS-50 unit has been designed for heavy duty and the main shaft is made from very high grade shaft steel, 2¼ inches in diameter. The bearings are made from nickel bronze, all wearing surfaces being hardened. The engine blocks are clamped in position with two single bolts so designed that the block is held perfectly rigid while burning-in or running-in, this construction also permitting access to all bearing bolts. The raising blocks or adapters for various types of engines are fitted in machined slots in the bed of the unit, so that there is positively no chance of misalignment of the bearings. The clutch on this unit has been designed so that it is positive in operation, easy to adjust and, the manufacturer claims, will stand extreme loads and shocks. The clutch is very simple, and in connection with the heavy driving pulley, makes a perfect combination for burning-in work.



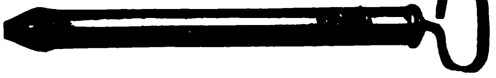


1. Fordson & Model T Ford Running-in Adapter.
3. Chevrolet "490" Raising Block. 2. Model T Ford Raising Block. 4 Dodge Raising Block.
3A. - " Adapter Disc. 2A. - " Adapter Disc. 4A. - Adapter Disc.

The model FS-50 carries parts which include burning-in adapters for Ford, Chevrolet, Dodge, Maxwell and Overland Four cars, while the main machine takes care of the Fordson.

Manufactured by the Service Products Co., Springfield, O. Prices and literature on application.

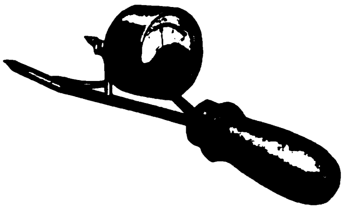
The Rose Truck and Tractor Grease Gun is similar to the Universal grease gun in construction, except that it has a cone shaped nozzle instead of being curved and is especially adapted for truck and tractor work, as it will handle all transmission greases without the necessity of having the nozzle removed. By taking off the nozzle, however, heavy greases may be handled with ease. The gun measures 19½ inches over all, has a capacity of one pound of grease or oil and weighs two pounds.



Manufactured by J. H. Haney & Co., Hastings, Neb. Price, each, $2.50.

The Springfield High-Rate Discharge Instrument Model TF-501 is designed for battery service stations and is used for the purpose of detecting damaged cells in storage batteries.

It consists of a special high grade voltmeter with a center reading 2-0-2, graduated in 10ths. The voltmeter is mounted on two steel posts which terminate in a convenient handle. Between these posts the current is short-circuited through a fixed resistance which determines the rate of discharge. The resistance has a current capacity of 80 amperes cold and 70 amperes when hot. When a cell is in good condition the voltmeter needle will hold its position somewhere between 1.3 and 1.7. It will not register higher, it is stated, because the high rate discharge produces an immediate drop in the voltage. If the cell has defective insulation, it is claimed, the needle will then gradually recede towards the center, as the high rate discharge of the cell takes place. If the cell has an open circuit or broken connectors inside or outside the jar, the needle will remain at zero. From 10 to 20 seconds should be the limit of the test.



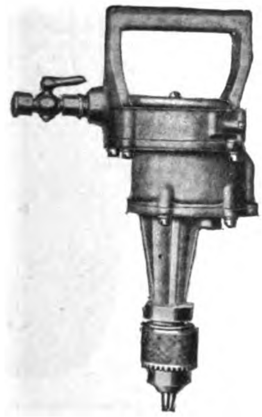
In testing batteries, a comparative reading of the cells is important. A perfect condition is indicated by all the cells registering the same voltage and any variation indicates a weakened condition.

Manufactured by the Service Products Co., Springfield, O. Prices and literature on request.

The Jackson Pneumatic Drill is designed especially for the garage and service station trade where a powerful yet compact light weight drill, capable of operating in close quarters, is demanded. The pneumatic drill is intended to be used in connection with the regular tire inflating compressor equipment and will work on pressures varying from 80 pounds when drilling a ⅜-inch hole to 110 pounds when drilling a ½-inch hole in steel.

The casing is constructed of tough aluminum alloy, while the gears are made of heat treated steel. Norma ball bearings are used on the high speed shaft, while phosphor bronze bushings are used on low speed spindles.

The chuck is a Jacobs, is regular standard equipment on this tool and has a capacity from 0 to ½ inch. The drill is throttle adjusted and is under the control of the operator at all times.

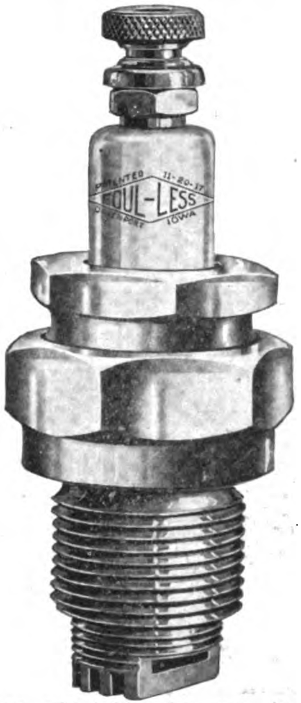


The regular Jackson guarantee applies to this drill, and is good for a year from date of purchase against imperfect material or poor workmanship.

Manufactured by the Kalamazoo Railway Supply Co., Kalamazoo, Mich. Price, $50.

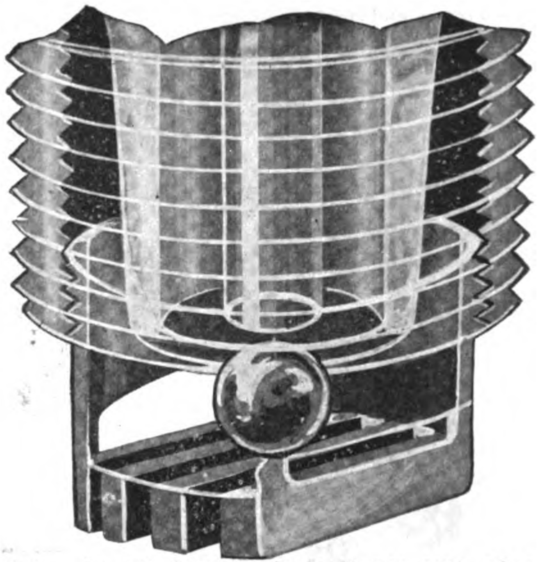
The Foul-less Spark Plug is not the result of accident or some radical mechanical idea, it is stated, but is the product of painstaking effort and research on the part of a corps of able mechanics and automotive engineers who have devoted years of time and study to the problem of more perfect combustion.

Foul-less plugs are built substantially and incorporate the highest grade material and the most skilled workmanship, and are adaptable for use in engines where heavy duty, high compression and extreme temperature conditions prevail. One and one-eighth inch special carbon hexagon steel is used in the body parts of all sizes. Each part is carefully inspected and gauged, and all are interchangeable. The center electrode is extremely heavy, being ⅛-inch diameter. Its composition is monel metal, to insure against pitting, scaling or corrosion. This gives positive assurance of the highest possible conductivity with the least possible electrical resistance. The porcelain is composed of a special formula and is capable of resisting high voltage and radical changes in temperature.



The ball is monel metal and functions at the bottom of the cage between the two parallel sparking surfaces, namely, the bottom of the center electrode and the bottom of the slotted cage. The current passes through the center electrode to the ball which, acting as a condenser, intensifies the spark. This ball, being in constant motion through the vibration of the engine and its explosions, keeps the sparking surfaces and also a sufficient portion of the porcelain, free and clear of all deposits of oil or carbon, thus insuring, it is stated, an ever clean spark plug.

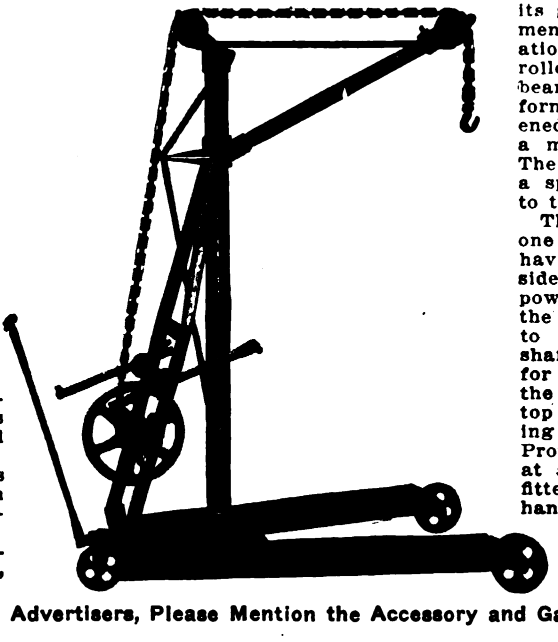
The manufacturer recommends that the needle valve adjustment of the carburetor be cut down at least 10 per cent. after Foul-less plugs have been installed, as these plugs give a more intense spark, they are able to function on an extremely lean mixture.



Foul-less spark plugs are guaranteed against any defect in material or workmanship. Claims for any breakage can be made to the nearest dealer. Adjustment of the gap at the bottom of the plug is made in a few moments time by means of a threaded nipple and a square end to which a wrench may be fitted.

Manufactured by the Foul-less Spark Plug Co., 220 East Third Street, Davenport, Ia. Price, $2.

The R-W Portable Floor Crane No. 365 is particularly adapted for lifting engines and other heavy units out of automobiles and trucks, because of its high lift and long reach. The crane is built throughout of cast iron and steel combined so as to place all heavy tensile and bending stresses on the steel members.



This device is particularly adapted for garage and service station use because of its great strength and freedom of movement about the garage and ease of operation. The crane is mounted on three rollers, while the base is made of two I-beam sections riveted together, firmly forming a base to which the mast is fastened. The mast is braced and trussed in a manner that gives it great strength. The mast arm is fastened to the mast by a special fixture and is suitably braced to the top of the mast.

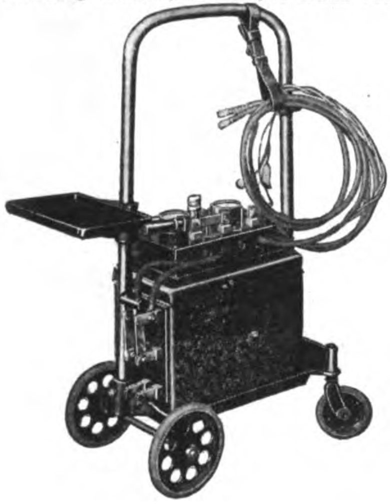
The winch is operated by two cranks, one at either side, fitted to a short shaft, having bearings on the braces at the sides. A small pinion gear transmits the power from the shaft to a large gear on the winch drum, which is likewise fitted to bearings at each end of the drum shaft, to the side braces. A chain, used for hoisting, is fastened at one end to the drum and passes over a pulley at the top of the mast and mast arm, terminating at a hook at the end of the chain. Provision is made for holding the hoist at any desired point by a pawl ratchet fitted to the cross shaft and operating handles.

Manufactured by the Richards-Wilcox Manufacturing Co., Aurora, Ill. Prices and literature on request.

Model TF-300 Electric Portable Test Unit consists of a unit designed and built for detecting defects in the electric equipment of passenger cars It is a "first aid" or trouble shooter for use in electric and battery service stations and garages. Motors, generators, ignition distributors, coils, relays, ammeters and switches may be tested without removal from the car. By means of an external battery and precision meters assembled with the necessary leads, it is possible to give quick and accurate service.

This model consists of a double six-volt battery with special double-pole, double-throw switch, Weston ammeter, double-reading, ranges 30-0-30 and 600-0-600; Weston voltmeter, 0 to 15; single-pole, double-throw switch; carrier for motor, generator and tools; mounted on a rubber tired truck.

The method of testing is very simple. Two heavy leads are provided for testing starting motors, two light leads for generator and ignition tests and one light lead for recording voltage.

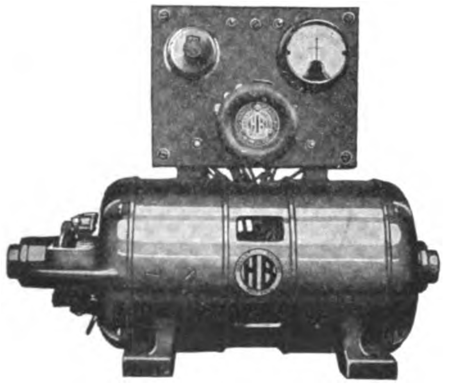


The double six-volt battery permits the testing of both six and 12-volt systems, the operation being controlled by a switch mounted on the battery box. The double-range ammeter allows full range of meter for testing both motors and generators.

With this unit, it is stated, the service station sells "service" instead of tim conserving the patience of the car owner and his time. The unit, it is claimed, eliminates makeshift methods and introduces standardized scientific service.

Manufactured by the Service Products Co., Springfield, O. Prices and literature on request.

The New HB-250 Watt Battery Charging Outfit is especially designed for the small garage that wishes to give service to customers only, and desires a dependable, continuous operating outfit that is economical to install and operate. It enables the small garage to give the complete battery charging service that customers demand, and its economy of operation allows the garage to make a big profit on a small investment.

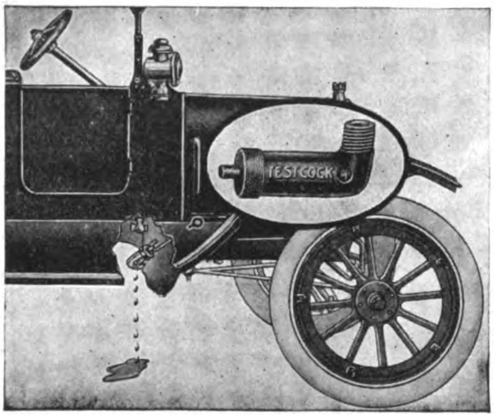


This sturdy little outfit, though much smaller than the other products of this manufacturer, maintains the same special features throughout as the rest of the line ball bearing equipment, automatic voltage control, allowing different voltage batteries to be charged at the same time, ample capacity for the rating, and complete panel board, mounted on top of the motor generator.

Manufactured by Hobart Brothers Co., Troy, N. Y. Prices and literature on application.

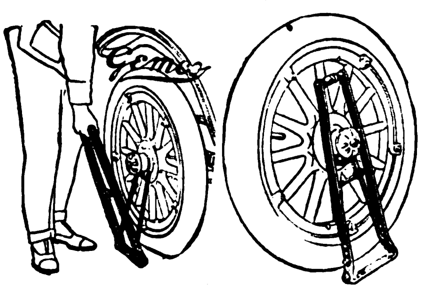
The "Test Cock" for Ford Engines is a small device that screws into the lower crankcase in place of the lower petcock and is used for testing the oil in the base of the Ford engine. A wire is connected to the plunger of the test cock, passing out through a hole drilled in the apron at the side of the car and terminates in a ring, by means of which the operator can open the cock when testing the oil.

The test cock is made of brass, with the exception of the valves, which is of cold rolled steel. It is stated that the device cannot break, clog or get out of order, and will last indefinitely. As shown in the illustration, a small hole is drilled in the test cock slightly above the elbow, through which the oil flows when the plunger is pulled out.



Manufactured by the F. L. Huber Co., 219-221 North Channing Avenue, St. Louis, Mo. Price, $1.

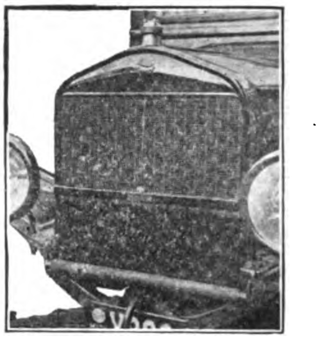
The Gemco Tire Saving Jack is designed to raise the car wheels from the floor of the garage, taking the weight of the car off the tires. The jack is made entirely of steel, with the exception of the hub saddle, which is covered with harness leather to protect the hub and cap from being marred. The jack is easily placed in position and can be adjusted to fit different sized wheels. A lock is provided which holds the jack in place after the wheel has been raised. Four jacks comprise a set. They are made in three sizes, as follows: Small, adaptable for Fords and other light cars; next larger for cars weighing 1800 to 2400 pounds; largest, for cars over 2400 pounds.



Manufactured by the Gemco Manufacturing Co., Milwaukee, Wis. Prices, $4.50, $5.50 and $7.50 respectively per set.

The Mayhew Curtain for Ford Cars is an adjustable radiator shield of the roller curtain type, controlled from the driver's seat by a cord running through the dash, over the top of the engine, passing through a tube inserted in the top of the radiator core in an air passage and connecting with the cross bar of the flap at its top.

The flap is fastened to the sides of the radiator by supports similar to those used for suspending a roller window curtain, the roller operating similarly to an ordinary curtain roller. The flap is raised and lowered and caught at any desired point and may be operated when the car is in motion.



The Mayhew Ford curtain is made of the best of materials throughout. Its use is primarily for quickly warming up the Ford engine, after which the flap can be lowered to any desired position.

Manufactured by the Sutter-Mayhew Co., 174 Canfield Avenue, Detroit, Mich. Prices on request.

The Victor Service Cord Tires, known as "Mileage Hogs," are composed of six layers of heavy cotton cords, criss-crossed to neutralize road shocks, each cord treated with tough, live rubber gum, which gives it extra strength and resiliency. The large amount of rubber used in the tread of this tire gives it both the appearance and durability of unusual strength. The name "Mileage Hogs" has been given to these tires, it is stated, by users who have been able to get from 8000 to 12,000 miles of service from them.

Victor tires are made from the best material, under ideal manufacturing conditions, and by workmen skilled in tire manufacture. The rubber used is the finest quality Ceylon and Para. The fabric is specially woven for strength and lasting qualities. Victor tires are guaranteed for positive mileage satisfaction and it is stated that the users forget the guarantee as the tires are built to outlast it, and that mileage is the only real basis of adjustment.

VICTOR

Manufactured by the Victor Rubber Co., Springfield, O. Prices and literature on request.

Highway Motors Co. at Defiance, O.

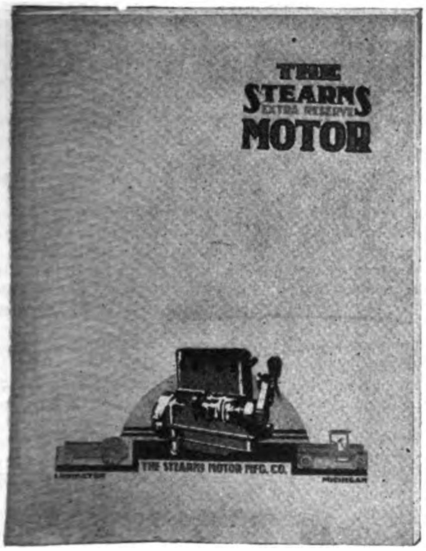
The Highways Motors Co. has been formed at Defiance, O., and has taken over the plants, good will and business of the Golden, Belknap & Swartz Co., and the Fruchery Machine Co., both of Detroit. The new corporation is capitalized at $1,500,000, $75,000 being preferred and $750,000 common stock. The officers are:

President, Charles H. Kettenring, Defiance; vice president, R. P. Kettenring, Defiance; vice president and chief engineer, E. H. Belknap; vice president in charge of purchases, J. W. Schwartz; secretary and treasurer in charge of sales and advertising, J. W. Wright; factory superintendent, W. R. Fruchery: the last four named all from Detroit. In addition to the officers named the directorate includes Albert M. Pearson and T. T. Shaw, both of Defiance; Harold S. Reynolds, a banker of Toledo, and Mr. Fraser of the Guardian Savings & Trust Co., Cleveland.

Plans have been developed for the production of a minimum of 150 motors a day on an eight-hour shift. A factory which has just been completed at Defiance, is being equipped with a complete line of modern machinery which will give the Highway Motors Co. one of the most up-to-date motor producing plants in the world. Production in the new factory will be concentrated on the model AA, 3¾ by five-inch. four-cylinder motor, heretofore manufactured by the Golden, Belknap & Swartz Co. and designed for both passenger car and truck service. The factories at Detroit will continue to supply present demands. The problem of housing its many hundreds of employees is being given attention and by the time the new plant is ready for operation 500 new homes will have been built at Defiance.

NEW STEARNS MOTOR CATALOGUE.

A new, attractive and exceptionally interesting catalogue has just been issued by the Stearns Motor Manufacturing Co., Ludington, Mich., in which are described the Stearns Extra Reserve motors. The details of the engine are photographically illustrated and blue prints and a phantom view of the 4¾ by 6½ motor, as well as a power curve chart, are shown. Installation charts are given showing the 4 by 6, 4¼ by 6, 4½ by 6 and 4¾ by 6½ motors.



This catalogue will be cheerfully sent upon request to tractor and motor truck engineers and others interested in industries utilizing gasoline and kerosene motors.

CRAIG-HUNT MOTORS INCORPORATED.

The Craig-Hunt Motors Co., Indianapolis, Ind., was recently incorporated with a capital of $1,000,000, to manufacture a small low-priced pleasure car to be known as the Craig-Hunt, with the slogan, "The Character Car." It will be made in two models, a five-passenger touring car and two-passenger roadster.

The Craig-Hunt Motors Co., has absorbed Craig-Hunt, Inc., which has, for the past five years, been making Ford Speed specialties. The following officers have been elected: President, J. B. Craig; vice president, W. L. Hunt; secretary and treasurer, C. L. Zechiel. The The executive offices will be in the Claypool hotel, Indianapolis, until the completion of the administration building, which will be located at the corner of Meridian street and Maple Road boulevard.

The new company will continue to manufacture and market the Ford Speed specialties, consisting of 16-valve head with overhead cam shaft, underslung parts and Speedway bodies.

VISIBLE PUMP CO. MOVES TO FORT WAYNE.

The Visible Pump Co., formerly of Montpelier, Ind., has recently reorganized as the Visible Pump Co. of Fort Wayne, Ind., with capital of $1,000,000. Following is the personnel:

President, H. E. Dean; vice president, L. E. Francis; secretary and treasurer, W. M. Roth; general manager, C. S. Fair.

The factory and general offices have been moved to Fort Wayne, where the manufacture of the August Bowser air pressure systems will be continued.

Champion Dealers Transport Plugs

The Champion Spark Plug Co., Toledo, O., recently found itself in the same predicament as thousands of other manufacturers, due to the embargo on freight and express shipments. The wires were kept hot by jobbers who were in urgent need of Champion plugs to supply their needs. It so happened that the sales forces of two prominent New York City jobbing houses, the A. J. Picard Co. and Whittemore-Simms Co., were in Toledo at the time when the freight tie-up was at its height, as guests of the Spark Plug Co. While going through the plant they noticed the congestion of freight in the shipping department, one keen-eyed salesman pointing out a case of plugs with his own firm's name stencilled on it. As a joke he suggested that they carry the case back with them, and was given the laugh when told that the box weighed over 600 pounds. He then proceeded to convince the head of his department that such a feat was not only possible, but practical, if each man would carry his share of the 2500 plugs, and when the delegation left for home each had at least one package containing 100 Champion plugs.

Dealers of Champion Spark Plug Co., Toledo, O., Laden with Shipment of Plugs.

WILLYS-OVERLAND CO. INCREASES CAPITAL.

An increase of $25,000,000 common stock has been authorized by the stockholders of the Willys-Overland Co., Toledo, O. With this new issue the authorized capital becomes $100,000,000, $25,000,000 preferred and $75,000,000 common. The Willys Corporation, in its re- $5,364,683 before taxes. After dividends and taxes there was a surplus of $3,250,800. The figures cover operations of the constituent companies for the first six months of the year, to July 1, the date of the original consolidated balance sheet, and for the six months thereafter. Total profits during the last half of the year, after providing for taxes, were $3,300,729, which, it is stated, were 5½ times dividend requirements.

The company's daily production is reported to be 650 cars and that schedule is to be increased to 750 soon.

RECORD OF BUILDING OPERATIONS FOR MAY

Contracts Made and Plans Contemplated for Alterations or Erection of Garages, Repair Shops, Service Stations and New Plants.

PLANS AND SPECIFICATIONS.

Birmingham, Ala.; Standard Oil Co.; one-story brick and concrete garage and machine shop; $17,000.

Camden, Ark.; N. S. Ward & Co.; one-story concrete block garage and display room, 100x120.

Pine Bluff, Ark.; Sinclair Oil Co.; one-story garage and two filling stations; $10,000.

Texarkana, Ark.; Texarkana-Overland Co.; one-story brick and terra cotta sales room, 50x60.

Wilmington, Del.; Charles E. Litzinger, 3678 Falls road; one-story brick garage; $10,000.

Wilmington, Del.; Federal Motor & Sales Co., 303 Lou street; three-story brick garage and show room, 106x141, at North avenue and Lord street; $100,000.

Wilmington, Del.; Wilmington Leather Co.; one-story brick and cement garage, 25x50, at Second street and Greenville avenue; $12,000.

Wilmington, Del.; Joseph Kitchenbaum, care J. J. Kennedy, Ford building; two-story brick and cement public garage, 35x75.

Washington. D. C.; James H. Keane, Colorado building; one-story brick and concrete public garage, 66x72, at 1908-1914 L street; $10,000.

Washington, D. C.; H. Winninger; one-story garage; $25,000.

Washington, D. C.; Nicholas P. Chaconas, care A. S. J. Atkinson, 3801 Macomb street, northwest; two-story brick and concrete garage, 31x80; $30,000.

Arcadia, Fla.; E. T. Smith; two-story fireproof garage, 50x150; electric elevator: $18,000.

Jacksonville, Fla.; Ford Motor Co., Detroit, Mich.; four-story assembling plant, 200x250 site; $400,000.

Key West, Fla.; Trevor & Morris; three-story brick repair shop, 48x145; purchased $2500 machinery.

Tampa, Fla.; Reagin-Denton Motor Co.; one-story reinforced concrete garage; site, 105x210; $45,000.

Atlanta, Ga.; Atlanta-Cadillac Co., 183 Peachtree street; three-story reinforced concrete automobile building, 93x150: $150,000.

Augusta, Ga.; E. J. Trelding and Henry H. Cummings; one-story garage; site 29x199; lessee, Pollock & Johnson.

Aurora, Ill.; Sinclair Refining Co., 111 Washington street, Chicago; one-story service station at Lake and Galena streets; $5000.

Berwyn, Ill.; F. Kunsel, 2736 West 64th street; one-story brick public garage, 52x80; $15,000.

Charleston, Ill.; Grant Childress, care Cole County Motor Car & Garage Co.; one-story brick garage, 115x145; $30,000.

Chicago, Ill.; S. N. Crowen, 30 North La Salle street; one-story brick garage, 40x20x120; $15,000.

Chicago, Ill.; O. W. Johnson, care A. Sandgren, 25 North Dearborn street; one-story brick garage, 22x85.

Chicago, Ill.; A. Craver, 6928 Woodlawn avenue; one-story brick private garage, 22x34, south side Woodlawn avenue; $3000.

Chicago, Ill.; F. B. Purviance, 6935 Chappell avenue; one-story brick garage at 6937 Chappell avenue; $5000.

Chicago, Ill.; Illinois Brick Co., 111 Washington street; one-story brick garage, 67x92; $7500.

Chicago, Ill.; New Central Garage Co.; one-story brick public garage, 122x125, at Fillmore and Central Park avenue; $38,000.

Chicago, Ill.; P. A. Pottinger, 4030 Irving Park boulevard; one-story brick garage and shop, 113x133, at Irving Park boulevard and Kedvale street; $45,000.

Chicago, Ill.; E. C. Waller, Jr.; one-story garage, 80x160, at 1523 North Wells street.

Chicago, Ill.; Hyman Brothers, care Axel V. Teisen, 3133 Logan boulevard; one-story brick garage, 24x25, at 2412-2414 Logan boulevard; $4000.

Chicago, Ill.; S. Zarzyckis, 2500 Sacramento boulevard; one-story stone private garage, 29x51; $7500.

Chicago, Ill.; J. E. Faget, care E. J. Ohrensetin, 58 West Washington street; one-story garage and service station, 50x120, on Cottage Grove avenue, near 63rd street; $20,000.

Chicago, Ill.; A. F. Hallman, 10 South La Salle street; one-story stone public garage, office and display room, 100x125; $25,000.

Chicago, Ill.; Otten & Woermer, care A. J. Fischer, 4011 North Robey street; one-story brick and stone public garage, 50x140, on Greenview, near Belmont avenue; $15,000.

Decatur, Ill.; Amos Wheeler, 235 Wood street; one-story reinforced concrete garage, 54x152; $15,000.

Evanston, Ill.; A. D. Sheridan, 510 Church street; one-story brick private garage, 20x24; $10,000.

Evanston, Ill.; Lansing B. Warner; one-story private garage; $5000.

Highland Park, Ill.; O. Kelley, 208 South La Salle street; two-story brick and stone private garage, 24x40.

Wilmette, Ill.; Warble Furniture Storage Co.; two-story garage, 40x50, Railroad avenue, near Wilmette street; $85,000.

Albany, Ind.; McCormick Brothers; one story brick garage, 55x65.

Argos, Ind.; W. L. Rudd Motor Co., Plymouth, Ind.; one-story brick commercial garage, 45x160; $15,000.

Bluffton, Ind.; O. E. Shafer, 510 South Morgan street; one-story brick garage, 60x100; $25,000.

Fort Wayne, Ind.; G. N. Fitch & Sons, Berry and Clinton streets; two-story brick garage and sales room, 110x120; $55,000.

Oakland City, Ind.; A. L. Maxwell Co., Lawrenceville, Ill.; one-story brick, steel and concrete commercial garage and sales room, 85x130.

Richmond, Ind.; Webb & Coleman, 19 South Seventh street; three-story commercial garage and sales room, 94x105.

Des Moines, Ia.; Hippe State Co., 710 Mulberry street; five-story reinforced concrete and terra cotta garage and sales room; $60,000.

Grinnell, Ia.; Hagen Brothers; one-story garage, 50x165; $30,000.

Treynor, Ia.; Carl Karrer; one-story brick and stone trim public garage, 52x102; $20,000.

Lincoln Center, Kan.; Lincoln Motor Co.; one-story brick and stucco garage, 100x120.

Topeka, Kan.; Page Milling Co.; three-story brick and stone trim garage, 50x150, at 912-914 Kansas avenue; $65,000.

Glasgow, Ky.; Glasgow-Buick Co.; two-story garage, 50x100; $25,000.

Louisville, Ky.; G. F. Lowe, 1215 Cherokee street; one-story brick garage, 41x152, at 434 East Broadway; $15,000.

Louisville, Ky.; Jacob Weber & Sons, 53 East Market street; one-story brick garage, 50x110; $20,000.

Biddeford, Me.; Cleaves & Sawter, Saco, Me.; one-story brick, steel and concrete public garage and sales room, 40x80.

Baltimore, Md.; George Klein, 2921 Belmont avenue; 45 one-story garages, 10x18 each; $18,000.

Baltimore, Md.; John Mennsteil, 1512 East Lanvale street; one-story brick garage, 47x70, at 1713 Spring street; $5000.

Baltimore, Md.; Guilford Building Co., 2802 St. Paul street; one-story brick garage, 50x50; $7500.

Baltimore, Md.; Charles E. Litzinger, 3678 Falls road; one-story brick garage at 38th and Elm avenue; $10,000.

Baltimore, Md.; R. S. Whiteford, 2633 Pennsylvania avenue; one-story brick garage, 46x100; $20,000.

Baltimore, Md.; Louis Blaustein, 2312 Callow avenue; one-story brick garage, 57x130, at 13 Fremont avenue; $30,000.

Baltimore, Md.; H. S. Born Motor Corporation, 798 Waesche street; one-story brick garage, 100x150.

Baltimore, Md.; Gotch Supply Co., Raspeburg, Md.; one-story garage, 75x100; $10,000.

Cumberland, Md.; Scott Kelso; three-story garage, 50x120.

Pocomoke, Md.; J. Milton Clogg; one-story brick garage, 69x140; $20,000.

Chelsea, Mass.; F. A. Glazier, 107 Addison street; one-story garage, 21x65: $50,000.

Lynn, Mass.; J. Callum, 27 Neptune street; one-story reinforced concrete garage, 73x85, at Washington and Suffolk streets; $23,000.

Battle Creek, Mich.; Post Tavern hotel: one-story brick public garage, 122x126; $150,000.

Philadelphia, Pa.; Alfonso Verdi; one-story stone garage, at 918 Wynnewood road, for George S. Williams; $2000.

Philadelphia, Pa.; Robert Killongh; one-story garage, rear 308 West Hortler street; $2800.

Philadelphia, Pa.; Samuel D. Milner; two-story garage, 33x48, at 4320 Wingonocking street, for Matthias Suetx; $2000.

Philadelphia, Pa.; Pierce-Henon Co.; two-story service station, 25x160, at 1248 North Broad street, for George H. Earle, Jr.; $25,000.

Philadelphia, Pa.; John N. Gill & Co.; 10-story sales room; southeast corner Broad and Vine streets, for Bigelow-Willey Co.; $425,000.

Philadelphia, Pa.; Boris Tubin; one-story brick garage at 1633-1637 Firtzwater street, for J. W. Stockett; $5000.

Philadelphia, Pa.; Standard Construction Co.; two-story sales room and service station, at 3438 Ludlow street, for W. H. Warren Webb; $150,000.

Philadelphia, Pa.; Levi Cartmell; one-story garage, at 542 Carpenter street, Germantown; $7000.

Philadelphia, Pa.; W. H. Bunn; one-story garage, 16x18, southeast corner 62nd street and Walton avenue, for Bessie Brownstein; $1100.

Philadelphia, Pa.; G. V. Simon; one-story garage, south side Louden street, east Third, for Charles A. Sauers; $3500.

Philadelphia, Pa.; G. D. Fisher, 5424 Thompson street; two-story public garage, at 119 South street, for P. Garrison, 102 South street; $20,0000.

Pittsburgh, Pa.; Davis Smith Co., 516 Federal street; one-story private garage, 18x22, for B. Stevenson, 1530 Denniston avenue; $3000.

Pittsburgh, Pa.; Henry Geschwender, 1244 Juniata street; two-story garage and sales room, 50x180, for Allegheny Motor Co.: $65,000.

Pittsburgh, Pa.; Miller Construction Co., Empire building; six-story sales room and storage station, 50x110, for Dyke Motor Supply Co., 5500 Hubert street; $90.000.

Reading, Pa.; L. H. Focht & Son, Baer building; three-story public garage, 90x119, at Poplar and Court streets, for Merchants' Auto Service, 424 Court street.

Scranton, Pa.; S. Sykes & Sons; one-story garage and shop, 52x100, for Scranton Lace Co., Glenn and Meylert streets; $30.000.

Washington, Pa.; John R. Lewis; two-story brick and reinforced concrete garage and service station, 100x120, for S. M. Bayers, 124 South Main street; $45,000.

West Chester, Pa.; R. Walter Pachalle & Son, Paoli, Pa.; two-story public garage, 71x100, at 5 South Church street, for Howard W. Moses; $40,000.

Williamsport, Pa.; Metzgar & Fisher, Otis building, Philadelphia; one-story garage, 28x51, for Atlantic Refining Co., 1211 Chestnut street, Philadelphia.

Providence, R. I.; Dimond Co., 244 Westminster street; one-story garage, 48x140; $30,000.

Columbia, S. C.; Marion Thomas; two-story brick automobile building, 43x85, for Davis Motor Co., 2000 Main street.

Alexandria, a.; Heerburth & Co.; two-story public garage, 77x125, for Mount Vernon Automobile Co.; $40,000.

Norfolk, Va.; Nichols & Lindeman, Seaboard Bank building; two-story garage and storage battery station, 40x104 and 80x106, at Jamestown boulevard and Monteo streets, for Relance Electric Co., 771 Granby street; $65,000.

Moundsville, W. Va.; W. H. Batson; one-story brick and tile garage, 60x110, reinforced concrete floor, electric lighting; for H. W. Perkins; $30,000.

Parkersburg, W. Va.; T. B. Watterson; two-story garage, 50x105, at Seventh and Green streets, for Motormart Garage.

Allonez, Wis.; Rudolph M. Hansen Co., Green Bay, Wis.; one-story garage, 24x28, for W. P. Brenner; $4500.

Oshkosh, Wis.; T. S. Moptin. 100 Algomia street; one-story gargae, 60x120, for Lawrence Larson, 62 State street ;$15,000.

Racine, Wis.; George Kamm; one-story garage, 32x60, for Kamm Brothers, 525 College avenue; $9000.

Wauwatosa, Wis.; Robert W. Bard; one-story garage, 20x21.

Garage News of the Southwest

Little Rock, Ark.; Holcomb Gunn is to take charge of the new battery department of the 555 Tire & Service Co., which handles Vesta batteries.

Colony, Kan.; Carey Christian and B. T. Barber of Iola have formed a partnership to operate a garage and Ford service station here. Extensive improvements are being made in the concern's headquarters in the implement warehouse.

Marshall, Mo.; W. P. Thomas has moved into his new garage on East North street He specializes on service to Ford owners.

Rosston, Okla.; Fred M. Porter is erecting a garage at Doby Springs.

Skiatook, Okla.; W. J. Schafer has sold his interests in the Skiatook Garage to Roberts & Fitzpatrick. retaining, however, the accessory end of the business, which will be enlarged. The new firm name of the garage will be the Roberts & Fitzpatrick Auto Co.

Thomas, Okla.; A. W. Renshaw & Son is moving its accessory business from the Dr. Omer building on West Broadway to the McClung building on South Main street.

Austin, Tex.; The Bergstrom Auto Co., 127 West Fifth street, has added a large. modern steam vulcanizing plant to its garage and repair business.

Brenham, Tex.; The Magnolia Petroleum Co. will open its new filling station. corner of Main and South West streets, about May 1.

Brownwood, Tex.; Burt Norwood is erecting a large garage on East College street. which will be leased by J. L. Clark of Rising Sun.

Cisco, Tex.; The Auto Electric Co. has leased half of the West & Hook Garage on South Main street, where it will open a machine shop at a cost of $25,000. The Auto Electric Co. has also taken over the Cisco Auto Electric service station, which is located next to the Cisco Morning News office, and will move that business to the new quarters. The owner and manager of the Auto Electric Co. is A. B. Lewis

Corsicana, Tex.; The Fred M. Allison Motor Co. has let the contract for work to the amount of $50,000 on improvements on its place of business. When completed 25,000 feet of floor space will be afforded An automobile repair and paint shop will be maintained.

Cotulla, Tex.; The Charles E. Neal Auto Co. is erecting a brick garage.

Gatesville, Tex.; The Nash & Overland service station, under the management of D. D. McCoy, has been opened in the Johnson building on Main street.

Memphis, Tex.; Gerlach & Franks is to erect a garage just east of City hall.

Palacios, Tex.; The Columbian Refining Co. of Houston is reported to be planning the construction of a filling station at the northwest corner of Commerce and Pavilion streets.

Strawn, Tex.; Caraway & Moyers is a new concern that has opened a garage on North Front street, near the Strawn flour mill.

Temple, Tex.; Jones & Stansell has opened an automobile sales room in the building in the rear of Oppenheimer's.

Trinity, Tex.; The Highway Garage has purchased the Ed Simon Garage and consolidated it with its own business.

Waco, Tex.; The E. M. Brown Motor Co. has opened headquarters for the distribution of the Auburn Beauty Six car in McLennon, Navarro, Falls, Hill, Limestone and Robertson counties.

Waco, Tex.; The building of Nash, Robinson & Co. at 16th and Franklin streets is nearing completion.

Waxahachie, Tex.; Thomas C. Grimland, representative of the New-Tex Oil & Refining Co., is putting in a filling station at his garage. Mr. Grimland will also have charge of the station the New-Tex Co. will erect at the corner of Franklin and Elm streets.

Coming Events

May 15-20—San Francisco, Cal.; Seventh Annual Foreign Trade Convention.

May 15-June 13—Antwerp, Belgium, Car, Tire, Wheel, Parts and Equipment Show.

May 20-30—Atlantic City, N. J., Third American Aeronautic Congress, Aero Club of America.

May 30-June 5—Del Monte, Cal., Mid-Summer Convention, A. E. A.

May 31—Brockport, N. Y., Dirt Track Races. Frank G. Bell, Manager.

May 31—Indianapolis, Ind., Seventh International 500-Mile Race, Indianapolis Motor Speedway.

June 1—Omaha, Neb., Reliability Truck Tour.

June 1-3—Indianapolis, Ind., Convention of Marmon Dealers.

June 5-20—Bordeaux, France, Annual Commercial and Industrial Fair.

June 6-10—Indianapolis, Ind., World Convention of Advertising. Felix M. McWhirter, chairman.

June 12—Uniontown, Pa., Speedway Race, Uniontown Speedway Association.

June 17—Portland, Ore., Dirt Track Events. Robert A. Hiller, Manager.

June 18-19—Bushkill Falls, Pa., Annual Outing, Automobile Accessories Business Association of Philadelphia.

June 19—Ogdensburg, N. Y., Dirt Track Races. Fred G. Bell, Manager.

June 21—Paris, France, Organization of International Chamber of Commerce.

June 21-25—Ottawa Beach, Mich., Summer Meeting, Society Automotive Engineers.

June 21-26—Milwaukee, Wis., Wisconsin Truck Tour, Milwaukee Sentinel.

June 22-25—Asbury Park, N. J., Annual Meeting, American Society for Testing Materials.

June 24-25—Isle of Palms, S. C., Semi-Annual Meeting, South Carolina Automotive Trades Association.

June 26-July 25—Antwerp, Belgium, Commercial Vehicles, Tractor and Truck Show.

June 27-July 6—Helsingfors, Finland, Finnish Fair.

July—Lake Huron Tour.

July 4—Hanford, Cal., Dirt Track Events, Hanford Board of Trade.

July 4—Spokane, Wash., Dirt Track Events.

July 5—Batavia, N. Y., Dirt Track Events. Frank G. Bell, Manager.

July 5—Tacoma, Wash., Tacoma Speedway events.

July 9-20—London, England, International Aircraft Exhibition, Society of British Aircraft Construction, Olympia.

July 14-29—Annual Tour, Michigan Pikes Association in Ontario and Michigan.

July 17—Warren, Pa., Dirt Track Races. Frank G. Bell, Manager.

July 17-25—Prague, Czechoslovakia, 12th Annual Automobile Exposition, Czechoslovak Automobile Club of Prague, Industrial Palace, Prague Exposition Grounds.

July 17-18—Inter-Club Run, Chicago Automobile Club.

July 24—Watertown, N. Y., Dirt Track Races. Frank G. Bell, Manager.

July 31—Fulton, N. Y., Dirt Track Races. Frank G. Bell, Manager.

August—Paris, France, Grand Prix Race, Sporting Commission, Automobile Club of France.

Aug. 7—Erie, Pa., Dirt Track Races. Frank G. Bell, Manager.

Aug. 7-Sept. 15—Antwerp, Belgium, Show of Motorcycles, Side Cars, etc.

Aug. 14—Buffalo, N. Y., Dirt Track Races. Frank G. Bell, Manager.

Aug. 15-22—Danzig, Germany, Second Danzig Fair.

Aug. 20-21—Middletown, N. Y., Dirt Track Races. Horace P. Murphy, Manager.

Aug. 21—Elgin, Ill., Road Race, Chicago Automobile Club.

Aug. 21—Johnstown City, Pa., Dirt Track Races. Frank G. Bell, Manager.

Aug. 27-28—Flemington, N. J., Dirt Track Races. Horace P. Murphy, Manager.

Aug. 28—Canadaigua, N. Y., Dirt Track Races. Frank G. Bell, Manager.

Sept. 1—New York-San Francisco Glidden Tour.

Sept. 3-12—Detroit, Mich., 71st Annual Exposition, Michigan State Fair Association.

Sept. 5—Sicily, Targa Florio Race.

Sept. 6—Hornell, N. Y., Dirt Track Races. Frank G. Bell, Manager.

Sept. 6—Cincinnati, O., Speedway Events, Cincinnati Speedway Co.

Sept. 6—Uniontown, Pa., Speedway Events, Uniontown Speedway Association.

Sept. 17-18—Syracuse, N. Y., Dirt Track Races. Horace P. Murphy, Manager.

Sept. 19-25—Springfield, Mass., Eastern States Exposition.

Sept. 25—Allentown, Pa., Dirt Track Races. Horace P. Murphy, Manager.

October—London, England, Commercial Vehicle Exposition, Olympia.

Oct. 1-2—Trenton, N. J., Dirt Track Races. Horace P. Murphy, Manager.

Oct. 6-8—Northampton, Mass., Annual Automobile Show, H. F. & H. Agricultural Society, Three County Fair Grounds. A. J. Morse, secretary.

Oct. 6-7—Gulfport, Miss., Meeting Louisiana-Missisippi Automotive Trade Association.

Oct. 6-16—New York, N. Y., Electrical Show, Grand Central Palace. George F. Parker, manager.

Oct. 8-9—Danbury, Conn., Dirt Track Races. Horace P. Murphy, Manager.

Oct. 20-22—Atlantic City, N. J., Convention National Implement & Vehicle Association. E. W. McCollough, Secretary, 72 West Adams Street, Chicago, Ill.

November—London, England, Passenger Car Show, Olympia.

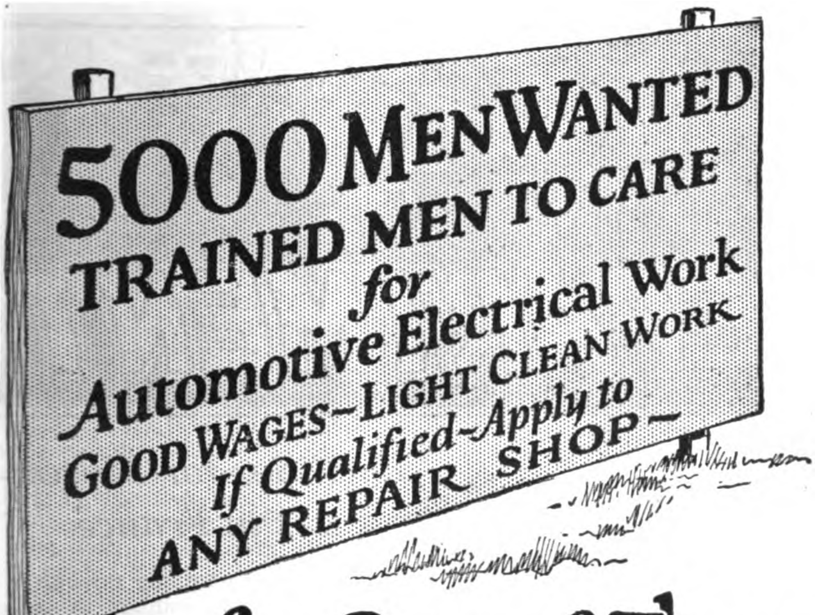
November—New York, N. Y., Annual Meeting American Road Builders' Association. E. L. Powers, Secretary, 150 Nassau Street, New York.

November-December—Buenos Aires, Argentina, National Exposition of American Manufacturers.

Nov. 1-16—Jersey City, N. J., Annual Automobile Show, Hudson County Automobile Dealers' Association, Fourth Regiment Armory.

Dec. 10-18—New York, N. Y., Motor Boat Show, Grand Central Palace.

January, 1921—Little Rock, Ark., Annual Meeting, Arkansas Good Roads & Drainage Association. Robert O. Schaefer, Secretary, Masonic Temple, Little Rock.



Why Don't You PREPARE YOURSELF for One of These Positions?

Repair Shops and Garages the country over are calling for men trained in electrical repairing. This demand has come so quickly—almost overnight—that there are not half enough trained or experienced men to take care of this work.

Big wages are being offered—the work is clean and light. The trained electrical men are the aristocrats of the automobile repair field.

And the demand is increasing faster than men can prepare. This is YOUR opportunity—grasp it NOW. Enroll in first possible class at

AMBU ENGINEERING INSTITUTE

In eight weeks you are trained in the details of Automotive Electricity. You not only learn WHAT to do in every possible case, but you learn WHY you do it.

All instruction is individual—by actual work on standard equipment, under the constant guidance of the teachers. You spend these eight weeks—

> Two weeks in fundamental Electricity—laboratory work and class room lectures.
>
> Two weeks in Starting and Lighting. Actual shop work and lectures.
>
> Two weeks in Ignition. Shop work on actual installations—with lectures on theory.
>
> Two weeks in Battery Shop. Building, Repairing and Tearing Down Batteries. Lectures on theory and practice.

Only 20 men to each instructor insures constant individual attention. All of the instructors are the best obtainable. They not only are educated and experienced, each in his line, but they can teach you what they know.

These limited classes start every two weeks.

Pave the way to a bigger, better future by training yourself here. Write today for terms and classes open.

International Chamber of Commerce

The new International Chamber of Commerce, which was projected at the International Trade conference at Atlantic City, N. J., last October, will be formally organized at Paris, France, during the week of June 21, 1920. Invitations have been sent out by the American group of the International Organization committee to business and industrial associations, asking them to name delegates to participate. About 100 American delegates are expected to attend.

The International Organization committee is to meet at Paris in advance of the general organization meeting to prepare and report a plan of permanent organization. At the meeting of the International Chamber of Commerce the important questions of international credit, shipping tariff regulations, unfair competition in international trade, among others, will be discussed.

The membership of the committee, so far as announced, is as follows:

United States—A. C. Bedford, chairman of the board of the Standard Oil Co. and member of the National Foreign Trade council, New York, chairman: Thomas W. Lamont of J. P. Morgan & Co., New York; Edward A. Filene, president of William Filene's Sons Co., Boston; Richard S. Hawes, president of the American Bankers' association, St. Louis; John H. Fahey, Boston, formerly president of Chamber of Commerce of the United States; S. C. Mead, secretary of Merchants' association of New York, vice chairman and secretary.

Belgium—Louis Canon-Legrand, president of Chamber of Commerce, consulting engineer, Mons, chairman; Prof. Paul Van den Ven, University of Louvain, delegates of Belgian minister of finance at Paris; Brussels, Alexander De Groote, vice president of the Antwerp Chamber of Commerce.

France—M. Eugene Schneider, head of Creusot Steel Works, president of the British Iron & Steel Institute and former member of Chamber of Deputies, Paris, chairman; M. Tirman, councillor of state, Paris; M. Roche, delegate of General Syndicate of Chemicol Products and administrator delegate of Poulenc Brothers, Paris.

Great Britain—Lord Desborough, president of the British Imperial Council of Commerce and formerly president of the London Chamber of Commerce, London, chairman; Sir Arthur Shirly Benn, K. B. E., M. P., managing director of Hunter, Benn & Co., London; Edward Manville, president of the Association of British Chambers of Commerce and vice president of the Federation of British Industries, Coventry; Stanley Machin, president of the London Chamber of Commerce, London; R. B. Dunwoody, secretary of the Association of British Chambers of Commerce, London, secretary.

Italy—Ferdinando Quartieri, president of the Italian Corporation for Chemical Industries, Milan, chairman; Prof. Vittorio Meneghelli, president of the Chamber of Commerce of Venice; Giorgio Mylius, president of the Italian Master Cotton Spinners' and Weavers' association, Milan; Pietro Giovanni Lazzerini, Lazzerini Brothers, shipping, Carrara; Augusto Jaccarino, Banco di Napoli, Rome.

COLE AERO EIGHTS WINNING RACES IN SOUTH AMERICA.

Among the recent road races held in Argentina, South America, were the 200-mile race held under the auspices of the Argentine Automobile Club of Buenos Aires, and the 120-mile race between Montevidio and Minas, both of which were won by Aero Eight Cole cars, made by the Cole Motor Car Co., Indianapolis, Ind., and entered by R. Borrat Fabini, Cole distributor at Montevideo, and piloted by E. Blanchardi. The time for the 200-mile run was four hours and 30 minutes and for the 120-mile event, two hours and 30 minutes, establishing two new South American records.

OVERLAND EXPORT ACTIVITIES.

Export orders on the books of the Willys Export Corporation, which is a subsidiary of the Willys-Overland Co., Toledo, O., are reported to be more than three times as large as the total foreign shipments of the company during any preceding year.

The Willys-Overland Canadian Co. has been reorganized during the past year with increased capital, and is now turning out more than 50 cars a day. It is also stated that the Willys-Overland Co.'s plant in Manchester, England, will have a capacity for manufacturing 25,000 cars a year by the end of 1920.

Facilities for Motorists in France

France is now affording through new regulations special facilities to American motorists who desire to tour in that country in their own cars. The prospective tourist should carry along his state license, upon the strength of which the French authorities will issue gray cards for cars and pink cards for drivers.

Incidentally, Americans will provide several copies of photographs such as have become familiar to the traveling world for passports and pay a fee of 20 francs. Thereupon the American will be able to "circulate" all over France with his machine.

GOBI DESERT TRAVERSED BY AUTOMOBILE.

George Moszkovski, a former lieutenant in the Polish army, with five companions, recently traversed 3500 miles of the desert of Gobi in Mongolia in a Packard twin-six car, to prove the possibility of substituting motor cars for beasts of burden to bring goods from Mongolia and Turkestan to the markets of the world. It took two months and a half to accomplish this trip in the face of seemingly insurmountable difficulties. Two trailers containing equipment were used, one of which became engulfed in the desert sand and was abandoned. Camels carrying gasoline followed far to the rear, and at times the car was forced to wait three days until the "ships of the desert" could catch up.

After reaching its destination the party rested for a few days, then started on the return trip.

One set of Goodyear cord tires carried the car over the entire tour.

SOUTH AFRICAN MOTOR TRADE.

The total value of imports of motor vehicles and parts from the United States to Cape Town, British South Africa, for the three years 1914, 1917 and 1918, was $1,066,321, $2,986,943 and $1,851,589 respectively. During these same years England's trade totalled $3.059,843, $806,160 and $608,192 respectively. Canada's share of this trade rose from $626,741 in 1914 to $1,242,341 in 1917, but declined to $462,641 in 1918.

Foreign Trade Opportunities

(Reserved addresses may be obtained from the United States Bureau of Foreign and Domestic Commerce, Washington, D. C., or its district and co-operative offices, upon written request by the opportunity number.)

32,439—An agency is desired by a man in South Africa for the sale of automobiles for firms which are not already represented in that country.

32,442—An electrical engineer in Argentina desires to secure an agency for the sale of electrical appliances in general, especially for lighting and heating, electrical machines, motors, cables, electrical measuring instruments and laboratory instruments. Correspondence may be in English. Reference.

32,453—A merchant in France desires to secure an agency with a stock of goods for the sale of automobiles, motorcycles, bicycles and spare parts. Quotations should be given c. i. f. French port. Payment after sale, quarterly remittances effected during quarter. Correspondence should be in French. References.

32,458—General importers and exporters in Syria desire to be placed in touch with manufacturers and exporters of agricultural implements, automobiles, machinery, hardware, pumps, engines and tools, bicycles, motorcycles, cutlery, silverware, chemicals and drugs, jewelry, leather, rubber goods, paints and varnishes, pianos, boots and shoes, haberdashery, textiles, copper and tin, iron and steel, kerosene oil, coffee, cotton thread and yarn, silk goods, aniline and indigo dyes, cotton seed oil and household and toilet soaps.

32,474—The representatives in India of a firm in the United States desire to secure the sole agency for the sale of motor cars. References.

32,475—A commercial agent in France desires to secure the representation of firms for the sale of cheap automobiles. Correspondence should be in French. References.

32,482—A firm of manufacturers' representatives in South Africa desires to secure exclusive agencies from manufacturers for the sale of office equipment and supplies, medium and high grade hosiery, straw hats, carpets, soft goods, leather goods, medium priced automobiles and accessories, underwear, neck wear, shirts, clocks, toys, chewing gum and confectionery, electroplated ware, enamel ware, crockery, kitchen utensils and cutlery. Reference.

32,493—A firm of engineers and merchants in India desires to import and secure agencies for all classes of hardware, such as wood screws, wire nails, galvanized wire bolts and nuts, rivets, files, tool steel and anvils; mill, cotton gin and railway supplies; machinery, electrical goods, provisions, perfumery, glass ware, crockery, bedsteads, enameled ware, metals and metal ware, brass and copper tubes, motor cars, motorcycles and parts, piece goods, woolens, boots and shoes, paints, etc. Reference.

32,540—A merchant firm in Spain wishes to secure an agency for the sale in that country and Portugal of electrical wiring and lighting equipment, motors and dynamos, automobile accessories, cutlery and tools. References.

32,555—A merchant in Palestine desires to purchase and secure an agency on commission for the sale of cotton goods, coal, building materials, such as timber, cement, paints, iron sheets, beams and iron bars; box calf and glazed sole and upper leather; sugar, coffee, flour and other colonial products; writing, wrapping and printing paper, shoe supplies, motor cars and trucks, typewriters, office furniture, drugs and patent medicine, lubricating oils, paraffine, candles, oleo oil, cocoanut oil, margarine, canned goods, wagons and parts, hardware and tools, and iron bedsteads. Quotations should be given c. i. f. Jaffa. Payment, 25 per cent. in advance, balance against documents. References.

NORWAY LEGISLATES FOR PNEUMATIC TIRES.

Norway is the first country in the world to propose national legislation that will specify that motor trucks up to two tons capacity must be equipped with pneumatic tires to prevent excessive wear on highways claimed to be due to the use of solid tires. In fact, some trucks have already been refused admission because they did not conform to the new wheel and tire specifications. The contemplated legislation provides that all automobiles used for commercial purposes must be equipped with tires of at least five-inch tread on all four wheels, which means that up to two tons trucks must be pneumatically equipped; from two to 3½ tons, either pneumatic or solid equipment of more than five-inch tires is permissible; while trucks of over 3½ tons weight may run on solids.

BRITISH MOTOR TAX BASED ON ROAD WEAR.

The new taxes which, it is contemplated, will be levied on motor vehicles in the United Kingdom, will be based on the amount of road wear, according to a statement of the Ministry of Transport. The horsepower will be the unit for the calculation of the tax on private motor vehicles, their weight the unit for commercial vehicles, and their seating capacity for hackney carriages and omnibuses.

Motorcycles will be taxed on their weight, with an added amount for side car or trailer.

MOTOR CARS IN SIAM.

There were imported into Siam from the United States during the fiscal year ending March 31, 1919, motor cars and parts to the value of $185,928; mineral oil, $284,188; lubricating oil, $46,634; electrical goods and apparatus, $129,423; rubber goods, $29,531.

IMPORTS INTO FRANCE FROM GERMANY.

The following figures show the status of import trade from Germany into France in 1919 as compared with 1913, as regards the vehicle industry: Vehicles, including passenger automobiles and other bicycles and motorcycles—From the Rhenish occupied territory, 1919, 24,685 metric quintals (5,443,043 pounds); value, 3,189,000 francs ($637,800). From other German territory, 1919, 22,890 quintals (5,047,245 pounds); value, 2,797,000 francs ($559,400). Total, 47,575 quintals (10,490,289 pounds); value, 5,986,000 francs ($1,197,200). Total from Germany, 1913, 37,144 quintals (8,190,252 pounds); value, 6,940,000 francs ($1,388,000).

AUTOMOBILE SHOWS IN BELGIUM.

Three international exhibitions of automobiles and accessories will be held this year in Antwerp, Belgium, on the occasion of the international Olympic games. The first exhibition will take place from May 15 to June 13, and will include motor cars, tires and wheels, mechanical parts and separate pieces, and all sorts of accessories connected with the automobile industry.

The second show will run from June 26 to July 25, and will make a specialty of commercial vehicles, agricultural tractors, camions and motors.

The third display will occur from Aug. 7 to Sept. 15 and will be devoted to motorcycles, side cars, bicycles, etc., including accessories.

Temporary free entry will be obtained from the Belgian custom house for foreign exhibits. All information and application forms may be obtained from James Gustavus Whiteley, Belgian consul, 223 West Lanvale street, Baltimore, Md., who has been appointed special representative of the Antwerp International exhibition.

CHAUFFEURS NEEDED IN JERUSALEM.

A school for chauffeurs is to be established in Palestine, according to a recent announcement by the American Zionist Medical unit at Jerusalem. The aim is to train men to become capable drivers of motor cars and mechanics in an effort to eliminate the acute shortage of chauffeurs in that country. Owing to the poor railroad facilities automobiles are being extensively used, with a consequent demand for competent drivers.

NORWAY LIMITS PROFITS.

The Norwegian Price Control commissioner has placed in force a regulation limiting the profits for dealers in motor cars to 15 per cent. on the first 10,000 crowns ($3000), 12½ per cent. on the following 5000 crowns ($1500) and 7½ per cent. on larger sums. The amount is calculated on cost, insurance, freight and duty. It is said that this measure is part of a policy to limit importation in order to improve Norwegian exchange.

Proper Attention to Generator Brushes

By O. E. Becker, President of Becker Bros., Chicago, Brush Manufacturer.

APPROXIMATELY 90 per cent. of starting and generator trouble is caused by lack of proper attention to brushes. A number of holders are so constructed that when the brushes wear out they ride on the commutator, causing it to groove. Yet there are many persons using automobiles every day who do not know what a brush is or that they have brushes on their starting motor and lighting generators and magnetos.

Few realize the importance of the brush to automobile efficiency. A brush is the heart of the lighting and starting system. Without proper brush contact or with poor commutation, one would be unable to start the car, to have a lighting system and, where a distributor is used, to run it.

Lighting and starting systems were first installed on pleasure cars in 1912. Now they are placed not only on all pleasure cars, but on some makes and sizes of motor trucks and tractors.

There are about a thousand kinds of brushes manufactured, varying in size from one-eighth of an inch square to 2½ inches square. Their carrying capacity varies from 30 to 300 amperes a square inch.

Brushes are made of copper gauze, or compounds of graphite, carbon and copper, depending upon the contact resistance and current required. The metal types contain from 15 to 90 per cent. copper.

Brushes other than the copper gauze type the graphite compound brushes—go through a complicated process before they are ready for the market. The materials are first transformed into a fine powder, which is placed into mixing machines. This mixture is put into hydraulic presses where it is subjected to a pressure of from 150 to 500 tons, and pressed into blocks varying in thickness from one-quarter to 1¼ inches. The blocks are then placed in furnaces giving a terrific and constant heat. They are left in the ovens for from seven to 14 days, after which they are permitted to cool gradually. When the blocks are cold the ovens are unpacked and the blocks are sent to the cutting department and cut into the numerous sizes and shapes.

Next they are brought to the drilling department where holes are drilled with minute care in order that they may be assembled with the copper wires or "pig tails," which are either spun, riveted, screwed or soldered on to the brushes.

AMERICAN MANUFACTURER ISSUES JAPANESE CATALOGUE.

The General Commercial Co., Ltd., Yokohama, Japan, agent of the Wright Manufacturing Co., Lisbon, O., has issued a catalogue of the hoists made by the Wright Co., printed in the Japanese language. This booklet presents an odd appearance, as is the case with most of the Oriental languages, the title page is at the back and the work is read from back to front and the text is printed in vertical columns.

DISTEEL BULLETIN ISSUED.

The Detroit Pressed Steel Co. in April inaugurated the publication of the "Disteel Bulletin," which will be published monthly from the offices of the company in Detroit, in the interests of scientific wheel designing and better wheel equipment. Particular attention is devoted to keeping those interested in the running equipment of the motor car informed as to the perfection and development of steel disc wheels by the Detroit Pressed Steel Co., and the history and progress of their application to the modern motor car is outlined.

A certificate of incorporation has been taken out by the Hudson Tire & Rubber Co., Yonkers, N. Y. The capital is $1,000,000, and the directors named are William M. Doucette and Arry B. Seymour of New York and Charles J. Wallace of Yonkers.

FIELD MANUFACTURING CO. INCORPORATES.

The Field Manufacturing Co., Owosso, Mich., has been incorporated under the name of the Field Body Corporation, and the following officials have been chosen: President, J. F. Field; vice president and treasurer, E. J. Frederick; secretary, F. H. Basom; assistant treasurer, Gilbert L. Taylor; general sales manager, A. L. Ditter; sales manager, F. J. Bosma; advertising manager, S. Hugh Paine.

The reorganized company is considering plans which will triple the present capacity, which include the erection of additional buildings and enlargements. Among the lines made by the Field Body Corporation are the new four-season cab and the Field All-Service Interchangeable Series platform. It is planned to manufacture 300,000 units of the latter for the year commencing July 1. Exclusive field distributors have been established in many of the leading centers of the United States.

COLUMBIA MOTORS INCREASES CAPITALIZATION.

The Columbia Motors Co., Detroit, has increased its capital from $500,000 to $6,000,000, and a tract of land has been purchased on the east side of that city on which a large factory is to be erected. This tract has an outlet on three railroads, which will give ample shipping facilities. The Columbia Co. already operates two large plants in that section.

The new stock was issued on the basis of eight shares of new for one of old, all of it taken by present stockholders.

VICE PRESIDENT LONG RETIRES.

Following his re-election as a member of the board of directors at the annual meeting of the stockholders of the Joseph Dixon Crucible Co., Jersey City, N. J., George E. Long, the senior vice president, declared his decision to retire from that office. He thereby terminates 43 years of active and valuable service with the Dixon Co., beginning in the capacity of stenographer and advancing to the offices of secretary, treasurer and vice president respectively.

$15,000 net profit last year manufacturing Auto Accessory Machinery; business for sale; cash only, as owner desires to change climate; price $30,000 for machinery, patterns, buildings, patent and stock on hand; can be made into stock company; business eight years old; shipping to all parts of the world. Address Carrier No. 35 B. Springfield, Ohio.

Drastic Measures Called for to Curb Automobile Thieving

National Motor Vehicle Theft Act Proves Efficient, but Uniform State Legislation Is Urged

THE great need for some drastic means to prevent the alarming increase in automobile thieving throughout the country is defined in the statistics given out by the police of the 15 leading cities of the United States, showing the number of cars stolen and recovered in their respective districts. The total number of cars stolen is given as 19,810, of which 15,249, or approximately 76 per cent., were recovered.

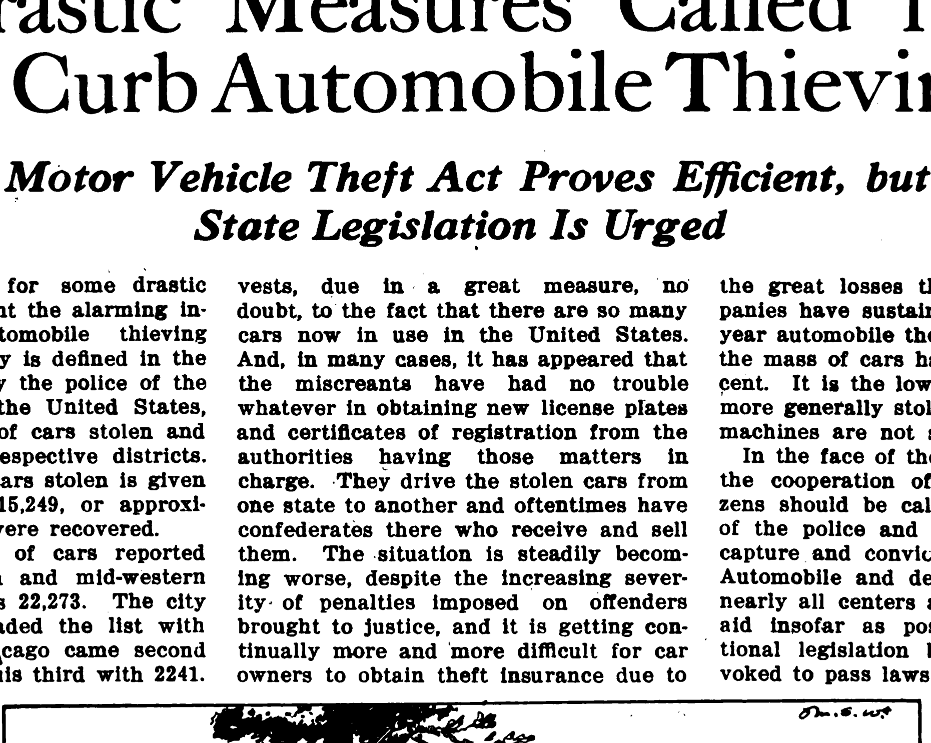
The total number of cars reported stolen in 18 western and mid-western cities during 1918 was 22,273. The city of Detroit, Mich., headed the list with 2637 cars stolen; Chicago came second with 2611, and St. Louis third with 2241. Kansas City, Mo., led in the list of total percentage of cars not recovered, 46 per cent.; St. Louis was second with 40 per cent. of stolen cars absolutely lost.

A report recently made to the members of the Virginia State Automobile Dealers' association stated that more than $28,000,000 worth of motor cars were stolen during the past year throughout the country, representing a total of 27,000 vehicles. But amazing as they are, these statistics fall considerably short, the police report, of the record of the very latest months.

Thieves have found the automobile field one in which they can reap rich harvests, due in a great measure, no doubt, to the fact that there are so many cars now in use in the United States. And, in many cases, it has appeared that the miscreants have had no trouble whatever in obtaining new license plates and certificates of registration from the authorities having those matters in charge. They drive the stolen cars from one state to another and oftentimes have confederates there who receive and sell them. The situation is steadily becoming worse, despite the increasing severity of penalties imposed on offenders brought to justice, and it is getting continually more and more difficult for car owners to obtain theft insurance due to the great losses the underwriting companies have sustained. During the past year automobile theft insurance rates on the mass of cars have increased 100 per cent. It is the low priced cars that are more generally stolen as the high priced machines are not so easily disposed of.

In the face of these serious conditions the cooperation of all law-abiding citizens should be called to the assistance of the police and other officials in the capture and conviction of such outlaws. Automobile and dealers' associations in nearly all centers are now lending their aid insofar as possible, state and national legislation bodies have been invoked to pass laws imposing severe penalties for thefts, and devices claimed to be efficient for the prevention of the driving away of cars by thieves and joy riders have been invented and placed on the market by the hundred, and there has still been but little abatement of the depredations.

While nearly all states have provided for the punishment of these offenders, it is claimed that the so-called Dyer or National Motor Vehicle Theft act, recently enacted by Congress, has proved the severest setback to automobile thieves of any before put in force in any state or community. This, in its third section, provides "that whoever shall transport or cause to be trans-



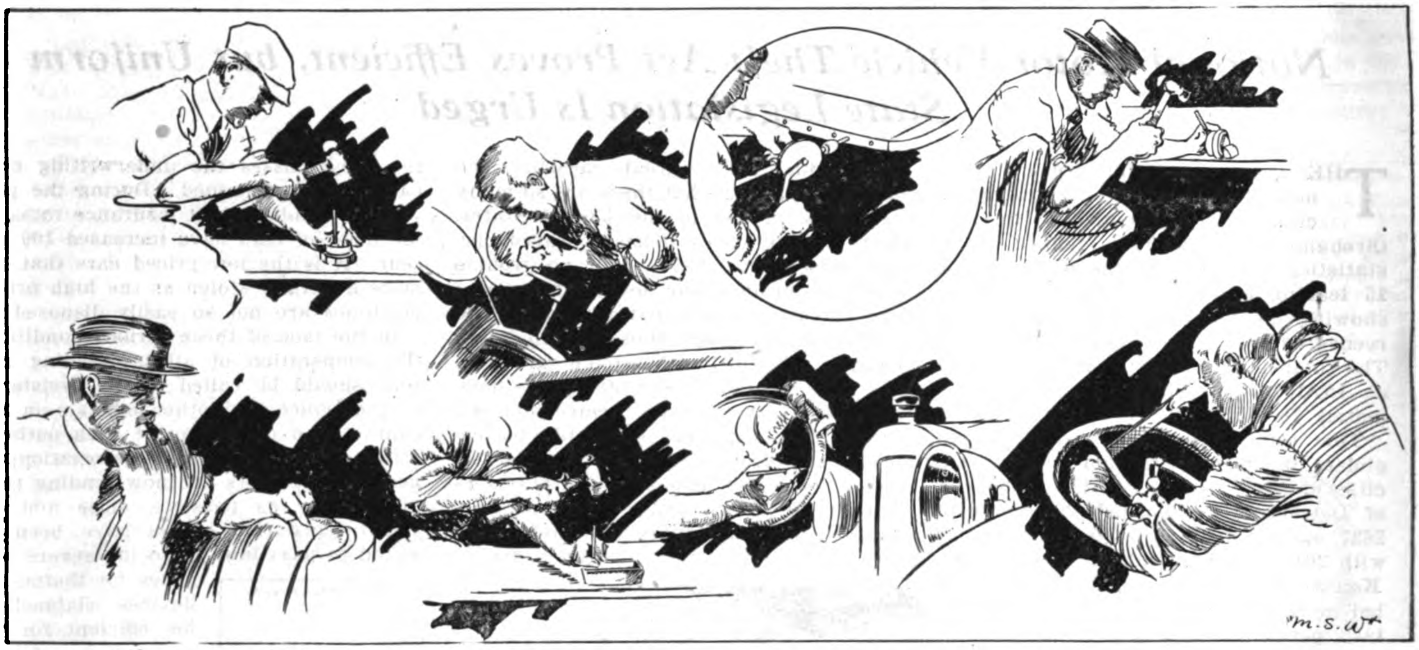
Public Opinion Aroused to Such an Extent in South and West as to Call for Vigilante Methods of the Old Days—Barriers and Armed Guards.

ported in interstate or foreign commerce a motor vehicle, knowing the same to have been stolen, shall be punished by a fine of not more than $5000 or by imprisonment of not more than five years, or both."

The term "motor vehicle" is defined by the act to "include an automobile, automobile truck, automobile wagon, motorcycle, or any other self-propelled vehicle not designed for running on rails." The term "inter-state or foreign commerce" as used in this act shall include "transportation from one state, territory, or the District of Columbia, or to a foreign country, or from a foreign country to any state, territory or the District of Columbia."

Other sections of the act are as follows: "Section 4. That whoever shall receive, conceal, store, barter, sell or dispose of any motor vehicle moving as, or which is a part of, or which constitutes inter-state or foreign commerce, knowing the same to have been stolen, shall be punished by a fine of not more than $5000, or by imprisonment of not more than five years, or both.

"Section 5. That any person violating this act may be punished in any district in or through which such motor vehicle has been transported or removed by such offender."



Some Simple Ways of Placing Private Identification Marks on the Car: Above, Left to Right—Place Punch Marks Inside of Radiator Cap; Bore Very Slightly a Certain Number of Holes in Frame and Cover Marked Spot with Paint or Graphite; Additional Screws in Running Board Would Never Be Noticed; Stamp Initials or Any Other Mark in Hub Cap. Below, Left to Right—Pull Out a Few Upholstery Tacks, Slip in Visiting Card Under Leather and Tack Down Again; Place Secret Mark Inside of Generator Cover; Inscribe Name or Initials Around Inside Rim of Head Light; File Notches on Under Side of Upper Arm of Steering Wheel.

Uniform Auto Theft Law.

The most comprehensive campaign against the auto thief has, however, been carried on by the Motor Vehicle Conference committee composed of representatives from the American Automobile association, the Motor and Accessory Manufacturers' association, the National Rubber Dealers' association, the Rubber Association of America, Inc., the Trailer Manufacturers' Association of America and the National Automobile Chamber of Commerce, Inc. This committee has been giving very careful attention to state laws designed to curb motor vehicle stealing and finds that they are open to serious criticisms on the following grounds:

First: Only a few states have made to date a serious effort to pass comprehensive anti-theft of vehicle laws.

Second: Few of these states have enacted laws which fully cover every detail of procedure which those who have given closest attention to the subject believe necessary.

Third: The procedure of one state differs widely from that of another and the mechanisms for the prevention, detection, arrest, trial, conviction and punishment of motor vehicle thefts bear such slight resemblance to each other that coordination and cooperation between states is impracticable.

Neglect Aids Automobile Thieves.

The stealing of automobiles will continue, in greater or less degree, according to the severity of the punishment, until a change in human nature is effected, not alone in the thief, but also in the owner.

Automobile thieves can be placed in two classes, professionals and amateurs. The professional is generally an expert mechanic usually equipped with tools to render practically every safety device valueless. He will usually steal the car he wants regardless of obstacles. Heavy punishment alone can discourage this type of criminal.

But the amateur is more often an opportunist. He steals automobiles or accessories because unusually good opportunities present themselves. He may be compared to the sneak thief who will only rob a house when a window is open or a door left unlocked. Carelessness is his best ally. A little observation will reveal many instances in which a car driver, after parking the car, threw the ignition switch to "off" position and then left his keys in place. Every automobilist may well inquire how often this has been done by himself and friends, thus giving a direct invitation to any person who may be making it his business to sneak around looking for just such chances. Greater care should be exercised in this regard.

Revival of "Vigilante" Days.

Public opinion has been aroused to such a height in some states by the depredations on automobile owners as to call for the adoption of strenuous measures to curb them in addition to legislation. For instance, according to reports from Los Angeles, Cal., a revival of the old "Vigilante" days is planned by the Automobile Club of Southern California to render the highways more secure and to prevent theft. A vigilance committee of 200 prominent business men has been formed who will always be on the job and act secretly, but not the less promptly and effectively. Each will be pledged not only to seek out automobile thieves, but also to report promptly by mail on post cards furnished for that purpose, all infractions of the motor laws observed by him. Machines will be traced by license number alone.

To make this plan more effective a "telegraphic barrage," designed to trap thieves, has been put into operation at Los Angeles. With the sheriffs, city police, members of the automobile club and insurance companies all cooperating and working at top speed to catch offenders, a system has been organized which, it is thought, will be the most effective of any yet tried. The big game of automobile thieves in Southern California in recent months has been to drive the stolen cars out of the state before offering them for sale. It is the purpose of the telegraphic barrage to break this up.

Under the arrangement, as soon as the theft of a motor car has been reported authorities in the towns nearest the state boundaries on the east and south are notified. It may chance that the closest border town is in Nevada, Arizona or Lower California, but that makes no difference.

The officer of the law is informed by telegram to be on the lookout for a car of the given description. It may be thought that it would be an easy thing for thieves to circumvent such a plan by avoiding the towns, but in a sparsely settled section where there is but one road, even motor car thieves will prefer arrest to taking chances on the unmarked desert.

Still another plan proposed which ought to prove quick and effective is to make all employees at roadside gasoline filling stations deputy sheriffs. Each station would be furnished with a telephone and a road barrier similar to the old fashioned toll gate. As soon as a report of a stolen car is received anywhere along the line, every gasoline station deputy would be notified by telephone. The road barriers would be let down and not a car be permitted to pass until it had undergone inspection. It would be made a serious offense to break through a barrier.

Maryland to Guard Highways.

The Automobile Club of Maryland is stated to be the sponsor of a bill before the state legislature calling for an appropriation to carry on the work of catching automobile thieves. The tentative plan is to have guards stationed on all the principal highways leading out of the state and near the state lines. All the guard houses are to be connected by telephone with a central exchange located in Baltimore. If necessary an exchange could be established that would handle only calls reporting the thefts of motor cars. Upon receipt of notice that a machine has been stolen, the exchange would send out word to every guard on duty and a sharp watch would be kept for the "auto jack." The automobile club is in favor of making the guards special policemen and would have them armed so that they would be in a position to stop them at any cost.

The chief objection to any such elaborate means of defense against automobile thieves is the expense of its installation and operation, but if the depredations continue to increase at the present alarming rate, almost any effective system of protection would be found economical in the long run.

Operation of the State Laws.

Nearly all the state laws make it a misdemeanor for the changing or effacing of trade numbers or any other distinguishing identification marks on cars, and in many commonwealths bills of sale or certificates of ownership are required to be made out when the car is purchased and must accompany the car at all times and be transferred with the car in case it is sold.

In Michigan a new law requires automobile dealers and garage owners to make duplicate records, in ink, of all cars sold, purchased or exchanged, specifying the date, the name of the purchaser or vendor and the make, serial number and a minute description of the vehicle. Copies must be forwarded to the secretary of state the first day of each month, the department furnishing the necessary blanks.

Section 28 of the Massachusetts Motor Vehicle act requires that "every person operating or running a motor vehicle into or out of a garage shall enter or cause to be entered in a book provided for the purpose in the columns under the proper headings, the date and time of entering and leaving, the register number and letter, if any, of the motor vehicle, and the full name of the operator or chauffeur." The section further reads: "In case of motor vehicles operated or run into or out of a garage by others than chauffeurs, the records shall be kept by the owner, proprietor or person in control of the garage, or by some employee or employees specially designated for this duty and the said owner, proprietor or persons in control of said garage shall be responsible for the proper keeping of such record. All entries in said book shall be made legibly in ink or with an indelible pencil."

STOLEN CAR RECORDS OF FIFTEEN CITIES.

City	Stolen	Recovered	Pct.
Salt Lake City	797	790	99%
Seattle	1,451	1,376	94%
Los Angeles...	1,629	1,499	92%

Kansas City...	1,144	606	54%
Total........	19,810	15,249	

Many devices have been placed on the market to prevent the unauthorized use of a car, but the professional thief has usually found ways to surmount the most ingenious of the conventional "thief-proof" attachments. Where the ignition is locked the crook manages to short-circuit the lock by simply connecting around it with a wire leading from the battery to the igniter. Gasoline locks are useful, but somewhat complicated in their installation and introduce the undesirable element of an additional opportunity for gasoline leakage. Probably the favorite method is a purely mechanical lock on the steering gear, starting crank or some other essential part of the mechanism.

Mark Your Car.

As it is easy for a thief to change numbers and obliterate all ordinary points of a car's individuality, as well as to repaint and otherwise so transform it that it would not be recognizable even by an owner thoroughly familiar with it through a long period of service, every car owner should, as soon as it is purchased, take pains to place on it some means of identification in case it should be stolen.

Numerous instances are recorded where a stolen touring car has been built over into a light delivery vehicle and resold. Open cars may be transformed into enclosed models and vice versa, while a common way is to interchange various parts of similar models and repaint and then place again on the market.

It is probably the fact that a majority of cars stolen are stripped of tires and other valuable parts and equipment and abandoned and, while it undoubtedly would not be very difficult for the owner to identify his machine even in its dismantled condition, such private means of recognition would save confusion in the event of a number of cars of the same model being stolen from the same locality.

The system of the location of these private identification marks need not be elaborate, but they should, of course, be placed where they would not likely to be noted and obliterated by thieves. Several marks in various places would seem to be better than a single one for, even if one should be discovered and eradicated, the chance that all such marks would be found is remote.

It is further suggested that the owner make a record or chart showing the character and location on the car of all such means of identification.

The accompanying illustration merely suggests several simple methods of the location and affixing of private identification marks, but an ingenious owner or driver will probably desire to work out a scheme in accordance with his own ideas.

Car Owner Should Cooperate.

In conclusion, the main thing is for the car owner, in the first place to cooperate as far as he possibly can to obviate all chances of theft. Of course it would be ideal if the car were never left alone on the public highways or in the open, but as this is impossible in many cases, care should be exercised in parking so that it may be, as far as possible, under the constant or frequent observation of the owner or his representative. Doors of private garages or the compartments in public service or community garages should be kept locked and windows fastened at all times when car is not in use, and in addition, all the mechanical means of preventing the unauthorized on the car at this time.

Secondly, some form of locking device attached to the car, while perhaps it would not entirely prevent theft, would make it more difficult for the thief to get away with the car without observation.

Finally, some private mark or marks should be placed on the car as a help to the authorities in tracing stolen machines and putting evidence in their hands to prove conclusively that the car was stolen, as well as affording an immediate and positive method of identifi-
use of the machine should be left in force
cation when recovered.

The Successful Business Man Is the One Who Keeps Busy---But Not Too Busy

(By Lester G. Herbert, Auburn, N. Y.)

ACCORDING to Bruce Barton, in a recent issue of the American magazine, John D. Rockefeller used to keep watch for promising recruits in his business, and when he found one would seize the opportunity for a talk with him and would say:

"Now, the thing for you to do is to find someone to do your work as soon as possible. Then you put your feet on the desk and think up ways in which the Standard Oil Company can make more money."

None of us will deny that Mr. Rockefeller was a successful financier, or that he was slow in discovering brains to help him build up his fortune. It has been, in a measure, because he was so keen in discovering promising recruits that he gathered about him a great and powerful organization. We all know, and we have read again and again what a humble beginning John D. Rockefeller had, but he went on from strength to strength, using all that came his way in a constructive manner.

But, do not be deceived and think that he simply set other folks to do things for him, and that he had no further responsibilities in the piling up of the Rockefeller millions.

The truth of the matter is that this man, remarkable in many ways, kept busy himself—but not too busy. That is to say, he was thoroughly in touch with his business as he went along. It was his own thinking apparatus that devised the initial ways and means of making his business beginning. But he was shrewd enough to know that, if he worked industriously long hours throughout his producing years, his output would be, of necessity, limited. He would be a success, naturally, but no greater success than many others.

On the other hand, if he devoted himself to **three separate lines of endeavor,** his prospects would be vastly enlarged, and the fortune he could build up would be colossal.

Perhaps this reasoning was not consciously done; nevertheless, it is the line of mental activity, practically followed by all great financiers, and for this reason is worthy of your earnest consideration and mine.

All too many of us are plodding along, succeeding in a moder-

"You Will Notice That All Our Big Financiers Have Organizations of Clever and Thinking Men, but These Organizations Are Linked Up in a Close Union. Back of All Is the Master Mind; He Must Be the Real Governor Who Holds the Balance of Things Where It Ought to Be. Here Again Is Where the Business Head Or Principal Must Be Busy—But Not Too Busy."

ate way and supinely taking it for granted that we are doing as well as anyone could expect us to do, everything considered. Just the same there is such a thing as not making the most of the opportunity facing us.

The First Factor in Finance.

The first great factor in finance is the same whether you are operating a peanut stand at Pumpkin Junction, a big manufacturing plant turning out huge quantities of implements of all kinds, conducting a retail store, or serving as the president of a great banking institution. **It is to know your line of business from A to Z; to understand all of the conditions affecting it; to organize your management in the most thorough going manner of which you are capable; and to exercise your will power to the end of keeping business at flood tide all the time.**

Most people will gasp at the end of that black faced section and will say,

"Well, if a man does all that, he has done **enough.** He will be a success all right and he doesn't need to go any farther at all. He can do just that and keep busy!"

Yes, that is true—he will keep busy but, if he does not go on to the **second** principle I am about to outline, he will keep **too busy.** And there is such a thing as a man being buried in details. The individual who is buried never lives very long, even if he was not very dead in the beginning. Sooner or later he will smother and that will be the end of it all!

Remember, then, to keep busy doing the things which a wide-awake business man must see are done somehow or other—but do not keep too busy.

The Second Factor in Fortune Building.

The second principle is one all too seldom applied by the average man in business today, for the reason that he hasn't time or thinks he hasn't got it. It is just this: **The man who would succeed in any line in a big way must—absolutely must—summon to his side other men of ability and power. The governor of a state or the President of the United States would be utterly swamped trying to attend to all the departments under his care. It simply couldn't be done. So the business executive must not be too busy with details. He must keep a watchful eye out and, by keenly observing, to discover men and women who can be depended upon to help him make more money. He must make no mistakes in selecting these people and, to prevent mistakes, he must do a lot of observing, and weighing and measuring. He must have time to chat casually with these people, to get their viewpoints, to draw them out and to find what they can do. Having found them he must give them certain latitude under suitable and safe restrictions.**

The Third and Important Consideration.

You will notice that all our big financiers have organizations of clever and thinking men, but these organizations are linked up in a close union. Frequent conferences are held; the business is so arranged that the balance of all sections or departments is carefully maintained, and back of all is the great master mind which does not permit anyone to **ride a hobby horse to the detriment of the business.** Here again is where the business head or principal must be busy—but not too busy.

He must be the real governor which holds the balance of things where it ought to be and does not permit misguided judgment, over-enthusiasm or mistakes of others to swamp him. **He is the captain of the ship, but he has a finely disciplined crew of trained helpers.**

How about it in your business? Are you **too busy?** If you are it is a mistake. Are you trying to be crew and captain too? Or are you summoning to your aid the assistance of promising people and are you virtually encouraging them to make more money for you and giving them the backing and the guidance they should have?

Do you know that the errand boy, the junior clerks or older employees should all be making money for you—other than just by performing routine tasks. Encourage thought and honest effort intelligently used.

Keep busy but not too busy. You are the Captain of the Ship!

TO SUCCEED IN BUSINESS.

First: Know your business from A to Z; understand all the conditions affecting it; organize your management in the most thorough-going manner; and exercise your will power to the end of keeping business at flood tide.

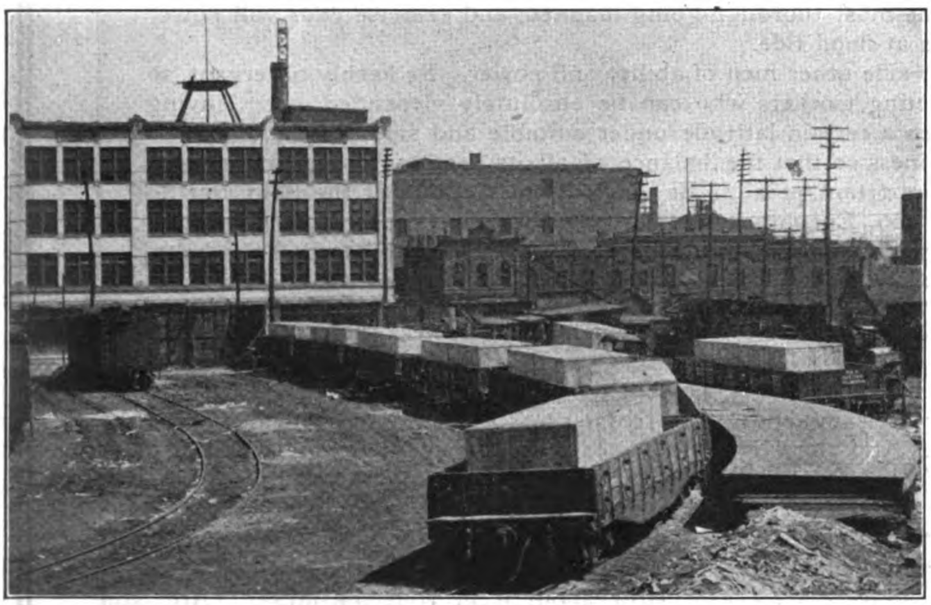
Second: Summon to your side other men of ability and power. Be keenly observant, so as to make no mistake in selecting workers who can be absolutely depended on. Having found them, they must be given a certain latitude under suitable and safe restrictions.

Third: Arrange your business so that the balance of all its sections or departments is carefully maintained. Most important of all: Be yourself the Captain of the Ship, but do not try to be the whole crew, too. Encourage your crew to help you make more money by giving them the backing and guidance they should have. But keep your hand at the helm.

EXPORT DEPARTMENT
W.

Train Load of Coles for England

One of the largest shipment of cars ever made by an Indianapolis manufacturer to any foreign distributor was that which recently left the plant of the Cole Motor Car Co. It comprises 25 car loads of Aero-Eights, and is being sent to the Cole distributor in London, England, William Cole & Sons, Ltd. This firm was a carriage builder of note in early Victorian days, but it has now turned to the more modern field of selling automobiles, numbering among its clients many of England's notables.



Twenty-Five Car Loads Cole Aero Eights for Shipment to London Distributor.

Through a curious coincidence the dealers' name is the same as that of car.

The state of the post-war demand in Great Britain for reliable makes of American cars is shown by the fact that when William Cole & Sons, six months ago, contracted with the Cole Motor Co. for future deliveries, it was on the basis of 100 a month. Due to delays in securing raw material, and adverse shipping conditions, the factory has been considerably behind in deliveries. Despite the unfavorable rate of exchange, high ocean freights, duties, etc., which bring the price of the Aero-Eight car in London up to almost double its domestic price, a recent cablegram from the distributor urged the importance of the delivery of the full quota of cars contracted for, regardless of price.

The packing of the Cole cars for export is done with extreme care, in a full sized box made from ¾-inch tongue and groove pine boards, and the top covered with roofing. This latter precaution is taken as a protection from rain inasmuch as the boxes are shipped two to an ordinary gondola flat car. The cars are packed completely assembled with the exception of the top, wheels and windshield, which are demounted.

LIGHT CARS DEMANDED IN BURMAH.

Two conditions favor the use of American cars in Burma in preference to those made in other countries: (1) Most of the purchasers are persons of moderate means who must buy a low priced car, and the taxi services also employ low priced cars; (2) the rough and hilly roads demand a car that is both light and durable. Burma has 1920 miles of metaled roads and 10,339 miles unsurfaced.

At present there are about 1725 passenger cars, 126 trucks, lorries and busses in Burmah. Most are of American origin.

Canada in Automobile Industry

Canada is now the second nation in the world in the manufacture of automobiles, number of cars owned and per capita distribution, the United States being first. Figures compiled by the farm bureau of the Goodyear Tire & Rubber Co., Akron, O., shows that one person in every 15 in the United States owns an automobile, while one in every 23 is the percentage in Canada. In Great Britain but one person in every 268 owns a car. he percentage in France is one to 102, one to 684 in Germany, one to 1000 in Italy, one to 2700 in Austria and one to 5300 in Russia.

The total number of cars registered in the Dominion of Canada is 350,000, as against 7,100,000 in the United States and 180,000 in England. Canada showed increased registration in 1919 of 13 per cent. Ontario was the banner province, with a registration of 127,860 passenger cars and 11,428 trucks. Saskatchewan, Alberta, Manitoba and Quebec rank in the order named.

Canada employs 15,000 workers in the automobile industry, which represents an investment of $50,000,000. In 1919, 94,000 automobiles were made in the Dominion, with a total sales for the year of approximately $100,000,000. The annual wages of persons in the industry totals $15,000,000.

Rural Canada owns more than half the cars operated in the Dominion and in the prairie provinces the percentage is greater.

It is estimated that the total Canadian production of automobiles in 1920 will be increased 35 per cent. over 1919.

MOTOR CONDITIONS IN CHOSEN.

There are 400 automobiles, 10 trucks and 58 motorcycles in use in Chosen. Most of the automobiles are employed as jitneys. The government is constructing new automobile roads, which will undoubtedly increase the demand. Most of the cars in use are of American make.

On the western front in France the British army authorities were employing in all 46,700 automobiles, of which 30,000 were trucks.

Foreign Trade Opportunities

(Reserved addresses may be obtained from the United States Bureau of Foreign and Domestic Commerce, Washington, D. C., or its district and co-operative offices, upon written request by the opportunity number.)

32,693—A merchant in Italy desires to purchase motorcycle and automobile accessories. Quotations should be given c. i. f. Palermo or Naples. Correspondence may be in English. Reference.

32,696—An automobile garage firm in South Africa desires to purchase engineers' machine tools of a light type, bench and fine tools, motor accessories and sundries, and garage fittings and appliances. All are required immediately. It is also desired to secure agencies for the sale of agricultural implements, pumping plants, light gasoline engines, wind mills, galvanized pipe, cylinders, working heads and pipe fittings. Reference.

32,702—A commercial agent in Ireland desires to represent manufacturers for the sale of cinematograph films, bicycles, motorcycles and automobiles. References.

32,704—A steel goods manufacturer in England desires to purchase steel plates, 1500 to 1550 degrees steel for pressing into automobile side rails, such as are used by American automobile manufacturers, in quantity sufficient to make about 40,000 side rail plates, and about 80,000 cross pieces. Quotations should be given c. i. f. Liverpool or Manchester. Payment will be cash against documents, by confirmed credit opened in New York against guaranteed delivery. Information is wanted as to base prices and delivery.

32,728—Agents and firms in France desire to be placed in communication with manufacturers and exporters for the sale of automobiles, motors, etc., boots and shoes, construction material, coal, cotton and woolen goods, canned goods, food products, carpets and rugs, electrical supplies, furniture, hardware, glassware, hosiery, gas and electrical fixtures, household goods, leather and leather goods, linen, machinery, metals, motorcycles, paper industry and machinery supplies, oil paintings, etc., oils and greases, portable houses, phonographs, railway material, silk goods, soaps, textiles, tools, tramway supplies and typewriters.

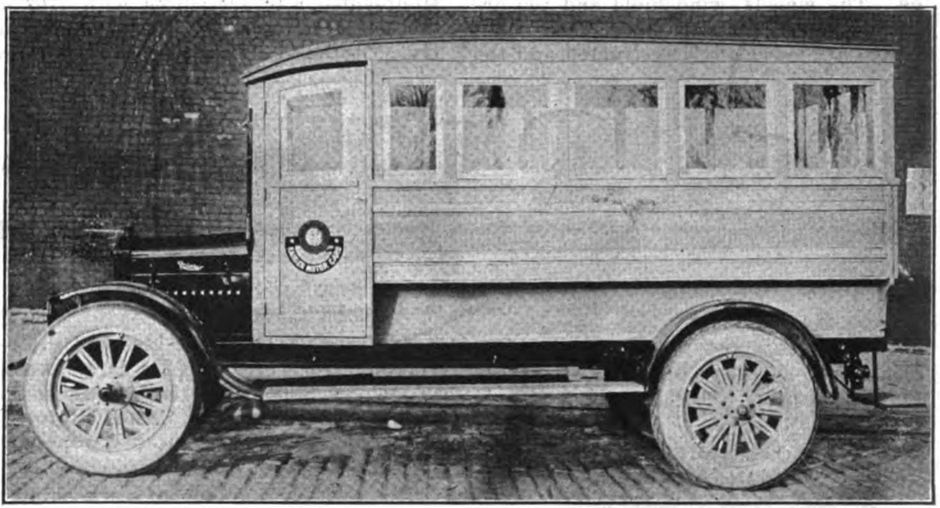
32,737—A merchant firm in Brazil desires to secure an agency on commission for the sale of hosiery, drugs, hardware, silk, underwear, automobiles and accessories, electric supplies, provisions, agate ware, enamel ware, paper and print paper, typewriters, textiles, etc. Quotations should be given c. i. f. Brazilian port or f. o. b. American port. Payment by draft 120 days. Correspondence should be in Portuguese. References.

32,742—An American firm maintaining branches in Amsterdam, Hamburg, Paris and Brussels, desires to purchase and secure agencies for the sale in Europe of toilet preparations, food stuffs, automobiles, motorcycles, tires and motor oils. References.

32,775—A company in Danzig desires to secure the exclusive agency, handling goods for own account and perhaps on consignment, for a cheap motor car, a high-grade car, motorcycles, automobile accessories and tires. It is also desired to purchase goods for own account. quotations should be given c. i. f. Danzig. Payment will be cash against documents, at Danzig. Correspondence should be in German. References.

32,780—An agency is desired by a commercial agent in Belgium for the sale of bicycles and motorcycles, parts and accessories, hand tools and small machine tools, agricultural implements, etc., sewing machines and accessories, and phonographs and supplies. Correspondence should be in French.

32,786—A commercial agent in Algeria desires to secure an agency for the sale of automobiles and accessories, sewing machines, typewriters, chemicals, paints and varnishes, coloring matter, cottonseed oils, agricultural machinery, hardware, etc. Quotations should be given c. i. f. Algerian port. Payment will be made against documents. Correspondence may be in English.



One of a Fleet of Rainier Trucks Equipped wtih Special Bodies That Will Be Used for Passenger Service in Jerusalem.

32,792—A firm in Portugal desires to secure an agency and purchase agricultural implements, automobiles, trucks, dairy equipment, hardware, machinery and tractors. Correspondence may be in English. References.

32,793—An automobile sales company in France desires to purchase and secure an agency for the sale of motor car accessories of every description. Quotations should be given c. i. f. French port. Correspondence may be in English. References.

32,813—A firm having a garage and repair shop near Paris, France, desires to secure the representation of firms for the sale of automobiles. Correspondence should be in French.

32,871—A commercial agent in Switzerland desires to secure the representation of firms for the sale of industrial fats and lubricating oils. Correspondence may be in English. Reference.

FLEET OF RAINIER TRUCKS ON JERUSALEM STREETS.

The advance shipment of a large fleet of Rainier omnibuses soon to be seen on the streets of Jerusalem was recently sent from New York City, where the headquarters of the Rainier Motor Corporation is located. These Rainier motor trucks are fitted with special omnibus bodies to accommodate 25 passengers. The Ramallah Co., which made the contract, will install a service from Jerusalem to Damascus in Syria. This company, which has offices in Jerusalem and also in New York City, states that there is a strong demand for improved transportation facilities in the ancient city. The English are planning to operate a fleet of trucks in that territory.

UP-TO-DATE GARAGE IN ALBANIA.

In Tirana, Albania a country almost without roads or means of transportation, there is a modern, up-to-date garage and repair shop—one which has repaid its owners, if not in coin, certainly in expediency, many times over The shop can accommodate 10 cars at a time, the garage 25, while in the shop itself many of the tools are run by electricity, the current for which comes from the only electric plant in Albania, one installed by Captain O. B. Cohun, an American Red Cross worker, with wires and insulation obtained from salvaged Austrian supplies at Teodo, Dalmatia, and a French motor.

The American Red Cross maintains many of these shops in Albania. The mechanicians are comprised of many nationalities, among them being Russian, Czecho-Slovakian, Austrian and Montegrin, in addition to Americans. Without these little repair shops, the relief work of the Red Cross would never have progressed as speedily as it has in that section.

The finance department of the Argentine Republic has authorized the customs department to classify as of declared value at 25 per cent. all electric motors for automobiles and apparatus for the generation of light and heat.

BIG SHIPMENT OF COMET CARS TO BELGIUM.

The Comet Automobile Co., Decatur, Ill., recently shipped the first installment of a large export order of Comet cars to Antwerp, Belgium, for distribution through various branches throughout Europe. This consisted of a solid train load representing a total value of nearly $90,000, and exports will be continued abroad at the rate of 60 cars a month, reaching a total valuation of $100,000 to $125,000.

Of special interest is the care the Comet company has taken in working out the specifications for the export orders A study of European tastes revealed a decided preference for maroon color in body finish and these cars are accordingly finished in deep maroon. They will, however, have left-hand drive, contrary to the English practise which requires right-hand control as "keep to the left" is the law of the road there. Special attention is also given in preparing for shipment. As a car is finished and tested every part is numbered, tagged and listed. The wheels, windshield and top are then removed for packing. Water tight crates are especially constructed and the packing is so standardized that the consignee will have no difficulty in setting up the car ready to use.

Train Load of Climax Cars on the Over-Land Leg of Their 5000-Mile Trip from Decatur, Ill., to Belgium.

HAYNES CO.'S SALES CAMPAIGN IN LATIN AMERICA.

The Haynes Automobile Co., Kokomo, Ind, has begun an aggressive sales campaign in Mexico, Central America and South America. Two important additions have been made to the export staff, one of them being Jose A. Barros, former attache of the Brazilian consulate in Chicago, and recently associated with the National City bank, New York. He is a graduate of McKenzie college, Sao Paolo, Brazil, and a graduate engineer of Union college. He will start at once on an extended trip through Brazil, Uraguay, Paraguay, Argentina, Chile, Bolivia, Equador and Peru, where he will establish Haynes dealers.

The other export agent is Leland de Villafranca, who is a graduate of St. John's college, Annapolis, and of the University of Maryland. He was at one time secretary to the Costa Rican consulate in Guatamala.

MOTOR VEHICLES EXPORTED.

During 1919 the total number of motor vehicle exports was 82,730, a gain over 1918 of 79 per cent. The valuation was $109,125,964. Passenger cars numbered 67,145, valued at $73,700,527.

Autos in Uruguay and Paraguay

A motor car for every 148 persons was the 1919 record for Uruguay, no other South American country having so many cars in proportion to its inhabitants, though larger numbers of automobiles enter Argentina, Chile and Brazil. Natural circumstances make Uruguay an exceptionally favorable market for motor cars. With a population of 1,500,000 and an area of 72,210 square miles, Uruguay is the most densely populated country of South America. Moreover, the people, the majority of whom are of European descent, are progressive, and sea and river ports have kept them in touch with the outside world. The large areas of rolling plains and increasing mileage of good roads and modern city streets afford opportunity for an extensive use of automobiles and trucks.

Montevideo, the capital and chief city, takes more than half of all the cars imported into Uruguay. In August, 1919, Montevideo was accredited with 5702 of the 10.134 motor cars in the entire country. Of these in the capital, 4222 were for private use, 1273 for hire and the remaining 207 were delivery cars. About 60 per cent. of all the motor cars in the country were from the United States, 25 per cent. from continental Europe and 15 per cent. from England.

The average number of cars shipped annually from the United States to Uruguay in the five fiscal years preceding the war, 1910 to 1914 inclusive, was 138, and the average total value was $173,314. The growth in the trade is indicated by the fact that in the five fiscal years covering the war period. 1915 to 1919 inclusive, the exports of cars averaged 1059 in number and $671,545 in total value each year. The exports for 1919 showed an increase of 76 times in number and 56 times in value over the fiscal year 1910. The total value of motor vehicles, parts and tires shipped to Uruguay from America in the last calendar year was $2,877,727.

The market for automobiles increases with the improvement of highways, and Uruguay already has about 400 miles of macadamized roads. One per cent. of all taxes paid on real estate is devoted to the building of roads and bridges. Uruguay has ambitions to lead as a resort for automobilists and its good roads and drives already attract wealthy Argentinians, Brazilians and Paraguayans with their cars. An active automobile club in Montevideo adds to the interest in motor cars by arranging races.

Paraguay's imports of automobiles averaged 45 cars a year at a total annual value of $30,000, in the six-year period from 1913 to 1918 inclusive. Since 1914 practically all of the automobile imports have originated in America, but Paraguay's lack of a seaport makes it difficult sometimes to trace the source. It is stated also that practically all of the tires and inner tubes imported are of American make. It is encouraging to note that in spite of the handicaps of poor roads, high cost of fuels, heavy freight rates, taxes and duties, the sales of American cars are increasing in Paraguay.

HOLLAND MAY PASS TIRE EQUIPMENT LEGISLATION.

Holland is seriously considering the advisability of following in the footsteps of Norway in proposing national legislation that will specify that trucks of certain capacity must be equipped with pneumatic tires so as to prevent excessive wear on roads and to cut down the cost of highway repairs due to the use of solid tires on heavily loaded trucks. The Dutch Road congress will meet in September for the purpose of discussing details. In Norway legislation goes into effect this summer providing that all trucks used for commercial purposes must be equipped on all four wheels with tires of at least five-inch tread. This means that, up to two tons, trucks must be pneumatically shod; from two to 2½ tons, either pneumatics or solids of more than five-inch tread will be permissible; while all trucks of more than 3½ tons' capacity may run on solids.

It is believed that Holland will require trucks up to one-ton capacity to run on pneumatics.

CHANGES IN TAXATION IN ENGLAND.

Proposed changes in taxation presented in the budget of the chancellor of the British exchequer for the fiscal year 1920-21, provide for the abolishment on Jan. 1, 1921, of the existing tax of 12 cents a gallon on motor spirit and the present license duties on motor cars and cycles, the following system of taxation to be then substituted: Motor cars and cycles, used for trade purposes, to pay a new scale of duty according to weight; vehicles used as hackney carriages to pay by seating capacity; private motor cars to pay £1 a horsepower unit or part of unit, with a minimum of £6 ($29.20.)

The exports from the United States to Japan for 1919 included passenger automobiles to the value of $2,890,034, compared with $2,877,692 in 1918.

Personal News of Industry and Trade

Williams Heads Barco Battery Co.

P. B. Williams heads a corporation composed of automobile and storage battery men of Detroit for the manufacture of automobile storage batteries under the name of Barco Battery Co. The new product is called the Barco "Bearcat" battery. It is made in seven standardized models that fill the requirements of 99 per cent. of the electrically equipped automobiles in use. The plates in the Barco "Bearcat" are made by a special process which is claimed to result in the combination of extraordinary high momentary discharge, exceptionally efficient recharge, and tough, hard plate surface that enables the battery to stand up for an unusual length of time under the abuse to which automobile storage batteries are subjected. The battery is guaranteed for 18 months. The office and factory are located at 83 West Fort street, Detroit.

P. B. Williams, Head of Barco Battery Co., Detroit, Mich.

Charles E. Stuart, Assistant Sales Manager, Selden Truck Corp.

Charles E. Stuart, who has recently been appointed by Vice President Hal T. Boulden as assistant sales manager of the Selden Truck Corporation, Rochester, N. Y., has had a ripe experience in the motor vehicle trade as salesman, dealer and field sales manager.

Clifton Slusser, who has just been transferred to Los Angeles, Cal., as general superintendent of the Goodyear Tire & Rubber Co. of California, the new $15,000,000 subsidiary company on the Pacific coast, went to work for the Goodyear Co. eight years ago as a stenographer. He was born at Massillon, O., and left school at the age of 11 to start work as a glass blower. Since then he has been a machinist's helper, plumber, rubber worker and assistant to Paul W. Litchfield, Goodyear factory manager at Akron. To complete his education he attended night school, donning overalls in the daytime and going through every department of the Goodyear factory. He helped organize the Goodyear "flying squadron," a group of men experienced in every phase of rubber tire manufacture and ready to stabilize production and plug up any hole that might occur in the factory. Successively he took over the efficiency and planning departments, factory expert work, garage and trucking work and the labor and aeronautical departments, all the time studying nights. About a year ago he was made personnel manager and admitted to the executive council, a group of five men who, under Mr. Litchfield, were responsible for the operation of the entire factory employing over 35,000 in Akron alone. As general superintendent at Los Angeles he will be in charge of 5000 men at the start, who will produce 5000 tires daily.

N. S. Reed, Consulting Engineer and Sales Director, Hinkley Motors Corporation.

Beall Accepts Gray Corp. Presidency

F. F. Beall has accepted the presidency of the Gray Motor Corporation, a newly organized concern, to take over the plant, equipment and business of the Gray Motor Co., Detroit, builder of the Victory motor, and associated with him are a number of prominent Detroit automobile men, including William H. Blackburn, formerly production manager of the Cadillac Motor Car Co., who is to be factory manager of the new Gray organization. Mr. Beall has, for the last seven years, been vice president in charge of manufacturing of the Packard Motor Car Co. The Gray Motor Corporation is capitalized at $4,000,000 and a production of 30,000 cars annually is planned.

B. A. Lyman, Director of Sales of Maxwell-Chalmers Interests.

B. A. Lyman, who has been for nine years with Maxwell Motor and Chalmers interests, has been promoted to the position of sales director. Although a young man, Mr. Lyman brings to his new office mature judgment and a thorough understanding of every dealer's problem, obtained by hard experience and schooling under acknowledged expert manufacturing merchandisers.

Ivar Du Rietz of the firm of Sven Du Reitz & Co., Inc., of Stockholm and Norrkoping, Sweden, has returned to Sweden after a visit of several months in this country, during which time he perfected arrangements for the opening of an office of his company, 1702 Consumers' building, Chicago, in charge of Walter E. Devlin.

Lon R. Smith, general sales manager of the Midwest Engine Co., Indianapolis, Ind., is on an extensive trip to the western coast to make a comprehensive investigation of market conditions in reference to the Midwest truck and tractor engines, and will visit many prominent Utilitor distributors and dealers.

Wilcox Becomes Research Engineer

Howard Wilcox, the famous automobile racing expert, has been appointed research engineer of Cole Motor Car Co, Indianapolis, Ind. Mr. Wilcox brings with him to this new position an experience in the automobile industry extending over a long period of years, his first connection being with the National Motor Vehicle Co., from 1904 to 1909, during which time he became associated with almost every branch of work conducted in that plant. He has the distinction of being one of the men directly responsible for the development of the first National racing cars and was a member of the first National racing team whose signal victories will be long remembered. In 1912 he entered the taxicab business but, at the same time, kept up his interest in racing and participated in many events on the speedways of the country. In 1913 he helped design and drove a special racing car which won honors under the name of the "Gray Fox." In 1915 Mr. Wilcox was a member of the famous Stutz racing team and in 1916 and 1919 drove the noted French Peugeots, winning the 500-mile race at the Indianapolis motor speedway with one of these cars last year. Mr. Wilcox was also recently associated with the Allison Experimental Co. at Indianapolis, specializing on tool and jig work. The Allison experimental laboratory was a government research station and it was there that the first Liberty motor was built, as well as the first United States tractor motor and the first successful reduction gear to reduce the ratio of aeroplane propellors from the air-whipping stage to that of maximum efficiency was developed there, and Mr. Wilcox was actively associated in all this work. This year he was retained to represent the Peugeot factory in the 500-mile race at Indianapolis, having as team mates Jules Goux and Andre Boillot, the two leading French drivers.

Howard Wilcox, Well Known Racing Driver, Becomes Cole Research Engineer.

The appointment of Mr. Wilcox will be followed by an expansion in the production of Cole cars.

George H. Layng, manager of manufacturing of the Cadillac Motor Car Co., has been appointed vice president and director of that company, and will continue in charge of the manufacturing departments. Mr. Layng became connected with the Cadillac Co. 15 years ago as foreman in charge of the chassis department.

S. V. Norton has been made service manager of the General Motors Truck Co. to fill the vacancy caused by the resignation of H. L. Beckwith. Mr. Norton has been, for 15 years, associated with the B. F. Goodrich Rubber Co., for the last 10 of which as manager of truck tire sales. He is well known as a writer on motor truck problems, among his works being "The Motor Truck as an Aid to Business Profit." He also originated the annual hand book, "Motor Trucks of America," now in its eighth year. Mr. Norton has been prominently identified with the Good Roads movement, serving as a member of the Ohio Good Roads federation and on the Ohio State Council of National Defense.

S. G. Norton, Service Manager General Motors Truck Co.

H. J. Butler has assumed his duties as general sales manager of the Oneida Motor Truck Co., Green Bay, Wis., manufacturer of gasoline and electric motor trucks and electric industrial tractors. Mr. Butler comes to the Oneida organization from the Edison Storage Battery Co., with which he had been associated as manager of the Chicago district offices for a number of years. Prior to that connection he was with the General Vehicle Co. The Oneida electrics will be built in sizes ranging from three-quarters to seven-ton.

J. W. Allan has been appointed export manager and national buyer representative in New York City of the Service Motor Truck Co., Wabash, Ind. L. H. Boydston has been made general manager of the Chicago branch of the Service Truck Co.

Waldron Sales Mgr. Boston Branch

Lester J. Waldron, sales manager of the Boston branch of the Pennsylvania Rubber Co., Jeannette, Pa., has been promoted to be New England district manager. He has been connected with the tire industry in Boston and Springfield for the past 10 years. He was the first salesman to travel through the New England territory out of Boston for the Pennsylvania Rubber Co., and became very successful and popular with the trade. During the war he enlisted in the aviation service and flew in several of the training fields in the South. He was honorably discharged in December, 1918, and resumed his connection in January, 1919, with the Pennsylvania Co. as sales manager.

L. M. Baker has resigned as supervisor of sales of the motor equipment division of the Hyatt Roller Bearing Co. to take over the exclusive representation in the State of Michigan of the Dittmer Gear & Manufacturing Co., Lockport, N. Y. Mr. Baker was formerly associated with the Bearings Service Co. as well as being sales manager of the United Motors Service, Inc. Previous to that connection he was with the Dittmer Co., to which he now returns. He will also be associated with his brother, E. K. Baker, in the wheel and rim business. His headquarters will be in Detroit.

L. M. Baker Represents Dittmer Gear & Manufacturing Co. in Michigan.

Gordon H. Gannett and L. S. Wiggin are in charge of the eastern sales office just opened by the Timken-Detroit Axle Co. in the Post-Standard building, Syracuse, N. Y. The address of the Chicago sales office of the Timken-Detroit Axle Co. is now 1403-1405 Conway building.

G. E. Schwartz, formerly mechanical superintendent of the Torbensen Axle Co. of Cleveland, has resigned to become manufacturing manager of the Timken-Detroit Axle Co.

NOTES OF TRADE AND INDUSTRY

Haynes to Build Iron Foundry

The Haynes Automobile Co., Kokomo, Ind., has assured itself of a continuous supply of malleable iron for use in the manufacture of Haynes "character" cars through the construction of a malleable iron foundry in Kokomo adjacent to its factory. The concern will be known as the Kokomo Malleable Iron Co. and it has been incorporated for $350,000.

As will be seen from the personnel of the directorate of the new company, it includes the leading officials of the Haynes Automobile Co.; directors, Elwood Haynes, J. W. Johnson, A. L. Thalman. A. G. Seiberling, Conrad Wolf, N. Cook and E. Bridges.

The officers are as follows: President, A. G. Seiberling; vice president, E. Bridges; secretary, N. Cook; treasurer, A. E. Starbuck.

The cost of the building, including equipment, will be about $300,000. The main building will be 360 feet long and 85 wide. The equipment will include two 15-ton furnaces, capable of producing 36 tons of malleable iron a day, making a yearly output of nearly 11,000 tons.

It is stated that Haynes company alone will use one-third of this output, while a prominent Indiana truck manufacturer will require at least 500 tons a year.

WILLYS-OVERLAND STEEL TUBE MILL.

Carrying out its policy of producing practically every part used in the Overland car, the Willys-Overland Co., Toledo, O., is operating its own steel tube mill in which are manufactured exhausts, muffler outlets, heater outlets, steering posts, throttle controls, robe rails and a variety of other parts that require the use of this class of material. This steel tube plant means a great deal in the economical production of the Overland cars. Despite the steel shortage this concern escaped being held up through inability to get steel tubing in the open market.

ANDERSON MOVES INTO NEW FACTORY.

The Anderson Electric & Equipment Co., Chicago, Ill., has moved into its new factory building at 154-160 Whiting steet, recently leased from the Ilg Electric Ventilating Co. It is six and seven stories and basement and affords floor space of 75,000 square feet, equipped with the latest machinery and supplied with every modern appointment and convenience for economical production.

The Anderson Co. is an extensive manufacturer of reel lighting devices, one of which is the "Autoreelite," a combined spot and trouble light. The company also makes electric industrial lighting devices on an extensive scale, as well as a line of dental and laboratory appliances. The new quarters will increase the company's manufacturing capacity about 500 per cent.

The present management comprises the following: President, E. G. K. Anderson; vice president and general manager, B. J. Grigsby; treasurer, J. A. Johnson; secretary, O. E. Grigsby; assistant secretary-treasurer, N. A. Engstrom.

The general manager is now in Europe on business relative to export trade.

WESTINGHOUSE SUPPLY SECTIONS MOVED.

The commercial and order parts of the meter, fan motor and rectifier sections of the supply department of the Westinghouse Electric & Manufacturing Co. have been transferred from the East Pittsburgh, Pa., works to the Newark, N. J., plant of the company in order that the commercial and manufacturing departments may be in closer contact. The Newark office will be designated as the supply sales department.

In charge of these departments are H. M. Wibel, rectifier section; W. J. Jockers, fan motor section; S. A. Berger, meter section.

DUESENBERG AUTOMOBILE CO. INCORPORATED.

According to a recent announcement by the Indianapolis Chamber of Commerce, the Duesenberg Automobile & Motors Co., incorporated under the laws of Delaware with a capitalization of $5,000,000 to manufacture passenger cars and motors, has purchased a site of 16½ acres for a new plant in Indianapolis.

ANDERSON
ANDERSON ELECTRIC & EQUIPMENT CO

New Factory of Anderson Electric & Equipment Co., Chicago, Ill.

New Eliot Street Six-Story Garage

The Eliot Street Garage is Boston's newest and most up-to-date enterprise of this nature, having a capacity for 600 cars on six floors so arranged that the machines are run from floor to floor without elevators. This garage is situated on Eliot street, Boston, between Tremont street and Park square, handy to the theater and hotel districts and shopping centers.

The cars enter the different floors over circular concrete ramps of slight grade, so constructed that the machines are easily driven to their destinations, and all delays and elevator accidents are eliminated. Each car is allotted a certain stall and remains there until removed by chauffeur or owner. Each space is provided with a concrete "Flatiron" located under the car between the wheels and machines can enter this space when lined up correctly; hence there is no danger of dents or scratches to the finish.

The garage is stated to be absolutely fireproof and is equipped throughout with the Automatic Sprinkler system, as well as fire extinguishers conveniently located. Each floor is supplied with a service of gasoline and oils by an air pressure system, and the leading makes of tires and tubes and other accessories are in stock, this department being open day and night.

There are comfortable waiting rooms for the accommodation of patrons and there is an adequate equipment of passenger elevators. A service car is held ready at all times for towing and other emergency calls.

MOTOR AND ACCESSORY MANUFACTURERS' CONVENTION.

The 1920 credit convention of the Motor & Accessory Manufacturers' association has been tentatively scheduled for Thursday and Friday, Sept. 16 and 17, at Cleveland, O. In view of the vital problems affecting the automobile industry in relation to the general financial and credit conditions, it is believed that this year's sessions will be among the most important and interesting in the history of the association. The programme will include not only the discussion of technical subjects, but viewpoints and experiences on special problems will be exchanged.

MITCHELL SPECIALTY CO.

The Mitchell Specialty Co., 18th and Market streets, Philadelphia, manufacturer of automobile hardware, has leased a portion of the building at 3631-3639 North Smedley street, having 7000 square feet.

Grand Central Palace to Be Closed

AUTOMOBILE SHOW
AUTOMOBILE SHOW
AUTOMOBILE SHOW

Grand Central Palace, Well-Known New York Exposition Building, to Be Converted to Business Purposes.

THE announcement that the Grand Central Palace, New York City, is to be closed to all expositions after April 1, 1921, will be of interest in automotive circles all over the country who have associated this structure with the annual automobile and accessory shows for a number of years past.

It is understood that the organization, headed by Alfred I. du Pont, which owns this property, will convert the exposition halls to business purposes.

The Grand Central Palace was built in 1912 and has housed practically all the large expositions and business shows held in New York in recent years. These included the automobile show, the electrical exposition, the motor boat show, the chemical industries exhibition, the flower show and the own your own home show.

The four exposition halls in the building cover in the total number of feet of floor space a larger area than any other auditorium in the city, not excluding Madison Square Garden. It was said in real estate circles that the great demand for space for business purposes would enable the owners of the building to get $5 or $6 a square foot rental.

Exposition men said the decision would mean that many conventions and exhibitions held in New York annually would have to go to other cities. The Grand Central Palace was said to be the only building in New York in which large gatherings of such a nature could be held. The only other large auditorium, Madison Square Garden, it was held, was too greatly in demand for sporting exhibitions and enterprises like the circus to be available for industrial expositions and events of such nature.

New York City, after April 1, 1921, it was said, will be the only city in the United States or Europe with a population more than 200,000 without a representative exposition building. It was learned that the notice, which was sent out by Frederick W. Payne, manager of the Grand Central Palace, had caused managers of expositions to make arrangements to hold their enterprises in other cities, notably Chicago and Atlantic City.

When the organization with which Mr. du Pont is connected purchased the leasehold of the building announcement was made on behalf of Mr. du Pont that the building would be used as a great market place for the exhibition of goods of all sorts from various parts of the world so that they might be viewed by domestic buyers. The International Exposition of Industries was the name given to the market place established in the building.

Exposition men some time ago received a notice from the Grand Central Palace that beginning on Jan. 1, 1921, the building would be closed to further expositions. Protests were made at the time and the matter was apparently dropped. Then followed the notice that the Palace would no longer be available after April 1 of next year.

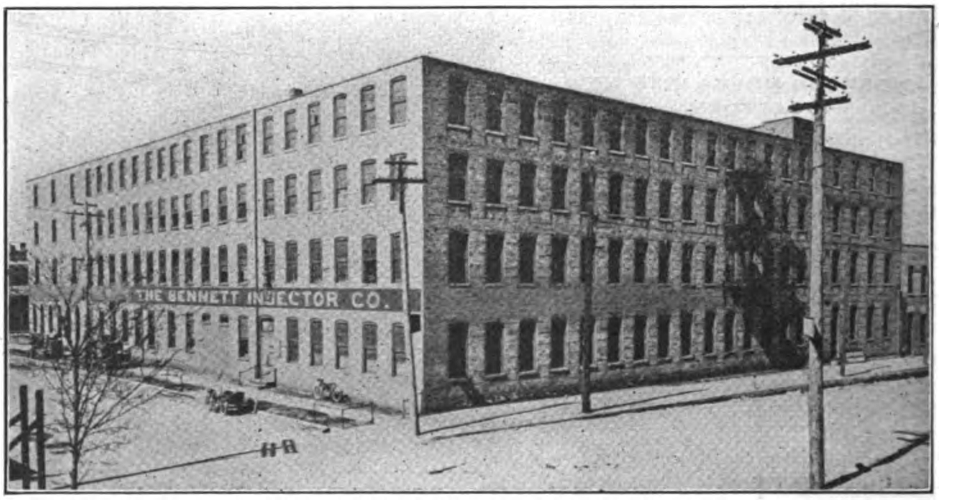
The Grand Central Palace is 12 stories in height. Four floors are used for exhibitions and offices. Permanent exhibits occupy the remainder of the building. During the war it was an army base hospital.

BENNETT INJECTOR CO. BUYS WOOD INTERESTS.

An announcement of interest to garage men and automobile and truck manufacturers is that the Bennett Injector Co., Muskegon, Mich., has purchased the interests of the A. J. Wood Manufacturing Co., Grand Rapids, Mich., which has been manufacturing the Wood no-valve grease injector, which is designed for pumping heavy grease direct from the original barrel container into gear cases and transmissions.

The Wood injector is quickly and simply attached to any grease barrel, which may be carried on a special truck to any part of the garage or factory. The lubricant can be applied quickly, without handling, where needed and with great accuracy as the pump is gauged to throw exactly one-quarter of a pound of grease a stroke. A special non-drip nozzle instantly stops the flow of grease when the pump ceases to operate.

The Bennett Injector Co., with a capitalization of $50,000, is already under production in its new plant, with sufficient orders on hand to keep it in operation at its full capacity. Thomas B. Bennett, formerly of the Koelbel-Bennett Auto Supply Co., Overland distributor for Muskegon county, is president and general manager.



Factory of Bennett Injector Co. at Grand Rapids, Mich.

Wheel Maker to Erect Factory

Phineas Jones & Co., engaged at 305 Market street, Newark, N. J., in the manufacture of vehicles and automobile wheels, has purchased 15½ acres of land in Hillside on which a factory will be built. The tract has a frontage of 235 feet on Hillside avenue and a depth of 657 feet, and the operations will involve an outlay of $300,000.

The largest unit will be a 40 by 300 foot assembly building. It will be of brick construction with steel sash and in it the product of the company will be made ready for market. Another structure, 120 by 124, with an ell extension 35 by 50 feet, will be used as a storage house. It will have terra cotta inclosing walls and a wood roof.

Twenty-four kilns of terra cotta construction, in which spokes and ribs will be prepared, are shown on the plans. Each will be 19 by 27 feet. A band shed, 50 by 120 feet and an engine and boiler room 30 by 60 will complete the structures. Approximately as many more buildings can be placed on the tract and additions will be made as the business grows.

Concrete platforms will extend from the main buildings to the siding on the property, which connects with the Irvington branch of the Lehigh Valley railroad.

The floor space in the buildings will be as follows: Assembly, 12,000 square feet; storage shed, 15,000 square feet, and band shed, 6000 square feet.

MIDWEST ENGINE CO. USES FILMS FOR PUBLICITY.

The Midwest Engine Co., Indianapolis, Ind., maker of Dependable power units, is using motion pictures to advertise its Midwest Utilitor, a general farm utility machine, and other products. A series of films has been prepared and the reels are sent out to the various distributors, dealers and district men, each of whom is provided with a motion picture machine, so that when a prospective buyer comes in, who may be a farmer or truck gardener, desiring to see the Utilitor in operation, the lights are turned down and on the screen can be instantly shown the outfit plowing, cultivating, seeding, mowing and operating belt-driven machinery. Other pictures present other Midwest Dependable units, such as steam turbines, pumps, heavy oil engines, etc., and still others describe a visit to the Midwest plants at Indianapolis and Anderson, Ind., showing the devices in all stages of production from the arrival of the raw material to the inspection and shipment of the finished article.

The McDermott Body Corporation, maker of automobile truck bodies, has purchased the property at the southwest corner of Van Alst avenue and 30th street, New York, containing 20,000 square feet, on which it will erect a two-story plant.

GENERAL MOTORS ACCEPTANCE CORPORATION.

In order to make it possible to increase its business to a size commensurate with the demand upon it, the General Motors Acceptance Corporation, Broadway at 57th street, New York, has been authorized to double its capital and surplus from $2,500,000 to $5,000,000. The stock is now authorized at $4,000,000, while the surplus will be doubled, from $500,000 to $1,000,000. This will give the corporation double facilities for financing the sale of General Motors automobiles and other products on the deferred payment system. The concern is now stated to be doing business at the rate of $150,000,000 a year.

The officials of the company, elected at its recent meeting, are as follows: Directors, William C. Durant, Pierre S. du Pont, Irenee du Pont, Lammont du Pont, Henry F. du Pont, J. Amory Haskell, John J. Raskob, Paul Fitzpatrick, Alfred H. Swayne, Curtis C. Cooper; president, J. Amory Haskell; vice presidents, John J. Raskob, Alfred H. Swayne, Paul Fitzpatrick, Curtis C. Cooper, John J. Schumann, Jr., Albert L. Deane; secretary, George H. Bartholomew; treasurer Reune Martin.

A vice presidency was created for Mr. Cooper, formerly secretary, and his assistant secretary, Mr. Bartholomew, was advanced to the office of secretary. John J. Schumann, Jr., who has been in charge of the sales of the company's collateral gold notes to bankers, and Albert L. Deane, who has been manager of the New York branch, have been created vice presidents.

MULTIBESTOS NEW YORK OFFICE.

The Multibestos Co., Walpole, Mass., maker of Multibestos brake and clutch linings, has opened a New York branch office at 105 West 63rd street. The Multibestos Co. also maintains branches in Chicago, Detroit, San Francisco and Chattanooga, Tenn.

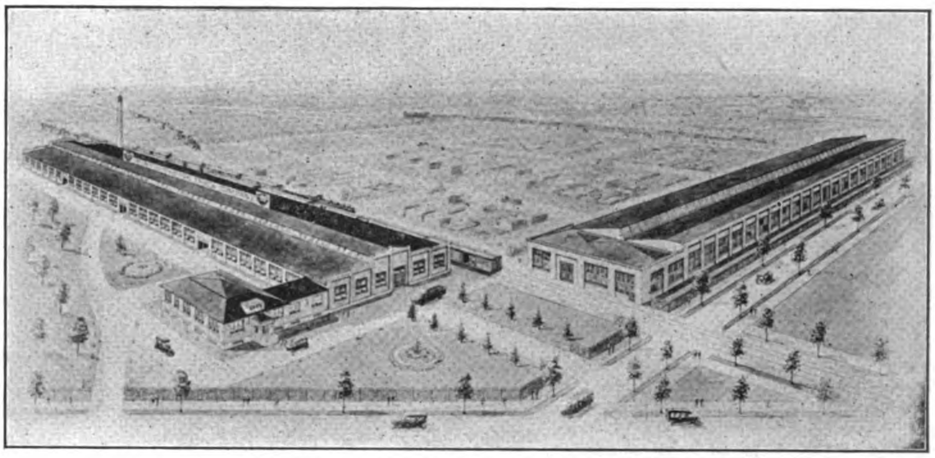
NEW GARAGE FOR FEDERAL.

The Federal Motor Sales Co., Baltimore, Md., has commenced work on a garage on North avenue.

New Building for Winther Co.

The Winther Motor Truck Co., Kenosha, Wis., has broken ground for a large addition to its present plant which, it is anticipated, will be ready for occupancy about Aug. 30. The new structure will be 60 feet wide by 400 long, of modern saw-tooth construction, with concrete floors, brick walls, and a wide sky-line extending the entire length of the building. It is designed with particular attention to high-speed production and will be equipped with every necessary labor-saving and safety appliance.

The shipping facilities will be excellent as spur tracks will pass between the two buildings making up the plant, to the Chicago & Northwestern railroad. Chassis construction will be continued in the present unit and the new building will be used exclusively for the final assembly, painting and inspection of Winther trucks and the Winther Six, the new passenger car. It is stated that this extra manufacturing space will enable the Winther Co. to more than double its present output.



Addition to Kenosha Plant of Winther Motor Truck Co.

ACTIVITIES OF GRAY MOTOR CORPORATION.

The Gray Motor Corporation, Detroit, the $4,000,000 organization which recently took over the plant of the Gray Motor Co. in that city, has secured the exclusive rights to the Briscoe, Storey & Stahl type of knocked-down automobile body. The Gray Motors Corporation now purposes to ship all cars in a knocked-down state to assembly companies, independently organized, and located at the leading centers for the economical distribution in the United States and the main points in all foreign countries. These assembling plants will have a capacity to assemble, paint, trim and distribute at least 3000 cars a year in the territory assigned to them. The Gray car is the product to be thus distributed, designed by the Benjamin Briscoe Stahl Engineering Co., Inc., Detroit.

It is believed that this method of shipment will represent a saving of as high as 70 per cent. in cost of freight, etc.

Parrett Tractor Co.'s New Management

Considerable interest is manifested in the recent taking over of the active management of the Parrett Tractor Co., Chicago, by Vincent Bendix and George A. Gibson, both well known in the industry. Mr. Bendix is the designer of the Eclipse-Bendix drive and head of the Bendix Engineering Works and Automotive Research Laboratories and becomes president of the reorganized Parrett Co. Mr. Gibson, who has become vice president and general manager, was formerly works manager for the Diamond T Motor Truck Co., and previous to that was with the Packard, White and General Motors organizations in various capacities.

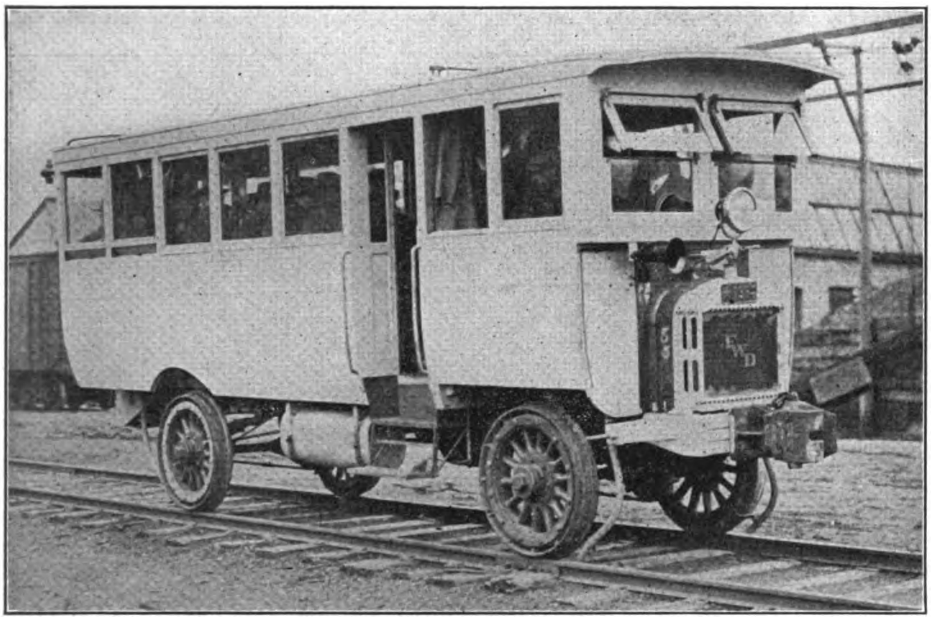
Curtis B. Bruce is the treasurer and together with Messrs. Bendix and Gibson makes up the executive committee. Other officers include: Vice president and chairman of the board, Robert Barbour; vice president and director of export sales, Russell A. Reed; secretary, W. J. Buettner. The board of directors includes Messrs. Bendix, Gibson, Robert and Warren Barbour, Bruce, Henry A. Rudkin and B. A. Tompkins.

Robert Barbour is president of the Barbour Flax Spinning Co., Paterson, N. J., and a director of the United Shoe Machine Co. and Safety Car Heating & Lighting Co.; Warren Barbour is president of the Linen Thread Co. of New York; Mr. Reed was formerly with the Oliver Chilled Plow Works, South Bend, Ind., and is now the head of Russell A. Reed, Inc., New York, exporter of agricultural implements; Mr. Bruce was formerly secretary of the Central Locomotive & Car Works, Chicago Heights, and later became treasurer of the Parrett Tractor Co.; Mr. Rudkin is a member of McClure, Jones & Reed of the New York Stock Exchange; Mr. Tompkins is vice president of the Bankers' Trust Co. of New York.

In addition to the Parrett tractor, the company will produce a motor truck of one-ton capacity designed for both city and country service, and a light tractor cultivator. A new model 15-30 tractor is to be placed on the market, equipped with a four-cylinder, 4½ by six-inch engine with overhead valves and to list at $1950. The motor truck will list at about $1750, and it is planned to produce 2400 of them the first year. The cultivator, which is also to be capable of plowing, will be offered at about $1000 list, and the first year's schedule calls for 1800 of these.

Tractor sales will be placed in charge of E. F. Sanders, who has been with the Parrett Co. for some time as district sales manager for the southwest, and was for seven years equipment sales manager of the Central Locomotive & Car Works.

Herbert L. Scharlach will superintend sales of motor trucks. He was formerly sales manager for the F. A. Ames Co. and later sales manager of the Sterling Motor Truck Co., Milwaukee, and recently with the Republic Motor Truck Co., first in charge of eastern sales and afterwards of the western territory. A. S. Whitney, formerly with the Ford Motor Co., is in charge of the purchasing department.



F-W-D Truck Chassis with Passenger Body and Flanged Wheels Used for Passenger and Freight Traffic on the Palatine, Lake Zurich & Wauconda Railroad.

ANDREWS RUST-PROOFING PROCESS.

The Benjamin Briscoe & Stahl Engineering Co., Inc., 821 Book building, Detroit, has been named as engineers of the Andrews Rust-Proofing process, recently imported from England, where it is stated that it was successfully used during the world war by European governments in rust-proofing munitions, etc. The process has been tested by the Detroit Testing laboratory, Detroit, and reported that the casting tested was rust-proof where not abraded. This statement is of interest because of the general use of rust-proofing in this country in the automotive and other trades.

F-W-D Truck Takes Locomotive's Place

An unusual and yet very practical use is made of an F-W-D truck chassis equipped with a passenger body by the Palatine, Lake Zurich & Wauconda Railroad Co., on its tracks between Palatine and Wauconda, Ill. It is used as a unit to replace a locomotive and car, being far more economically operated, and practically the only change necessary was to change the road wheels for flanged wheels.

The distance between terminals is 16 miles, and on this the truck unit makes regular runs during the day, a part of the time hauling a trailer, loaded with freight and luggage weighing up to five tons. The track at one point ascends a grade of seven per cent. Without the trailer the round trip is made on six gallons of gasoline.

Of the service obtained Vice President and General Manager Thomas J. Lee of the road stated in a recent letter: "I think there is a great field for the truck which will operate successfully on a railroad, as there are about 250 short lines in this country, which would be in need of them if the right machine were built."

The Butler County Railroad is operating a similar equipped railroad between Fargus, Mo., and Tipperary, Ark.

SINCLAIR OIL PROJECT DROPPED.

Due to unsettled labor conditions and high prices of building material, the Sinclair Consolidated Oil Co. has announced that its plan for the erection of an oil station at Trembley Point, Elizabeth, N. J., to cost approximately $10,000,000, has been temporarily abandoned. Two tanks, each with a capacity of 65,000 barrels, now under construction, will be completed, however.

The contemplated oil station was to be one of three for the Sinclair Oil Co. in the East, the others being at Boston and Buffalo.

ALLEN COUNTY ASSOCIATION FORMED.

The Allen County, O., Automobile Trade association has completed its organization by the election of the following officers: President, Joseph C. Hartline of the Hartline Motor Co.; vice president, O. L. DeWeese of the DeWeese Garage; secretary-treasurer, A. M. Heriett of the Heriett Tire Service Co. Measures were taken to affiliate with the Ohio Automobile Trade association. The membership is now more than 50.

DIPPY & AITKEN IN NEW QUARTERS.

Dippy & Aitken, advertising agent, formerly at 12th and Filbert streets, Philadelphia, has moved into more commodious quarters at 1328 Walnut street.

The examining of automobile operators, now going on in New York and Brooklyn, shows that the rejects have been running a full 25 per cent.

National Four-Passenger Phaeton

The National Motor Car & Vehicle Corporation, Indianapolis, Ind., announces a new four-passenger phaeton of distinctive design and unusual body lines. Extreme narrowness is a characteristic of this model, the rear seat being no wider than the front, 40 inches. The cowl is longer than in the regular touring car, and the rear compartment is shorter, giving room for a small after deck.

The interior fitments include a novelty in the way of walnut cabinets in the center cowl with a tilting robe compartment underneath. It is powered with a 70-horse engine and weighs 3600 pounds. The chassis is practically the same as for the other National Sextet models. It has a 130-inch wheelbase and has a speed range up to 70 miles an hour, accelerating from two to 40 miles an hour in high gear within a standard city block.

AN INGENIOUS STEAM CARBURETOR.

Among the ingenious devices to aid carburetion recently put on the market is the Automatic Steam Carburetor, made by the Automatic Steam Carburetor Co., 2190 Milwaukee avenue, Chicago. It is really an auxiliary carburetor, as it is used in conjunction with the conventional gas carburetor. The water for the steam device is taken from the cooling system of the car and is heated and vaporized by the exhaust manifold. The resultant steam is shot into the gas carburetor to be mingled with vaporized air and gasoline, the principle that causes a motor car engine to run more smoothly on damp days being utilized.

On a recent test in Chicago on Marmon 34, Velie and Chevrolet cars, equipped with a Stromberg, Rayfield and Zenith carburetor, respectively, on a quart of gasoline, it was found that the following per cent. of increase in mileage resulted with the use of the combined gas and steam carburetors: Marmon, 33 1/3; Velie, 27, and Chevrolet, 27. The increase in speed under pull noted was as follows: Marmon, 5½ miles; Velie, 5¾ miles, and Chevrolet, six miles.

GENERAL ALUMINUM CO. BUYS McADAMITE PLANT.

G. G. Powers, general sales manager of the General Aluminum & Brass Manufacturing Co., Detroit, has purchased the stock of the McAdamite Aluminum Co. of that city, and J. P. Carritte of the latter company has become associated with the former as a director and member of the executive committee. It is the intention to operate the McAdamite plant as a separate unit.

A. P. Slater, formerly superintendent of the aluminum and brass foundries of the Willys-Overland Co., Toledo, has joined the General Aluminum Co. as assistant general superintendent of foundries.

AUTOMOTIVE ENGINEERING OFFICE IN WASHINGTON.

The first automotive engineering office for Washington. D. C., has recently been opened by A. & D. R. Black, who has leased quarters in the Evening Post building. This firm plans to handle two general classes of work: Consulting engineering on air craft and light motor vehicles, and the technical representation of manufacturers in the automotive field in their dealings with governmental departments. The members of the firm are Archibald Black, who has been with the United States Navy department for the past 20 months, and for two years previous, chief engineer with the L. W. F. Engineering Co., College Point, and Donald R. Black, formerly chief draftsman with the L. W. F. Engineering Co. and for several months in the United States air service. The former is a member of the Society of Automotive Engineers, the Aero Club of America, the American Flying club and the American Society for Testing Materials.

DILSO SPRING LUBRICATION SYSTEM.

Buxton & Owen, former Chicago distributor of the Reo cars, has secured the sole rights, under the Dilley patents, to license manufacturers to use the Dilso system of spring lubrication for automobiles and trucks.

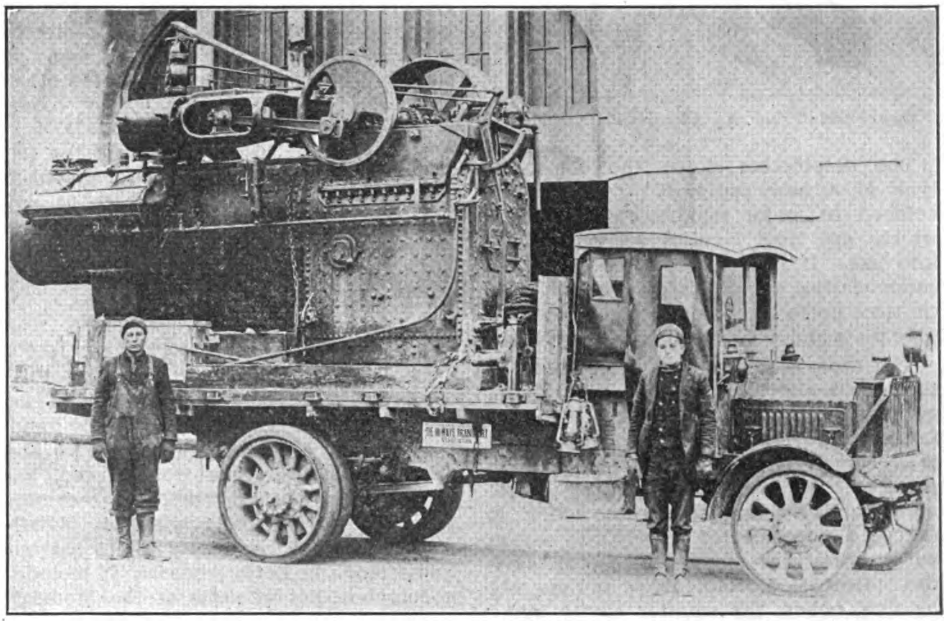
It is stated that the courts have recently sustained the validity of the Dilley patents covering the lubrication of springs by free-flowing oil retained by means of a felt washer in a cup-like recess near the end of each spring leaf, which can be supplied with oil through an oil duct in the end of the leaf. The lubricant is carried by capillary attraction over the entire frictional surface of the spring.

Buxton & Owen has opened general offices at 30 North La Salle street, Chicago.

Federal Moves Eight-Ton Boiler

A Federal truck, which had seen two years service, was recently picked by the Harrison Brothers of Toledo, O., to move a 16,200 pound boiler a distance of 70 miles, although the truck company has but two Federal in its fleet of nine trucks.

The Austin Co. of Toledo wanted the boiler moved from Dunkirk to Toledo, but questioned the advisability of hauling it on a motor truck. Harrison Brothers assured the company that it would come through all right, and proved their contention, the Federal taking to its task as though it were an everyday load.



Federal Five-Ton Truck Owned by Harrison Bros., Toledo, O., with a Steam Boiler Weighing 16,200 Pounds That Was Hauled from Dunkirk, O., a Distance of 70 Miles.

DURATEX CO. IS TO EXPAND.

Ralph S. Allen, vice president and general manager of the Duratex Co., Newark, N. J., manufacturer of Duratex automobile and furniture upholstery, is authority for the statement that his company has purchased a large plot of ground adjoining the factory to provide a site for an addition which will give five acres of manufacturing space under cover, a total of about 250,000 square feet.

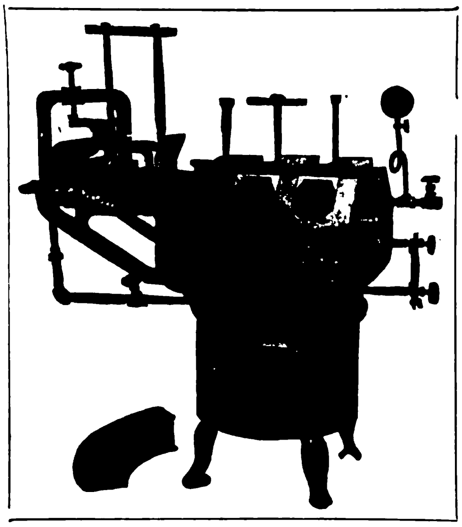
Duratex automobile upholstery is stated to be the evolution by scientific research and experiment of a product that is absolutely sun and water proof and remarkably durable.

NORTHWIND SPARK PLUG.

The Northwind Spark Plug Corporation has been formed to take over the production, on a commercial scale, of the Northwind spark plug. The business offices are at 42 West 39th street, New York City, and a manufacturing plant has been established at Union Hill, N. J.

Improved Type Akron Vulcanizer

Always keeping up to the times, the Akron Rubber Mold & Machine Co., Akron, O., manufacturer of tire repair equipment, has recently made improvements on its vulcanizers and retreaders.



Improved Type A, Akron Vulcanizer.

The illustration shows the improved type A, a new equipment recently developed to make repairs on cord tires which are now coming so extensively into use. It is a three-cavity outfit, accommodating all makes of cord and fabric tires up to five inches; equipped with tube plate and self-contained steam boiler.

The type F is an ideal equipment for the small shop. It is a self-contained outfit handling all makes and sizes of fabric tires from 2½ to five inches. This is a complete unit equipped with tube plate and inside patch vulcanizer attachment, and fitted with steam boiler so that the purchase of a separate steam boiler is not necessary. It has two cavities: One 3½ by four inches and one 4½ by five inches, the smaller cavity being fitted with a reducing shell for taking 2½ by three-inch size tires.

The improved type E is a cavity retreader and has been developed especially to accommodate five-inch cord tires, which are larger in size than five-inch fabric tires. It is a two-cavity outfit on which all makes of tires from three inches up to five-inch cord and fabric tires can be handled. It is equipped with self-contained steam boiler and plain, ribbed and non-skid tires can all be handled on this equipment.

In addition to the equipment described the Akron Rubbermold line includes several other types of vulcanizers as well as tube plates, bead molds, reducing shells, air bags and steam boilers, buffing stands, lasts, brackets, etc., and a full line of tire repair tools.

Literature regarding Akron Rubbermold equipment will be furnished upon application to the Akron Rubber Mold & Machine Co., 945 Sweitzer Avenue, Akron, O.

SAVEUR FORD FRONT SPRING.

The New Era Spring & Specialty Co., 68 Cottage Grove avenue, Grand Rapids, Mich., has added to its line of "Better" springs, tire carriers, spring bumpers, etc., the Saveur Ford front spring, which is especially designed to stop the blows that flatten the ordinary plain springs.

The illustration shows this spring with the open-looped, up-turned ends of the seventh leaf. This simple and effective spring saver is an integral part of this type of New Era "Better" spring. When the spring is deflected three-fourths of its arc, the open loop comes into contact with the "V" angles of the frame. Thus the open loops absorb the extra heavy thrust of the spring itself and, it is claimed, positively prevent spring breakage.

The Saveur Ford front spring is uniformly oil-tempered from end to end by a new process, graphited between the leaves for two years' lubrication; built to fit exactly; is flexible, easy riding and squeak proof. Like all New Era "Better" springs, the Saveur is guaranteed against breakage on the basis of a new one in prompt exchange for a faulty one. It helps absorb the shocks and saves other breakage of radius rods, bent axles, steering knuckles, etc.

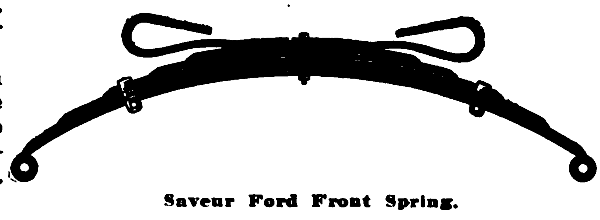
Its weight is 20¼ pounds and the list price is $6.50. The Saveur open-looped leaf is also made separately to fit any Ford front spring by removing and replacing the top leaf with the Saveur leaf. The price of the Saveur open-looped leaf alone is $2.50.

ISSUES SPANISH CATALOGUE.

Charles F. Lyngaas Co., Inc., 135 Wooster street, New York, export factor handling motor car accessories, parts and tools under the Lynx trade brand, has issued a comprehensive illustrated catalogue of the products which it distributes, addressed especially to its patrons and friends in Latin America. It includes a complete list of parts of the Model T Ford car with numbers and cable code symbols for convenience in ordering, and a complete alphabetical index.

DEATH OF MANAGER, TWITCHELL GAUGE CO.

Max D. Bendel, manager of the Twitchell Gauge Co., Chicago, died recently in that city from heart failure while on his way from his home to his place of business. Mr. Bendel succeeded to the management of the Twitchell Gauge Co. in 1912, shortly after that concern was acquired by A. Schrader's Sons, Inc., of Brooklyn, N. Y. In addition to his duties as sales executive of the Twitchell Gauge Co. he also conducted the Chicago branch of the Schrader Co.



Saveur Ford Front Spring.

Jacquet Motors Corporation Formed

The Jacquet Motors Corporation of America has been formed at Belding, Mich., and will manufacture the Jacquet car to retail at about $4500.

The directorate of the new organization is as follows: Alfred J. Jackson, Ray D. DeWolf, L. W. Wilson, Byron F. Brown, Fred L. Warner.

Mr. Jackson was elected president and sales director. He started his automobile career as a boy with the Napier Motor Co. in London, England, and was with the Pierce-Arrow Co., Buffalo, N. Y., from 1905 to 1909, and later associated with Frank W. Ruggles of the Republic Motor Truck Co., being a consulting engineer and a pioneer in the worm-drive movement in America.

The vice president and general manager is Louis W. Wilson, who has been identified with the industry for more than 20 years. He resigned a connection with the Timken-Detroit Axle Co. to join this concern.

Ray D. DeWolf, vice president and production manager, was formerly with the Universal Tractor Co., Moline, Ill., and the Advance-Rumeley Co. Byron F. Brown, secretary and treasurer, was formerly secretary of the Belding Chamber of Commerce. Charles Marquet, who is also a member of the company, is manager of the American Motor Co., Battle Creek, Mich. He was formerly with the H. H. Franklin Manufacturing Co., Syracuse, N. Y. The assistant engineer is Harold Ringold, formerly with the Michigan Aircraft board. B. R. Batchelor, the purchasing agent, has had a wide experience in this field.

The trade name "Jacquet," adopted by the corporation, is a combination of "Jackson" and "Marquet," the names of two prominent members of the organization. The company has a modern plant at Belding, 230 by 100 feet, a part of which is of two-story construction.

CATALOGUE OF BANNER PRODUCTS.

The Banner Accessory Manufacturing Co., 2629-2633 La Salle street, St. Louis, Mo., has just issued its Catalogue No. 6 of Banner products comprising automobile and truck accessories and repair parts. Each article is illustrated and described, and list prices, discounts and shipping points for each are plainly stated for convenience in selection and ordering, etc. The Banner company is also direct factory representative for an extensive line of equipment, and the name of the manufacturer is given with each unit, together with specifications and other information.

NEW DORT DISTRIBUTORS.

The Dort Motor Car Co., Flint, Mich., announces the following new distributors: W. S. Kip Motor Co., 1408-1410 North Broad street, Philadelphia, Pa., and N. D. Shawkey Motor Co., 5925 Baum boulevard, Pittsburgh, Pa.

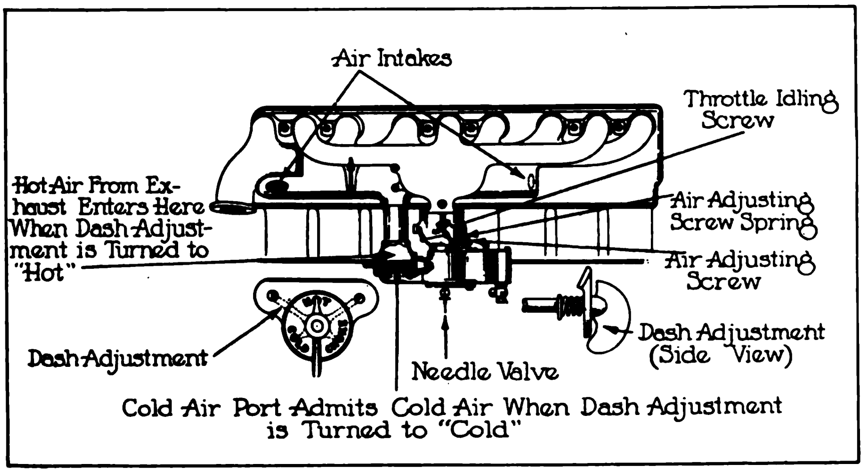
Adjusting Marvel Carburetor on Buick Six Cars

THE standard adjustment of the carburetor which will give the maximum mileage with the best all around driving, is as follows, on 1919 and 1920 Buicks:

The gasoline needle valve at the bottom of the carburetor should be open approximately one full turn and at the end of the air adjusting screw just above the float bowl should stand flush with the end of the ratchet spring. To get this result adjust as follows:



Air Intakes
Throttle Idling Screw
Hot Air From Exhaust Enters Here When Dash Adjustment is Turned to "Hot"
Air Adjusting Screw Spring
Air Adjusting Screw
Dash Adjustment
Needle Valve
Dash Adjustment (Side View)
Cold Air Port Admits Cold Air When Dash Adjustment is Turned to "Cold"

Marvel Carburetor, Used on Buick Six, Model K, 1920 Cars.

Turn the gasoline needle valve on bottom of carburetor to the right until it stops and then quickly turn back to the left one complete turn. Make sure the air adjusting screw is flush with the end of the ratchet spring.

With dash adjustment turned to "Hot," start and run the engine until the intake manifold feels warm.

Retard the spark and close the throttle gradually on steering wheel quadrant until the engine idles. If the engine tends to stop when the throttle is closed, either the throttle idling screw is not screwed in far enough, or the air adjusting screw should be screwed in farther.

To get a good idle of the engine, adjust throttle idling screw and also air adjusting screw as loosely as possible without making the engine miss or run irregularly.

To test the above adjustment the engine should accelerate from an idling speed as follows: With the spark advanced it should accelerate without a back fire on both hot and cold air. With retarded spark it should accelerate on hot air without a back fire, but should back fire when accelerated on cold air. These accelerations should be tried several times to make sure of the adjustment.

If the engine does not back fire with retarded spark and cold air, the carburetor is set too rich and this can be remedied by turning the needle valve to the right and at the same time tightening the air adjusting screw to keep the engine running idle until the above conditions are met. On the other hand, if the engine back fires on advanced spark and cold air, the carburetor is too lean and may be made richer to meet the above conditions by turning the needle valve to the left and loosening the air adjusting screw to keep the engine idling properly.

The carburetor should be tested frequently to see if the above conditions are being obtained and the temperature of the air entering the carburetor should be regulated to give the desired results while driving.

In starting the engine, turn the dash adjustment to "Choke" until the engine starts, and then turn it immediately to "Hot."

The adjustment should be left at "Hot" only long enough for the engine to become well warmed up, when the dash adjustment should be turned to "Cold" and left in that position. These directions apply to normal temperatures and weather conditions, and the operator will soon learn to handle the dash adjustment to take care of colder temperatures.

For example, on a very cold winter day it may be necessary to drive with the dash adjustment turned at a point between "Hot" and "Cold" all the time, the exact position being determined by finding out where the most satisfactory performance of the engine is secured. The adjustment should be kept as near "Cold" as good performance of the engine seems to permit.

When the dash adjustment is turned to "Choke," both the hot and cold air inlets are shut off and only enough air enters to make a combustible mixture at a low temperature. This mixture is entirely too rich for driving.

When the dash adjustment is turned to "Hot," the carburetor is fed with hot air from the chamber around the exhaust manifold, entering at air intakes. This gives a satisfactory mixture while the engine is warming up.

When the dash adjustment is turned to "Cold," the carburetor draws its air from the outside, and if the carburetor is properly adjusted gives the correct mixture for ordinary driving temperatures.

The dash adjustment to a position between "Hot" and "Cold," on cold days may be made in such a manner as to feed the air to the carburetor at about the same temperature as the outside air in warm weather, thus assuring a mixture that affords both performance and economy.

USE THE THIRD BRAKE.

The motor car driver should not forget that his car has three brakes. If he puts the gears in second speed and cuts off the spark, steep grades will have no terror for him. He should shut off the engine and slide into second as he rolls across the ridge, but should not drive in second. The spark can be shut off if the throttle will not close. Then with a six-cylinder car six compression brakes are gained and the engine is cooling in the meantime. If necessary, a gentle touch of the service or emergency brake now and then generally will hold nicely. At times an abrupt or long drop will call for low instead of second in compression. On all but the steepest grades this will hold the car with but very little use of the brakes, and will keep the brakes in reserve for real emergencies.

In removing steering wheel to lubricate planetary gears it will be found advisable to use a wheel puller, to avoid damaging threads.

Freeing a Seized Engine

OCCASIONALLY the repairer receives a call to start a seized engine that has resisted the best efforts of the owner of the car. At such times the repairer must exercise the utmost ingenuity for the owner has generally tried all the easy and well known methods before the repairer arrives.

In such cases the first thing to do is to make sure that it is the engine and not some other part of the transmission or rear axle that is at fault. The rear wheels should be jacked up and the emergency brake released and the gear shift lever placed in neutral. The wheels should turn freely and there should be no binding in the rear axle system.

The spark plugs should be removed, or the compression taps turned, to relieve the compression. Then if the crank cannot be turned over by hand or by means of the starter, or by the two working together, the car may be towed with the gears in high and the clutch disengaged. As soon as the car has attained some momentum the clutch may be allowed to engage gently, care to be taken not to allow a sudden motion, which might strip the gears in the rear axle or even break a shaft.

If this does not free the engine, kerosene can be poured into the cylinders and allowed to remain for a couple of hours. This will have a tendency to dissolve any old oil which may have gummed the pistons to the cylinder walls. Then the car may be towed again and an attempt made to turn over the engine by engaging the high gear. The engine can be turned over more easily in high than in low gear because it does not have to revolve so rapidly.

After one has succeeded in turning over the engine the drain cock in the bottom of the crankcase should be opened and the mixture of kerosene and old oil drained out. Then the new oil should be added, the radiator should be filled with hot water in order to expand the cylinders, and the spark plugs replaced. After starting the engine it should be run slowly under its own power for some little time, in order that the new oil may work to all parts of the engine and to allow the engine to work out some of its stiffness.

Sometimes water leaks into the cylinders and rusts the pistons fast to the cylinder walls. There is also a possibility of moisture condensing within the cylinders, if the car is allowed to remain standing in a damp place without being used.

If the engine is fitted with a removable head, as is now used on many cars, it is often but the work of half an hour to remove the cylinder head and ascertain if the pistons are stuck in the cylinders. The movement, of course, will be very slight, but if the pistons are not rusted to the cylinder walls, some slight movement should be obtainable.

If only one piston is tight, it may be possible to remove the lower half of the crankcase and take off the cap of the connecting rod of the tight piston. If there is sufficient room in the crankcase, the connecting rod can be tied to one side, and the engine used to drive the car home on three cylinders. Or the tight piston may be driven out of the cylinder with a block of wood. The wire leading to the spark plug of the seized cylinder should be grounded when attempting to run the engine on three cylinders.

It is sometimes possible to rap each piston separately with a block of wood at the same time that the strain is applied to the starting crank, thus releasing the pistons from the cylinders and allowing a film of lubricating oil to penetrate between the parts.

On some cars the rim of the flywheel is exposed, so that it may be gripped with a heavy wrench and the wrench used to assist in turning over the crankshaft.

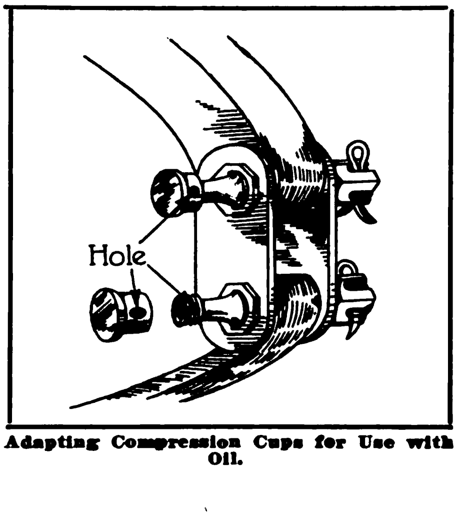
If one man lies on the bonnet over the engine and pulls up on the starting crank, at the same time that the car is being towed, the simultaneous strain at both ends of the crankshaft will often be enough to start the movement of the pistons in the cylinders.

When the car is in the garage and compressed air is available, this may be forced into the cylinders through an air valve made from a discarded tire, a valve and a broken spark plug. If an air pressure of 100 pounds a square inch is exerted over an area on the top of the piston of 15 square inches, this should be sufficient to start it. Of course the poppet valves will have to be closed while the air is being admitted into the cylinder.

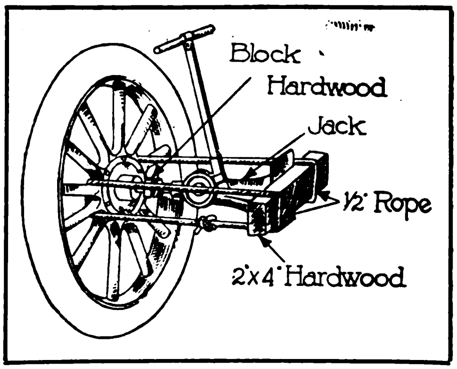
LUBRICATION OF SPRING BOLTS.

Where hard grease is used as a lubricant for automobile spring bolts, it sometimes dries in the small holes and grooves that feed it to the bearing surfaces, thus preventing the parts from being properly lubricated. This causes the bolts and spring eyes to wear out quickly. A way is illustrated whereby this condition may be remedied successfully by installing oil cups for thin oil.

Drill a hole large enough to allow the oil to be poured in through the cap and threaded portion of the bolt as shown. Then turn the cap half-way around, thus completely closing the hole.



Adapting Compression Cups for Use with Oil.



Removing a Rear Wheel with Lifting Jack.

IMPROVED WHEEL PULLER.

It sometimes becomes necessary to remove a wheel from a car not fitted with detachable wheels. Having removed the hub cap and nuts holding the wheel securely on the axle, it is found that a wheel puller is required in order to remove the wheel from the axle, so tightly is it held. As a wheel puller is seldom available and is not often required, the jack may be pressed into service. Two lengths of strong rope and a short, stout piece of timber are also required. The jack is let down as far as possible, and the ropes are passed around one or two spokes on opposite sides of the wheel and tied in a hard knot so that loops of equal lengths are formed. A piece of heavy timber is then passed in through the two loops and the jack is placed between the end of the axle and the timber with the base of the jack resting against the timber. To prevent damage to the end of the axle it is well to place a small piece of hard wood between it and the top of the jack. On extending the jack carefully the wheel will be pulled from the axle.

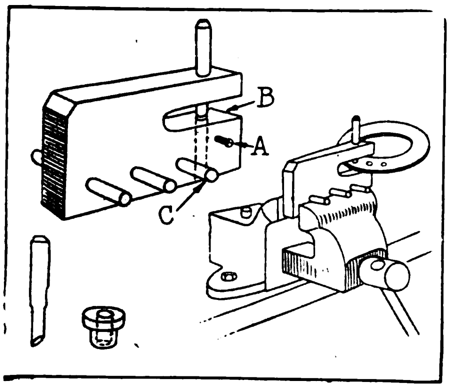
RESETTING SPRING LEAVES.

Authorities on spring manufacture state that it is not advisable to reset spring leaves of any kind by hammering them, hot or cold, or by running the leaf through a tire bender. The method suggested is to heat the steel to about 1900 degrees Fahrenheit, reshaping the leaf to a pre-determined form and immediately dipping the leaf in a bath of oil. It is usual to sprinkle a little water on the hot plate before dipping it into the oil bath. The plate is then very brittle and must be drawn carefully, depending a great deal on the degree of heat before quenching, but at 1900 degrees, quenched in a moderately cool bath, it is usual to draw until there is just the slightest suspicion of a dull red glow, or about 700 degrees.

In most cases there is a little fitting necessary after the plate is drawn and allowed to cool slowly. This is done by hammering on a regular spring fitter's block or anvil, but the amount of such hammering, compared with what is necessary to completely change the set of the spring, is negligible and not particularly harmful to the spring, just enough being done to insure a snug fit between the plates.

HANDY VISE PUNCH.

A novel type of small punch for the bench vise can be made from small pieces of boiler plate or other scrap metal, as shown in the illustration. The piece of plate is used edgewise. A hole is drilled for the largest size punch, which for a ⅞-inch plate is ⅝ inch, then a slot "B" is cut to receive the work to be punched. The steadying or support pins "C" are put through the plate. These help hold the punch solid in the jaws of the vise. A set of dies can be made for the smaller size punches, as shown. These are held in place by the screw "A." If the equipment to make the dies is lacking a set of the punch plates could be made for the sizes needed, making the punch hole to suit each size. These punches can be used on all thin stock and gasket material.

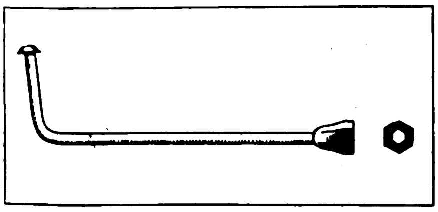


Small Punch for Bench Vise.

HANDY AMMETER WRENCH.

A handy wrench for removing the inside ammeter nut on models similar to 1066 Delco lighting and ignition switch is shown in the illustration.

It is made by pressing a nut taken from the inside ammeter stud into the large end of the outside ammeter stud nut. This nut is made of brass, so care should be taken not to split it. The inside nut can then be removed and a depression is left which acts like a socket wrench. Solder into the opposite end a handle made with a tie rod from an old round type generator or motor. Bend rod over three inches from top for a handle and grind the outside of the brass nut as thin as possible, so that it will not bind against the circuit breaker when turning off the nut. The use of this tool may save considerable time and also prevent damage to the insulation on the circuit breaker winding.



Wrench for Removing Inside Ammeter Nut.

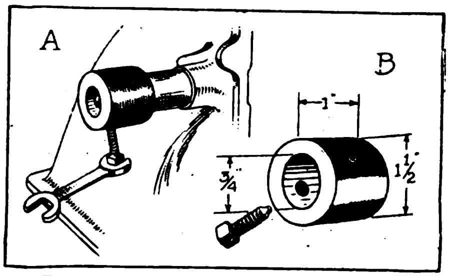
When joints in fuel line or around carburetor develop small leaks a coating of soap will prove effective.

Two Handy Tools for Use with Delco Motor Generator

It is frequently necessary to replace broken taper pins that have become sheared off from No. 78 and No. 98 Delco motor generators used on Cadillac models 53, 55 and 57.

The tool shown in cut will prove very useful for this work, as it is designed to fit over the motor shaft and facilitate the removal of the pin. The taper pin is intended as a safety pin and will shear to prevent damage to the starting clutch and flywheel if the starting pedal is depressed while the engine is running.

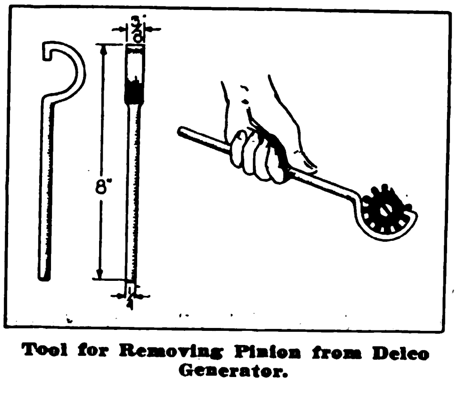
The tool is made from any piece of steel that will easily cut to the dimensions shown in the figure. After making it should be hardened as there is considerable strain put upon the threads. Without the tool the generator driving shaft would have to be taken out and the motor generator loosened and moved back to allow the starting clutch housing to be removed. This ordinarily will take two or three hours, while with the tool it can easily be done in from one-half to three-quarters of an hour without removing any equipment. Illustration shows how tool is used.



Delco Taper Pin Removing Tool.

DELCO PINION TOOL.

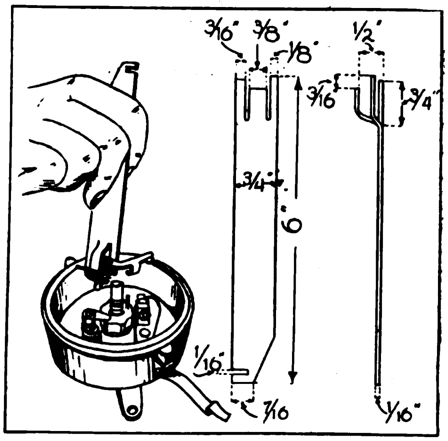
The illustration shows a handy tool to be used when removing the pinion from the Delco motor generator. It is made from a piece of round cold rolled steel about ¼ inch in diameter. The wrench end is heated and flattened and then bent in the shape shown. The tool is eight inches long and the lip on the curved end is turned in for ⅜ of an inch as shown. The device in use is simply slipped over the pinion, with the lip fitting in between the teeth and providing a firm hold when removing the set screw on the end of the shaft. It is not necessary to set the armature in the vise in order to remove the end housing, as it can be easily taken off with this tool while resting on the bench.



Tool for Removing Pinion from Delco Generator.

REMY BREAKER ARM TOOL.

Removing the breaker arm and spring from the Remy breaker box is rather a difficult operation unless some form of a tool is devised that will hold the spring securely while the arm is being removed and replaced. Such a tool is shown in the illustration and should prove practical in use.



Remy Breaker Arm Tool.

The sketch plainly shows the details of the tool and how it is used. The dimensions are as follows: The tool is made from a piece of flat steel or stiff brass about 3/32 inch thick. Cut the metal to a strip ¾-inch wide and six inches long. One end is beveled and a slot 1/16 inch wide is cut near the top. Two cuts are then made with a hack saw on the opposite end of the strip and it is bent to approximately the shape shown.

Note that the three prongs after bending are of different lengths. The longest and narrowest is notched slightly with a file to prevent the spring from springing off. A little experimenting will get the exact shape of these pieces so that when the arm and spring are placed in them tension will be given to the spring and it will be held by the long prong. After the arm and spring are assembled on the tool with the proper tension, it can be placed very quickly in the breaker box and held down with the other hand and the tool removed. This leaves the arm in the box with the spring wound up to the correct tension. The job of replacing these arms is a troublesome one at best, and a little time in making this tool will be well spent.

DETECTING A SHORT CIRCUIT.

When two of the wires of the lighting or starting systems are producing a short circuit an inevitable accompaniment of the condition is heat. By feeling carefully along the wires the repairer can usually detect the presence of a short circuit by the heat that is being generated.

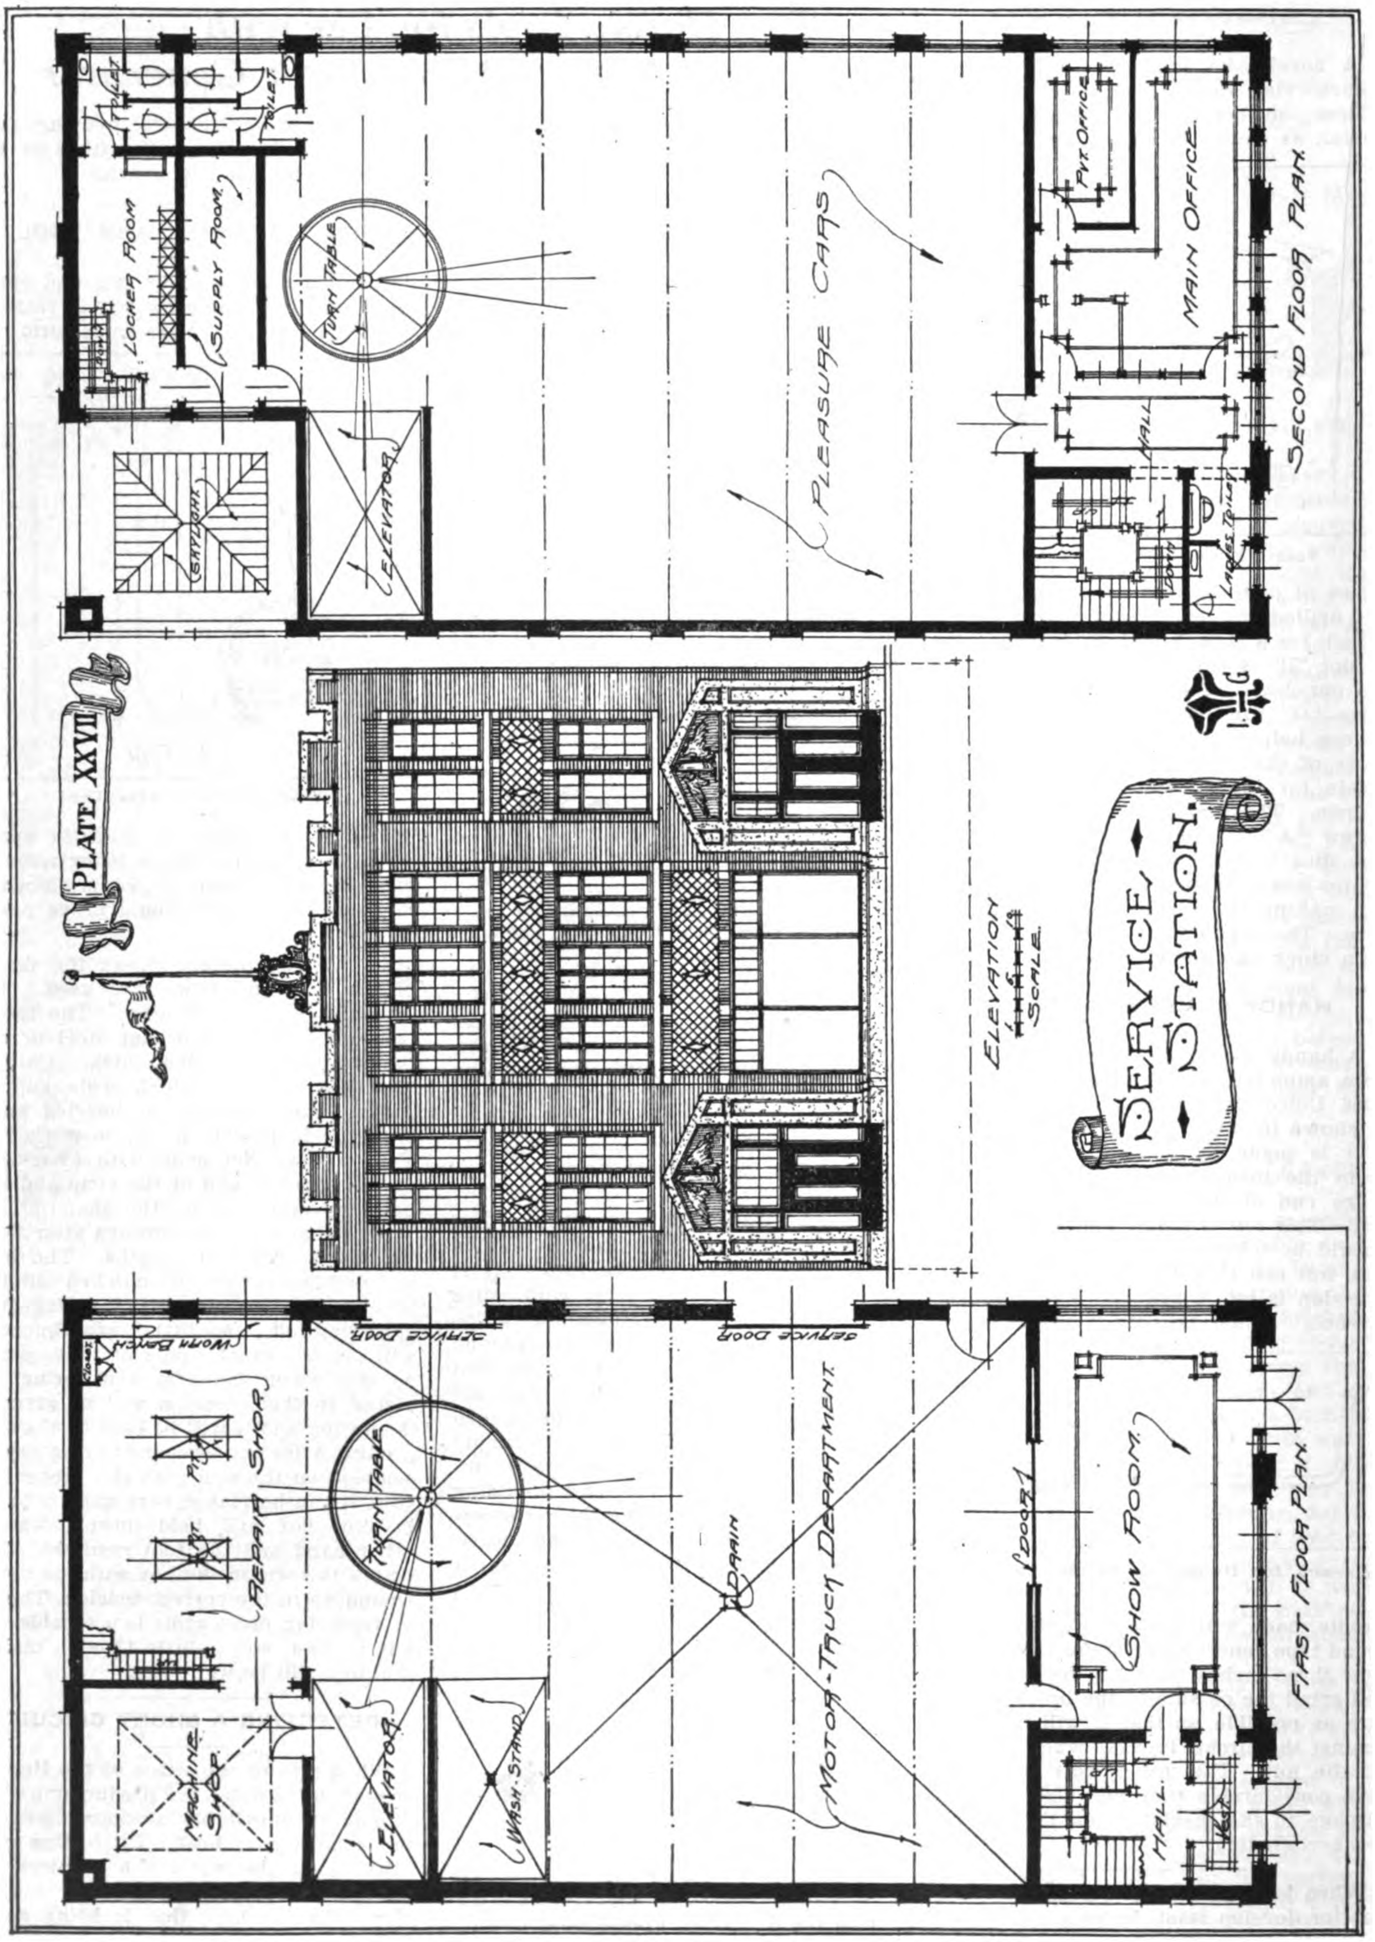


PLATE XXVII

GENERAL SERVICE STATION

A Three-Story Building, 50 by 100 Feet, on Corner Location, Arranged for Freight and Passenger Vehicle Storage, with Every Facility for Repair Work.

WHEN an automobile dealer who is to handle both passenger cars and trucks plans to erect a service station he is bound to be confronted with many problems. It is much simpler to plan a building that will be used for the handling of just passenger cars, or simply trucks, but when the structure has to serve both cars and trucks many unusual provisions have to be made if the building is to be laid out so that high grade service may be given. The architect has given due consideration to these requirements in his presentation of a layout that will combine essential features necessary for both trucks and cars.

The service station and salesroom for motor trucks and pleasure cars which is suggested in the accompanying sketches, would be up-to-date in every respect. A building of this type under present conditions could be built at an approximate cost of $35,000, and the elimination of some of the features would result in an appreciable reduction of this figure.

Very liberal provision is made for the used car department, as the entire third floor could be devoted exclusively to this purpose, if desired. Service stations are finding that they must provide extensive space for the used cars, as these have become such an important factor in business.

Possibly a dealer needing a building of about this size might find that he does not need so much space for his used car department. If so, he can readily find other uses for any part of the floor. Many purposes to which sections of the floor might be utilized will readily suggest themselves.

The architect's aim has been to picture a structure that would entirely meet the needs and desires of a progressive dealer who insists upon a thoroughly modern service station possessing every reasonable convenience and so designed that everything connected with his business may be done in a most practicable and efficient way.

A three-story building, with an area of 50 by 100, is shown. It is represented as being on a corner lot, as such a location for a large building devoted to the handling of trucks and passenger cars has many great advantages in its favor and is really essential.

The sketches show two plans and the front elevation, the third floor plan being omitted. The first floor is for motor trucks, with provision for openings and height. In the forward part is a large show room having a separate entrance from the street and also large show windows on both streets.

A large vestibule and stair hall are shown in the front of the building, and these lead to the second and third floors. Two service doors lead from the side street, as shown, opening into the storage department for trucks. Next is a washstand, followed in order by an elevator, which goes from the first to third floors.

Ample provision has been made for repairs, as can be seen from the large repair department shown. Adjoining the repair shop is a large machine shop, ready to handle anything from repairing parts to making them.

This would necessitate the installation of machine tools, such as lathes, a milling machine, a shaper, a drill press and a radial drill. Also provision may be made for a power saw. In a shop of this size these tools would be an absolute necessity in order that owners of cars may be given prompt and efficient service, obviating such delays as would be due to sending to the factory for parts to replace what could be repaired at the service station that is equipped with facilities to do restoration or even make new units if need be. A well planned machine shop is worthy of the consideration of anyone contemplating the construction and operation of an up-to-date service station.

The second floor has an office and women's room in front, and also a large storage section for the display and storage of passenger cars. At the rear is the elevator, also toilets, supply room and locker room. There are turntables on both the first and second floors.

As to the construction of the building, the foundation is of concrete, with super structure brick and steel. The floors are concrete, with steel floor beams, concrete reinforced. There is steel sash throughout. The service doors are automatic, raising out of the way to the ceiling.

General treatment of the outside bricks is with concrete trimmings, as shown. A rough texture brick with large white joint is suggested. Bricks may vary in color so as to give striking effects.

Heating by steam wall radiation is preferred. The heating plant would be in the basement under the machine shop, with stairway leading from the repair shop. Placing of lights and type is left to the discretion of the owner.

Such a structure would undoubtedly make an unusually good service station and sales room for motor trucks and passenger cars. The fact that the entire third floor could be reserved for the handling of used cars should prove an especially attractive feature.

There are several minor features that could be incorporated to suit the business of any individual dealer. Any further particulars desired will be gladly furnished upon request by the Architectural Department of this publication.

Essential Principles of Successful Soldering

The art of soldering is a very simple one. There are but four essential principles, and when these are followed anyone can after a little practise do as good work as the most experienced workman. These four principles are as follows:

(1) The soldering iron must be kept clean and well tinned.

(2) A good soldering flux must be used.

(3) The metals to be soldered must be thoroughly cleaned before joint is made.

(4) The joint must be heated above the melting point of the solder.

Soldering requires heat. You may use a gas stove, coal stove or a gasoline torch. Any one of these will do the work satisfactorily. Soldering irons cannot be heated properly in the yellow or illuminating flame of the gas because it smokes the iron, and also because it is not hot enough. A blue flame is needed, the same as given by a gas stove, but a good clean coal fire will do. To heat the soldering iron, slip the pointed end down through the hole in the center of the burner of an ordinary gas stove so that the blue flame comes in contact with the large end of the iron. This method of heating does not burn the solder from the iron so quickly and the iron keeps hot longer. To heat the iron in the ordinary cook stove, be sure to have a clean coal fire. Put the iron through the broiling door in such a way that the tin on the iron is protected from the flame by the lining of the stove. This leaves only the large end of the iron exposed to the fire. This method will save burning off the tinning. If no gas stove or other convenient method of heating the iron is available, a gasoline torch would be ideal.

To tell when the iron is hot enough, try it by touching the solder to the point. If the solder melts as soon as it touches the iron it is hot enough and ready to use. If the iron is overheated the tinning will be burned off and it must be retinned or, if the end of the iron becomes black and the black will not wipe off, the iron needs retinning.

To Retin Soldering Iron.

To retin a soldering iron, rub it on a clean brick, sand paper, emery cloth, or file to brighten the surfaces, and if it is badly pitted file it smooth. Then heat it by any of the methods suggested and put on a suitable soldering flux, rubbing on the solder, at the same time going over all four sides of the iron while it is still hot, and wiping them on an old cloth. This makes the soldering point of the iron look bright and shiny, the color of new tin. The soldering iron must be kept in this condition if good work is to be done and the cleaner and better the iron is kept the better the class of work that can be done.

The metals to be soldered must be thoroughly cleaned by scraping with a piece of emery cloth or a file. With the iron properly heated and the metals ready to be joined the next step and the most essential one in the entire operation is the use of the right kind of soldering flux.

Right Kind of Soldering Flux.

For ordinary work this flux should be in the form of a paste, which can be applied with a stick or a brush, or the end of the solder, and to the part to be soldered. In selecting the paste be sure that one is obtained that is non-corrosive, that will solder all metals and that is thoroughly mixed, so that each particle that is picked up on the head of a pin has all the elements of the complete flux. Be sure to buy a reliable flux.

If it can be done the best results will be obtained by holding the hot soldering iron underneath the parts to be joined, and it should be remembered that both sides of the joint to be soldered must be heated alike to make a good joint.

The solder is then held on top and as the heat rises it melts the flux, which should flow to every part of the joint, and later the solder melts and flows as far as the flux, making a perfect joint. For this reason a flux that will flow to a considerable distance is the best to use on most classes of work. Where it is impossible to apply the heat from below good work can be done by keeping the iron on top, provided care is taken to get the parts to be soldered hotter than the melting point of the solder.

When the solder has run freely take the iron away and let the parts get cold. If the joint is given a slight tap while the solder is still hot the surplus will be shaken off and a clean looking joint will be the result, but in doing this care should be taken not to separate the joint.

If Solder Looks Bunchy.

If the solder looks bunchy while it is still warm, take a cloth with a little of the flux on it and rub the joint over quickly. This will make it clean and smooth. Practise makes perfect. If the first job is not satisfactory one should not get discouraged, as he is bound to get good results eventually by persevering.

There are three troubles with a poor joint, namely, the wires should be cleaned by scraping before the joint is made; a good soldering flux should be put on the top of the joint before the heat is applied; and the joint was not hot enough the soldering iron should have been held underneath to let the heat from the iron rise.

TO SOLDER WITHOUT A SOLDERING IRON.

Pieces of brass can be soldered without it being possible to detect the joint by filing the pieces so as to fit exactly, moistening them with a soldering liquid, then placing a piece of smooth tin foil between them, fastening them together with wire and heating over a lamp or fire until the tin foil melts. With good soft solder a good many ordinary jobs can be done over a lamp without the use of an iron. The different degrees of fusibility of solders can also be advantageously used for several solderings and joints on the same piece; that is, first using a fine solder composed of lead two parts, tin one part and bismuth two, there will be no danger of melting when close to the jointed part; another piece may be joined with solder composed of lead four parts, tin four and bismuth one. The best soldering liquid is composed of equal parts of water and hydrochloric acid saturated with zinc.

FATS FOR SOLDERING.

Many workers who use the soldering iron to any extent prefer a soldering paste instead of the fluid. To them the following will be of interest:

1—Soldering fat or grease is commonly a mixture of rosin and tallow with the addition of a small quantity of ammoniac. It is particularly adapted to the soldering of tinned ware, because it is easily wiped off the surface after the joint is made, whereas if rosin were used alone the scraping might remove some of the tin and spoil the job.

2—The following is a well tried recipe for soldering grease: In a pot of sufficient size and over a slow fire melt together 500 parts of olive oil and 400 parts of tallow; then stir in slowly 250 parts of rosin in powdered form and let the whole boil up once. Then let it cool and add 125 parts of saturated solution of sal ammoniac, stirring the while. When cool this preparation will be ready for use.

SOLDERING RADIATORS.

In making repairs on the inside of a cellular radiator with the ordinary type of soldering iron, an inexperienced workman, such as the ordinary car owner, is very likely to start more joints leaking, so that the radiator may be in worse condition after he gets through than it was in the first place. This is a job for the expert in radiator repairing.

CEMENT FOR FASTENING BRASS TO GLASS.

For cementing brass to glass the following recipe will be found to answer very well: Take resin soap, made by boiling one part caustic soda and three parts of resin in five of water, and knead it into half the quantity of plaster of paris. This cement is used largely for fastening the brass tops on glass lamps. It is very strong, is not acted upon by petroleum, bears heat very well and hardens in one-half to three-quarters of an hour. By substituting zinc white, white lead or slacked lime for plaster of paris, it hardens more slowly. Water attacks only the surface of this cement. As it sets shortly after mixing, only as much as may be needed for immediate use should be made at one time.

When two of the wires of the lighting or starting system are producing a short circuit an inevitable accompaniment is the presence of heat. By feeling carefully along the wires the operator can usually detect a short by the heat generated.

Perfection Motor Car Heater Territory Open

The Perfection Heater proposition for this season is an unusually interesting one.

Our Plans embrace an extensive national advertising campaign, liberal factory co-operation and other attractive features.

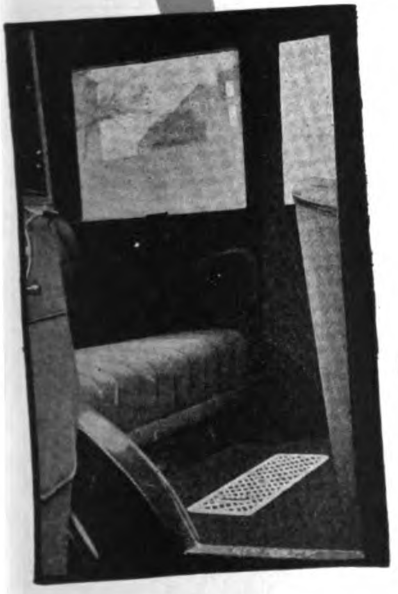
Territory is now being assigned. Distributors and dealers of the better class are invited to write us.

Do not delay. Make application before the territory goes to your competitor.

The Perfection Heater & Manufacturing Co.

6545 Carnegie Ave. Cleveland, Ohio

Manufactured and Distributed in Canada by
Richards-Wilcox Canadian Co., *Ltd.*
LONDON, ONTARIO



Cars using Perfection Motor Car Heaters *as Standard Equipment on one or more models:*

Allen Case Cole Columbia
Crow-Elkhart Davis
Dixie Flyer Dorris Du Pont
Gardner Grant Haynes
Holmes Hudson King
Kissel Liberty Maibohm

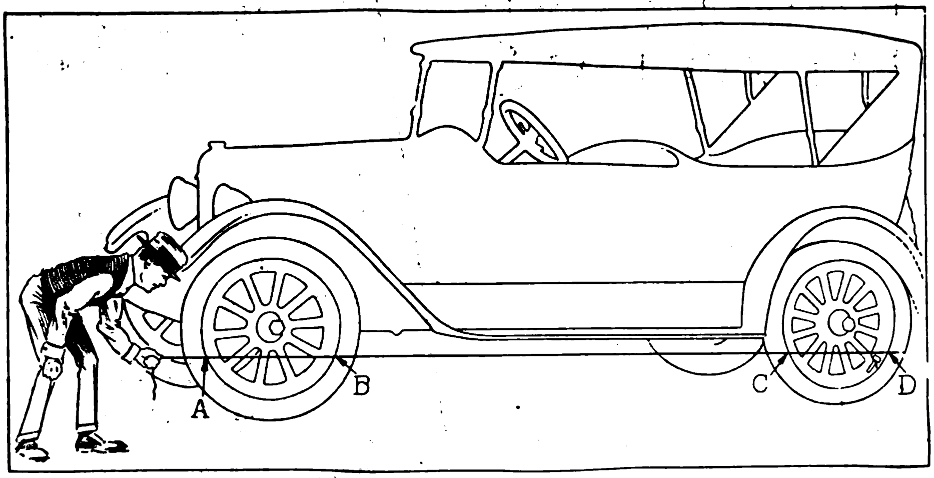
Velie Willys-Knight Westcott
Yellow Taxicabs *of* Chicago

How to Align Automobile Wheels Properly



Method of Aligning Motor Car Wheels by the Simple Use of Cord.

A METHOD of aligning the wheels of the motor car that is used in service stations is by the use of a cord. A bolt or piece of iron is fastened at one end of the cord "D," and the cord with the bolt is passed around the tire and felloe of the wheel so that the cord when drawn tight will be below the wheel hub. The cord is carried forward to the front wheel and held in position "A" against the front edge of the front tire, as shown in the illustration. The steering wheel is turned so that the cord will touch the sides of the tire of the front wheel at "A" and "B" equally when the cord is drawn tight.

Change the cord to the opposite side of the car and repeat the operation, fastening the cord around the rear wheel as before. Drawing the cord tightly across both rear and front wheels below the hubs will show how much the front wheel is out of alignment. If the alignment is correct the cord should touch both edges of the tire lightly. If out of alignment, the cord will either bear hard on rear edge of the front tire, or will not touch it at all. In either case the tie rod end will have to be loosened and the rod either lengthened or shortened as the wheels are out or in. Placing car on a level floor will soon enable the motorist, after practising a few times with the cord, to test the alignment of the front wheels of his car with a certain degree of accuracy that will satisfy him as to the advisability of doing this work periodically.

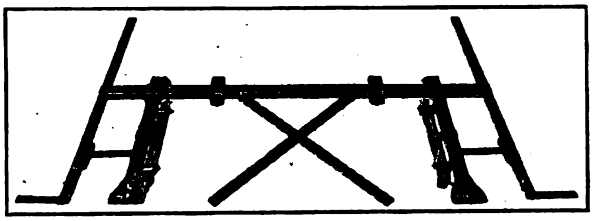
Aligning with a Rod.

The rod aligning gauge consists of a ¼-inch rod of iron, over which is slid a length of pipe, the two members being held by a set screw. The toe-in varies from 5/16 to ⅜ inch and should be measured on a line with the hub. A similar device for determining the parallelism of the axles, front and rear, is shown. The device consists of an iron rod fitting a piece of pipe and held by a set screw. The ends of the pipe and rod are pointed to make centering of the device easy.

Manufactured Wheel Aligner.

Probably the manufactured wheel aligner shown in the illustration and made by J. F. Duby, Mattapan, Mass., will be of interest to many motorists who desire a device that is much more accurate than the majority of home-made devices.

The Duby gauge is mounted on roller casters and is made entirely of metal. The side members are shaped similar to a try square, the shorter end of the square fitting across the front of the tire, while the longer side of the square fits parallel with the side of the tire. The squares are adjustable by means of the two handles at the center, which slide the squares either in or out till the proper adjustment is reached. The degree of alignment is shown by pointers on dials above the roller casters. When the wheels are properly aligned the correct alignment is shown on these dials.



The Duby Wheel Aligner.

Aligning with Pointers.

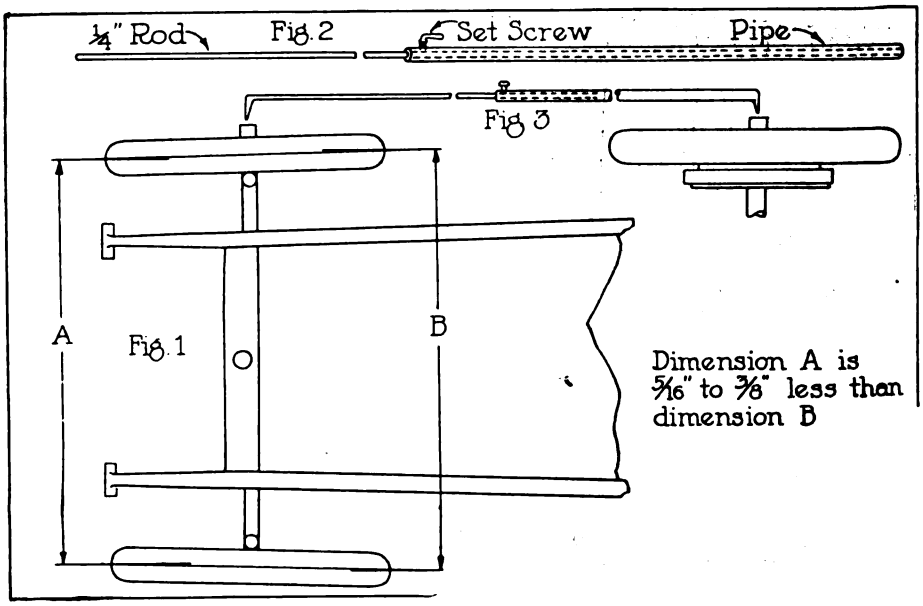
When aligning the front wheels with pointers jack up the front of the car from the center of the axle so that the distance rod is not interfered with. With both wheels free to revolve a center line may be marked on each tire by holding a soft lead pencil against it when spinning. The pencil must be held steady or the result will not be a straight line.

Next measure with a stick or tape the distance between these lines at a point opposite the hub. Turn the wheels half a revolution and measure again. The distance between the two results is the average allowing for a slight wobble, and should be 5/16 inch to ⅜ inch less than the distance measured in the same way at the rear.

The measuring stick is probably the handiest way to measure this distance and can be made by any one handy with tools in a few minutes time. To adjust the distance rod it is necessary to remove one of the bolts so that the clamp screw can be loosened and the clevis adjusted by turning on the threads of the distance rod. Any back lash in the axle knuckles and clevises should be taken up by straining the wheels outward in front before setting the distance rod. The job should always be checked after the wheels have been let down on the ground with the weight of the car on them.

A large try square is a simple tool for aligning front and rear whels. A piece of iron approximately ¼ inch wide by an inch thick by 16 feet long and another 5½ feet long are welded at right angles. With this device it is possible to align the rear and front wheels; also the two front wheels and the two rear wheels.

A new meter device which measures the load placed on motor trucks was recently tested at Akron, O.



Method of Truing Up Wheels by Use of Rod Inserted in a Piece of Piping.

RECORD OF BUILDING OPERATIONS FOR JUNE

Contracts Made and Plans Contemplated for Alterations or Erection of Garages, Repair Shops, Service Stations and New Plants.

PLANS AND SPECIFICATIONS.

Birmingham, Ala.; Louis V. Clark; one-story garage, site, 100x190; drive-in type filling station. Lessee, P. Y. Whitman.

Selma, Ala.; Ward Motor Co.; two-story brick and concrete garage, 79x180; $50,000.

Little Rock, Ark.; T. H. Sharp, Jr., 411 West Capital avenue; one-story automobile building, 70x200; $100,000.

Bridgeport, Conn.; Bridgeport Coal & Wood Co., 194 North Washington avenue; one-story brick garage, 32x65; $20,000.

Hartford, Conn.; Dragat & Toubman; two-story brick public garage, 95x96, at 295-297 Windsor avenue; $150,000.

Meriden, Conn.; Claude Collington, 81 Crown street; one-story brick public garage, 80x120; $50,000.

New Haven, Conn.; Luigi Pap, 165 Franklin street; one-story brick and terra cotta garage, 48x112.

Washington, D. C.; James H. Keane, Colorado building; one-story garage, 66x72.

Jacksonville, Fla.; O. P. Woodcock; one-story garage; $25,000.

Augusta, Ga.; Jacob Phinizy; one-story garage; $25,000.

Chicago, Ill.; S. Zarzyckis, 2500 Sacramento boulevard; one-story stone private garage, 29x51, southeast corner 25th street and Sacramento boulevard; $7500.

Chicago, Ill.; Anton Baca, Superior and Milwaukee avenues; one-story brick private garage, 42x59, at 2224-2226 Augusta street; $12,000.

Chicago, Ill.; R. A. Pottinger, 4030 Irving Park boulevard; one-story brick and stone garage and repair shop, 112x133, at 4000-4012 Kadvale avenue; $60,000.

Chicago, Ill.; Kurt Rosenthal, 1515 Estes avenue; one-story brick and stone garage, 100x150, at 2432-2440 Lawrence avenue; $52,000.

Chicago, Ill.; H. Seberg, 2844 Foster avenue; one-story frame garage, 22x28.

Chicago, Ill.; E. C. Walker, 105 North Clark street; one-story brick and stone garage, 80x162, North avenue, near Wells street.

Chicago, Ill.; O. L. Freeman, care A. L. Levy, 111 West Washington street; one-story brick and stone garage, 88x115, at 23-29 North May street; $50,000.

Danville, Ill.; Schaefer Oil Co., 76 West Monroe street, Chicago; one-story garage, 32x150; $25,000.

Elgin, Ill.; Herman Bunge; one-story brick and stone garage and service station at National street and Grove avenue; $20,000.

Glencoe, Ill.; C. A. Dunham; two-story brick and stone private garage, 28x71; $25,000.

Golden, Ill.; Caffens Auto Co.; one-story brick and concrete garage, 90x100; $35,000.

Lawrenceville, Ill.; A. L. Maxwell Co.; two and three-story brick and reinforced concrete public garage; $70,000.

Bourbon, Ind.; Rudd Motor Co., Plymouth, Ind.; one-story brick and hollow tile garage, 49x150; $65,000.

Fort Wayne, Ind.; Dr. R. B. Shields, 3939 Harrison street; two-story brick and stone trim garage, 55x150; $75,000

Terra Haute, Ind.; Dr. William H. Hickman; one-story brick service station, 80x142, at Fourth and Walnut streets; $25,000.

Templeton, Ia.; Temple Auto Co.; one-story brick garage, 75x140; $40,000.

Belle Plain, Kan.; Harry Nessley, Mulvan, Kan.; one-story brick and stone trim garage, 50x140; $10,000.

Ellis, Kan.; Charles Kaylv; one-story brick and stone garage, 50x120; $15,000.

Emporia, Kan.; A. G. Bachelor, 807 Commercial street; one-story brick and stone garage, 30x40, at 809 Commercial street; $6000.

Florence, Kan.; Robinson Brothers; two-story brick and hollow tile garage and show room, 50x75; $20,000.

Hays, Kan.; John O'Laughlin; one-story brick and stone garage, 50x120.

Hutchinson, Kan.; C. H. Rush; two-story public garage, 66x132.

Lincoln Center, Kan.; Lincoln Motor Co.; one-story brick and stucco garage, 100x120.

Parsons, Kan.; A. H. Bond; two-story brick and reinforced concrete garage, 120x120, at 18th and Belmont avenue; $60,000.

Tonganoxie, Kan.; J. M. Lanning; one-story brick and stone trim garage and sales room, 60x100 and 50x50; $20,000.

Valley Center, Kan.; A. P. Wright; one-story cement and stucco garage, 50x100; $12,000.

Wichita, Kan.; Chevrolet Motor Co., 115 Lawrence street; one-story reinforced concrete garage, 75x100, at 222 South Topeka avenue; $180,000.

Frankfort, Ky.; Dr. John P. Stewart; one-story reinforced concrete private garage, 42x42; $12,000.

Louisville, Ky.; W. E. Ross, 1123 Cherokee road; five-story brick and concrete public garage, 90x120, at Market and L streets; $100,000.

Louisville, Ky.; Kentucky Motor Sales Co., 628 South Third street; one and two-story garage; $50,000.

Pineville, Ky.; F. Daniels; one-story brick garage, 66x145; $40,000.

Williamstown, Ky.; K. Jewett; two-story brick public garage, 54x85; $15,000.

Winchester, Ky.; Tom Moore; two-story cement block garage, 20x40; $7500.

Dixfield, Me.; D. A. Gates; one-story public garage, 32x120; $20,000.

Lewiston, Me.; Lewiston-Buick Co.; three-story brick garage and service station, 97x102, at Main and Sabatis streets.

Baltimore, Md.; United Automobile Sales Co., 12 East Mount Royal avenue; three-story sales and display room, 10x12.

Baltimore, Md.; Guilford Building Co., 2802 St. Paul street; one-story garage, 50x50.

Baltimore, Md.; R. S. Whiteford, 2638 Pennsylvania avenue; one-story brick garage, 46x100.

Baltimore, Md.; F. S. Dorn Corporation, 35 North Beurolau street; one-story brick public garage, 100x150; $40,000.

Baltimore, Md.; Louis Blaustein, 2312 Callow avenue; one and two-story brick garage, 57x130, at 609-613 Fremont avenue; $30,000.

Baltimore, Md.; Federal Motor & Sales Co., 303 Lou street; three-story brick garage and show room, 100x141, at North avenue and Lord street; $100,000.

Baltimore, Md.; Frederick W. Kohl, 3004 West Prestman street; one-story brick garage, 248x296; $200,000.

Catonsville, Md.; Catonsville Garage Co.; one-story brick garage, 40x150; $15,000.

Hagerstown, Md.; Irvin R. Middlekauf; one-story garage, 80x80.

Hagerstown, Md.; Hagerstown Foundry Co.; two-story reinforced concrete garage and machine shop, 60x80; $10,000.

Pocomoke, Md.; J. M. Clogg; one-story brick garage, 69x140; $20,000.

Boston, Mass.; Kaufman & Greenburg, Old South building; one-story public garage and service station, at Brighton avenue; $300,000.

Boston, Mass.; George Marsh, care of Tuck & Gilman, 34 School street; two-story brick and reinforced concrete public garage, 100x145; $125,000.

Brookline, Mass.; Daniel Cerussi, 1371 Commonwealth avenue; two-story brick and limestone trim sales room, 95x268, at Commonwealth avenue and St. Paul street.

Fall River, Mass.; Robertson Motor Co., 526 South Main street; one-story reinforced concrete garage; $100,000.

Springfield, Mass.; Charles Nash, 120 Oakland street; two-story garage, 50x140.

Caro, Mich.; W. H. Cooper; one-story brick garage, 78x140; $25,000.

Detroit, Mich.; E. Sorock, 122 East Forest avenue; four-story reinforced concrete sales room and service station, 90x100, at Fourth and Canfield streets; $400,000.

Detroit, Mich.; Walker Saxe Motor Co., 1515 Gratiot avenue; one-story brick garage, 120x200.

Detroit, Mich.; A. DeMoght, 578 Mt. Elliot avenue; one-story brick public garage, 31x75; $15,000.

Detroit, Mich.; Charles Clements, 114 East Ferry avenue; one-story brick garage and sales room, 55x130, at 813 West Grand boulevard; $25,000.

Detroit, Mich.; Hannah Real Estate Exchange, 1 McGraw building; three-story garage and service station, 100x190; $175,000.

Detroit, Mich.; Peter Sauer, 389 Mack avenue; one-story brick public garage at Mack and Elmwood streets; $20,000.

Detroit, Mich.; S. L. Bird & Sons, 171 Woodward avenue; one-story brick private garage, 35x60, at Brooklyn and Cherry streets.

Detroit, Mich.; Barmou Transfer Co., 2470 Jefferson street; one-story brick garage, 91x110, at Gray and Kercheval streets; $30,000.

Flint, Mich.; Marshall Auto Co.; two-story brick, stone and reinforced concrete garage, 50x183, at Fourth and Court streets; $75,000

Flint, Mich.; Dort Automobile Co.; three-story brick and reinforced concrete sales room, 75x150.

Hamtramck, Mich.; George T. Haas, 1514 Kresge building, Detroit, Mich.; one-story public garage, 37x100.

Jackson, Mich.; Michigan Buick Sales Co., 104 East Washington street; two-story brick garage and repair shop, 58x120; $25,000.

Kalamazoo, Mich.; R. E. Fair, 218 North Rose avenue; two-story brick and concrete garage, 100x175; $75,000.

Monroe, Mich.; Pinkham & Wright, Hillsdale, Mich.; one-story brick, marble and tile garage; $35,000.

Melrose, Minn.; A. J. Kraker; one-story public garage, 50x140; $50,000.

Moorhead, Minn.; Samuel Christenson; two-story public garage, 25x85.

Joplin, Mo.; C. H. Studhoelter & Co., 715 West Ninth street; one and two-story brick and stone trim garage, 50x134.

Kansas City, Mo.; Killarney Investment Co., care of William Jewell, Jr., 417 Rialto building; one-story brick and stone trim service station, 100x132, at 1608 Locust street; $45,000.

Kansas City, Mo.; Lester & Barrell, 1612 Benton boulevard; one-story brick and stone trim garage, 100x115, at 16th and Montgall avenue; $25,000.

Kansas City, Mo.; C. H. Lampe, 2814 Gillham road; one-story brick and stone trim garage, 100x128, at 2740-2746 Cherry avenue.

Kansas City, Mo.; D. H. Smith, 4513 Triost avenue; two-story brick, stone trim and reinforced concrete sales room, 100x138; steam heating; plate glass front.

Kansas City, Mo.; M. Heedra, care of J. W. Flannagan, 2836 Benton boulevard; one-story garage, 112x195.

Nevada, Mo.; H. R. Brimmer, Buckner building; two-story brick and stone trim garage, 97x160; $75,000.

St. Joseph, Mo.; Horigan Realty Co., care of J. J. Flynn, Fourth and Sylvaine streets; one-story brick and stone trim garage, 80x170, at Ninth and Locust streets; $25,000.

St. Louis, Mo.; Eilderman Transfer Co., 24 North First street; one-story garage, 50x87.

Springfield, Mo.; W. P. Kennedy; one-story brick and stone trim garage, 48x100.

Tarkio, Mo.; J. D. Rankin; one-story brick and stone trim garage, 48x128; $18,000.

Grand Isle, Neb.; Teeter Homan, 112 East Second street; four-story reinforced concrete garage and service station.

Omaha, Neb.; R. F. Harris, 1315 Harney street; one-story brick garage. 66x131, at 1307-1311 Harney street; $18,000

Dover, N. J.; J. N. Brown; one-story brick garage. 50x50; $10,000.

Hoboken, N. J.; Charles Noending, 125 Harrison street; one-story brick public garage at Second and Harrison streets; $16,000.

Laurel Springs, N. J.; Board of Freeholders; one-story brick garage, 27x71.

Newark, N. J.; Charles H. Bennett, 39 Saybrook place; two-story brick and concrete service station, 100x150; $100,000.

Newark, N. J.; Frank Megaro, 24 Seventh avenue; one-story brick public garage, 68x87, northeast corner Crane and Stone streets; $18.000.

Newark, N. J.; McAllister Carton Corporation, 1001 Broad street; two-story brick garage and service station, 70x150; $100,000.

Newark, N. J.; John A. Pfarr, 164 Watson avenue; one-story brick front and cement block public garage, 49x99, at 152-154 Watson avenue; $10,000.

Trenton, N. J.; Trenton Pottery Co.; one-story brick garage, 60x80.

Amsterdam, N. Y.; George Kellogg. 35 West Main street; one-story private garage; $8000.

Binghamton, N. Y.; S. J. Saleeby, 106 Clinton street; one-story concrete garage at 196 Clinton street; $10,000.

Brooklyn, N. Y.; Biltwell Auto Body, Inc.; one-story brick and concrete garage, 100x100, southeast corner Morgan and Lombardi streets; $35,000.

Brooklyn, N. Y.; Morris Auto Co., 2003 Bedford avenue; one-story brick garage, 80x122; $16,000.

Brooklyn, N. Y.; Standard Oil Co. of New York, 26 Broadway, New York; one-story brick garage, 60x89; $30,000.

Brooklyn, N. Y; P. T. J. L. Building Co., 1715 Sterling place; one-story garage, 105x107, at southwest corner Waverly avenue and Fulton street; $60,000.

Brooklyn, N. Y.; James F. Trommer Co., Inc., Bushwick avenue and Conway street; one-story brick garage, 106x116, at northeast corner Bushwick avenue and Gillen place; $40,000.

Brooklyn, N. Y; Chershad Realty Co., 1199 Eastern parkway; one-story brick garage, 72x119, at 1419 Newkirk avenue.

Brooklyn, N. Y.; Reckwitz Brothers, 44 Court street; one-story brick garage, 44x100, south side Malbone street, west Rogers avenue; $100,000.

Brooklyn, N. Y.; Samuel Ageloff, 126 Reid avenue; one-story brick garage, 100x100, at 25-31 Humboldt street; $25,000.

Brooklyn, N. Y.; Morris Goetz, 1581 President street; one-story brick garage, 80x180, at 104-106 Lawrence street; $20,000.

Brooklyn, N. Y.; John Willabook, 168 Schenectady avenue; one-story brick garage, 20x40, at 170 Schenectady avenue; $13,000.

Brooklyn, N. Y.; Mary Ryan, 491 Smith street; one-story repair shop, 20x70, southeast corner Huntington and Smith streets; $10,000.

Brooklyn, N. Y; Simon Freund, 381 Miller avenue; one-story brick garage, 20x100, north side Livonia avenue, east Van Sicklen; $10,000.

Brooklyn, N. Y.; Combe & Wilson, 32 Court street; one-story brick garage, 50x110, at Wyckoff avenue and Stockholm street; $30,000.

Brooklyn, N. Y.; Talbemear Realty Co., 1404 Eastern parkway; one-story brick garage, 100x100; $25,000.

Brooklyn, N. Y.; Benjamin Martin, 22 West 27th street, New York; one-story brick garage, 50x100; $25,000.

Brooklyn, N. Y.; William Schwen, 822 Lexington avenue; one-story brick garage, 87x100; $50,000.

Brooklyn, N. Y.; Liberty Wyona Co., 106 Bristol street; one-story brick garage, 100x100, at 812 Evergreen street; $40,000.

Brooklyn, N. Y.; C. Hershed Realty Co., 1199 Eastern parkway; one-story brick garage, 118x200, at 1419 Empire boulevard; $30,000.

Brooklyn, N. Y.; N. J. & N. Realty Improvement Co., 129 Front street, New York; one-story brick garage, 75x100; $25,000.

Brooklyn, N. Y.; Princess Contracting Co., 52 Webster avenue; one-story brick garage, 100x250; $70,000.

Brooklyn, N. Y.; Brislin Co., 3290 Atlantic avenue; one-story brick garage, 95x100, north side Truxton street, east Stone avenue; $25,000.

Brooklyn, N. Y.; Vleckles, Inc., 189 Montague street; one-story brick garage, 100x160, north side Empire boulevard, east Belford avenue; $50,000.

Brooklyn, N. Y.; Pownick Building Co., 728 Saratoga avenue; one-story brick garage, 40x80, west side Cleveland street, north Pitkin avenue; $20,000.

Buffalo, N. Y.; Samuel Kaderbeck, Inc., 967 Main street; one and two-story brick and tile sales rooms, 50x120 and 50x100, at 1120-1124 Main street; $15,000.

Buffalo, N. Y.; Lafayette Buffalo, Inc.; one-story brick sales room, 56x120, at 1276 Main street; $45,000.

Jamaica, L. I., N. Y.; John Boccodare; one-story brick garage, 18x18, east side Merrick road, north South street; $6000.

Long Island City, L. I., N. Y.; Anna Limbacher, 484 Grand avenue; one-story brick garage, 50x100; $10,000.

Long Island City, L. I., N. Y.; Factory Construction Co., 44 Court street, Brooklyn; one-story brick garage, 50x78, at 13th and Crescent streets; $80,000.

Long Island City, L. I., N. Y.; John J. Daly; one-story brick garage, 105x133, northeast corner Hancock and Nott streets; $25,000.

New York, N. Y.; Wendel Estate, 175 Broadway; one-story garage, 68x120, at 344-354 West Broadway; $15,000.

New York, N. Y.; Ford Oswald, 34 Chestnut street; one-story brick garage, 100x108, southeast corner Jamaica avenue and Chestnut street; $30,000.

New York, N. Y.; Samuel Rubin, 1060 Findlay avenue; one-story brick garage, 50x140; $12,000.

New York, N. Y.; John Brown, 514 West 146th street; two-story brick public garage, 151x153, at 51 Jumel place; $60,000.

New York, N. Y.; Seibert Sales Co., 801 Jennings street; one-story brick garage, north side Jennings street, west Bristow; $5000.

New York, N. Y.; Security Mortgage Co., 165 Broadway; one-story brick public garage, 85x127, at 250 West 153rd street; $35,000.

New York, N. Y.; David Krans, 350 Broadway; one-story brick garage, 100x144, at 510-522 West 130th street; $35,000.

New York, N. Y.; LeBash Garage Corporation, 30 East 42nd street; one-story brick garage, 100x175; $39,000.

New York, N. Y.; Louis C. Rasmussen, 456 Canal street; two-story concrete garage and repair shop, 25x100, at 218 Spring street; $8000.

New York, N. Y.; Julia Fitz, 346 East 51st street; one-story brick garage, 22x24, at 944 First avenue; $36,000.

New York, N. Y.; Solid Inner Tube Co. to Tru-Matic Tire & Tube Co.

Making Magnesium Metal Out of Mineral Water

THE Dow Chemical Co., Midland, Mich., has perfected a process, after five years of experimentation, for the production of metallic magnesium, the lightest metal known to man used commercially and, until the war, an exclusively German product. The expert engineers of the Dow company are now taking salt brine from their mineral wells at Midland and Mount Pleasant, and are converting it into a metallic substance one-third lighter than aluminum and only one-fourth the weight of cast iron. This substance, which is to be known commercially as Dow-metal, is being produced in quantity and is being tested in some two-score automobile plants throughout the country under the most exacting conditions. It is being fabricated into piston rings, connecting rods, motor castings, bolts and nuts, bearings, gears and other automotive parts.

The Dow Chemical Co. is now organizing its sales department and will put this product on the market on a large scale. Engineers declare it to be the only commercially successful piston alloy composed chiefly of magnesium. All other light piston alloys are aluminum compounds, containing at best, only a small percentage of magnesium. The company has an unlimited supply of the raw product, which is a natural salt brine from which is extracted by many processes the other chemical products the company also manufactures. Whereas the method of manufacture of metallic magnesium is electrolytic whereby a fused molten salt bath is decomposed by a powerful electric current, forming the metal which is so light that it floats on the surface of the pots, its cost is higher than that of other light metals, but its many desirable qualities more than offset this in its adoption for the construction of automotive parts. These are its lighter weight, greater tensile strength, machining qualities, no cutting compound being necessary, and presenting no hard spots to dull tools, and the fact that with a Brinnell hardness of 70 degrees the metal does not tear when high speed is used in working it when it is desired to speed up production.

Efforts Devoted to Piston Material.

Realizing that the motor manufacturing industry needed a better piston material, the Dow company has thus far devoted most of its efforts to developing a piston alloy that would enable the production of a component more nearly perfect than was hitherto obtainable. Five years of experimentation has resulted in the evolution of a metal one-third lighter than aluminum and one-fourth lighter than cast iron and having a greater tensile strength than either; which in itself is a sufficient bearing metal, does not require the use of a bushing for the piston pin, and which in actual performance has proved to afford many other points of superiority.

In more than 40 motor plants in the United States where tests were made, not a single instance is recorded of a cast iron cylinder being scored from a Dow-metal piston seizing or setting. These tests also established the fact that smoother running motors, with less vibration, resulted from the use of the new metal. Other noticeable advantages were greater acceleration, a saving in oil and gasoline consumption, greater horsepower and higher speed.

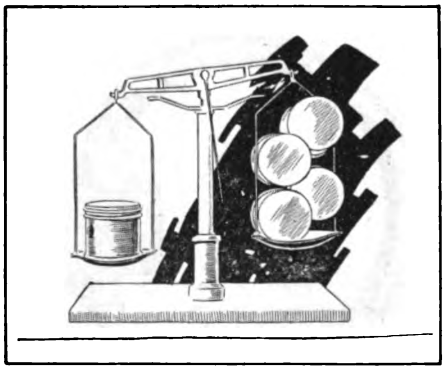
Exhaustive Test on Car.

In practical performance Dow-metal was first tried out by the Dow Chemical Co. in a Ford car. This was a 1918 runabout which had been in use for almost two years with cast iron pistons. Dow-metal pistons were installed, and the first test was to jack the rear wheels up and place pulleys on the rear axle with belt attached to the line shaft above. The entire machine shop, with 10 or 12 machines, was run by the power from the Ford motor for two weeks, and the average mileage, as figured from the speed of the motor, was approximately 200 miles a day. The car was then started on a 5000-mile test run, from Midland to Saginaw, Bay City and Alma, and with four different drivers alternating on the trips. No special speed was made but the time averaged from 15 miles to 45 miles an hour. An accurate account was kept of the gasoline and oil consumed on this test, and the results were as follows: 23¼ miles to the gallon of gasoline, and 101 miles to the quart of oil. The motor was taken down and pistons showed very little wear.

The cylinders were tested with a micrometer and showed no wear. The pistons, being in good shape, were re-assembled in the motor and the car continued as a service car in trips from Midland to Bay City, Alma, Saginaw, Mount Pleasant and Big Rapids. The present estimate for the complete mileage on this set of pistons is now about 18,000 miles. The car was recently taken down, the motor disassembled and no wear and tear on the cylinders was noted. There was very little wear on the pistons, so the Dow engineers consider that the tests have established that Dow-Metal does not have any abrasive action on cast-iron cylinders.

All Pistons Redesigned.

Because Dow-metal is a new piston material, the manufacturer cannot be expected to adopt the same without a severe test. All piston designs submitted for casting are redesigned by the engineering department at the Dow plant, the pattern and core box being constructed to the design for Dow-metal, and not following cast-iron construction, a mistake made by some others in trying out a new piston material. In cast-iron construction, the main point in the construction of a piston is to reduce weight, while with the light metal a sufficiently thick head serves the purpose of a conductor of heat, as well as a factor of safety and strength.



Four Dow-Metal Pistons Balancing One Standard Cast-Iron Piston.

Machining costs, from the statements of manufacturers of motors, are quite interesting also. Dow-metal pistons can be machined at the rate of three to one as against cast-iron. The cost of the finished piston ready for assembly being almost equal, when the cost of the castings in the rough would be greater in the Dow-metal material.

In the past the tensile strength of magnesium has been unknown, but as the experimental stage develops, it is found that each time it is reworked, rolled, drawn or drop forged, there is an increase in its tensile strength, and also that it can be recast for the finest parts of a motor, without decreasing its strength.

Lighter Construction the Ultimate Goal.

Lighter construction is the ultimate goal of the automobile manufacturer. The present day car which averages 3000 pounds in weight, when built of the lighter metals should not weigh more than 1500 pounds. The following parts can be made of the lightest metal: bodies, cast wheels, crank cases, fans, fan pulleys and blades, engine blocks, pistons, connecting rods, oil pans, hoods, fenders, gears throughout car, all housings, radiator shells, propeller shafts, steering wheel spiders, etc. The matter of axles is one that, while not improbable, is hardly possible until an alloy different from any on the market is found which would possess that factor of safety necesary for this part of the car.

MAGAZINE PAPER SHIMMING SOLID TIRES.

It has been suggested that it is possible to make use of magazine paper in shimming solid tires to truck wheels. For some months experiments have been carried out along this line with old newspapers and magazines. It has been found that while newspapers will do the work, magazine paper is better as newspaper tears easily and only a portion of it will work in between the tire and the wheel., while with magazine paper the results were practically as good as with burlap.

The necessity of finding some substitute for burlap or tin, two substances that have previously been used for this purpose, is made imminent by the high prices charged for this material.

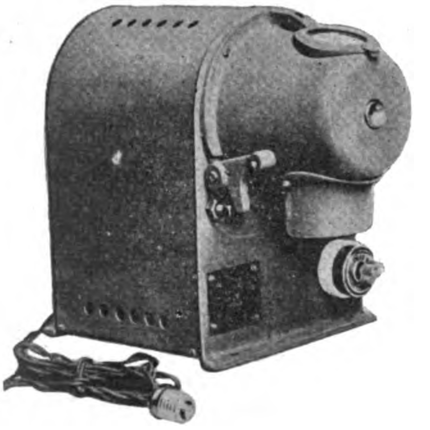
Nevada has two motor cars for every three miles of road.

ACCESSORIES, EQUIPMENT AND TOOLS FOR THE GARAGE AND REPAIR SHOP

The F-F Insulated Wire Stripper consists of a motor driven machine for use in electric repair stations, service stations, garages, etc. It is designed to simplify and shorten the labor required in stripping the ends of insulated, enameled, stranded and single conductor wire.

Duplex cord, it is stated, can also be stripped in much shorter time than formerly by the use of this machine. In some of the larger plants where it has been in use the capacity has been increased by as much as five times, is the claim of the manufacturer.

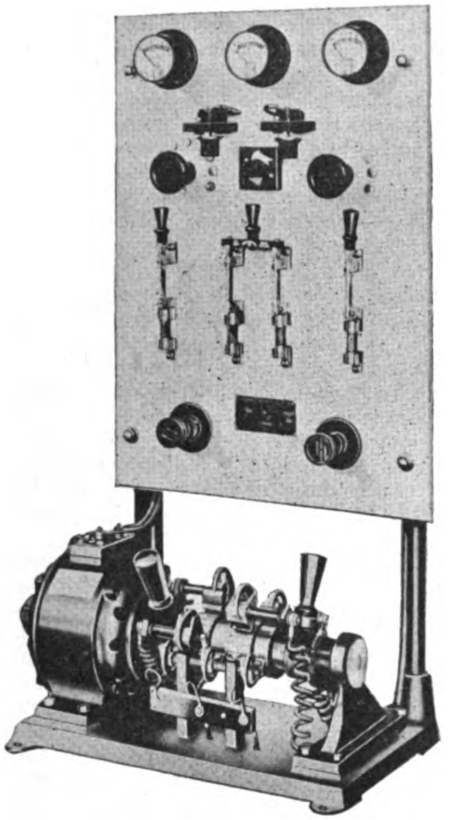
The device is guaranteed as to workmanship and performance. It must prove serviceable to the purchaser. Equipped with either single-phase, 110-volt, 60-cycle, alternating motor, or 110-volt, direct-current motor, as desired.



Manufactured by the France Manufacturing Co., Berea road and West 104th Street, Cleveland, O. Prices and literature on request.

The Advance Motor-Rectifier consists of a one-eighth horsepower motor, "special type," with an extended shaft, upon which are mounted three collector rings and two special commutators (as a unit), which absorb the alternating current from a transformer, as a three-wire circuit, and directly convert the alternating current into a direct current to two separately controlled circuits, in graduated voltages of 22-volt steps to 110 volts and normal capacity of one kilowatt a circuit, or 10 amperes at 110 volts. The total output of the rectifier delivering direct current is two kilowatts.

The special motor is designed for this class of work and is equipped with self-oiling ring bearings of rugged construction. The switchboard included with the outfit is mounted above the motor and is fastened to two uprights fitting into sockets in the motor base, and is constructed of marble, and containing the necessary switches, meters, automatic cut-outs and regulators to control the charging circuits. The transformer is mounted at the back of the switchboard and will handle up to 220 volts.



The device is fully warranted by the manufacturer to be fool-proof, who will make good for a period of one year from date of purchase any part that should contain a flaw, when returned to the factory postpaid.

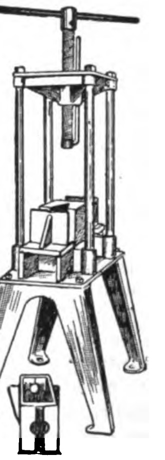
Manufactured by the Advance Electric Co., 131 East Sixth Street, Los Angeles, Cal. Prices and literature on request.

The Johnson Universal Tire Lock is designed to lock and protect tires placed on rear or side tire hangers from being stolen. It is stated that the lock can be opened only with the keys provided by the manufacturer and that the cable is made of a specially constructed metal surrounded by armor steel sleeves, which interlock with each other, allowing free rotation, but will resist all efforts to separate them. It is claimed that they cannot be cut or injured by hammering.

The device bears the approval of the Underwriters' Laboratories, Inc., and is claimed to be thief proof.

Manufactured by the Johnson Automobile Lock Co., 2309 Archer Avenue, Chicago, Ill. Prices and literature on request.

The Whitney Arbor Press is designed for service stations, where many jobs are presented during the course of the year that require straightening, bending, forcing gears from shafts, etc. The press is extremely light in weight for its capacity. Both the head and base are substantially webbed, supplying additional strength to those parts subject to the severest strain. The base is provided with ways similar to those of a lathe, permitting the blocks to slide into various positions, thus offering a firm foundation for the work. A large recess through the base allows the passage of shafts, gears, etc. The screw is made with a square thread, thus reducing wear to a minimum, it is claimed, the head being supplied with recesses, allowing the use of two bars when exceptionally strenuous pressure is necessary.

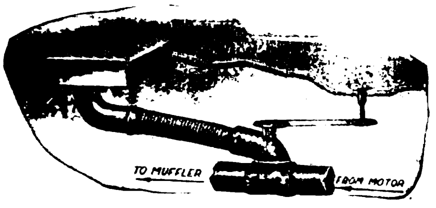


A patented feature is added to this press in the form of a guide rod sliding parallel with the screw and attached to a cap on the pressure end, preventing twisting strains on the surface of the work and relieving the assembly supports from strain. Accompanying every press are two sliding L blocks, one sliding V box block, one round V block and an axle attachment designed especially for Ford axles.

Manufactured by the R. S. Whitney Manufacturing Co., 74 Nichols Street Lewiston, Me. Prices, No. 1 press, $70. east of the Rockies; No. 2 press, $90, east of the Rockies.

The Noble Auto Heater is designed for both open and closed models of passenger cars, is manufactured in nine different types and embodies principles in construction that are unique.

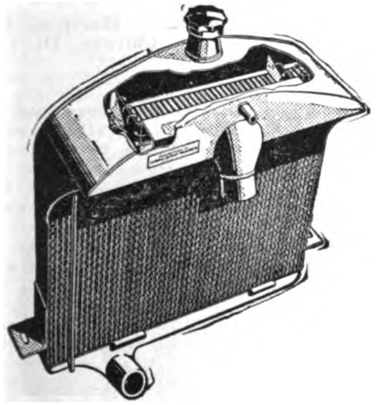
The Noble heater, it is claimed, utilizes the waste exhaust heat from the motor, it being thoroughly protected in its passage to the radiator and on its return to the exhaust pipe, thus conserving the heat for heating purposes only, and not wasting it by radiation. Employing the principle of insulating the heater supply pipe, the hot gases reach the heater at a much higher temperature than if delivered through a single unprotected supply pipe. This principle of heat supply is patented by the manufacturer and insures a steady supply of heat at the heater regardless of atmospheric changes.



It is stated that, with this system of heating, it is impossible for the fumes of the exhaust gases to reach the occupants of the car, and that the disagreeable feature sometimes coincident with the use of exhaust heaters is eliminated in the Noble heater. The heater and its connecting pipe and valve are made of the best of material, the fittings are nicely finished and of a high grade, and the outfit can be easily installed in any passenger car in a few hours' time by a mechanic.

Manufactured by the Noble Heater Co., 347 East Lewis Street, Fort Wayne, Ind. Prices and literature on request.

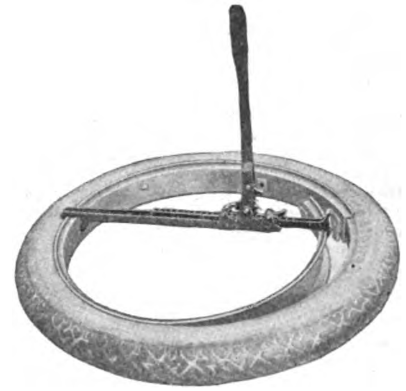
The New Curran Radiator for Ford Cars, equipped with a patented simplified thermostatic control, offers several new features to Ford owners, chief among which is the impossibility of heating, the manufacturer stating that no Curran radiator has ever been known to boil. Over-cooling is also claimed to be prevented by the thermostatic control, through an absolutely self-adjusting device which, it is stated, cannot get out of order, and regulates the flow of water. With this attachment the engine is operated winter or summer at an even temperature of 160 to 180 degrees.



Curran radiators are claimed to be constructed in such a manner that freezing of the water will not damage the radiator, the manufacturer citing cases where radiators have been frozen 18 times without the least injury. The factory will replace any Curran radiator damaged by freezing within one year from date of purchase.

Manufactured by the Curran-Detroit Radiator Co., 558-570 Lafayette Boulevard, West, Detroit, Mich. County distributors are wanted. A very attractive proposition is offered to dealers furnishing A 1 references. Prices and literature on request.

Trex Rim Tool is designed to remove and replace tires fitted to demountable rims of all kinds and sizes. It is strongly made of malleable iron constructed in the form of a jack and using a similar principle of operation. The stationary end of the device is hook shaped to fit over the edge of a rim, while a shoulder is provided which fits inside of the rim, preventing the hook from coming loose on the edge of the rim.



A sliding bar is also provided which has a rack cast through its center. This is also equipped with a hooked end fitting the edge of the rim, while a shoulder is provided in connection with the hook which fits against the inside of the rim when forcing the split of the rim into place.

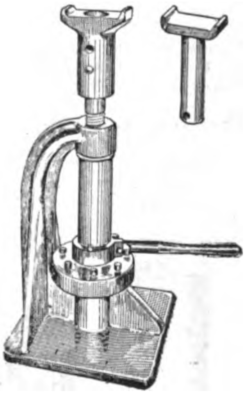
A handle is provided, fitted with a ratchet wheel at the lower end, which meshes with the rack of the sliding bar, while a combination ratchet is pinned to the handle a short distance above. This ratchet allows the lever to either expand the rim or by using a reverse motion to contract it.

It is stated that this device is capable of contracting rims that have become rusted to the tires, allowing easy removal of the tires, and that rims that have become bent or otherwise out of shape can be easily expanded to their correct position, so that they may be locked.

Full directions for operating accompany each tool, so that the operation may be easily understood even by the novice.

Manufactured by the Trexler Co., 1418 Walnut Street, Philadelphia, Pa. Price, $6 net, or, West of the Rockies, $7.

The Whitney Safety Automobile Repair Jack is designed for service stations and repair shops handling automobiles, trucks and tractors. It is perfectly proportioned throughout for this class of work, every part being webbed to warrant the greatest possible strength and safety. The base is made unusually large to insure a firm and rigid support for the lifted car or truck and possibility of the vehicle working off from the jack is claimed to be eliminated by this wide base. The jack occupies but little space in the shop. An extension head is provided with each jack, affording a lifting radius 7¼ inches higher than the regular lifting radius. The jack is capable of lifting an axle 11 inches, plus 7¼ inches when using the extension arm.

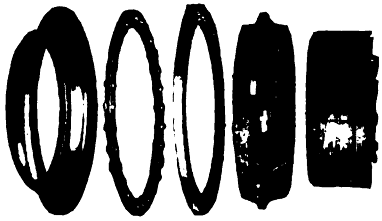


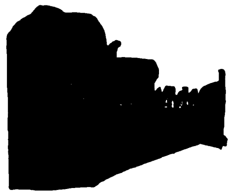
This jack is manufactured in one size only and is stated to be adapted to all classes of work regardless of weight.

Manufactured by the R. S. Whitney Manufacturing Co., 74 Nichols Street, Lewiston, Me. Price, $35, east of the Rockies.

The Anco Triple Duty Ball Thrust Bearing for Ford Cars is designed to take up any end play that may have developed in the crankshaft, magneto and transmission and to prevent further end wear.

The Anco bearing is installed between the universal joint housing and the clutch spring support and is adjustable to take up all end play and to bring the vital parts into perfect alignment. When properly adjusted the bearing locks securely in position with a flat steel key and strong screw. After that all end thrust is taken on the Anco heavy anti-friction balls and no further end play can take place.



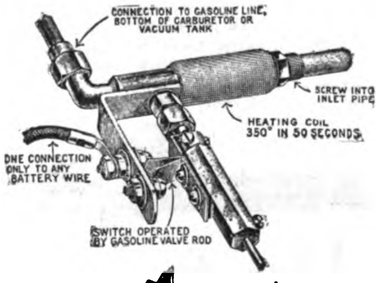


It is claimed that many garages have adopted this bearing as standard for use in all Ford overhauling jobs.

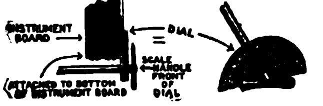
Manufactured by the Anderson Co., South Bend, Ind. Price, $12. Free instructions for installing are included with each bearing.

The Thermo Electric Gas Primer is a device that screws into the inlet manifold and delivers heated gasoline vapor and boiling hot liquid gasoline to all cylinders to facilitate starting action even on the coldest day.

It is formed of a brass chamber, around which is wound a heating unit connected through a switch to the battery wire. When the electric connection is made the chamber becomes heated to a temperature of 300 to 500 degrees in about a minute. When the starter pedal is depressed a needle valve is opened and the vacuum in manifold sucks gasoline into the chamber independent of the carburetor action. This charge being highly heated, it gives off a highly explosive gas. The action is automatic when the switch is turned on and the needle valve rod is turned, and it does not require any hand pumping or filling. The tubing and wire for making the connections are furnished with the primer.



CONNECTION TO GASOLINE LINE, BOTTOM OF CARBURETOR OR VACUUM TANK
SCREW INTO INLET PIPE
HEATING COIL 350° IN 50 SECONDS
ONE CONNECTION ONLY TO ANY BATTERY WIRE
SWITCH OPERATED BY GASOLINE VALVE ROD

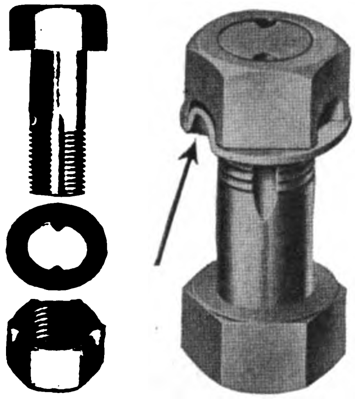


INSTRUMENT BOARD
DIAL
SCALE HANDLE FRONT OF DIAL
ATTACHED TO BOTTOM OF INSTRUMENT BOARD

Made by New York Coke Co., 338-340 Pearl St., New York, N. Y. Retail price, $5.

The Stevenson Safety Nut and Bolt consists of a combination bolt, washer and nut. The bolt is constructed with two longitudinal tapered grooves, the washer with two inner extending lugs to fit the grooves on the bolt, while the nut is equipped with chucks on its lower and outer surfaces. This construction permits the easy application of the washer to the bolt before applying the nut, as the inner extending lugs do not begin to bind in the base of the grooves until the washer has passed on to the bolt for two-thirds of the length of the tapered portion of the grooves.

The bolt washer and nut are assembled and the nut washer carried home to contact. The washer binds in the base of the grooves equally on both sides anchoring it against any lateral or horizontal movement without, it is stated, engaging the threads.

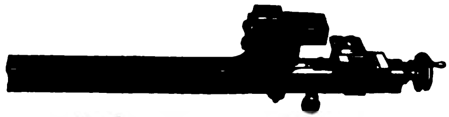


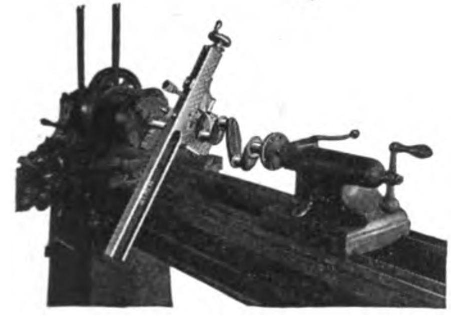
After the nut has been turned down sufficiently, the outer rim of the washer is upset into any one of the chucks of the nut, thus locking the washer and nut. To unlock nut, back down the bent portion of the washer, freeing the nut.

It is especially designed for use in service stations for replacement purposes where it is desired to use a shorter bolt, with the same assurance that it will hold as when a castellated nut and cotter pin is used.

Manufactured by the Safety Nut & Bolt Co., 1836 Euclid avenue, Cleveland, O. Prices on request.

The Weber Crank Pin Returning Tool is the invention of a California master mechanic for expediting work on engine crank shafts. It will be noted in the illustration of this device that it is a crank pin returning tool and works on any ordinary lathe. One view shows the tool in operation on a four-throw tractor crankshaft. The crankshaft is held between centers on a lathe, while all four pins are turned true and finished in one setting of the tool, the manufacturer states, in from 30 minutes to an hour. The shaft is rotated very slowly, the tool riding around with the pin, the handle resting against the side of the lathe.

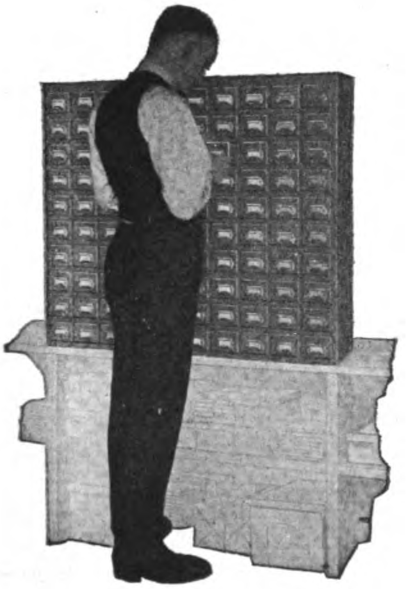




At the top of the tool is located a hand wheel which feeds the cutters into the pin. This wheel is fitted with a dial below which is graduated into thousandths. The dial can be locked by means of set screws, in any position, thus making it easy to turn all pins to exactly the same size. The pin is held firmly in place, independent of the cutter, by three supports, one being a bronze shoe that can be adjusted while the tool is cutting. The tool starts cutting on the surface worn the least and gives an absolutely round pin the least amount of metal. Filing of pins, it is claimed, at the same time removing off-setting or the use of jigs to complete the job are not required as the tool finishes the pin accurately for use. The manufacturer guarantees that the tool will work within as close limits of accuracy as can be done by any other known method.

Manufactured by the Sawyer-Weber Tool Manufacturing Co., Los Angeles, Cal. Prices and literature on request.

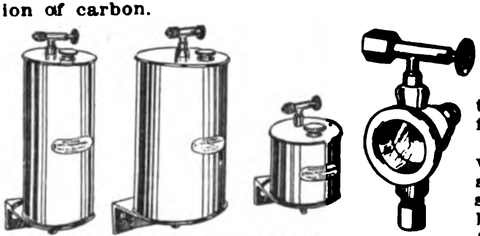
The HB Universal Screw Cabinet is designed especially for service station stock rooms and has proved a great convenience in keeping track of the screw stock. The cabinet is constructed with well made, strong drawers to hold the dozens of small accessories, screws, nuts, bolts, brads, nails and many other small articles that so often become scattered about and wasted. It is stated that such a cabinet will save its cost many times over in year by providing a place where every small part can be stored and yet where they can be found instantly when wanted



The finish of the cabinet is light golden oak, fitted with polished brass drawer pulls and card holders. The drawers are eight by three by 2½ inches, inside measurement. These cabinets can be purchased in either 100 or 50 drawer sizes.

Manufactured by the Hobart Brothers Co., Troy, N. Y. Illustrated literature and prices on request.

The Whitney Gas Humidifier is designed to supply the combustible mixture with water vapor, producing pronounced flexibility, which means increased mileage accompanied, it is claimed, by the elimination of carbon.



The Whitney Gas Humidifier consists of an upright cylindrical tank acting as a reservoir for water, connected by means of copper tubing to a nipple in the intake manifold, allowing the water vapor to be drawn into the engine cylinders by the vacuum caused by the motion of the pistons in the cylinders. Within the humidifier is a patented automatic shut off valve, located at the lowest possible water level, which checks the rush of air into the engine when the humidifier becomes empty, preventing it from acting as an auxiliary air valve if neglected.

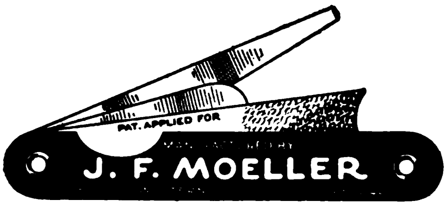
A sight feed gauge is provided with the device, which is connected between the humidifier and the engine intake manifold and acts as a constant tell-tale as to the amount of water being taken into the engine cylinders. An adjustable valve is provided on the gauge, which allows the operator to increase or decrease the amount of water taken in.

The Whitney humidifier is made in three models, each including a gauge.

Manufactured by the R. S. Whitney Manufacturing Co., 74 Nichols Street, Lewiston, Me. Price, east of the Rockies. No. 1, $14; No. 2, $16; No. 3, $11.

The Momaco Spark Plug Tester is designed as a pocket tool, combining four tools in one for the benefit of the service station and garage repairer and all motorists. It consists of four blades folding neatly into a handle similar to a pocket knife, each blade having a special use.

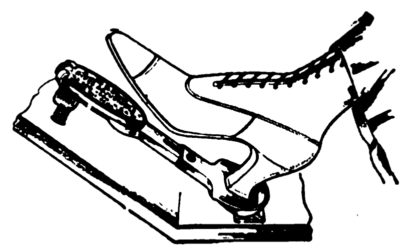
Opening the two long blades, resting one on spark plug terminal wire and the other against the engine cylinder will short-circuit the plug and show if trouble is present in the cylinder. A third blade is fitted with a file for cleaning points, while the thickness of either of the long blades will give the correct gap between spark plug points. The short, thin blade is a gauge which gives the correct clearance between the valve and tappet.



Manufactured by J. F. Moeller, 10822 South Western Avenue, Chicago, Ill. Price, 25 cents postpaid.

Rives Extension Accelerator Pad and Heel Rest No. 6 provides a flexible foot rest for the car operator when using the accelerator in driving the car. The foot rest is fastened to the floor boards by a hinged joint, the forward end resting lightly on the top of the accelerator button. The front of the rest is cushioned with a rubber pad, which makes the operation of the accelerator very smooth.

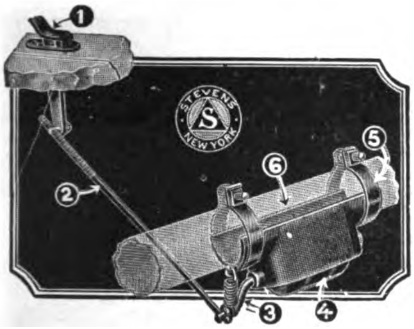
For lady drivers such a device is particularly valuable as much of the fatigue and strain is eliminated from the arch of the foot when using the Rives extension foot rest.



An extension adjustment is provided which allows the pedal to be extended or shortened when fitting the pedal into position. The Rives extension pedal and heel rest is made from steel with a japanned finish.

Manufactured by the George H. Rives Manufacturing Co., Inc., 2187 Woolworth Building, New York, N. Y. Price, complete, $1.50.

The Snap Exhaust Relief Valve for Ford Cars and Trucks is designed to give instant control of the exhaust gases, doing away with the sharp staccato sound so common to devices of this nature. The relief valve is fitted to the exhaust pipe by cutting a V shaped slot on the under side which, it is stated, does not weaken the exhaust pipe in the least. The Snap Exhaust Valve consists of a casting which is fastened to the exhaust pipe by two steel bands, which are drawn tight by a bolt in each band and supports the exhaust pipe at the point where the V shaped slot is cut in the pipe. A damper is fitted at the opening of the valve, which is controlled from a foot operated pedal on the floor board of the car. To operate the pedal is pressed at the right to open the damper and at the left to close it. The damper is controlled by a short coiled spring, which facilitates opening and closing.

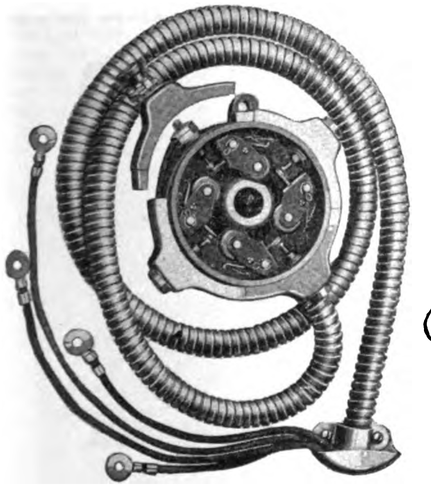


It is claimed that as the damper runs lengthwise of the exhaust opening the large opening is not obstructed, so that the Snap gives Ford engines the quickest and most complete relief without a shrill report.

Sold by Stevens & Co., 375 Broadway, New York City. Price, complete, $1.70.

The Duntley Wire and Terminal Guard is designed to protect the primary wires of the Ford engine as they pass from the coil box to the commutator, and to keep them from getting oil soaked. The guard consists of an armored flexible conduit, in which the wires are run, and can be either fastened to the frame of the car or allowed to hang loose as desired.

In connection with the Duntley magneto break timer the wire guard makes a complete outfit for the Ford car and it is stated the use of the two devices affords protection to the most vital parts of the ignition system.



The Duntley wire and terminal guard is claimed to readily fit the regular standard pattern Ford or Fordson timer. It is made throughout of the best of material and is readily attached by anyone familiar with the ignition system of the Ford or Fordson engine.

Manufactured by J. W. Duntley, 1008 Michigan Avenue, Chicago, Ill. Prices and literature on application.

The Auto Spark Lite is, as its name implies, a small gasoline filled torch cigar lighter which is ignited by a spark from the ignition system of the engine. The igniter is fastened to the dash board of the cowl, while the torch is held rigidly in brackets at each side of the igniter. To use the torch is removed from the brackets and placed in the opening of the igniter, the wick, saturated with gasoline, being ignited by a spark jumping across a gap or small air space in the interior of the igniter.

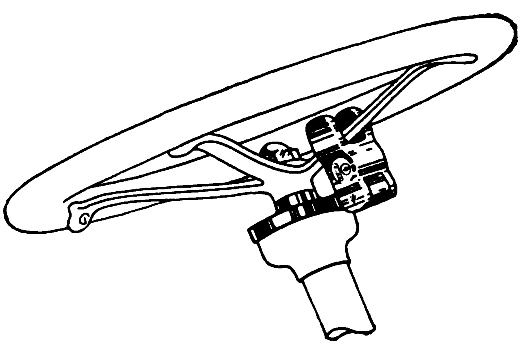
In wiring for the igniter one of the terminals leading to a spark plug is lengthened and fastened to a terminal post of the igniter, while a second wire is run from the other post to the spark plug. When the engine is operating the torch is easily ignited by the spark jumping across the air gap.

PAT'D AUTO LITE PAT'D
QUEENS... LONG IS... CO. INC. N.Y. U.S.A.

The Auto Spark Lite is easily attached in a few minutes time, adding to the appearance of the dash, it is claimed. It is stated that the device is exceptionally well made, sure in operation and cannot get out of order.

Manufactured exclusively for the J. C. Adams Sales Co., 51 East 42nd Street, Vanderbilt Avenue Building, New York City. Price, $5 complete.

The Wayne Auto Lock for Ford Cars consists of a special cover and fastening nut, fitted with a special fork which is locked by a Yale lock and key. The cover takes the place of the regular Ford internal gear case cover which encloses the planetary gears of the steering mechanism, and is held in place by two screws, fastened to the edge of the internal gear case.



It is stated that the Wayne Auto Lock meets the requirements of the Underwriters' Laboratories, when installed according to the directions which accompany each lock.

A larger size Auto Lock is also manufactured, known as the Standard model, which is adapted to cars of other makes than the Ford. This lock also meets the requirements of the Underwriters' Laboratories when fitted according to instructions.

Manufactured by the Fort Wayne Auto Specialty Co., Fort Wayne, Ind. Prices and literature on application.

"Syde-Gripper" Mud and Snow Hooks are designed to be used either with or without the regular tire chains. They occupy but little space in the tool kit and when wanted can be applied in a few moments time by anyone who can turn a thumb screw.

The device consists of two cross chains fastened at ends to two specially formed plates that fit snugly the walls of the tire, the plates being fastened to the rim by two bolts passing through a cross plate and fastened to the plate by means of thumb screws.

The manufacturer states that Syde-Gripper mud and snow hooks will prevent spinning of the drive wheels in deep mud, snow or sand and that the fact that a drive wheel naturally sinks into mud, snow or sand as the driver tries to get the car out, is a help instead of a hindrance to the action of the Syde-Gripper, as the projection at the center of the side plates has a tendency to get a firmer hold on the walls of the rut and assists to get the car out of the mud, snow or sand under its own power.

The Syde-Gripper mud and snow hook is made throughout of the best of material by workmen of long experience in the manufacture of tire chains.

Manufactured by the Bersted Manufacturing Co., 765-771 Mather Street, Chicago, Ill. Sold by all dealers, or may be purchased direct from factory. Price, $4.50 per pair, complete.

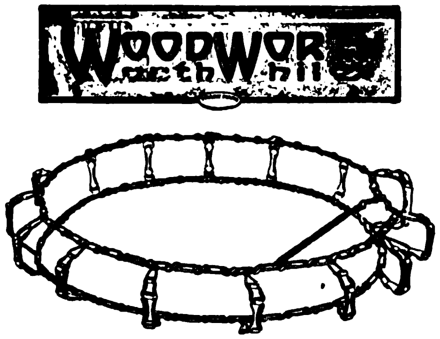
The Kent Starter Steel Ring Gears are designed as a replacement proposition for cars equipped with fly wheels having cast iron teeth. Engines on which the starter ring gear teeth have become broken can now be replaced with a new steel ring tooth gear by sending the balance wheel and starter ring gear to the factory. The new steel tooth gear can be fitted at slight cost to the owner.

Many cars are equipped with cast iron gears cast as part of the balance wheel, and often these gears have teeth that have been broken by the operators carrying the spark too far advanced when starting the engine with the electric starter. The steel bands, or ring gears, make it possible to replace these cast iron gears and give one that is much stronger than the original.

Manufactured by the Kent Auto Parts Co., 1743 Logan Street, Denver, Col. Prices and literature on request.

Woodworth Kant-Skid Tire Chains are of the side chain type but have the cross members designed especially for the purpose. They are made of steel stampings in such a manner as to present a smooth rounded surface to the tire and the sharp edges to the road thus causing, it is claimed, practically no wear on the rubber and taking the best possible hold on the road surface.

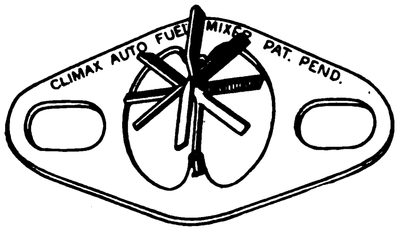
These cross members are so designed that they are small in the middle to avoid bumping on pavements but they take a stronger hold in mud or snow than chains of ordinary construction. On account of the Woodworth Kant-Skid chains causing practically no wear on the tire, it is stated, as well as on account of their great durability, it is claimed for them that they are much more economical to use, besides being dependable to take an excellent grip on any sort of road surface.



The same type of chains are made for solid tires, being called "Woodworth Truck Chains." These have the cross members made of half-oval steel so that they wear unusually long, cause no bumping, it is stated, and do not injure the tire.

Manufactured by the Woodworth Manufacturing Corporation, Niagara Falls, N.Y. Prices on request.

The Climax Automatic Fuel Mixer consists of a thin metal plate which is inserted between the flanges of the carburetor and the intake manifold, having cardboard gaskets placed above and below the metal disc to insure a tight joint when the flange bolts are tightened. The center of the metal disc is cut open the same size as the bore of the intake manifold and carburetor mixture flue, allowing the inrushing gas to the engine to pass. Above the opening and suspended from the sides is fitted the fuel mixer, which consists of metal arms fastened at the center to a cross member rigidly attached to the sides of the opening in the disc. The vanes of the fuel mixer are set at a slight angle to each other, causing, it is stated, the coarser portion of the mixture, or that which has not previously been vaporized, to be broken up into a minute spray as the gaseous mixture rushes by the vanes.



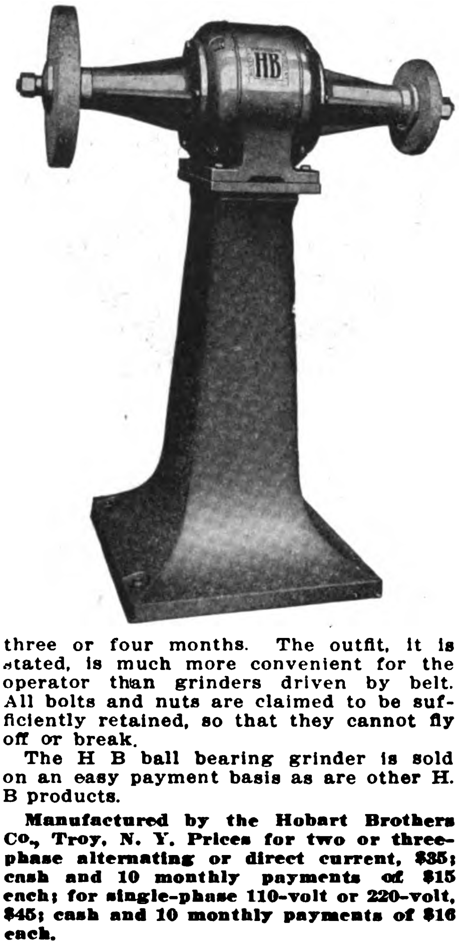
It is claimed by the manufacturer that higher mileage is obtained when the device is used, and that the engine develops more power and the tendency is also to keep the cylinders free from carbon. It is easily attached in a few minutes time by anyone familiar with the use of tools.

Satisfaction to users is guaranteed or money will be refunded. Distributor and jobbing trade solicited.

Manufactured by John B. Chnce, South Attleboro, Mass. Price, one inch and 1⅛ inch, $1; 1¼ inch, $1.50.

The H B Ball Bearing Motor Grinder is one of the newest time and labor saving machines manufactured especially for the grinding of castings, sharpening of tools, tire buffing and the thousand and one uses around the service station machine shop. The grinder is equipped with a two-horse-power quiet-proof ball-bearing electric motor and has ample power for all purposes around the shop.

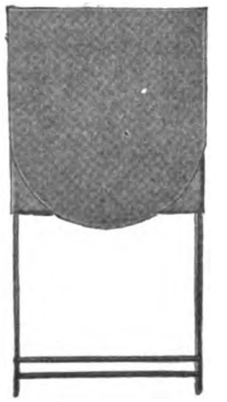
A buffing or wire brush wheel can be substituted for one of the grinder wheels. The machine is strongly constructed throughout to stand up under the heaviest kind of continuous work. The sturdy base and ball bearings insure freedom from vibration, and it requires only a minimum of power to operate. Bearings require lubrication only once in every three or four months. The outfit, it is stated, is much more convenient for the operator than grinders driven by belt. All bolts and nuts are claimed to be sufficiently retained, so that they cannot fly off or break.



The H B ball bearing grinder is sold on an easy payment basis as are other H. B products.

Manufactured by the Hobart Brothers Co., Troy, N. Y. Prices for two or three-phase alternating or direct current, $35; cash and 10 monthly payments of $15 each; for single-phase 110-volt or 220-volt, $45; cash and 10 monthly payments of $16 each.

The Handy-Pandy Folding Chair and Folding Table makes an ideal combination to have in the car when touring or on a vacation trip. The Handy-Pandy folding chair can be folded down out of the way when not in use, and when wanted for the carrying of two extra passengers is easily opened and placed in the tonneau of the car, allowing ample room between the passengers of the tonneau without crowding.

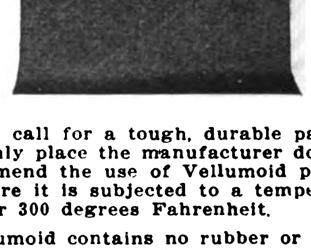


The chair is made entirely of metal, the back and seats of 20 gauge, the legs of ⅛ inch band iron and the braces of ⅜ inch rods. When set up the seat is 17 inches from the floor. When folded the chair occupies a space of 10½ inches by 21 inches by one inch, a convenient size for storing under the seat.

The folding table, not shown, is made of the same material, but has the top marked for a checker board, and can also be used for many other purposes when camping.

Manufactured by the Pandolfo Manufacturing Co., St. Cloud, Minn. Weight of chair, six pounds. Prices and literature on request.

Vellumoid Sheet Packing and Gaskets have as a base a very strong vegetable fiber, which is chemically treated, making it the manufacturer states, oil, water, gasoline, grease and air proof and exceedingly tough. Owing to these properties Vellumoid makes an exceptional gasket for use on all oil, grease, water and gasoline connections, and all places where the conditions call for a tough, durable packing. The only place the manufacturer does not recommend the use of Vellumoid packing is where it is subjected to a temperature of over 300 degrees Fahrenheit.



Vellumoid contains no rubber or rubber substitutes and no mineral matter. It is light in weight, very flexible and has high tensile strength. Because of its compressibility it makes a particularly tight joint and its toughness insures durability.

Manufactured by the Fiber Finishing Co., 67 Milk Street, Boston, Mass. Prices and literature on application.

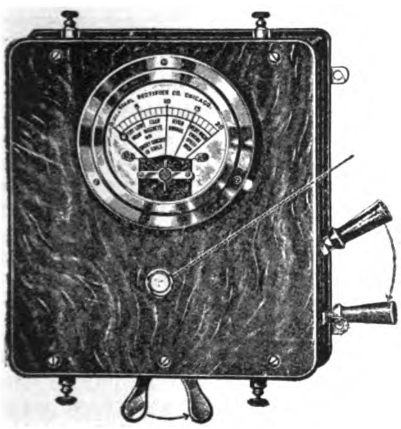
Aluminum Alloy Pistons, known by the trade name of Aluminite, are manufactured for replacement purposes and for fitting to new cars by the manufacturer. They are light, weighing about one-third as much as a cast iron piston of the same size, and offer many advantages not given by cast iron pistons.

It is stated, that the use of Aluminite pistons makes the engine develop more power, because less power is required to overcome the inertia of the engine and, being light, the thrust on the wrist pin, connecting rod and crankshaft bearings is greatly lessened, this meaning less bearing wear and longer life to the engine. By being equipped with such pistons it is claimed that higher speeds are attained without undue engine strain or vibration.

Aluminite pistons are easily fitted by the experienced mechanic to engines of modern make, the cost is not excessive and it is claimed, the advantages gained more than offset the additional cost.

Manufactured by the Green Engineering Co., Dayton, O. Prices and literature on request.

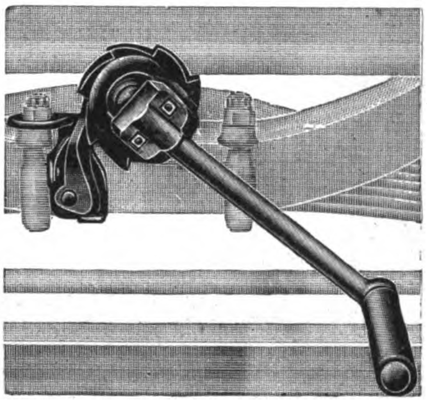
The MagFixer consists of a unique device for testing and locating troubles in the Ford magneto. It is especially applicable for service stations catering to Ford trade and is claimed to locate and remedy in a few minutes time troubles that would take hours to locate by any other method. The MagFixer consists of a neat wooden box to which is attached a meter, scaled into five sections, each scale indicating a certain condition of the magneto. A handle is located at the right and a second handle at the bottom. Two battery posts are placed at the bottom while the two posts at the top allow connection to be made to ground and the magneto when testing the magneto. A meter button is located conveniently below the meter on the front of the box.



In use, a battery is connected to the battery posts, the ground wire is connected to the frame of the car and the magneto post to the magneto plug on the engine. Pressing the button will show immediately, it is stated, whether or not the trouble is in the magneto, indicating the fact on the meter. This indication tells whether the defect is in the magneto or whether there are any short circuits in the coils. Further manipulation of the levers will, it is stated, remove the defect and, if the magneto is weak, recharge it to its full capacity.

Manufactured by the Stahl Rectifier Co., 7401-5 West Jackson Boulevard, Chicago, Ill. Price, $60. Further details and literature can be obtained from the manufacturer.

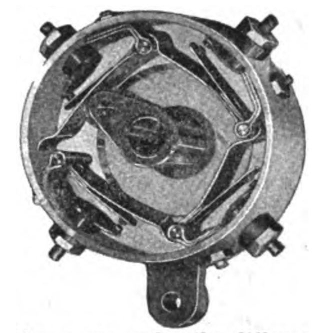
The Ford Non-Kick Cranking Device is an attachment that is fastened by one bolt to the top of the spring clamp, fitting around the starting shaft and consists of a pawl and ratchet device, which prevents the Ford engine from kicking back when cranking, if by chance the spark has been left in an advanced position, lessening, it is stated, the chance of a broken arm. The driving mechanism is clamped to the starting crank at the bend in the handle and the operation of the ratchet and pawl, it is claimed, does not interfere with the regular cranking of the engine. In case of a kick-back of the engine the starting clutch is automatically disengaged, allowing the handle to turn free from the engine.



The device, it is claimed, can be installed in five minutes time by any one handy with a wrench.

Manufactured by the Weldon Auto Specialty Co., 1104 Walnut Street, Kansas City, Mo. For prices and detailed information address Department C.

The K-L Timer for Ford Cars has been brought out for replacement purposes and is stated to be a decided improvement over the older style of Ford timer. The shell is made of metal while the wire terminal posts are insulated from it by large fiber washers. The working parts of the timer are radically different from other types in use, flat springs being employed to make and break the flow of current at the contact points. The springs are hinged at one end while the other is allowed to be free and, when not in use, rests upon the hinge of the spring next ahead. As the cam comes in contact with the spring the spring is raised, making contact at the points through a second and shorter spring riveted to the first.



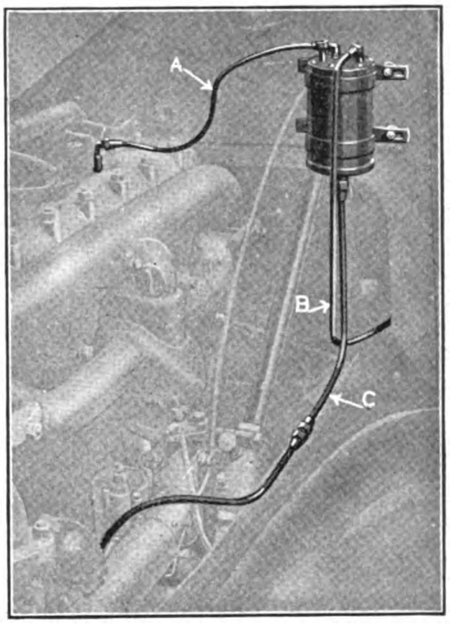
It is stated that wear is reduced to a minimum in the K-L timer and the manufacturer is willing to guarantee it for 20,000 miles. If the purchaser is not satisfied at the end of 15 days he may return the primer and receive his money back.

The contact points are of very large size and made of a special alloy, which is stated to be the equal of platinum in conductivity. The cam consists of a brass frame with fiber roller which has a ¼ inch bearing pressing the cushion spring support, making a soft positive contact. It is stated that after a test of 20,000 miles the timer did not show the slightest wear in any part and that the contact points in the coils and timer were not pitted.

Manufactured by the M-R Co., 122 North 14th Street, Lincoln, Neb. Price, $7. Distributors', salesmen's and dealers' propositions on application.

The New Sparton Fuel Feeder for Automobile Engines is a radical departure from the regular vacuum tank principle of fuel feed in common use. Instead of the vacuum created by the engine pistons being used to suck or draw gasoline from the main tank into the auxiliary tank, a spring-actuated pump is installed in the small tank which is located on the inner side of the dash, the pump being operated by the compression of the engine cylinders, through pipe A.

A shut-off valve is located in the compression line, which automatically closes the compression pipe from the engine, when the gasoline in the tank reaches a certain predetermined height, this being controlled by a float in the tank. As the gasoline feeds down through pipe C to the carburetor, the float drops in the tank, allowing the compresion pipe valve to open and the compression again operates the spring-actuated pump, pumping gasoline into the auxiliary tank from the main tank, through pipe B.



It is stated that this fuel feeder will give much better results than are obtained by any other methods, especially when the engine is laboring in mud, sand, or on a grade, and that the gasoline feed will also be more positive.

The device has been tested under very severe conditions by the engineers of the company in many ways and it is claimed has been found to be without a fault. It is simple in construction, easily installed, and is said to give a positive and unfailing feed under any and all conditions of road travel.

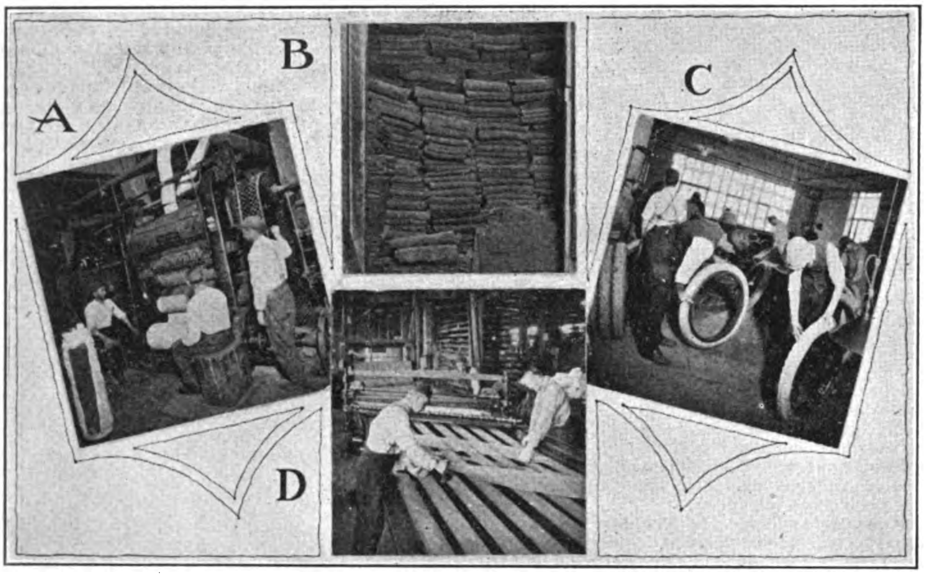
Manufactured by the Sparks-Withington Co., Jackson, Mich. Prices and literature on request.

Importance of Rubber in Automobile Industry

THE manufacture of rubber products which in 1919 became a $1,000,000,000 industry in the United States alone, is consuming crude rubber now at the rate of 350,000 tons annually. To meet this tremendous cumulative demand there has naturally been a great increase in the production of plantation rubber, as the supply of the wild product became entirely inadequate to meet the demand a number of years ago. The accompanying figures, compiled by the Firestone Tire & Rubber Co., Akron, O., show this increase during a period of 10 years:

INCREASE IN CRUDE RUBBER PRODUCTION.

Year	Plantation	Other Sources	Total Tons
1909......	3,600	62,000	69,600
1910......	8,200	62,300	70 500
1911......	14,419	60,730	75,149
1912......	28,518	70,410	98,928
1913......	47,618	60,822	108 440
1914......	71,380	49,000	120,380
1915......	107,867	50,835	158,702
1916......	152,650	48,948	201,598
1917......	213,070	52,628	265,698
1918......	255,950	40,629	296,579



Treatment of Crude Rubber at Morgan & Wright Factory of United States Tire Co., Detroit, Mich.: A, Calendar Machine; B, Rubber "Crepe" as It Comes from the Plantation; C, Final Inspection of Finished Product; D, Fabric Cutting Machine.

The importance of rubber as a factor in the automobile industry today is demonstrated by the fact that over 75 per cent. of the crude rubber produced goes into tire equipment for motor vehicles. The tire business of the country in 1914 amounted to $300,000,000, and in 1920 it is estimated that it will reach the astounding mark of $1,200,000,000.

Production of Tires Trebled in Five Years.

Although the production of tires in the United States has practically trebled in the last five years, the opportunity for much greater development is clear. There are 7,600,000 passenger cars and motor trucks in operation now, and official estimates of the industry place the production of the former, during the forthcoming 12 months, at between 300,000 and 350,000, and of the latter at 375,000 to 450,000, depending somewhat on the status of foreign credits.

The problem of the motor car manufacturer, up to the present time, has been largely one of production alone. The public is buying automobiles as fast as it can get them. There has been no forcing of sales and no stimulation of the appetite for cars has been necessary. The most conservative feel that this will be true up to the point of a production of 12,000,000 cars, allowing that six years is the average life of an automobile. Twelve million cars in use would mean 72,000,000 tires annually at the rate they are being used now, the present figures showing that an average of six tires a year is required by the car owner.

Magnitude of Tire Exports.

The magnitude of the tire industry, as allied with the automobile business, is also graphically shown in a statement of the foreign trade of the United States in automobiles and tires for 1919, prepared by the Division of Statistics of the United States Bureau of Foreign and Domestic Commerce.

The total exportation to all listed foreign countries was 67,145 passenger cars, valued at $73,700,527, and 15,586 commercial cars, valued at $35,425,437. Automobile parts were exported to the value of $42,562,186, while the value of tires exported was $23,924,659.

Sources of Crude Rubber.

A consideration of the sources of the supply of crude rubber therefore becomes of prime importance in this connection. Until recent years all the crude rubber came from the wild forests of rubber trees in Brazil, South Africa, the Philippines and other countries, but the demand for this material grew so fast that nature's supplies could not fill all wants, and the big rubber users of the United States and Europe decided they would have to grow their own supplies. Today practically every big manufacturer of rubber goods in this country maintains its own rubber plantation in Sumatra, Ceylon, India or other tropical country, and the bringing into bearing of the millions of planted rubber trees, raised under the most scientific conditions, will insure an adequate supply of rubber for all needs for all time to come.

U. S. Rubber Plantation in Sumatra.

An example of the size of the various plantations maintained by American companies can be obtained from the reports of the United States Rubber Co. The rubber plantations in Sumatra, Dutch East Indies, owned by this concern cover an area over six times as large as the island of Manhattan. The company owns a total of 93,759 acres, of which about half have been cleared and planted with over 5,000,000 rubber trees. Of these, 2,592,898 trees have reached the tapping stage and are now producing rubber, and new trees are reaching that stage constantly. In 1917 the United States Rubber Co. produced on its own plantations about 7,000,000 pounds of rubber, and this total will be doubled each year until the entire acreage is in bearing.

Goodyear Also Operates Plantations.

The Goodyear Tire & Rubber Co. likewise has a rubber plantation in Sumatra containing over 20,000 acres, and this area is being rapidly cleared and planted to rubber. And yet to show the tremendous demand for crude rubber on the part of tire manufacturers, the president of the Goodyear company in a report to the stockholders stated that even when all of the 20,000 acres which the company is planting to rubber trees have come into full production they will furnish less than one-fifth of the crude rubber requirements of this one company.

Firestone Activities in Singapore.

By the erection of a $1,000,000 plant in Singapore, Straits Settlements, which is now one of the principal centers of the crude rubber market of the world, the Firestone Tire & Rubber Co. expects to cut the cost of handling this product hundreds of thousands of dollars annually. This plant, now in the course of construction, will introduce into the Far East some of America's most modern machinery. The equipment will replace the labor of numerous coolies and much work on the part of the East's other famous burden bearer, the caribou. There will remain, however, the need of the productive efforts of 100,000 persons in meeting the company's requirements.

In addition to Americanizing the East's methods of handling crude rubber, the plant will cut costs perceptibly by cleaning the rubber at Singapore—a process of manufacture now carried on at Akron—and by compressing it for shipment. In this way freight charges will be decreased, since they are based in large part on the space occupied aboard ship.

The cleaning process, carried on by coolie-operated machines, will also effect a saving in that it will permit the rubber to go to the skilled hand of the mill operator immediately upon its arrival in Akron. The plant will effect a further saving by making it possible for the company to sidestep numerous middlemen, since it will place the company's organization in direct contact with the producers.

A city whose streets are heated by a tropical sun, and within whose walls there are 350,000 orientals and only a few white persons, might be supposed not to appeal very forcibly to the best type of American factory executives as a place of residence, yet the Firestone company has had no difficulty in obtaining capable men willing to undertake the direction of affairs at its plant which is being erected at Singapore, where these conditions exist.

S. G. Carkhuff, secretary of the company, who returned to the United States recently after six months spent in the Far East, has discovered what he thinks might be Singapore's peculiar attractiveness. It is a city, he says, without a servant problem. "A white man," said Mr. Carkhuff, "wants at least four servants if he is to abide by the decrees of the caste system which prevails in Singapore. He finds no difficulty, however, in obtaining them. In the aggregate he will spend no more than 40 American dollars each month for his cook, his water carrier, his butler and his gardener."

The plant at Singapore will be operated by a subsidiary company, the Firestone Tire & Rubber Co. (S. S.), Ltd., which was organized for the purpose.

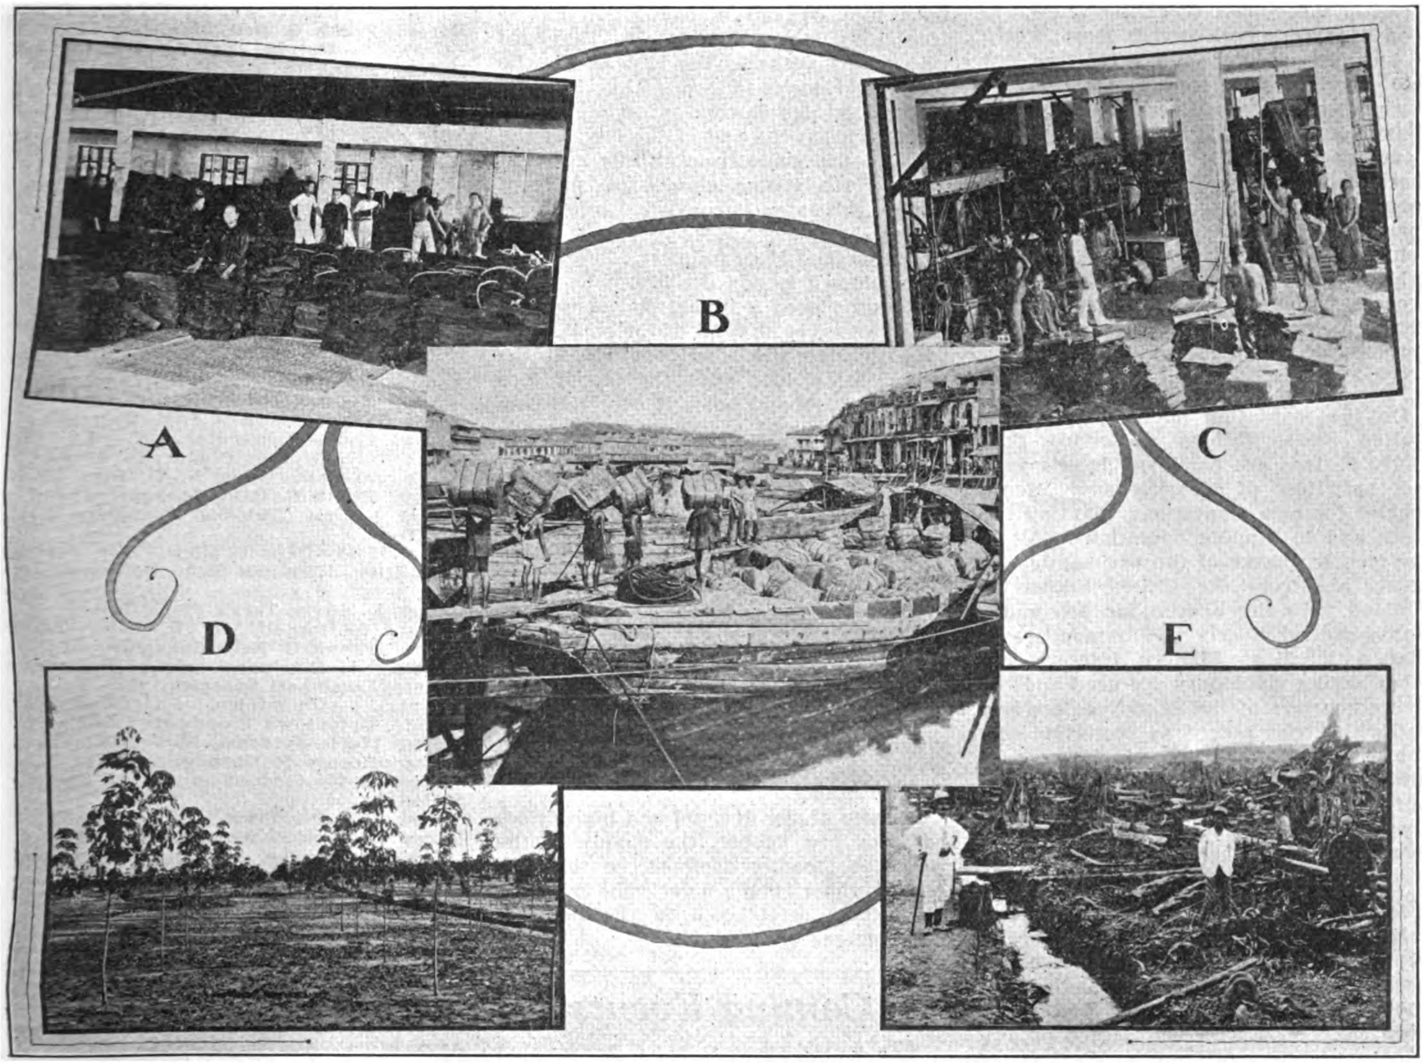
Although the commercial growing of rubber dates back for only a decade, the plantations now occupy about 2,000,000 acres, of which 1,000,000 are in the Malayan peninsula, 500,000 in the Dutch East Indies and the remainder distributed through Ceylon, India, Burma, Cochin China and Borneo, and a comparatively small acreage in the Philippines. The amount of capital invested in the rubber plantations of the Orient is estimated at approximately $300,000,000, chiefly British. Holland and the United States come next in the amount of money invested. In 1918 the total production of rubber from plantations was about 240,000 tons, as against about 50,000 tons of wild rubber from Brazil and other sources.

Methods of Production.

The methods of production used on the plantations are entirely different from those pursued in the wild forests of Brazil. On the plantations everything is done in the most scientific manner and trained experts are at the head of the various branches. The rubber trees are all grown in nurseries maintained on the plantations, and the seed used for this work is carefully selected from the most prolific producers. As the plantations are all located in the tropics, where intense heat and copious rain falls are encountered, the growth of the young trees is very rapid, and after the young seedlings are set out they attain a height of 10 feet or more the first year, and within four or five years are ready for tapping. If tapping operations are carefully done and the tree is not bled to death it will remain healthy and productive for many years, and on the plantations the tapping is done in such a manner that permanent injury to the tree is practically eliminated. On the Upper Amazon of Brazil there are trees over 100 years of age which still produce latex, as the sap of the rubber tree is designated, after being tapped for many years.

Tapping for Latex.

There are a number of ways in which the trees are tapped for their latex, but



Growing and Handling of Crude Rubber at Plantation: A, Receiving and Sorting at Firestone Plant in Singapore; B, Natives (Coolies) Carrying Rubber in Bales Weighing 200 to 250 Pounds Each to a Lighter or "Tong-Kong," a Few Blocks from Firestone Warehouse in Singapore; C, Packing Rubber for Shipment at the Singapore Firestone Plant; D, Rubber Trees, 15 Months Old, on Plantation of United States Rubber Co., Soengi Sikassim Estate, Sumatra; E, View Showing Character of Land Cleared for Rubber Plantation—Jungle Felled and Partly Cleared—Tonah Radja Estate of the United States Rubber Co. at Sumatra.

the prevailing practise on the larger plantations is to make a series of cuts the shape of a V on four sides of the tree, from the bottom up to as high as a man can reach, and a cup is then placed at the point of the V. A tapper is given a certain district in which to operate and he taps a certain number of trees each day, returning later to empty the cups. The latex gathered from these cups is taken to the treating plants, where the tree juices are mixed with lime juice and the mixture allowed to stand. Latex, as it comes from the tree, contains considerable water and the acid is added to separate the rubber from the water. It soon becomes a soft, spongy mass, which is kneaded, washed and dried and cut into small pieces and run through a washing machine with grooved rollers. This changes the "biscuits" into long, clean, crinkly crepe ribbons, which are thoroughly dried by hanging in a drying room. This is the way cultivated rubber comes into the markets today. Before being used for the manufacture of tires, rubber goods, etc., there are a number of processes, some of which are secret, designed for preparing the material for the purpose for which it is intended.

Many Natives Employed.

On the plantation maintained by the United States Rubber Co. more than 14,000 natives are employed in the various activities of clearing away dense jungles for new plantations, planting the trees and in tapping operations. All of the men in charge of the various departments are from the United States or Holland. As the plantations are under Dutch control, nearly all foremen are of that nationality. Modern tractors and labor saving machinery are used and the living quarters of the employees are laid out with strict regard to sanitation and conservation of health. A large hospital, with expert doctors and trained nurses is maintained, and everything possible done to keep the health of the men up to the highest standard.

Rubber Forests of Brazil.

In the vast reaches of the rubber forests of Brazil, nature has established a supply of wild rubber that would be almost inexhaustible if rightly handled, but rubber production in Brazil has never been carried on with any degree of uniformity and the most wanton methods of destruction have been practised in the attempt to secure wild rubber. It is a case of killing the goose to get the golden egg, for in many instances great trees have been chopped down in order that the native gatherers might obtain the small amount of latex which would thus exude from the trunk.

The rubber forests of Brazil are virtually dense jungles, with no means of transportation save water. The rain fall is excessive and streams abound everywhere, which are used as highways for the rubber hunters. Along the principal streams the exporting rubber agents maintain headquarters, and here the native gatherers bring their boat loads of rubber "biscuits" for grading and payment. The system of barter in vogue there is more or less a partnership arrangement. The rubber dealer advances the tapper such food and supplies as he requires, payment for which is made in crude rubber. After deducting the advances so made the remainder is divided between the tapper and dealer on a percentage basis.

How the Wild Rubber Gatherer Operates.

The wild rubber tapper usually lives alone in his particular district which is protected from outside tappers by the rubber company operating in that vicinity. At daylight the tapper sets out on his rounds, carrying a supply of tiny cups, made of tin or similar substance. He taps the trees and inserts these cups until they are all in use, when he retraces his steps and empties the cups which have gathered the juices from the trees previously tapped. This juice is emptied into an earthen jar, made by the tapper, and at the end of the day, by the aid of a fire made from an oily nut that sends forth strong clouds of pungent smoke, this latex is converted into crude rubber.

The method is as follows: The tapper seats himself beside the fire, over which has been placed a funnel-shaped earthen jar so arranged that all of the smoke will pass through the small opening at the top. With a long stick the tapper dips into the latex and holds it over the pungent smoke until a thin layer of crude rubber is formed. This is repeated until a large ball of solid rubber has been produced, after which it is cut loose from the stick and the operation repeated. These balls or "biscuits" are kept until the next market day, when they are graded and paid for by the broker or agent. So expert have these Brazilian rubber dealers become in judging rubber that they can grade rubber by merely handling and observing it, and so accurate are they that it is seldom that the grades established by them are changed when the product finally reaches the United States.

In spite of the demand and high prices paid for raw rubber, the supply of the wild has steadily declined, so that the future rubber supply must come from the plantations established in the hot and wet portions of the earth.

Coming Events

June 18-19—Bushkill Falls, Pa., Annual Outing, Automobile Accessories Business Association of Philadelphia.

June 19—Ogdensburg, N. Y., Dirt Track Races. Fred G. Bell, Manager.

June 21—Paris, France, Organization of International Chamber of Commerce.

June 21-25—Ottawa Beach, Mich., Summer Meeting, Society Automotive Engineers.

June 21-26—Milwaukee, Wis., Wisconsin Truck Tour, Milwaukee Sentinel.

June 22-25—Asbury Park, N. J., Annual Meeting, American Society for Testing Materials.

June 24-25—Isle of Palms, S. C., Semi-Annual Meeting, South Carolina Automotive Trades Association.

June 26-July 25—Antwerp, Belgium, Commercial Vehicles, Tractor and Truck Show.

June 27-July 6—Helsingfors, Finland, Finnish Fair.

July—Lake Huron Tour.

July 4—Hanford, Cal., Dirt Track Events, Hanford Board of Trade.

July 4—Spokane, Wash., Dirt Track Events.

July 5—Batavia, N. Y., Dirt Track Events. Frank G. Bell, Manager.

July 5—Tacoma, Wash., Tacoma Speedway events.

July 9-20—London, England, International Aircraft Exhibition, Society of British Aircraft Construction, Olympia.

July 14-29—Annual Tour, Michigan Pikes Association in Ontario and Michigan.

July 17—Warren, Pa., Dirt Track Races. Frank G. Bell, Manager.

July 17-25—Prague, Czechoslovakia, 12th Annual Automobile Exposition, Czechoslovak Automobile Club of Prague, Industrial Palace, Prague Exposition Grounds.

July 17-18—Inter-Club Run, Chicago Automobile Club.

July 24—Watertown, N. Y., Dirt Track Races. Frank G. Bell, Manager.

July 31—Fulton, N. Y., Dirt Track Races. Frank G. Bell, Manager.

August—Paris, France, Grand Prix Race, Sporting Commission, Automobile Club of France.

Aug. 7—Erie, Pa., Dirt Track Races. Frank G. Bell, Manager.

Aug. 7-Sept. 15—Antwerp, Belgium, Show of Motorcycles, Side Cars, etc.

Aug. 14—Buffalo, N. Y., Dirt Track Races. Frank G. Bell, Manager.

Aug. 15-22—Danzig, Germany, Second Danzig Fair.

Aug. 20-21—Middletown, N. Y., Dirt Track Races. Horace P. Murphy, Manager.

Aug. 21—Elgin, Ill., Road Race, Chicago Automobile Club.

Aug. 21—Johnstown City, Pa., Dirt Track Races. Frank G. Bell, Manager.

Aug. 27-28—Flemington, N. J., Dirt Track Races. Horace P. Murphy, Manager.

Aug. 28—Canadaigua, N. Y., Dirt Track Races. Frank G. Bell, Manager.

Sept. 1—New York-San Francisco Glidden Tour.

Sept. 3-12—Detroit, Mich., 71st Annual Exposition, Michigan State Fair Association.

Sept. 5—Sicily, Targa Florio Race.

Sept. 6—Hornell, N. Y., Dirt Track Races. Frank G. Bell, Manager.

Sept. 6—Cincinnati, O., Speedway Events, Cincinnati Speedway Co.

Sept. 6—Uniontown, Pa., Speedway Events, Uniontown Speedway Association.

Sept. 17-18—Syracuse, N. Y., Dirt Track Races. Horace P. Murphy, Manager.

Sept. 19-25—Springfield, Mass., Eastern States Exposition.

Sept. 25—Allentown, Pa., Dirt Track Races. Horace P. Murphy, Manager.

October—London, England, Commercial Vehicle Exposition, Olympia.

Oct. 1-2—Trenton, N. J., Dirt Track Races. Horace P. Murphy, Manager.

Oct. 6-8—Northampton, Mass., Annual Automobile Show, H. F. & H. Agricultural Society, Three County Fair Grounds. A. J. Morse, secretary.

Oct. 6-7—Gulfport, Miss., Meeting Louisiana-Missisippi Automotive Trade Association.

Oct. 6-16—New York, N. Y., Electrical Show, Grand Central Palace. George F. Parker, manager.

Oct. 8-9—Danbury, Conn., Dirt Track Races. Horace P. Murphy, Manager.

Oct. 20-22—Atlantic City, N. J., Convention National Implement & Vehicle Association. E. W. McCollough, Secretary, 72 West Adams Street, Chicago, Ill.

November—London, England, Passenger Car Show, Olympia.

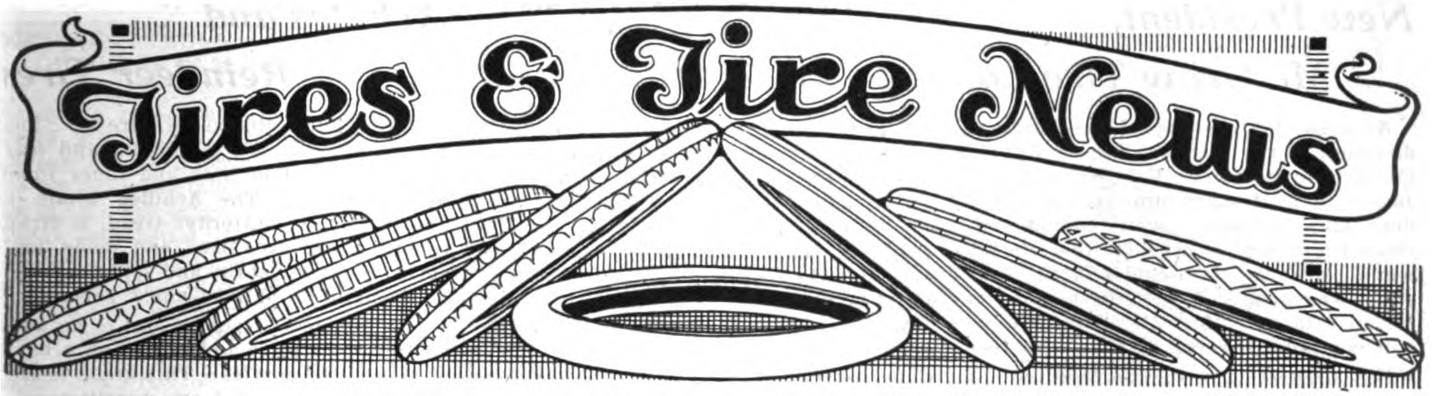
November—New York, N. Y., Annual Meeting American Road Builders' Association. E. L. Powers, Secretary, 150 Nassau Street, New York.

November-December—Buenos Aires, Argentina, National Exposition of American Manufacturers.

Nov. 1-16—Jersey City, N. J., Annual Automobile Show, Hudson County Automobile Dealers' Association, Fourth Regiment Armory.

Dec. 10-18—New York, N. Y., Motor Boat Show, Grand Central Palace.

January, 1921—Little Rock, Ark., Annual Meeting, Arkansas Good Roads & Drainage Association. Robert O. Schaefer, Secretary, Masonic Temple, Little Rock.



Climax Rubber Co.'s Activities

IN A QUIET WAY, but none the less effectively, the preliminary work is being accomplished for what promises to become one of the largest factories in Columbus, O., the plant of the Climax Rubber Co. Ground has been purchased, plans are being drawn and estimates made on the first unit which will be located along the tracks of the Hocking Valley railroad on West Goodale street, in which will be manufactured the Climax compression tube, patents for which have been granted after a series of most rigorous tests. Its construction embodies a new principle that is claimed to give more service and better satisfaction, as all punctures are self-sealed.

These buildings in Columbus will be the second unit operated by the Climax Co. as the initial plant at Huntington, W. Va., is turning out tubes to full capacity. Distributing companies are being organized in each state and it is expected that the full output of several thousand compression inner tubes a day will be reached in October. Columbus is the home office of the company.

In regard to the compression tube itself: It is so molded that about 700 small pockets, more or less, depending on the size of the tube, hemispherical in shape and about three-quarters of an inch in diameter, protrude inwardly. When the tube is inserted in the casing it fits snugly before being inflated. Then, as the air is introduced, these pockets are pushed out against the casing, causing a compression in the walls of the tube. When fully inflated the pockets cease to exist, the tube becoming circular in cross section and similar to the ordinary expanded tube but very different in this respect, that the Climax tube is made thicker because of the excess rubber being forced into the walls of the tube and is also under compression.

This results in a good, springy pneumatic inner tube, so built that, although punctured, no air escapes, this being accomplished by the closing up of any hole made in the tube by the excess rubber introduced into the sides, about 33 per cent. The sides of the puncture are being constantly forced together by the resiliency of this excess rubber.

In other words, there is a big wad of lively rubber compressed in all directions. On one side is the inner wall of the casing; acting opposite to this is the air pressure in the tube; at right angles to these forces we have the other forces acting in all directions in the wall of the tube and each pushing against a corresponding opposite force. These latter forces, as explained above, are caused by the compression of all the excess lively rubber into a smaller space than it ordinarily occupies. It is the fighting against this compression that forces shut and keeps sealed any puncture that is made in the tube. The greater the air pressure the better the tube functions, which is exactly the opposite to the workings of the expanded tube, which leaks faster when highly inflated than when not.

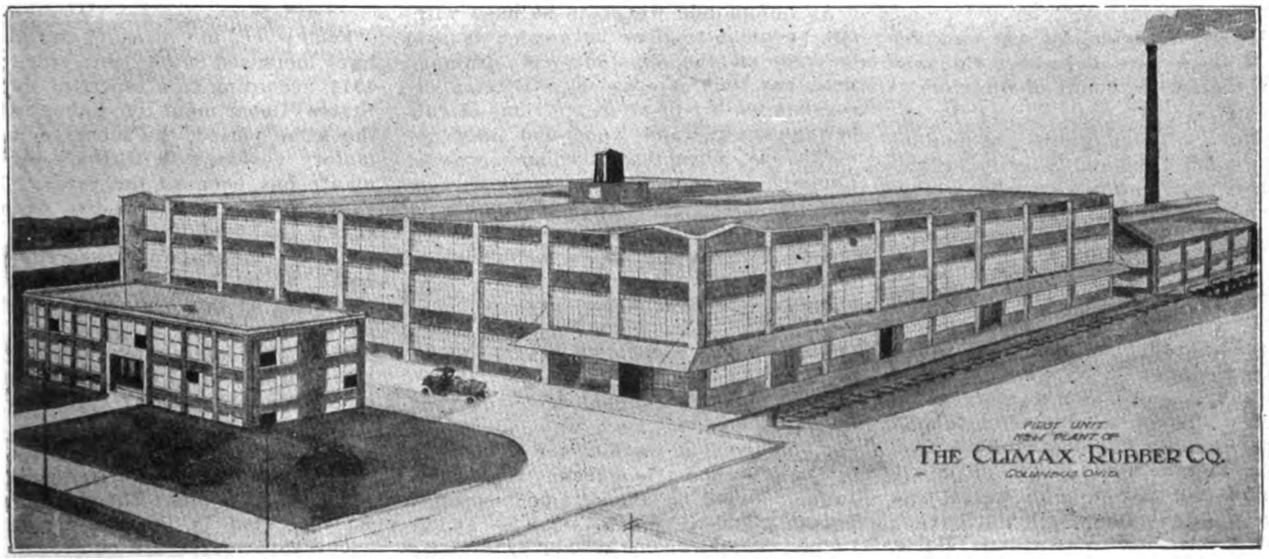
The pockets are compressed, or disappear, at about 30 pounds, so it is not necessary to carry a high pressure to insure proper functioning. If under the normal pressure in the tube air cannot escape when a puncture takes place and cause a blow-out by a rapid out-rush of air at high pressure, one cause for blowouts is eliminated.

TEN STANDARD TIRE SIZES TO BE RETAINED.

Progress is being made in standardization of tire sizes in conformity with the plan proposed by the Rubber Association of America. Before the war the idea of discontinuing the manufacture of tires of odd sizes met with approval from manufacturers.

At the conclusion of the war tire manufacturers, rim makers and car builders continued to cooperate with a view to reducing the number of sizes to the smallest possible number compatible with adequate service. Owners of cars using tires of unusual size will be able to get tires for their cars as long as the cars last, but no new cars will be made calling for any except the standard sizes.

The standard sizes for passenger car pneumatic tires will be 30 by 3½ and 31 by four-inch clincher and the following straight sides: 32 by 3½, 32 by 4, 33 by 4, 32 by 4½, 33 by 4½, 34 by 4½, 33 by 5 and 35 by 5 inches.



New President, Mc Graw Tire Co.

At a special meeting of the board of directors of the McGraw Tire & Rubber Co., held at its offices, East Palestine, O., June 5, John Morgan, formerly vice president and treasurer, was unanimously elected president, succeeding the late Edwin C. McGraw, the founder of the company, who died at his southern home in Miami, Fla., on May 24. Mr. Morgan will continue to serve as treasurer also.

His association with the McGraw Co. extends over the past 10 years, practically from the inception of the company. Throughout this decade he has taken an active part in the direction of the company's policies, having been elected to the office of treasurer in 1912 and the following year was made a vice president in addition. He was born in London, England, in 1880, and came to America in 1905 to introduce the Kempshall, a high grade European tire. He is one of the directors of the Rubber Association of America.

John Morgan, Recently Elected President of the McGraw Tire & Rubber Co., East Palestine, O.

Charles H. Wheeler, factory manager of the McGraw Tire & Rubber Co., was also elected to the board of directors.

The McGraw Co. specializes in the manufacture of high grade pneumatics, and solid truck tires and inner tubes, and maintains distributing branches in a large number of cities throughout the country.

GOODYEAR OPERATES LAUNDRY.

The feeding of 10,000 people daily in four large cafeterias, as well as caring for the sick among 35,000 factory workers makes a lot of soiled linen. In fact it means so much laundry work that the Goodyear Tire & Rubber Co., Akron, O., has announced that it is to install and operate its own laundry. It will have a force of 25 working in two daily shifts.

GOODRICH TIRE REPAIR SCHOOL TEACHES ECONOMY.

The conservation of material is the keynote of instruction in the tire repair school of the B. F. Goodrich Rubber Co. at Akron, O. Practices formerly common in tire repairing are no longer tolerated in the Goodrich school. The student is shown how to cut fabric without waste, to use gum economically and to observe the principle that shiftless methods never lead to profit.

Many of the means of saving taught might be considered of litle importance when considered separately; taken in the aggregate, however, their real worth becomes apparent. The average saving in retreading a tire is stated to be $1.

No examination is required for admission to this school, and when a student enters he is shown each process in the construction of a tire. In the class room he learns the theory and in the factory he becomes familiar, at first hand, with the actual processes. Each step in tire repair is carefully explained and at the work bench he has a chance to become skilled in the work. When he is graduated he is qualified to take a tire damaged in any way whatsoever and to quickly render it ready for duty again.

Classes in the Goodrich school will start July 19, Aug. 16, Sept. 13, Oct. 11, Nov. 8 and Dec. 1.

KENYON CO. TO MAKE CORD TIRES.

The C. Kenyon Co., Brooklyn, N. Y., which operates one of the largest fabric rubberizing plants in the country, is soon to start the manufacture of Kenyon cord tires. This concern has been engaged in the rubber industry since 1857, the product now ranging from rain coats to large rubber blankets used in off-set printing plants, and has included the manufacturing of cord fabrics for other tire manufacturers.

Two big plants are operated on Pacific street and the Bay Ridge water front, Brooklyn, employing nearly 3000 operatives.

TIRELESS WHEEL INVENTED BY BELGIAN.

An automobile wheel, to be used without pneumantic tires but which is said to have all the elasticity of ordinary tires, has been patented by a Belgian. It consists mainly of alternate rings of rubber, aluminum and wood and does not weigh any more than ordinary wheels. The new wheel is reported to be guaranteed to last 3½ years, only the outer band of rubber needing replacement. A factory is to be established in Belgium to turn out these wheels adapted to seven different makes of motor cars.

RUBBER CO.'S SUMMER COTTAGE.

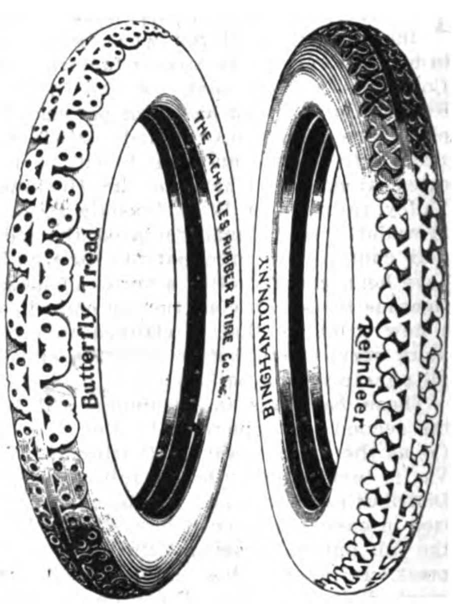
In an endeavor to help solve the vacation problems of the young ladies who are employed in their offices, the Pennsylvania Rubber Co., Jeannette, Pa., on June 1, leased for the summer season, a beautiful and commodious cottage at Put-In-Bay, O., and turned it over to the girls.

Achilles and Reindeer Tires

The Achilles Rubber & Tire Co., Inc., Binghamton, N. Y., is making and marketing automobile tires and inner tubes of high grade. The Achilles grade is known as the "Butterfly" tread, is strictly high-class, over-sized and made with an extra ply of fabric, and sold on an adjustment basis of 7000 miles' service.

The Reindeer is guaranteed to be good value for the price and is sold on a basis of 3500 miles' service. This grade is also made in brands for large distributors.

The Achilles Co. is also engaged in perfecting a new cord tire which will be ready for sale in the fall. Many improvements on and additions to the Achilles plant have been made during the past few months, and the company is planning to erect a large building with a capacity of 2000 tires a day.



THE ACHILLES RUBBER & TIRE Co. INC.
Butterfly Tread
BINGHAMTON, N.Y.
Reindeer

H. J. Smith, president, and A. W. Caney, vice president of the Achilles Co., have each had over 20 years' experience in this line of business.

WAGES AND THE COST OF LIVING.

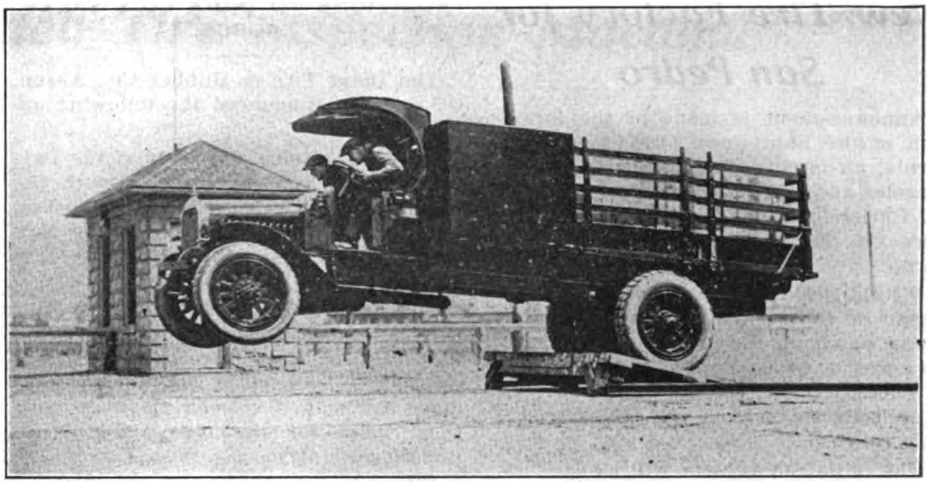
Food prices in Cleveland and Akron, O., have increased 90 per cent. since August, 1914, according to a report of the United States Department of Labor while, in the same period, the increase in hourly factory earnings in Akron's big rubber plants has been at the rate of 119 per cent. In July, 1919, the two were nearly equal, the food increase being 81 per cent. and the wage increase stood 82 per cent. Since then, however, wages have increased 37 per cent. while food prices have gone up only 17 per cent.

It is also interesting to note that the retail prices of tires during this time have only advanced 41 per cent.

The B. F. Goodrich Rubber Co. has established its Boston warehouse in the old Park riding school. The sale of tires has so increased in that section that previous storehouses are outgrown.

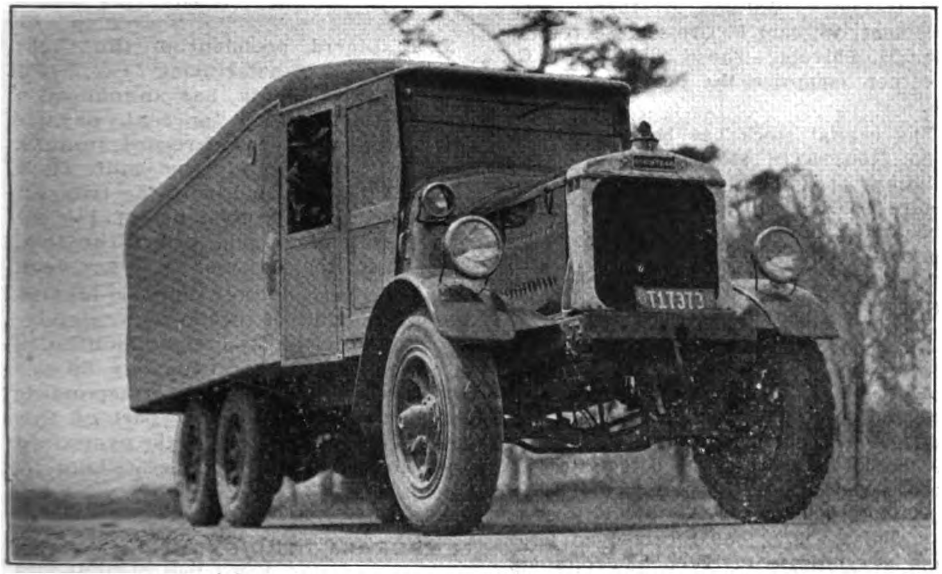
GOODYEAR TURNS OUT 800,000 TUBES IN 30 DAYS.

A world's record was probably made recently in the tube department of the Goodyear Tire & Rubber Co., Akron, O., when 800,000 inner tubes were turned out in 30 days. The magnitude of this production can better be comprehended when it is stated that the amount of air necessary to inflate this one month's output would keep a man alive for 12 years and nine months. Pursuing these calculations further, it is estimated that the 2,000,000 cubic feet of air required to inflate these standard 34 by four-inch tubes to a pressure of 45 pounds, would keep 4711 men alive for one day, with enough surplus to supply the 4712th man for 18 hours, 21 minutes and 12 seconds. These figures are based on the statement of Professor Fisher the eminent British medical authority that the average man consumes 425 cubic feet of air in 24 hours.



One of the Tests Made by the United States Tire Co., at Its Revere Plant at Providence, R. I., the Truck Making a Jump from an Incline to Register Photographically the Degree of Tire Deflection Upon Impact After the Flight Through Space.

Factory experts also figure that if the 800,000 tubes, averaging nine feet in length, were straightened out so as to form one continuous line, the month's production would reach 1300 miles. The company's 1919 production of 5,000,000 tubes would extend 9000 miles if placed end to end.



Goodyear Experimental Four-Rear-Wheel Driven Truck, Now Being Tested in Fast, Long Hauls Between Akron, O., and Boston.

BRITISH RUBBER IMPORTS.

During the period including the first three months of 1920, British imports of crude rubber totaled 59,464,200 pounds valued at $35,471,033, against 49,924,500 pounds in the corresponding period in 1919, valued at $34,172,753, and 41,481,300 pounds, of the value of $34,172,208, in 1913. The chief countries from which this crude rubber was received this year were the Federated Malay States, 17,482,700 pounds; Straits Settlements, 14,159,500 pounds, and Ceylon, 12,963,100 pounds; each of which showed a large increase over the March quarter of 1913, whereas Brazil imports fell from 12,765,200 pounds in the first quarter of 1913 to 4,441,900 pounds for that period the current year.

Re-exports of crude rubber from the United Kingdom in the March quarter, 1913, aggregated 24,238,300 pounds, and were less than one-half those in the corresponding months this year, 50,302,900 pounds; while the values were $21,872,440 and $31,039,082 respectively. Re-exports to the United States this year have aggregated more than the entire re-exports in the first three months of 1913; and are nearly four times the amount sent to this country in the pre-war year, the United States taking 8,416,900 pounds, valued at $7,610,233 in the March quarter of 1913 and 32,497,300 pounds, valued at $420,286,609 this year.

The wholesale market value of crude rubber in London on April 16, 1920, ranged from 54 to 55 cents a pound, after having risen earlier in the year to about 70 cents. The low price quoted is, however, 13 cents above the lowest quotation touched in 1919.

A CLIMAX TUBE ISSUE.

The May number of Auto News, the official organ of the Columbus, O., Automobile club, is largely devoted to the activities of the Climax Rubber Co., 21 West Gay street, that city, which is beginning the manufacture on a large scale of the Climax compression inner tube.

New Tire Factory for San Pedro

Announcement is made of the formation of the Fabri-Cord Tire Co. of California, an organization composed of Los Angeles and San Pedro business men. J. H. Christian, founder of the Perfection Tire Co., is president of the new concern.

Within the next 30 days work is to be begun on the first unit of the company's plant which, in its entirety, will occupy 30 acres of ground on 17th street, west of Pacific avenue, where it will be served by a spur track from the Southern Pacific railroad.

The initial investment will be $460,000. Of this amount the land represents $180,000, the building $80,000 and the equipment $200,000.

From 400 to 600 men will be employed. The output from the first unit will be 500 tires and 1500 inner tubes daily. The total working force when the plant is complete will be from 1500 to 1700 men.

GOODRICH SUMMER RESORT AND ATHLETIC FIELD.

The B. F. Goodrich Rubber Co. has provided a summer resort and athletic field for its 28,000 Akron, O., employees. This is situated at Rex lake, 10 miles from Akron, and consists of 40 acres of wooded land, and is made available for week end parties, outings and picnics by the fact that the company provides transportation for all such events.

The Goodrich Co. also recently purchased another tract of land located in the city and also on the shores of a small body of water. This park, when completed, will have two baseball diamonds, tennis courts, soccer field, a rifle range, a bathing beach, a canoe boat house and pier, a children's play ground and a stadium.

McCLAREN RUBBER DISTRIBUTION.

The McClaren Tire Co. of Dallas, Tex., has been appointed distributor of the products of the McClaren Rubber Co., Charlotte, N. C., in Texas. R. B. Sticher, vice president of the Security National Bank of Dallas is president of the new Dallas tire distributing company, and associated with him, as directors, are R. E. L. Saner, John Saner and D. E. Wagoner, president of the Security National bank. H. F. Miller, vice president and general manager, was formerly manager of the Racine Tire & Rubber Co.'s branches both at Chicago and Los Angeles.

RAMBLER TIRE LEASE IN NEWARK.

A 10-year lease on the building at 156 Central avenue, Newark, N. J., has been taken by the Rambler Tire & Rubber Co., a Delaware corporation, with its principal offices at 10 West 23rd street, New York. It will make alterations on the building and will occupy the first floor as a sales room. This will be the 50th branch operated by the Rambler Co.

ADDITIONS TO INDIA CO.'S SALES FORCE.

The India Tire & Rubber Co., Akron, O., recently announced the following appointments:

W. W. Alexander, formerly of the Dayton Tire Co., and still earlier with the Diamond Rubber Co., has been named as direct factory representative in the New England territory with headquarters in Boston.

To Blakey & Hall, Pittsburgh, Pa., has been assigned the India distribution in that city and adjacent territory.

Frank G. Schenuit, a well known Baltimore tire man, has been given distribution rights for that city and the surrounding country.

NEW OFFICERS FOR PREMIER RUBBER CO.

The stockholders of the Premier Rubber & Insulation Co., Dayton, O., have elected the following officers: President and treasurer, William Grethers; vice president, William F. Greiser; secretary, John H. Shively. These, with Harry G. Grestner, comprise the board of directors.

The capital stock has been increased from $150,000 to $250,000. Two large buildings at Edmund street and the Baltimore & Ohio railroad are being occupied and a day and night shift is being worked.

OFFER TO TULSA CO. FOR FRENCH RIGHTS.

A. J. Liebman, president of the Compression Tube & Tire Corporation, New York City, distributor of this product in the East, states that the Tulsa Rubber Co., which recently constructed a $1,000,000 factory on the Sand Springs line, Tulsa, Okla., has received an offer from a syndicate of French capitalists for the patent rights to manufacture United States compression inner tubes in France.

BOSTON GILLETTE FACTORY BRANCH.

The Gillette Rubber Co., New York City, has established a branch in Boston to take over the distribution of Gillette tires, in charge of Frank C. Stetson, as New England district manager. Mr. Stetson began his career in the tire industry 18 years ago and has been identified with several prominent companies as a sales man and executive.

PACKARD TIRE STORES MOVE.

The Packard Tire Stores Co., Milwaukee, Wis., has moved into larger quarters at 408 Jefferson street, formerly the headquarters of the Western Motor Supply Co. The Packard Co. distributes McClaren tires, made by the McClaren Rubber Co., Charlotte, N. C., and now has 400 exclusive dealers in Wisconsin and northern Michigan.

Importation of Rubber into France

The French director of customs has recently published the figures on the importations of crude rubber into France. The total imports for 1919 were 32,455 metric tons against 19,927 tons in 1918. The countries contributing to the total, by tons, were: Brazil, 3235; England, 12,638; French Congo, 516; Senegal, 321; West Africa, 1006; East Indies, 8294; and other countries, 6442 tons.

The value of the importations in 1919 is given as $41,713,090, against $11,920,554 in 1918. Importations of 11,772 metric tons of manufactures of rubber, comprising tires, tubes, shoes, clothing, bandages, tubing, etc., valued at $42,678,862, are reported. American manufacturers furnished a large quantity of this merchandise.

GLOBE TIRE'S 10 PER CENT. STOCK DIVIDEND.

J. B. Linerd, president of the Globe Rubber Tire Manufacturing Co., 1851 Broadway, New York, has announced a stock dividend of 10 per cent. payable July 1 to stockholders of record June 30. This is the second 10 per cent. stock dividend this year and, with the two regular quarterly cash dividends of 1½ per cent. each, already paid, brings the total dividend for the half year to 23 per cent.

The business of the company for the first five months of the present calendar year, and for the first eight months of the sales year, is approximately 60 per cent. over that of the corresponding periods last year. A large part of this increased demand is due to the over-sized cord tire brought out two years ago by the Globe Co.

TEMPORARY INJUNCTION ALLOWED.

It is stated that the McElrath Tire & Rubber Co., which was recently formed at Ravenna, O., has been allowed a temporary injunction restraining the McElrath Building Co., also of Ravenna, from using the word "McElrath" in connection with its business.

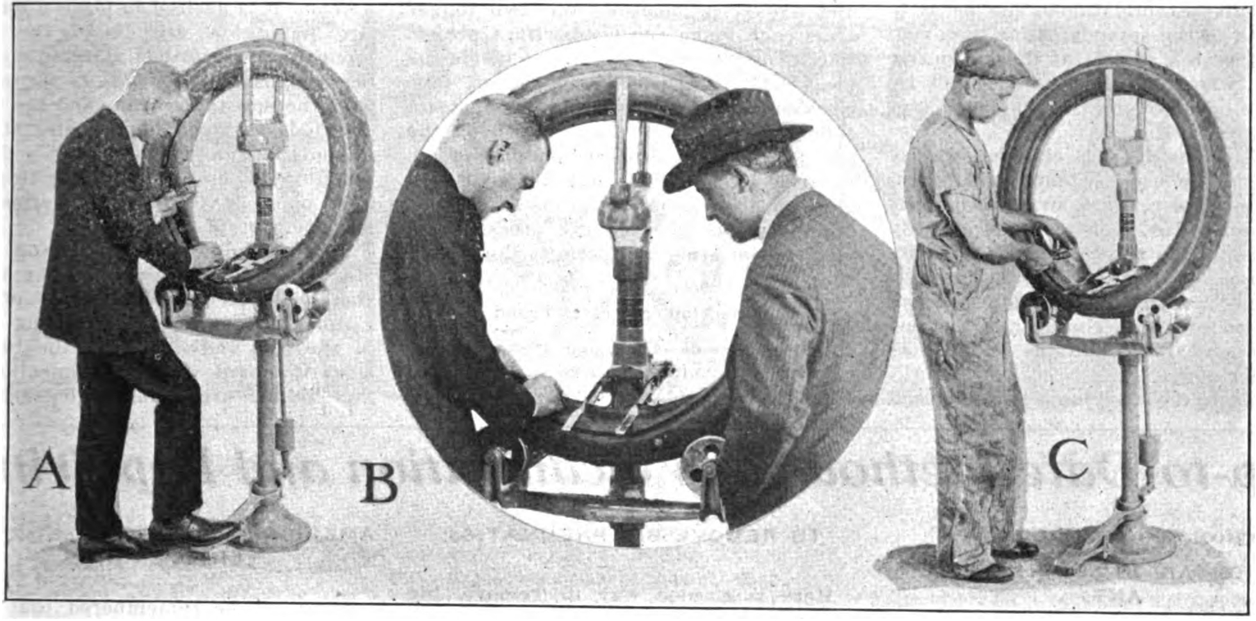
In its application for injunction the plaintiff alleged that there is no person by the name of McElrath connected with the defendant company and that the adoption of the name was "an artifice calculated to produce and to perpetuate a fraud both upon the public and plaintiff." The petition was sworn to by Milo E. Evans, secretary of the plaintiff company.

The McElrath Tire & Rubber Co. is erecting a large factory in Ravenna, and it is expected that production of the McElrath tire will be under way shortly.

MASON SALES INCREASE.

Sales of the Mason Tire & Rubber Co. for the quarter ending April 30, totaled $2,140,812, an increase of over 100 per cent. over the same period last year.

The Ramsdell Tire Inspection Machine



Using Ramsdell Tire Inspection Machine: A, Fitting Inner Tube; B, Examining Inside of Tire for Stone Bruises, Etc.; C, Fitting Inside Patch.

A TIRE inspecting machine has recently been placed on the market by the Ramsdell Brothers Manufacturing Co., 5700 Walworth avenue, Cleveland, O., after exhaustive tests, which is stated to fill a long felt want in tire branches where it is necessary to inspect casings to show the customer the defects in his tires, when asking for an adjustment, and pointing out conclusively whether or not they are of such nature as to warrant replacement.

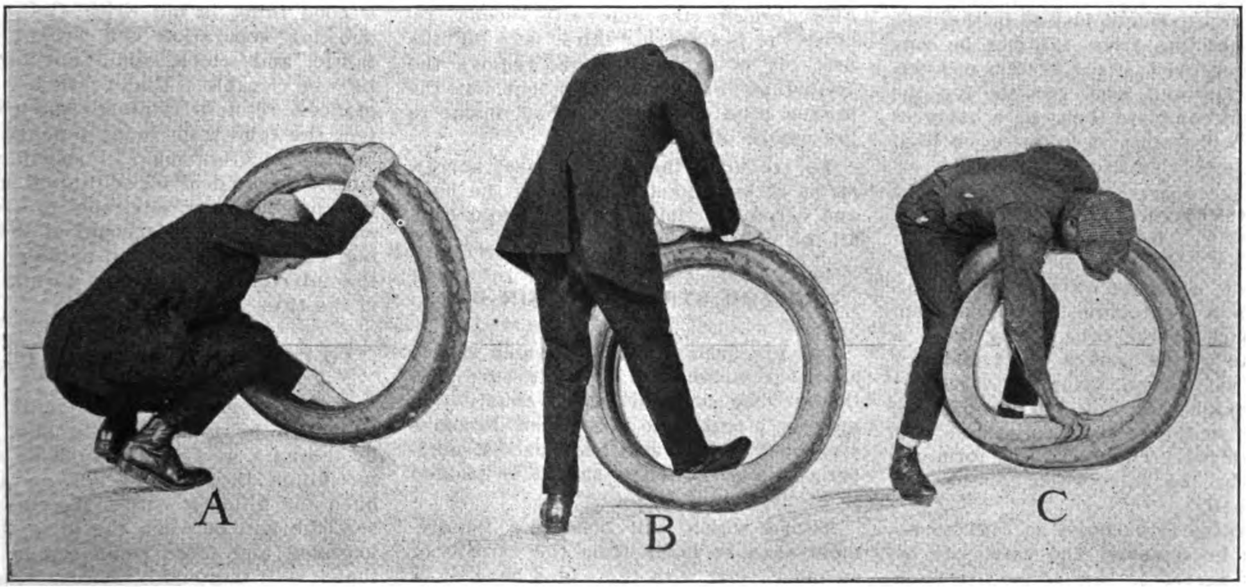
A ready use is also found for this tire inspection machine in repair shops in the location and determination of the nature of damage to tires, whether inside or out, examination for tread cuts, stone bruises, nails in the tread, or the thousand and one defects that can occur.

The machine again proves its worth when removing tubes that are stuck in the tire, or when replacing new tubes in tires that have a stiff, heavy bead. Spreading the sides with the machine facilitates the removal of stuck tubes or the replacing with new tubes, lessening the time required to do the work and making it possible for the repairer to do it with greater ease.

The tire testing machine consists of a foot operated stand, mounted on a metal base, which may be fastened to the floor, if desired. An upright hollow steel tube, fitted in a socket in the base, is fastened to it by means of a set screw. The upper end of the tube is provided with a head casting, also fastened to the tube with a set screw, the head fitted with two tubes or rods spaced correctly to hold the tire in a vertical position. Midway the steel tube is fastened, by two set screws, a cast stand equipped with two arms, each provided with a flanged roller wide enough to take the ordinary broad tire. The rollers are free to move in either direction and are supported by arms from the stand and are mounted on hardened steel shafts.

Above the stand, fastened by set screws to the steel tube, is located a casting having an arm at each side equipped with three slots in each arm. The slots are several inches long, two being located lengthwise of the top and the third running downward from the top. The spreader arms of the machine operate in these slots, being connected to and operated by a foot pedal at the base. The foot pedal is fastened to the steel tube just above the base by a collar, allowing free movement of the pedal.

A lip is provided on the base casting which acts as a catch for pedal-operated



Inspecting Tire by Old Method: A, Feeling Inside of Tire for Tack Points, Rough Spots, Etc.; B, Inspecting Tire for Fabric Breaks; C, Replacing Inner Tube.

pawl on the foot pedal, holding the spreader arms in opposite directions when they are attached to the beads of a tire under examination. The pedal is connected to the spreader arms by a rod, provided with a weight at the bottom of the rod, which enables the arms to release the beads of the tire when the foot pedal is released.

Such a tool will, it is claimed, after a short period of use, be found indispensable to the tire repairer or branch manager when called upon to render speedy decisions in the matter of adjustments on customers' tires. By using the tire inspecting machine the customer is enabled to look into the interior of the casing and see the conditions exactly as the dealer does.

To operate the machine a tire is placed on the rolls with its top fitting between the two vertical bars or tubes at the top of the machine. The arms are lifted over and placed in position, the two longer arms each being equipped with a projection about an inch long, fitting inside the bead, while the shorter two arms, likewise equipped, are fitted at the opposite side of the tire. Pressing down on the foot pedal exerts pressure on the spreader arms, opening the tire at the beads, allowing inspection of the inside. Releasing the pedal releases the pressure applied to the arms and permits the tire to close.

Inspection of Tire Tread.

Inspection of the tire tread is performed by placing the tire on the rolls, allowing the beads to rest upon the rolls. Turning the tire on the rolls allows the repairer to examine the tread for punctures, sand pockets, nails, etc.

When it is desired to place a tube in a tire having a stiff bead, the tire is mounted as described above for examining the inside. The tire is spread open with the spreading arms, and the tube is inserted as shown in the illustration.

Applying an inside patch is done in much the same manner, the tire being held open by the spreader arms while the operator fits the patch.

The old method of examining the inside of a tire is shown in the illustration, as is also the old method of fitting a tube. The chances of missing defects in the tire and damaging the tube, besides the hard work in connection with this method, are plainly to be seen.

Up-to-Date Methods of Vulcanization and Repairing

(FROM GOODYEAR NEWS.)

EVERY DETAIL IN SHOP IS IMPORTANT.

The vulcanizer is more than a repair man he is a high grade mechanic turning out a product. He is also a business man providing a real mileage saving service for users of tires.

As a mechanic building a product he, of course, wants to use the best available materials and the best available methods, so that his customers will be satisfied with the product turned out for their use. Any repair in a tire must be of the proper quality to give customers a good return on the amount charged for that repair. In order to give this fair return for the money spent in the shop, that repair must be good enough to fulfill all the conditions under which the tire is going to be used.

As a business man he owes more to his customers than the turning out of a quality repair. He is a very valuable part of the chain of service which tire users are now demanding.

Therefore, it must be recognized that every detail in the business is capable of constant improvement just as in the business of building tires. It can be continually improved. If the system of keeping accounts and cost records for the shop is not complete then—as a business man he will want to improve on that part of his service to the public.

BROKEN VALVE STEMS EASILY REPAIRED.

To repair a broken valve stem the fittings should be removed and the stem slipped back in the tube. Now make a small hole in the tube a short distance from the valve stem, bring the valve out again through this hole and in so doing the fabric in the original valve hole will not be injured. The small cut formerly occupied by the valve stem can be vulcanized easily.

If the valve is battered so that no fittings can be removed, the valve can be sawed off across to the cut with a hack saw and the nut can then be easily taken off.

TO REMOVE BIG PNEUMATICS.

Here is a good way to remove big pneumatic truck tires which is especially effective if the casing seems to be rusted to the side of the rim and resists any attempt at removal, no matter how much grease graphite is applied.

By pushing the valve stem inside and taking an ordinary carpenter's square, or if this seems too expensive, a piece of steel thin enough to insert between the rim and the tire so that it runs through to the permanent rim on the other side, the rim can be removed.

By using a hammer and driving the steel around the rim from stem to stem the tire will be loosened and will fall off easily. Next grease the rim and remove all rust.

TO REPAIR CLINCHER TIRE CASINGS.

The repair of regular clincher casings can easily be effected by making a quarter section at the point where the bead is broken, in the following manner: First, remove the sidewall; second, remove the bead strip; third, take out the first ply of fabric; fourth, remove the second ply of fabric; fifth, cut out the broken bead on a bevel. Push inside to the center of the bead.

To rebuild the casing use narrow strips of building fabric, lay in the bead and carefully trim to shape. Build back all the plies removed.

PAD FOR STRETCHED AIR BAG.

One precaution that repair men should always remember is to make sure that the air bag fits the casing snugly. In making a cure, the bag often becomes stretched after it has been used a number of times. Then it should be padded to fit the casing to be cured.

A pad which will meet the requirements can be made from the carcass of an old casing, with the edges beveled to fit. The method of applying the pad is shown.

AMERICAN TIRES NOT USED ON MILLIMETER RIMS.

It should be remembered that American tires are not designed to fit millimeter rims or millimeter tires American rims; that is, a tire marked 32 by four should not be used on a rim marked 815 by 105, neither should an 815 by 105 tire be used on a 32 by four rim. The rim seat diameter and circumference of the two are the same, but the beads are different in width and height and good results cannot be secured if they are interchanged.

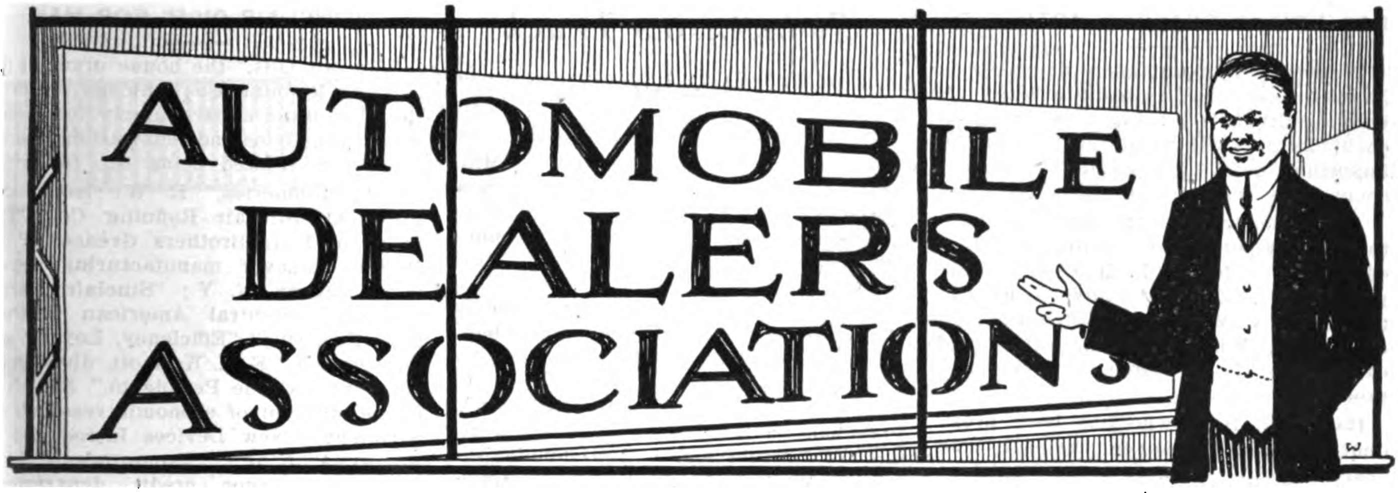
There are some oversize tires made in the millimetre type, but the regular size should not be confused with the oversize. For example, an 815 by 105 millimeter tire should not be used on an 810 by 90 millimeter rim, as it will result in damage to the beads.

RELINERS AND INSIDE PROTECTORS.

Reliners, if made of flexible material and well designed, are, according to the Firestone Tire & Rubber Co., Akron, O., a good thing in old tires; that is, tires showing separation and breaks in the fabric, and which would not ordinarily be serviceable. Under such circumstances, reliners reinforce the tire, protect the tube from being pinched in the fabric and often make it possible to secure a great deal of additional mileage. It is not, however, advisable to use reliners in new tires on account of the creeping, chafing and heating occasioned and the interference with the normal action of the tire.

TO CEMENT SEPARATED CORDS.

A slight separation of the cords in cord tires can be repaired with good result by taking a grease gun, such as is used for filling the grease cups on automobiles and filling it with C-16 cement. Insert the gun between the plies that are loosened and force some cement in so that it will thoroughly permeate between the plies. The drying of such a repair will take at least two days.



State Organization Formed in Newark

Over 100 delegates from trade associations representing every section of the state attended the first annual conference and election of officers of the newly formed New Jersey Automotive Trade association at Atlantic City. The temporary organization of the body was made permanent by the re-election of the following officers: President, John L. Brock, Trenton; vice president, C. P. Broadhead, Atlantic City; treasurer, Ralph G. Earle, Hackensack; secretary, Harvey S. Moore.

Horace A. Bonnell, former president of the Newark trade association, was chosen to represent the state association on the special motor vehicle commission to be chosen by the governor.

ONE LICENSE WITH DUPLICATE NUMBERS.

The Louisiana-Mississippi Automotive Trade association. the headquarters of which are at 718 Poydras street, New Orleans, La., announces that it has received the following ruling regarding the use of license tags by dealers:

"The system of buying one license and using as many as four duplicate numbers of the one license will be permitted in this state, provided, however, the dealer buys one license and duplicates to match for every kind of car handled by him. That is to say, if he handles Overland cars he may buy one license tag and four sets of duplicates to demonstrate his Overland cars. If he handles Fords, Mitchells or other makes of cars he would be required to buy one license tag and duplicates for each of the other makes. * * * The law positively prohibits the use of pasteboard tags for demonstration purposes or otherwise."

Headquarters for the 16th Orphans' Automobile Day outing this month were established at the Automobile Dealers' association, 1845 Broadway, New York. This year several thousand children will be taken to the Bronx Exposition and Amusement park, the use of which was donated by President H. F. McGarvie.

CARES FOR 4000 SHRINERS' AUTOMOBILES.

During the big Shriners' convention in Portland, Ore., in June, the Garage and Repair Men's association of that city took upon itself the provision of temporary quarters for some 4000 of the 5000 or more cars that conveyed a portion of the visitors to that city. It was found that about 2200 could be accommodated at the various public garages, and arrangements were made by the members for accommodation of about as many more at private quarters. And it is thought that the remainder of the out-of-town cars can be taken care of by parking in front of dwellings and at garages not formally listed.

The fact that the Democratic nominating convention occurs at San Francisco at the same time of the Shriners' meeting has crowded Pullman cars and other railroad equipment in that section to the limit, and hundreds will travel by automobile that otherwise would doubtless ordinarily rely on rail transportation.

TWO NEW CRAFTS ORGANIZATIONS.

Portland, Ore., one of the foremost cities in the country in automotive trade and crafts organizations has just added two more associations to the list. These are the Automotive Body Builders' of Oregon and the Portland Automobile Top Builders' association.

The officials of the Body Builders are as follows: President, Fred Dundee; secretary, William P. Casey; first vice president, H. C. Hodgkins; second vice president, George Wentworth; treasurer, E. M. Tucker. The initial membership is 25.

The Top Builders are officered as follows: President, J. H. Crans; secretary, E. Lennox; treasurer, Eugene Kuhlman.

Another organization closely allied to automotive interests that was organized recently at Portland is the Portland Rubbers Workers' club, the president of which is L. M. Harper; W. A. Peters being vice president and Al Courts secretary-treasurer. The following applications for membership in this association have just been received: East Burnside Vulcanizing Works, Alberta Tire Shop and Weldon & Shaw.

New Members of Equipment Ass'n.

The Automotive Equipment association has admitted the following concerns to membership: Jobbers — Automotive Equipment Co., Newark, N. J.; Consolidated Grocery Co., Jacksonville, Fla.; Dayton Iron & Steel Co., Dayton, O.; P. J. Cronin Co., Portland, Ore.; General Auto Supply Co., Lancaster, Pa.; Keyes Supply Co., Ltd., Ottawa, Ont., Can.; Kimball-Upson Co., Sacramento, Cal.; Kopac Brothers, Omaha, Neb.; Lomont & Co., Fort Wayne, Ind.; Mid-West Auto Supply Co., Dubuque, Ia.; Motor Accessories Co., Allentown, Pa.; George W. Nock Co., Inc., Philadelphia, Pa.; Robinson Brothers Co., Louisville. Ky.; Joseph Strauss, Inc., Buffalo, N. Y.

Manufacturers—American Bureau of Engineering, Inc., Chicago, Ill.; Alvord Reamer & Tool Co., Millersburg, Pa.; Apex Electric Manufacturing Co., Chicago, Ill.; The Carborundum Co., Niagara Falls, N. Y.; Conant & Donelson Co., Conway, Mass.; Federal Brass Co., Chicago, Ill.; Gill Manufacturing Co., Chicago, Ill.; National Lamp Works of General Electric Co., Cleveland, O.; Neville Steering Wheel & Manufacturing Co., Detroit, Mich.; Presto-Felt Manufacturing Co., Toledo, O.; F. W. Stewart Manufacturing Corporation, Chicago. Ill.; Stewart Manufacturing Co.. Oakland, Cal.

HELD USED CAR SALE.

The Memphis, Tenn., Automobile Dealers' association recently inaugurated a novel scheme for the disposal of second hand cars by its members. It was a "used car sale" held on a convenient vacant lot in that city, and continued for four days. Approximately 200 cars were offered for sale the opening morning. Each machine was plainly marked with a price tag and every exhibitor had a representative on the grounds for demonstrations. The collection included almost every type of motor car known, from cheap roadster to luxurious limousine.

This unique sale was under the general direction of L. F. Carter of Grand Rapids, Mich.

DES MOINES DEALERS' ACTIVITIES.

With the reorganization of the Des Moines Dealers' association a new system of activity was inaugurated whereby each director will be at the head of an important committee assuming the responsibility for work in his department.

The directors and the lines of work they will supervise are as follows: Don Chemberlain, fours; L. B. Chase, trade practises; R. E. Stacey, advertising and publicity; A. M. Brackett, finances and legislation; William Gibson, shows and expositions; L. A. Doren, meetings and programmes.

Harter B. Hull, who has been president of the association for the past three years, is to inaugurate a series of monthly dinners.

The association is formulating plans for a truck show to be held in connection with Iowa state fair in August.

NEW MEMBERS OF PORTLAND ASSOCIATION.

The following concerns have recently joined the Garage and Repair Men's association of Portland, Ore.:

Columbia Garage, A. A. Smith, proprietor, 107 Fessenden street; Fields Motor Car Co., service department, 14th and Alder streets; Francis Motor Car Co., W. P. Stokes, manager, Hawthorne and Grand streets; Gill Piston Ring Co., J. D. Lynch, manager, 409 Burnside street; Park Rose Garage Co., F. Kruse, manager, Park Rose; Peoples' Auto Repair Shop, S. Clifton, proprietor, 5529-5531 Foster road; Oregon Auto Exchange, James E. Kelley, proprietor, 448 Flanders street; Red Cap Garage, A. H. Braman, proprietor, 409 Stark street.

LOUISIANA-MISSISSIPPI TRADE ASSOCIATION.

In accordance with a resolution affiliating the Louisiana-Mississippi Automotive Trade association with the National Automobile Dealers' association, the dues of the association were increased to include the fees for national membership. The new scale places the dues at $65 for dealers handling more than 50 cars a year, and $40 for those handling under 50 cars.

The next meeting of the Louisiana-Mississippi Automotive Trade association will be held at Gulfport, Miss., Oct. 6 and 7.

PREMIER MOTOR CORPORATION.

The Premier Motor Corporation of America, 810 Pennsylvania building, Philadelphia, Pa., is to operate a plant for the manufacture of a four-cycle marine type of engine and a two-cycle motor. The president of the corporation is Timothy O'Leary.

SAXON PRODUCTION SCHEDULE.

The production schedule of the Saxon Motor Car Corporation, Detroit, calls for over 500 cars in June and 1000 cars a month thereafter.

Twin Cities Truck Dealers

The Twin Cities Commercial Car Men's association was formed at Minneapolis, Minn., at a meeting of 22 truck dealers and manufacturers. The Minneapolis men will cooperate with a similar movement on the part of St. Paul dealers.

The purpose of the organization is stated to be to help individual members solve the problems of their business, to raise the ethical tone, and to further the Babcock highway plan. The officers are: President, Harry Dafoe; vice president, Carl Will; treasurer, J. A. Donnelly; directors, W. R. Stephens, George R. Holmberg, E. W. Brehm, W. T. Clapp.

PORTLAND ASSOCIATION OPENS EMPLOYMENT BUREAU.

In the interests of the automotive industry of the state, and particularly of the city, the Portland Garage & Repair Men's association of Portland, Ore., has opened an employment bureau at its offices, 601 Beck building. The object will be to supply garages, repair shops and other branches of the industry with expert mechanics and other workers, and the automobile trade schools in the vicinity have been urged to place their best talent at the command of the bureau with a view to obviating, as much as possible, the threatening scarcity of labor and of effecting a satisfactory distribution of whatever help is available.

PHILADELPHIA USED CAR DEALERS.

At a recent meeting the Philadelphia dealers in used motor cars formed an organization to be called the Philadelphia Used Automobile Dealers' association. The following officers were elected: President, Samuel Gorson; vice president, William Baron; secretary, Augustus Rosenbluth; treasurer, Milton Stern; directors, Solomon Morris, Daniel Goodman, Al Thalheimer.

It was decided to close the places of business of the members on Sundays after June 8.

ASSESSMENT FOR GOOD ROADS.

The Portland, Ore., Garage and Repair Men's association has voted to assess each member $5 to aid in defraying the expenses of the Good Roads campaign in that state.

COFFEYVILLE DEALERS' ASSOCIATION.

The local automobile and accessories dealers of Coffeyville, Kan., recently met at the Chamber of Commerce rooms to form an association.

ATHOL MANUFACTURING CO.

The Athol Manufacturing Co., Athol, Mass., maker of materials for automobile tops, is to build a branch plant at Marysville, Mich.

"SINCLAIR OILS" FOR MAY.

"Sinclair Oils," the house organ of the Sinclair Refining Co., Chicago, offers in the May issue a particularly interesting series of articles and illustrations, among the topics treated being the following:

"The Refineries," E. W. Isom, vice president, Sinclair Refining Co.; "The Story of Four Brothers Grease," P. E. Potter, manager manufacturing department, Albany, N. Y.; "Sinclair Marine Service;" "Central American Railroad Uses Fuel Oil;" "Efficiency, Loyalty and Cooperation," E. A. Kermott, division accountant; "Crude Petroleum," Joseph E. Pogue, director of economic research department; "New Devices Introduced by Robert A. King;" "Promptness," J. M. Judson, manager credit department; "Denver to Alamosa Via Truck." A group of half tones, introducing the associate editors of "Sinclair Oils," is included, and considerable space is devoted to the activities of the various divisions and refineries.

FRANKLIN STOCK INCREASE APPROVED.

The board of directors of the H. H. Franklin Manufacturing Co., Syracuse, N. Y., has approved an increase in preferred stock capitalization from $5,000,000 to $15,000,000, and also an increase in common stock from 20,000 shares, par value $100, to 600,000 shares of no par value; $1,500,000 of seven per cent. cumulative sinking fund preferred stock is now offered at par, $100 a share. For every two shares of preferred stock the purchaser will be given the right to buy one share of the new no-par-value common stock at the price of $50 a share.

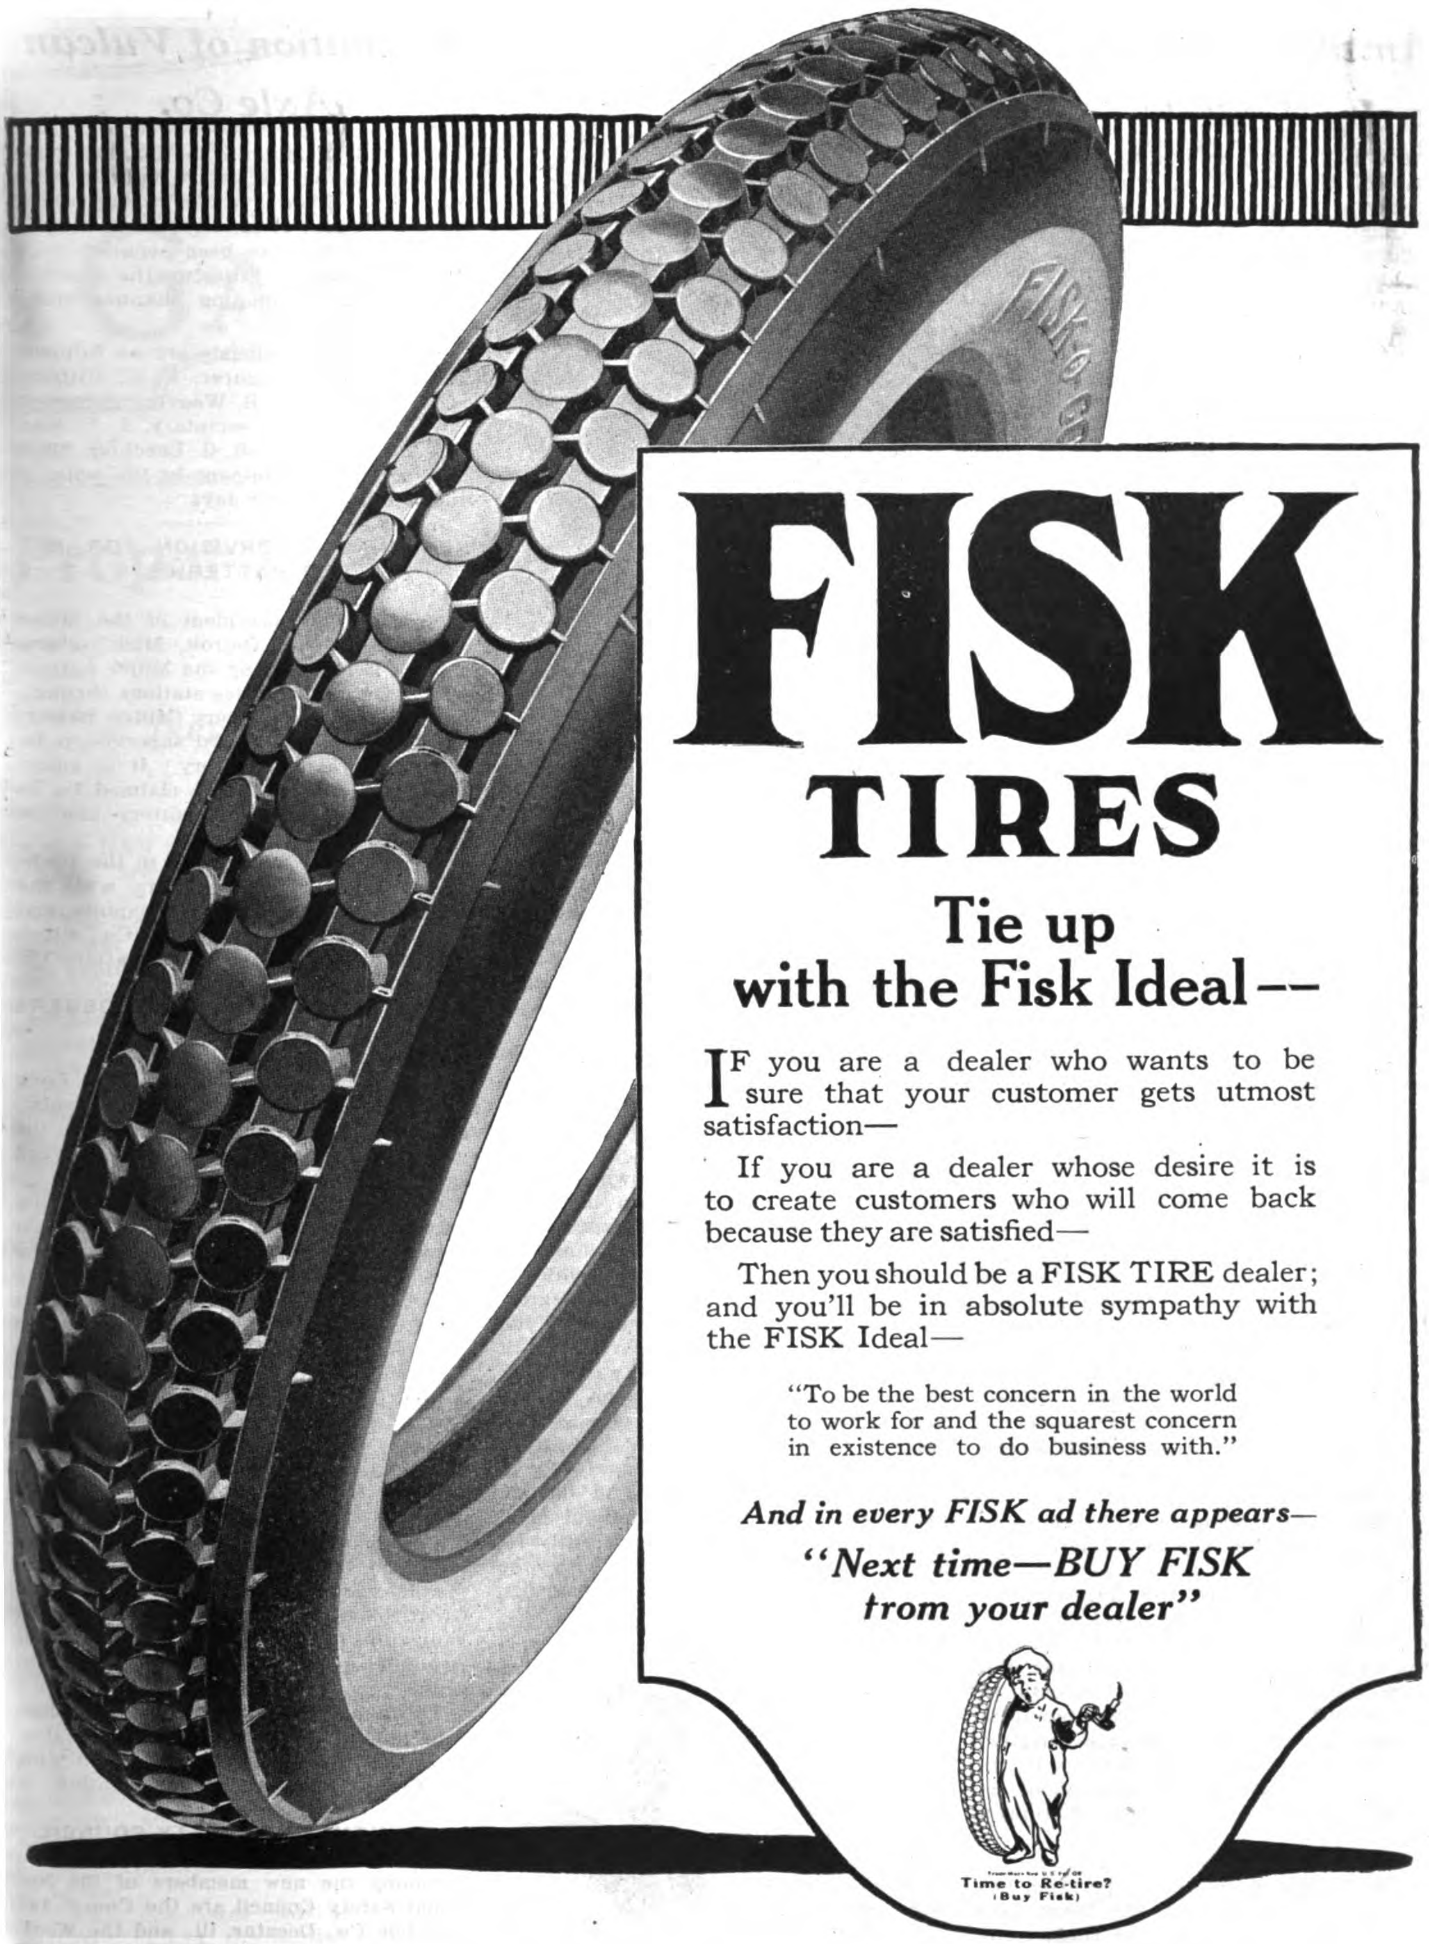
The purpose of this stock increase is to take care of future expansion and to supply funds as needed in the enlargement of the plant.

JEFFERSON ELECTRIC INCREASES PRODUCTION FACILITIES.

The Jefferson Electric Manufacturing Co., 426-430 South Green street, Chicago, has leased additional manufacturing floor space, which will enable it to double its production of Jefferson products, including ignition coils for every requirement of the automobile, truck, tractor, gas engine, motor boat and motorcycle and the Combination spark plug, Auto lamp and Ford Unit tester, Ford magneto lamp regulator and electrical transformers of every description, bell-ringing, toy, sign lighting, wireless and Auto transformers, as well as custom made transformers of any size and style.

FORT WAYNE DEALERS' OFFICERS.

Following are the officers of the Fort Wayne Automobile Dealers' Trade association, recently elected: President, Matt Jones; vice president, Ward Becker; secretary, C. Schiefer; treasurer, Fred Pennell. The association presented the retiring president, A. L. Randall, with a gold watch and chain. Mr. Randall has presided over the association since its organization, five years ago.



FISK

TIRES

Tie up with the Fisk Ideal--

IF you are a dealer who wants to be sure that your customer gets utmost satisfaction—

If you are a dealer whose desire it is to create customers who will come back because they are satisfied—

Then you should be a FISK TIRE dealer; and you'll be in absolute sympathy with the FISK Ideal—

> "To be the best concern in the world to work for and the squarest concern in existence to do business with."

And in every FISK ad there appears—

"Next time—BUY FISK from your dealer"

American Influence in England

Ira A. Kip, Jr., president of the Duratex Co., Newark, N. J., in an interview following his return from a recent trip to England and France, stated that the influence of American methods in automobile construction and quantity production in Europe is more clearly shown this year than at any other period of the industry.

"It is astonishing," said Mr. Kip, "to note how fast certain European manufacturers are coming to quantity production. I talked with executives of the Willys-Crossley Co. of Manchester, England, the Harper-Bean and Austin companies, the three largest English manufacturers; the Citroen Co. of Paris, and others, and all seemed to realize that the hope of the automobile industry lies in quantity production as has been proved in America. Both American machinery and American products have been adopted by the leading manufacturers. In many cases even American men are being sought for executive positions.

"The financial situation in England is improving rapidly and automobile manufacturers there do not seem to be worrying about the future. The Willys-Crossley Co., for example, has purchased one of the largest munition plants in England. This is located at Manchester and when the machinery is entirely installed it will be one of the finest automobile factories in Europe. It predicts that about the beginning of 1921 it will be producing 100 cars a day, which production has never been equalled by any European manufacturer.

"The situation in France, on the other hand, is more serious on account of their not being able to obtain raw materials. None of the French manufacturers, with the exception of the Citroen Co. of Paris, is anywhere near big production. These people are making a small, light car selling at 18,000 francs, or about $1050 in American money. At present their production is around 50 cars a day. They told me, however, that it was their aim to increase this figure shortly, as they are very far behind in orders. Executives of this plant, as of others, seem to have difficulty in comprehending the great production of our largest American manufacturers. When I told them the number of cars being made by some of our largest plants they could hardly believe me.

"My conviction that American methods and many American products lead the world has been definitely confirmed. In regard to our own product, Duratex, the facts speak for themselves. Seventy-six successful automobile manufacturers throughout the world now use Duratex. And it is significant that Duratex is the only coated fabric used throughout as standard equipment on any European car."

The Combined Motors Corporation has leased the property at 119 West 63rd street, New York, from the Haggstrom-Callen Co.

F. C. Gilbert, President and Treasurer, Vulcan Motor Axle Co., Detroit.

KENNEDY CAR LINER & BAG CO.

The Kennedy Car Liner & Bag Co., Shelbyville, Ind., recently acquired and will operate a subsidiary factory in Woodstock, Ont., Canada, to meet the rapidly increasing demand for its product by the Canadian trade. The subsidiary concern will be known as Kennedy Car Liner & Bag Co., Ltd.

GROWTH OF COMET AUTOMOBILE CO.

Headed by George W. Jagers, as president and general manager, for many years a prominent figure in the automotive industry, the activities of the Comet Automobile Co., Dayton, O., maker of Comet automobiles, have grown in scope and the production has been increased until this year the output is expected to average 10 cars a day and the plans contemplate the completion of 3630 cars for 1920, as against 600 in 1918. An aggressive export campaign has resulted in the demand for upwards of 100 cars a month in that field. Mr. Jagers was for 12 years, general manager of the Racine Manufacturing Co., and, previous to that, spent 14 years with the J. I. Case Threshing Machine Co.

Working with Mr. Jagers, in the capacity of assistant to the general manager, is C. F. Jamison, who recently resigned an executive position with the Central Service Corporation, Indianapolis, Ind. Mr. Jamison's other connections in the automotive field have been as southwestern sales representative of the Chalmers Motor Co. of Detroit, general sales manager of the Saxon Motor Corporation and assistant general manager of the Elgin Motor Car Corporation.

Formation of Vulcan Axle Co.

The Vulcan Motor Axle Co. has been incorporated at Detroit to build a complete line of axles for motor vehicles. It is capitalized at $1,000,000, and a large modern factory has been secured, with ample shipping facilities, in the heart of the Milwaukee Junction manufacturing district of Detroit.

The executive officials are as follows: President and treasurer, F. C. Gilbert; vice presidents, R. B. Weaver; Sidney C. Love, C. C. Miller; secretary, J. T. Hanlon; chief engineer, R. G. Beechler. They have all been prominent in the axle industry since pioneer days.

PERSONAL SUPERVISION FOR MILLER BATTERIES.

J. H. Miller, president of the Miller Battery Co., Inc., Detroit, Mich., states that he is fast placing the Miller battery with dealers and service stations throughout the country. Every Miller battery has Mr. Miller's personal supervision before it leaves the factory. It is adaptable to all cars and it is claimed by its makers that no better battery can be made.

Mr. Miller is well known to the trade, having been for three years with the Pumpelly Battery Co., Indianapolis, and later with the Detroit Battery Co., which he left to organize the Miller Battery Co.

NEVERFAIL CARBURETOR JOBBERS APPOINTED.

The Neverfail Carburetor Co., Long Island City, N. Y., has recently appointed the following jobbers to distribute the new Neverfail model carburetor for Ford cars:

F. Hersh Hardware Co., Eastern Pennsylvania; J. C. English Rubber Co., New Jersey; Select Products Sales Corporation, Long Island and Brooklyn; Bailey & Co., North Carolina to Texas; Monarch Sales Co., Indianapolis; Deckert Brothers, Western New York and Western Pennsylvania; E. A. Patterson & Co., Kansas; The Mountain Tire & Gas Co., Colorado.

TO SELL AUTOMOBILE SPECIALTIES IN ENGLAND.

The County Chemical Co., Ltd., of Birmingham, England, one of the largest manufacturers of motor specialties in Great Britain, is establishing a selling organization to handle, in that country, automobile specialties made in this country.

This new selling organization will function under the name of British Sales, Ltd., but will operate in connection with the County Chemical Co. organization.

NEW MEMBERS, SAFETY COUNCIL.

Among the new members of the National Safety Council are the Comet Automobile Co., Decatur, Ill., and the Wood Brothers Thresher Co., Des Moines, Ia.

GARAGE JOURNAL

VOL. X. PAWTUCKET, R. I., JULY, 1920 No. 3

Proper Protection by Insurance an Important Factor in Use of Motor Car

New Rates Represent Advance of Practically 40 Per Cent. Over Last Year.

WHEN it is remembered that there are nearly 7,000,000 motor cars owned and operated in the United States today, it may well be realized that any change which vitally affects the protection of this army of automobile users in the legitimate exercise and enjoyment of their rights of ownership and operation will be of paramount interest.

An increase in the rates for automobile fire and theft insurance was predicted before action was actually taken by the National Automobile Underwriters' association early the present season, based on the increased risks occasioned by the augmentation of casualties, thefts, etc., concomitant with the increasing use of the motor car throughout the country. The new rates adopted represent an advance of practically 40 per cent. For fire and transportation risks on gasoline and steam privately owned passenger types of automobiles the rates range from 40 cents to $1.50. Alphabetical symbols have been assigned to all makes of automobiles in the classification manual, the range being from A to H inclusive, according to price of car, where operated, etc. These rates are key or basic, applicable to classes for all territories.

The fire rates for automobiles in New England, the eastern and western conferences, are to be the basic key rates before mentioned, classes A to H inclusive. The fire rates to be used for new automobiles in the southern conference territory (excluding the State of Mississippi) range from 60 cents to $2.25, the schedule being arrived at by applying substantially a 50 per cent. loading on the rates adopted for use in the New England, eastern and western conference territories.

Alphabetical class letters from L to W, inclusive, were agreed on to represent rates for theft insurance. The assignment of rates to these classes, which have been adopted for use in the so-called standard schedule territory in the New England, eastern, southern and western conferences, range from 25 cents to $6.35, according to class.

Penalty and Country Schedules.

For use in such territory in all conferences as require penalty rates for theft, the rates range from 50 cents to $10 according to class.

For use in the so-called country schedule territory, rates have been adopted ranging from 20 cents to $1.75. This is designated as Country Schedule A. A schedule has also been adopted known as Country Schedule B, of theft rates for use in farm or rural territory, and differentiated from the country schedule for general use, the rate for Schedule B being 15 to 75 cents, according to class.

Commercial Vehicles.

Rates for commercial vehicles for fire and transportation risks range from 75 cents to $2.35. No change was made in theft rates on commercial cars.

The new rates applicable to automobile fire and theft insurance are now the same for both new and second hand cars. Formerly a higher rate was made on a car bought second hand. The "loss of use" coverage upon which a charge was formerly based at the rate of 10 per cent. of the property damage clause is now eliminated, and under the new conditions the loss of use is attached to the property damage clause and is included in that rate.

It would be wise for the car owner, when receiving an automobile insurance policy from the broker, to read the contract over carefully. Particular attention should be given to see that the factory number of the car is correctly stated and that the automobile is properly described in the policy, especially such items as list price, number of passengers, whether driven by owner or chauffeur, whether used for pleasure or business or whether driven by the assured alone or by any other member of

ANY factor which affects in any way the cost and the safe and economical use of the modern motor car will be at once recognized as well worthy of consideration by the dealer and distributor, as well as by the manufacturer.

While the present condition of a demand greatly in excess of supply continues in the motor car market, it may not appear so essential to the short-sighted dealer to cooperate with other agencies, such as automobile associations and similar organizations, that are devoting their energies towards safety, economy, utility and pleasure in the ownership and operation of the automobile, the time is sure to come and is, perhaps, not so far in the future as it appears at the present time, when these conditions of high prices and congestion will be superseded by a much more conservative policy on the part of both buyer and manufacturer, and the wise dealer is the one who is building up his business on a basis looking to the future as well as the present.

There should be care and cooperation on the part of all concerned in any way with the manufacture, distribution and use of the motor car in order that casualties, fatalities, thefts, etc., may be reduced to the smallest possible minimum; and one of the results which should automatically follow would be a reduction in the tolls which the insurance companies are today obliged, on account of the constantly increasing risks, to impose on the motor car owner as the price of his protection in the use and enjoyment of this great factor in modern life and activity.

his family. The rate is affected by these particulars and therefore they should be noted very carefully.

Immediate Notice Should Be Given.

Under a theft and fire policy covering an automobile, the contract particularly provides that in the event the car is stolen immediate notice is to be given to the police in the vicinity where the car disappeared. The next step to protect the owner's interests would be to send a registered letter to the insurance company or to the broker who represents the assured.

There is a reduction in insurance rates where the assured uses more than one car, but driven by only one chauffeur. This reduction is a considerable one, and it would pay the owner to call the attention of the company to this fact.

Another class of insurance is what is termed "collision," which was first written by American casualty companies in 1907. The following year this form was undertaken also by fire and marine companies. In the beginning the company was not liable unless the amount of damage exceeded $25. The companies soon found that nearly all claims were running in excess of $25, so they altered the form by excluding from their liability the first $25 of each loss. In subsequent years the full collision plan was adopted and the $100 and $50 deductible clauses were introduced in the place of the $25 clause. The tendency of rates in this class of car insurance has been upward, as it has always been unprofitable for the underwriters.

FEATURES OF NEW RATES.

Features of the new rates are a moderate increase for public liability on passenger cars, a substantial advance in public liability rates on commercial vehicles and a radical augmentation in collision rates for all classes.

General increases are principally applicable in congested traffic territories, amounting to about 10 per cent. for passenger cars and approximately 35 per cent. for commercial. Collision rate advances are based on unprofitable experiences of all insuring companies and, while varying considerably according to the type of car, amount to at least 40 per cent. over last year's rates. Property damage rates are based on the inclusion of loss of use liability and are slightly less than last year's rates for the two hazards combined.

Territories have been slightly modified, but in general conform to last year's boundaries, with the important exception that a new intermediate territory between six and seven has been created.

The new rating continues car valuation as a basis, but by establishing a key symbol for each make of car, has obviated the defect in last year's system which necessitated an advance in the premium rate every time the maker of a car advanced his price.

Property Damage and Liability.

Property damage automobile insurance was first written in this country in 1899. It covers the owner as to any damage the machine might cause to the property of others. Within the last two or three years a demand arose for the broadening of this clause to include what is called "loss of use." Where a motor car is a necessary adjunct to a business and is damaged, making it necessary to hire another car, the law allows recovery, in addition to damages on the car, of the expense of hiring another car in the interim. As stated above this clause is now included in the regular policy.

The first liability insurance written in this country was in 1898 on electric vehicles. Gasoline and steam cars followed in 1899. For a few years at the start liability rates were far from uniform and stable. They were based, to some extent, on the horsepower of the car. The original basis was a flat premium for cars not exceeding a certain horsepower, with a certain additional premium for each additional horsepower. There was no conference or agreement of any kind on the part of the underwriters in different parts of the country. Each company quoted its own rates based, more often than anything else, it is stated, on underbidding competitors, with the result that this class of business was found unprofitable for most of the companies during the first few years. The companies finally awakened to the fact that before any real progress could be made there would have to be some uniformity in forms, rates and methods of rating, and that this could be attained only by some cooperation between themselves. Following this realization they adopted horsepower as the basis of rating and groups of horsepower ratings were established with a definite premium rate for each group. In time the automobile liability business was included in the liability conference, which later became a part of the National Workmen's Compensation Service Bureau. Chiefly as the result of the activities of this bureau and the cooperation of its members, automobile liability insurance has progressed more in the last four years than during the preceding 12.

Fire and theft insurance had much the same experience, namely, an early period of chaotic conditions. The folly of attempting to successfully handle the business under such conditions finally made itself manifest to the leading companies with the result that in 1909 a few companies organized an association out of which has grown the National Automobile Underwriters' association.

Development of Rating.

For some time after horsepower was adopted as the basis for rating, the advertised horsepower of the various models of cars was accepted. The advertising of horsepower at variance with the actual horsepower resulted in a change to insurable horsepower. The developments in the types of engines made the formula for computing insurable horsepower incorrect and changes were again necessary, and the companies abandoned horsepower and adopted list price as the basis for rating pleasure cars with variations in the rates according to whether or not the car is driven by chauffeur or owner, and the purposes for which it is used.

While the basis of writing commercial cars is still according to classification, provision has been made for insuring fleets on the payroll basis, instead of the specified car or named chauffeur basis, and also for the promulgation of an experience rate based on the experience of each individual risk.

Rates Higher in Congested Centers.

After the business started it did not require a very long time for experience to indicate that the liability and property damage loss ratio is always higher on cars operated in congested centers. Accordingly, higher rates were charged for cars operated in such centers. This system is still in effect, but it has been greatly refined so that now the entire United States is divided into territories for rating purposes.

The original liability policy has been liberalized and now protects the assured up to its limits, and the company agrees to defend suits, even though groundless, pay interest on judgments up to the policy limits and sometimes beyond. In New York state insolvency of an automobile owner is no defense to his insurer against paying damages, thus making the automobile liability policy a contract of insurance instead of a contract of indemnity. Until 1918 only one assured person was covered in a single policy unless an extra premium was paid. Now there is "omnibus coverage." The policy limits, originally $5000 to $10,000, have been increased to large amounts to meet the demand for full protection, the additional premium for large limits being as low as consistent. Now there is under consideration the issuance of unlimited policies.

Personal Liability Most Serious Risk.

Personal liability or damage claims and suits resulting from injuries inflicted by a car on the person of another party is the most serious risk that an automobilist must face today. His car may be wrecked, burned or stolen and the limit of his loss will be the value of the machine at the time of the incident. He may accidentally strike a pedestrian and be suddenly called upon to face a verdict of $25,000. It apparently makes little difference where the blame actually rests, especially if it happens to be a child involved. In such cases, very frequently the accident is unavoidable, the child darting out from the curb in front of the machine or appearing suddenly from behind some other vehicle, yet there is hardly a jury empanelled that will not render a verdict in favor of an injured child against an automobilist. In Paris, France, and some other continental cities, in case a pedestrian is struck by a motor car, he is held to be at least partly to blame and liable to arrest as well as the car driver. In this country, in spite of the fact that in a large percentage of the accidents the pedestrian is obviously at fault, the automobilist finds himself on the defensive.

Therefore, it would seem to be wise,

if the car owner can afford only one of the five principal lines of automobile insurance—by all means to choose personal liability—for, as has been stated, while insurance against fire, theft or collision may save him thousands, insurance against the personal injuries inflicted by his machine may save him tens of thousands. And judging from recent reports of classified casualties, a motorist takes about as many chances on hitting pedestrians or injuring people in other vehicles as he does on having his car stolen or burned.

The cost of personal liability insurance varies as to the make of car and the territory in which it is operated, and also as to the limits taken out. It is written in so-called "minimum" limits of $5000 to $10,000; that is, the insurance company will pay a maximum of $5000 in claims arising from the injury or death of any one person in any one accident, and $10,000 in claims arising from death or injuries to two or more people in any one accident. But in view of the increasing amounts awarded in jury verdicts these $5000-$10,000 limits are insufficient. Additional protection above these limits can be bought at a very small proportional increase in rates.

Claims for Property Damage.

Claims for the damage that a man's car may inflict upon the property of others is another form of liability which the automobilist is frequently called upon to face. Verdicts for property damage do not, as a rule, run as high as those in personal liability cases, probably for the reason that, in the first case, the actual damage may be definitely determined by the actual value of the property destroyed, while in the latter the claims are limited apparently only by the imagination of the injured party or the presumed ability of the defendant to pay. The liabilities included in this class arise from damage inflicted by one machine on another in collision, to property carried on other vehicles damaged or destroyed in collision (for example, should an automobilist run down a milk wagon and scatter the load, he would probably be called on to make good the loss), and for property adjoining the highway, such as lamp posts, telegraph poles, plate glass windows, etc., so frequently damaged.

Property damage is usually written in $1000 limits, and also varies in cost as to the make of the machine and the territory in which it is operated. Notwithstanding the fact that property damage liability verdicts run very much lower than personal liability ones, $1000 limits are rather small; to play safe this figure should be doubled or even trebled.

One big advantage of insurance is that it relieves the automobilist of the expense and trouble of attendance on fighting out a case in court. The insurance companies try to settle actions out of court, but when they do have to go into court before a jury all the costs of the proceedings are borne by them.

Steer Clear of Cut-Rate Policies.

In buying insurance, the automobilist should steer clear of any bargain or cut-rate policies. An insurance policy is, after all, merely a promissory note, and unless it has a strong, reliable company behind it, ready to make good these promises to pay and protect, it is not worth the paper upon which it is written. The cost of policies of a similar nature is practically the same in all of the old, reliable companies, and one written at a lower rate probably has some important feature lacking and does not afford the same protection.

When it comes to a choice between a company with weak resources and a shaky financial system, but with a low rate, and a strong company with ample resources at the standard rate, it is wisdom to choose the latter. At the moment of taking out the policy it may cost a few dollars more to insure in the good company, but when it comes to the time for payment of losses, it may have cost a few thousand more to have been represented by the weak company.

What Standard Policies Include.

Most of the standard fire and theft policies insure against direct loss or damage to the body, machinery and equipment of the automobile described therein, while within the limits of the United States (exclusive of Alaska, the Hawaian islands and Porto Rico) and Canada, including while being built, on the road, railroad car or other conveyance, ferry or inland steamer, or coastwise steamer between ports within the said limits.

Following are the perils insured against: Fire arising from any cause and lightning; while being transported in any conveyance by land or water, the stranding, sinking, collision, burning or derailment of such conveyance, including general average and salvage charges for which the assured is legally liable; from theft, robbery or pilferage, excepting by any person in the assured's household or in his service or employment.

Most of the standard fire and theft policies exclude liability for loss or damage to robes, wearing apparel, personal effects or extra bodies; also the usual exemption from liability from loss or damage caused directly or indirectly by invasion, insurrection, riot, civil war or commotion, military, naval or usurped power, or by order of any civil authority.

The insuring company does not hold itself liable beyond the actual cash value of the property at the time any loss or damage occurs, and such loss or damage shall be ascertained or estimated accordingly, with proper deduction for depreciation however caused, and without compensation for the loss of use of the property, and shall in no event exceed what it would then cost to repair or replace the automobile or such parts thereof as may be damaged with others of like kind and quality; such ascertainment or estimate shall be made by the assured and the insuring company or, if they differ, then by appraisal by competent, disinterested parties appointed by the assured and the company, one by each, these appraisers selecting a competent and disinterested umpire. If the appraisers cannot agree upon the selection of an umpire, after a period of 15 days, he shall be chosen by a judge of a court of record in the county and state in which the property insured was located at the time of the loss. The appraisers shall individually appraise the damage or loss and, failing to agree, shall submit their differences to umpire.

Policy Voided by Misrepresentation.

The entire policy becomes void if the assured conceals or misrepresents any material fact or circumstance concerning the insurance or the subject thereof.

IMPORTANT POINTS FOR CAR OWNERS.

Car owners should read over insurance contracts carefully, giving particular attention to see that factory number of car is correctly stated, that the vehicle is properly described, especially such items as list price, number of passengers, whether driven by owner or chauffeur, whether used for business or pleasure, or whether driven by assured alone or by other members of his family. The rate is substantially affected by these particulars.

Under theft and fire policy, immediate notice of theft should be given to police in vicinity where the car disappeared, and a registered letter of notification should be forwarded to the insurance company or its representatives.

The automobilist should steer clear of bargain or cut-rate policies and insure only in old, reliable companies. At the moment of taking out the policy it may cost a few dollars more, but when the time comes for the payment of losses, it may cost thousands more to be represented by a weak company.

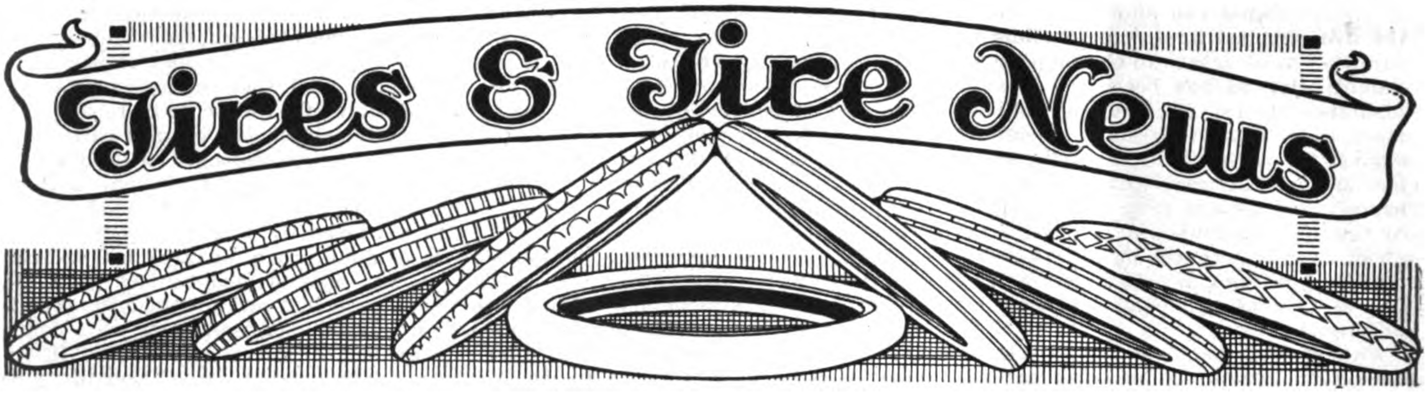
If the car owner can afford only one of the five principal lines of insurance, he is advised, by all means, to choose personal liability, for while protection against fire, theft or collision may save him thousands, personal liability insurance may save him tens of thousands.

The policy also becomes void, unless otherwise provided by agreement in writing added to it, if the assured be other than the unconditional and sole owner of the property; or in case of transfer or termination of the interest of the assured in the property other than by the death of the assured; or in case of any change in the nature of the insurable interest of the assured in the property described in the policy whether by sale or otherwise.

Unless otherwise provided by agreement in writing added to the policy, the company is not liable for loss or damage to property insured while encumbered by any lien or mortgage; while the automobile described is frequently or habitually used as a public or livery conveyance for carrying passengers for compensation and for one week after the termination of such use; or while being rented under contract or leased, or operated in any race or speed contest.

No suit or action on the policy or for the recovery of any claim under it shall be sustainable in any court of law or equity unless the assured shall have complied with all the requirements stated in the policy; nor unless commenced within 12 months after the happening of the loss.

Tires & Tire News



New Factory of Lee Tire & Rubber Co.

The accompanying illustration shows the completed plant of the Lee Tire & Rubber Co., with the addition consisting of new milling department and vulcanizing room. The company has added 14 mixing and warming mills and eight vulcanizers to its equipment, giving a capacity of over 3000 tires a day. The Lee Puncture-Proof tire is being made in additional amounts, well over 50 per cent. being of that type, the balance being largely cord tires.

Sales of the Lee Tire & Rubber Co., Conshohocken, Pa., in the first four months of 1920 totalled more than $850,000, an increase of 60.5 per cent. over the corresponding period last year, while the net earnings were more than $325,000, an increase of 50 per cent. Estimates of earnings for the full year are between $9 and $10 a share. The production schedule calls for 500.000 tires this year as against 300,000 last year.

MILLER SHOWS BIG INCREASE IN BUSINESS.

The business of the Miller Rubber Co., Akron. O., shows an increase of 1200 per cent. in the last five years. The working force has grown, in 24 years, from 25 to 6000, and the floor space occupied from 1200 to over 1,000,000 square feet. Business for the current year, it is estimated, will reach $50,000,000.

PERFECT WORK ON CALENDERING MACHINE.

How carefully work must be done in rubber tire and tube making is revealed by a statement that a gang of men on a calendering machine at the Akron, O., manufactory of the Goodyear Tire & Rubber Co. recently broke all records for perfect work and percentage of bad stock for the period of a month. During that time the crew in question rolled 24,450 yards of tube stock for inner tubes, the most difficult of all calendering work, with a percentage of bad stock of but 1 1/10th. Another gang had a percentage of 1.28 for the month. These records are all the more astounding when it is considered that tube stock must be rolled almost to 1/1000th of an inch and that the inspectors will reject it if there is any appreciable variation.

SHIPPING FACILITIES FOR RUBBER TRADE.

One of the forthcoming acquisitions to the trans-Pacific lines of vessels calling at Singapore is a service by the Los Angeles Pacific Navigation Line, a new company, which announces its intention to operate a line of freighters running direct between the Pacific coast metropolis and Far Eastern ports, with Singapore as its eastern treminus. One of the main objects of the launching of this new line, as stated by the promoters, is to serve the rubber manufacturing industry in and around Los Angeles, giving direct connections with the crude rubber plantations of the Far East.

Standard Four Co's Publicity

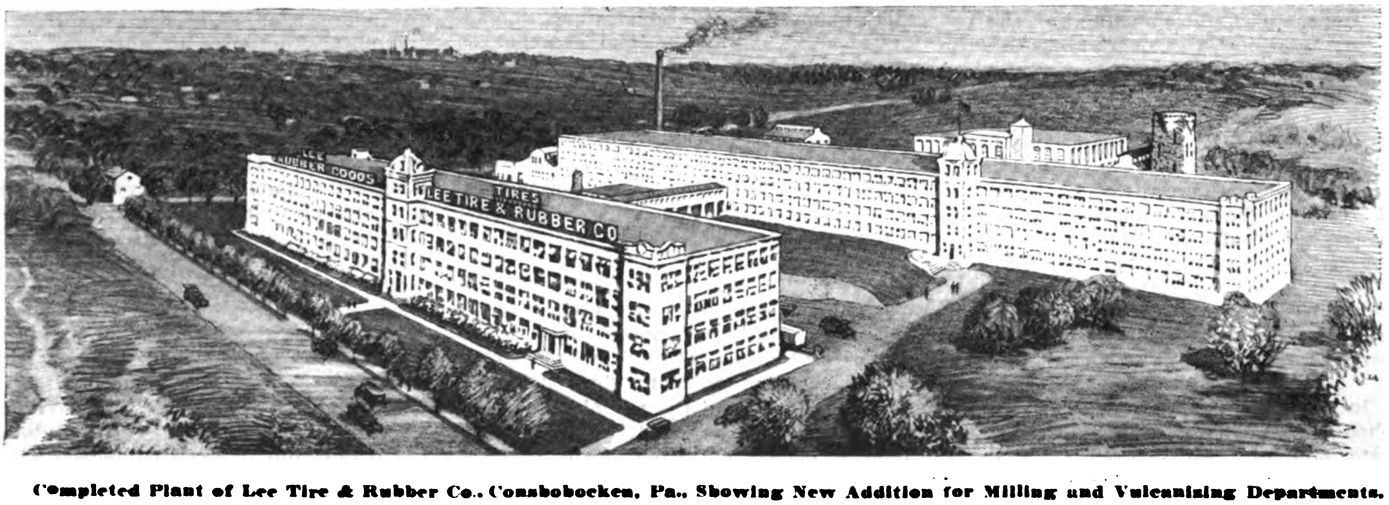
The Standard Four Tire Co., Keokuk, Ia., has inaugurated a novel publicity campaign, the basis of which is 26 original paintings portraying Indian lore and legend in many of its most interesting phases.

The scenes cover a wide variety of subjects, including the following titles: "The Indian Runner," "The Medicine Man," "The Indian Oath of Fidelity," "Archery," "The Marriage Ceremon "The Great Spirit," "The War Dance," "The White Captive" and "Arrow Making," and they are works of some of the leading commercial artists of the country.

J. B. Gabeline, president of the Standard Four Tire Co., authorizes the following statement concerning the reason for this extensive art programme:

"Standard Four Tires are manufactured in the locality where once lived one of the most unique characters among Indian chieftains. His name was Keokuk and he was noted not so much for his warlike qualities as for his fidelity to a promise. Among all of those with whom he had dealings the word of Chief Keokuk was indeed as good as his bond. He never broke a promise.

"Thus it occurred to officials of the Standard Four Tire Co. that the spirit and character of the old and respected chief might well represent the policy and aims of the company. Hence the adoption of a slogan that reads, 'Chief of the Tire Tribe.'"



Completed Plant of Lee Tire & Rubber Co., Conshohocken, Pa., Showing New Addition for Milling and Vulcanizing Departments.

Burdick Tire Co's New Factory Unit

The new factory unit of the Burdick Tire & Rubber Co., Noblesville, Ind., now nearing completion, is one story of brick, 75 by 120 feet, and will be used as a power house. The new factory building, which was completed about two months ago, is of solid reinforced concrete, 100 by 200 feet. It is three stories in height and contains over 75,000 square feet of floor space. By August the output is expected to reach 250 casings and 500 inner tubes a day, and by the end of the year 500 casings and 2500 tubes daily. With this as a basis the company will be turning out 2500 tires and 5000 inner tubes a day by the latter part of 1921, and to attain this production it will be necessary for them to employ over 1000 persons.

The officers of the company are as follows: President, H. G. Steinheimer; vice president and general manager, F. E. Teachout; secretary and treasurer, H. P. Steinheimer. The executive offices are at 10 South LaSalle street, Chicago, and the factory and general offices are at Noblesville, Ind.

IDEAL CO.'S HOUSE ORGAN, THE GREYHOUND.

One of the neatest and best arranged house organs issued by any concern in the industry is the Greyhound, now well into the second volume of its existence. This is published by the Ideal Tire & Rubber Co., Cleveland, O., maker of Greyhound tires and tubes, and the table of contents for the June number includes articles on "Greyhound Ford Casings," "Steps in Rubber Manufacture," "Tracking an Auto by Its Tire Trail" and "Our Method of Marketing Greyhound Tires." It is well illustrated and its departments devoted to wit, gossip from factory and sales branches, etc., are lively, interesting and helpful.

DIRECTORS OF HANNIBAL RUBBER.

The Hannibal Rubber Co., recently incorporated at Hannibal, Mo., has elected the following directors: C. O. Maves, S. O. Osterhout, R. B. Goodson, D. D. Mahan, W. J. Richards, A. E. Gibson, C. C. Haywood of Shelbina; W. G. White of Whiteside, and H. M. Still of Kirksville. A factory is being erected at the foot of South Maple avenue and Collier street and will probably be ready for occupancy the latter part of the month. The authorized capitalization is $1,000,000.

SIX-WHEEL BUS AT AKRON.

A pay-as-you-enter auto bus, patterned after the new type of street cars and capable of hauling 100 people, is being designed by the Goodyear Tire and Rubber Co., Akron, O., as an experiment in broadening the field for pneumatic tires.

It will be equipped with six wheels, and the company later intends to operate a bus with eight wheels similar to the double trucks on street cars.

ADDITIONS TO INDIA COMPANY.S PERSONNEL.

The India Tire & Rubber Co., Akron, O., has made two more important additions to its executive staff in K. C. Burtscher, who has become traffic manager, and Calvin F. Troupe, who is placed in supervision of the southern Wisconsin territory.

Mr. Burtscher is well known in transportation circles through his former connection with the Wheeling & Lake Erie railroad. He has also spent two years in Goodyear's traffic department.

Mr. Troupe was formerly branch manager for the Fisk Tire and Rubber Co. in Milwaukee, Wis. He will now make his headquarters in that city, working in direct connection with the Ramler Rubber Co., India distributor.

SURETY CO. HAS ENLARGED.

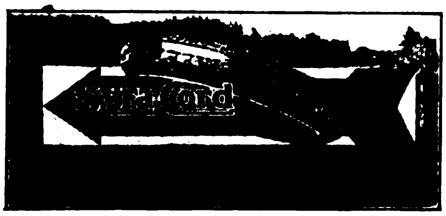
The Surety Tire & Rubber Co. is now installing machinery and equipment in its new plant at Kansas City, Mo., which will make possible a daily production of 1000 cord, 1250 fabric, 1000 Sternwear and 5000 ordinary tubes. The company is capitalized at $1,500,000.

STANDARD SYRA-CORD ROAD SIGN.

The accompanying illustration shows the standard Syra-Cord road sign that the Syracuse Rubber Co., Inc., Syracuse, N. Y., has patented and is erecting throughout the United States at head-on locations on highways. It is considered both one of the largest and most striking road sign designs in use in the country and is creating a great deal of favorable comment in publicity circles.

For a number of weeks past the company has been experimenting with a sample sign in the vicinity of Syracuse. Several different color schemes were tried. The one finally adopted is that now on the sign—a gigantic red arrow, 50 inches long and 10 inches high, passing through an immense Syra-Cord tire. The background of this sign is in a light blue that is calculated both to set off the red arrow and act as a contrast to any background on which the sign might be located. Across the face of the arrow in black, outlined by white, are the words "Syra-Cord," and the company's slogan, "Built by Cord Tire Specialists." On the tail of the arrow is a space for the name and address of the dealer handling the tire in any given territory.

H. H. MacBride, advertising manager, states that the company is already under contract with one of the largest sign companies in the United States to build these signs throughout the country.



Enlargement of Goodrich Plant

The B. F. Goodrich Rubber Co., Akron, O., has building expansions under construction which will increase the size of the plant 20 per cent. and cost, with new equipment and machinery, in excess of $10,000,000. The new buildings will provide 779,000 square feet of additional floor space, making a total of 4,554,304 square feet. Several thousand additional workers will be required next year to care for the contemplated increased production.

The largest of the new buildings under construction is an eight-story warehouse for raw materials with 530,000 square feet of floor space. When completed it will be the largest factory building in the city. The second largest building will have nearly 200,000 square feet and will be used exclusively for tire building. Other new buildings being erected include a giant water softening plant, an electric current transformer station, a large refrigeration building and an extension to the boiler house of Mill 2.

A better idea of the extent of the new construction can be obtained from the fact that the added floor space alone is larger than that of three-fourths of the rubber companies of the United States. It emphasizes the steady growth of the Goodrich Company since it was organized 50 years ago, many years before any other rubber factory was opened in the "Rubber City."

The original plant of the Goodrich was a building 40 by 100 feet and only 35 employees were on the first payroll. Today this original building could be tucked away and lost in any of a dozen of the company's buildings. The force of 35 employees has grown to an army of 28,000 men and women.

GOODYEAR'S POLICE FORCE.

The police force of the Goodyear Tire & Rubber Co. now comprises 200 men, or 50 more than the entire city of Akron, O. In addition to guarding the factories, this force, under Chief John Kidney, looks after the residential section of Goodyear Heights, with a population of 5000 people; the Wingfoot Lake air station, where the dirigible balloon activities of Akron are centered; and a rim plant operated by the company at Thomastown, a suburb of Akron.

TERRELL CO. ORGANIZED.

The Terrell Tire & Rubber Co. has been organized at Kansas City, Mo., with capital of $1,000,000, for the purpose of manufacturing automobile tires, tubes and other rubber products. The company has the exclusive rights for the making of Fabric-Cord tires, a pneumatic tire invented by A. C. Terrell of Kansas City, president of the company. The other officers are: Vice president, Otto W. Croy; secretary and treasurer, R. L. Meierhoffer.

Practical Hints on Vulcanization and Repair of Tires

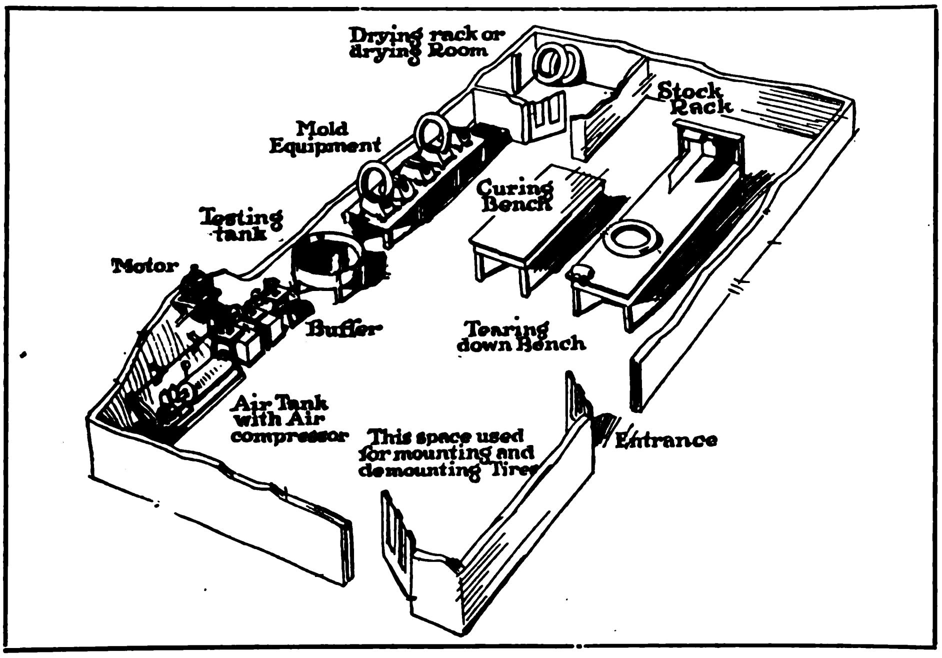
(From Goodyear News.)

WELL ARRANGED VULCANIZING SHOP.

Tire vulcanizing is a trade in which, if the various operations are simplified, much useless detail and lost motion may be eliminated, adding to the efficiency of the shop. The layout or plan of arrangement of a repair shop is one of vital importance. As every shop has different dimensions it would be difficult to formulate any set plan of layout which would apply in every case.

The necessary equipment and the relative position of each will not be taken up with regard to dimensions, but considered only in the details of their operative efficiency.

Mold equipment should be located so that it is not exposed to a constant draft. This equipment should be set in as close as possible to one of the walls. Directly in front of this should be the double shelf curing bench, the lower shelf of which is used for bead molds and the second for air bags. The top of the bench is used for preliminary curing operations.



Drying rack or drying Room
Stock Rack
Mold Equipment
Curing Bench
Testing tank
Motor
Buffer
Tearing down Bench
Air Tank with Air compressor
This space used for mounting and demounting Tires
Entrance

To the right or left of the mold equipment place the circular tube testing tank. Next to this should be the buffing stand and air compressor. Care should be taken to cover the air pumps to exclude buffing dust. Arrange these last three pieces of equipment so that sufficient room is left for working around them.

The drying room, or if the drying room is not used, the drying rack should be located at the opposite end of the shop from where the buffing is done and in a direct line with the rest of the equipment mentioned. Keep the room or rack far enough from the mold equipment to prevent an accelerated action in the drying.

In the middle of the shop place a large tearing down and building up bench, wide enough to permit work at it from either side. At one end of this bench place a notched stock rack with iron piping as a support for the various rolls of repair materials. If the shop's location affords a cellar or basement, the best arrangement is to provide for the tearing down and buffing equipment there. The compressor can be also located in the cellar. This would leave the ground floor for a drying, building up and curing room.

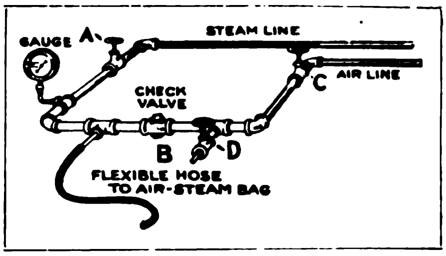
1. Don't attempt to have your sales room a part of your vulcanizing shop proper.
2. Don't huddle or crowd your equipment; leave operating space where necessary, thus facilitating the cleaning up operation. A clean shop is an absolute necessity.
3. Don't fail to leave a good sized space for mounting and demounting tires from rims.
4. Don't have your tube testing tank near your raw materials.
5. Don't expose your mold equipment to drafts.
6. Don't fail to take advantage of natural light, especially in reference to building up and tearing down.
7. Don't fail to furnish plenty of artificial light if sunlight isn't available.
8. Don't fail to properly guard your buffing equipment. This will prevent buffing dust from scattering.

Connection to Air and Steam Bags.

The accompanying drawing shows the arrangement of piping and valves for making connections to combination air and steam bags. By the arrangement a change over from air to steam or steam to air can be made without disconnecting the connections on the bag. In carrying out this operation it is important that the directions are followed very closely.

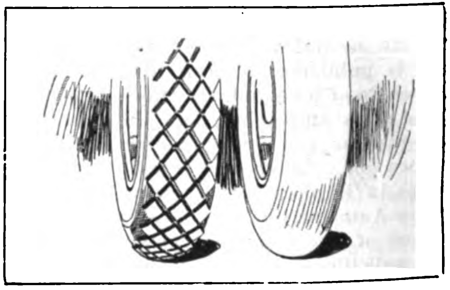
The flexible tube is connected to the bag. The valve C is opened, valves A and D being closed, thus admitting air to the bag. When it is desired to make the change over to steam, valve C is closed and A and D opened.

The purpose of the valve D is to prevent air from leaking into the bag with the steam in case valve C should leak. This sometimes happens unless valve D is put in the line due to the fact that the air pressure is higher than that of the steam. Check valve B prevents the steam or condensed water from flowing back into the air line in case the air is shut off.



EQUAL TRACTION OPENS WAY FOR TIRE SALES TALK.

In making a tire inspection it is a good plan to tell the owner the story of equal and unequal traction. Show him with a diagram, using pad and pencil that, by shifting his casings so that they balance each other, he can obtain equal traction (equal gripping and pulling power of the casing on the road surface.) This also enables him to obtain hundreds of miles of mileage otherwise lost. (See diagram.)



It is a well known fact that, due to the peculiarities of driving, traffic rules, of starting and stopping, that tires wear out as follows: Rear right first, then rear left, right front next and left front last. If the motorist has this explained to him he will more readily agree with you when you prescribe retreading or repairs, shifting casings or purchase of new.

FABRIC RUPTURES.

Fabric, like steel or any other article, has its limit of strength, and when taxed beyond that point will break. A rupture of this nature may be caused from a cut or bruise and usually, although not always, splits with the bias or in the direction of the threads of the rubber. The bruise does not always leave a mark in the rubber cover on the outside, and it is, therefore, sometimes hard to understand why a tire blows out when being driven on a perfectly smooth street. The cut or bruise may originally be very small, but it causes the fabric to continue to strain and break at this weak place, and to eventually pinch the tube or blow out.

DIRECTION OF REVOLUTION DOES NOT AFFECT LIFE.

Does it make any difference in the manner of the application of a casing in regard to the direction of revolution? This is a question asked by a Wyoming man and can be answered as follows: There is little difference in the lasting quality of a casing to be derived from changing the running direction when putting it back on the wheel. While running in one direction the cords in the casing are necessarily pulled or strained in one direction, and naturally, when the direction of revolution is reversed, the strain is reversed. Whether this is good or injurious for the casing is a question, but seemingly there is but little to be gained according to experiments in reversing the direction of revolution.

With this method it is also necessary to tighten up the clamps from three to five minutes after the casing has been placed in the mold.

SIMPLE DEVICES THAT WILL SAVE TIME AND MONEY.

In the accompanying illustration is shown an advertising device used by a New Jersey repairman, who used to lose a good many air gauges because thoughtless customers carried them away.

He cut sections from a Goodyear tire showing the tread pattern as well as the construction of the casing, and bored holes in them through which chain links were fastened and to the other end of the chains the air gauges. The combination is so unusual that he says motorists examine the section of casing and come in to ask questions about the tire. This often gives him an opportunity to sell a tire.

TREAD WEAR MAY BE CAUSED BY BRAKE BANDS.

Excessive wear to the tread of a tire does not necessarily indicate irregular alignment of wheels. If on the rear wheel the damage may be caused by one or both brake drums being too tightly adjusted. If the clamping brackets of demountable rims are not tightened evenly the rims will wabble and grind the tires off in a short time.

The canting of the front wheels outward at the top, for the purpose of easier steering and turning of curves to better advantage, varies from one-quarter to 1⅛ inches between inside felloe measurements. If the wheels stand too far outward at the top there is some binding effect at the axles; the tires do not roll freely, the strains on the fabric are not equally distributed and the rubber on the side wall is more exposed to wear.

It is the general impression that excessive wear to the tire tread is caused from misalignment of the wheels, and the real fault is not, therefore, always discovered even when the car has been inspected by a mechanic. If, on test, the wheels are found to be in alignment, other conditions that might cause wear are not considered, and the tire is itself assumed to be defective. Excessive wear on the tread may often be traced to a loose or worn hub disc, bent axle, steering rod or knuckle, or a connecting rod that is either too long or too short. If on a rear wheel the damage may be due to the brake drums, as stated above.

THE QUESTION BOX.

Q. Is it important to cut fabric for sectional repairs on the bias?

A. All manufacturers of fabric tires cut their fabric on a bias to give resiliency to the carcass. In making a sectional repair the object is to get a job that will not be stiffer than the rest of the tire. Hence, if fabric used is cut on the bias, the repairman is more likely to get a job that will not be stiff.

Q. What is the cause of tread gum loosening from the casing?

A. Improper buffing, the use of a poor grade of solvent in cement, or dirty spots on the old carcass due to a water-soaked condition, are probable causes for loosening of the tread.

Q. What is the correct amount of cushion gum to apply to a casing which is being retreaded?

A. One thirty-second of an inch of G-170 cushion gum.

Q. What is the cause of retread work coming off the casing in pieces?

A. Probably over-cure.

Q. What is the best way to repair fabric separations caused from running on a flat tire?

A. It depends entirely upon the extent of separation of the plies. If the casing is too badly separated, it will not be profitable to make a repair. For slight separation, one-ply deep and not over two or three inches long, the ply might be split, the edges raised, cemented and placed in position and a patch of new fabric applied on the top.

Q. Is high test gasoline necessary for use in cutting C-15 cement?

A. No. The point to remember in using a solvent is that it shall be free of oil residue. Oil in a solvent will give all manner of trouble in a cure.

RIM CUTS.

Rim cutting is not always a result of running with under-inflated tires. In fact the construction of the beads has been so improved that running soft does not usually damage the beads to any great extent. Rim cuts are more likely to develop from dented rims, and very frequently from heavy loads, fillers, etc. If a tire has been ridden deflated for a considerable distance at any time, the rim flanges may have been battered down and have become rough. In such an event the next tire to be applied is sure to be cut around the beads. If not neglected too long, such an injury may be satisfactorily repaired.

DEGREES OF HEAT, NOT PRESSURE, MAKE BEST CURE.

There is only one proper cure for a given material when it comes to the question of applying heat. It is needless to say that the time of cure naturally depends upon the thickness of the raw materials used.

Steam gauge pressure is only standard at sea-level and 40 pounds in that case represents 286.7 degrees Fahrenheit. In all elevated parts of the country, such as Denver, the 40 pounds of steam pressure would be lower by several degrees. For this reason, care must be taken to observe the altitude in which the cures are made.

Another condition to be aware of is that there may be trapped air in the mold or condensation may have taken place. In this case the steam gauge would still read 40 pounds steam pressure but the heat of those molds would be far below 286.7 degree Fahrenheit.

Therefore, the important thing to remember in curing is not steam pressure, but degrees of heat.

If possible use a thermometer on the molds and then the repairman will know whether or not he has the proper curing heat.

DANGER OF NEGLECT.

Car owners cannot sometimes understand why tires having good covers and appearing to be all right from the outside fail to give more service, and are surprised to learn from the repair man that it is not advisable to rebuild the tire. This is often due to water working through neglected cuts in the cover and causing separation, decay and disintegration of the fabric.

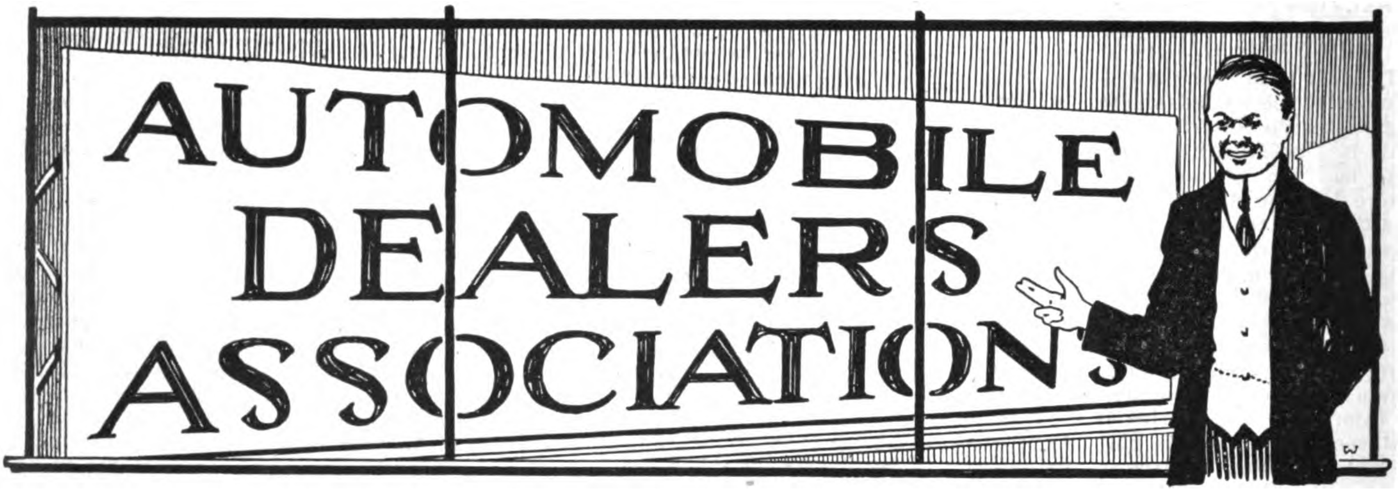
A neglected cut spreads or opens under the weight of the car. Dirt and moisture works in and when the wheel revolves this foreign matter is held and a wedging action takes place. In time sand boils form and continued neglect means the entire separation of the tread.

BEST UNIONS MADE BY TREAD CONTACT.

When repairmen find treads "letting go" where the new rubber joins the old, they can be sure, if the cement is thoroughly dry and the solvent has no oil residue, that the trouble is due to the fact that they have not made the tread union consist of tread gum to tread, i. e., they have probably united tread gums by means of a union of cushion stock.

HUDSON TIRE CO. INCORPORATED.

The Hudson Tire & Rubber Corporation has been formed with capital of $1,000,000 and executive offices at 503-504 Proctor building, Yonkers, N. Y., and will commence at once the building of a modern factory on a 20-acre tract of land in that city, where cord and fabric tires, tubes, solid truck tires and other rubber goods will be made. The officials are: President and general manager, W. M. Doucette; vice president and treasurer, H. B. Seymour.



Dafoe Heads Minn. Association

With a view to bettering local trade conditions and lending aid to the proposed Babcock good roads amendment movement, Minneapolis and St. Paul motor vehicle dealers have perfected a permanent organization under the name of Twin City Motor Vehicle Men's association. The following officers were chosen:

President, Harry Dafoe, Federal Motor Truck Co.; vice president, Carl Will, Wilcox Co.; treasurer, Joseph A. Donnelly, Mack Co. Board of directors, E. W. Brehm, Brehm-McMullen Co., Acme distributor; J. C. Compton, White Co.; W. R. Stevens, Pence Auto Co.; G. E. Holmberg, Stevens Corporation, Republic truck distributor. P. S. Wells of the Master Motor Truck Co. was appointed chairman of a permanent entertainment committee.

The election of a secretary was deferred pending the appointment of a paid assistant secretary.

"Minneapolis and St. Paul commercial car dealers have long been in need of such an organization," says President Dafoe, "and with an association composed of live-wire distributors, manufacturers and factory representatives, we are assured immediate success in our undertaking. With the Babcock good roads amendment coming up for adoption or rejection at the November election, it behooves the motor truck dealers to busy themselves spreading propaganda favorable to the movement for, unless this amendment passes, we can see no immediate improvement in roads throughout the state and unless there are improvements, and vast improvements, made within the next few years, the motor haulage project will be retarded in its progress and our opportunity to relieve freight congestion will be lost, in part."

Harry Dafoe, President Twin City Motor Vehicle Men's Association.

OUTING OF PHILADELPHIA ACCESSORIES ASSOCIATION.

The Automobile Accessories Business association of Philadelphia held its annual outing at Bushkill, Pa., June 18 and 19, which was attended by 100 members, who made the trip in 35 automobiles with a Graham Brothers truck for the conveyance of baggage, tire repair outfit, etc. The affair commenced with a lunch served in the rooms of the Philadelphia Automobile Trade association before the start on the 100-mile run through Sellersville, Quakertown, Coopersburg, Allentown, Bethlehem, Nazareth, Wind Gap, Saylorsburg and Stroudsburg. Upon arrival at Bushkill a dinner was served and the evening was spent in dancing, games, etc.

The second day was occupied with baseball and other outdoor sports, visits to spots of interest in the vicinity, etc., and the return trip was made in the afternoon by the way of Delaware Water Gap. A feature of the journey home was the entertainment provided at Easton by the representatives of the automotive industry under the auspices of the Easton Motor association, the committee of arrangements, including Robert G. Arnold, executive secretary; C. H. Quig, Fred L. Way and C. C. MacDougall. A visit was made to Lafayette college.

The chairman of the Automobile Accessories Business association's outing committee was George L. Fischer of J. H. McCullough & Sons.

Florida Association's Bonding Plan

The plan proposed by the Florida State Automobile association for taking care of a state bond issue for a state system of roads and bridges with revenues derived from state registration fees, or licenses, on motor vehicles, is as follows:

A bond issue of $5,000,000 running for 20 years from July 1, 1921, maturing June 30, 1940, at five per cent. interest.

A bond issue of $5,000,000 running for 18 years from July 1, 1923, maturing June 30, 1940, at five per cent. interest.

A bond issue of $5,000,000 running for 16 years from July 1, 1925, maturing June 30, 1940, at five per cent. interest.

A bond issue of $5,000,000 running for 14 years from July 1, 1927, maturing June 30, 1940, at five per cent. interest.

Based at 50 cents per hundred weight on all motor driven vehicles, at an estimated average weight of 2000 pounds, the revenue to be derived from a total of 75,000 such vehicles for the year 1922 would amount to $750,000. After deducting 10 per cent. for cost of tags, expenses incident delivery of tags, registration certificates, licenses, etc., the net revenue available for taking care of the bond issue would amount to $675,000 for the first year.

All funds collected from motor vehicle licenses, after paying the annual interest on the bonds, would be placed in a sinking fund, and the interest on these funds at four per cent. per year would be added to the principal of the sinking fund each year and also draw interest.

Before the close of the year 1940 there would be a sufficient amount in the sinking fund to retire the four issues of bonds and a balance of $3,076,127 which could be used for road building or repairs.

Electrical Craft has been organized as a department of the Portland Garage and Repair Men's association of Portland, Ore. Its membership comprises R. W. Lee & Co., Gibson Electric Garage and Storage Battery Co., Sunset Electric Co., Electric Service Auto Co., Keene & Morrison, Johnnie Walker, Bolton Service Station, Fred Dundee, Ballou & Wright and the Pacific Eisemann Co.

Curran-Detroit Increases Capital

The sales campaign inaugurated by the Curran-Detroit Radiator Co., Detroit, Mich., the first of the year, has resulted in so great a demand for its radiators that the capitalization has been increased to $1,000,000, but it remains a Michigan corporation. The personnel of the management is as follows: President, Edward T. Curran, B. S., L. L. M., M. D., Detroit, radiation engineer, inventor of Curran radiators and Detroit water heaters and founder of the Detroit Heater Corporation; vice president, W. H. Fahrenbach, attorney-at-law and capitalist, Cleveland, O.; second vice president and general manager, Harry H. Rowe, Detroit, sales expert, associated for 16 years with the sales departments of the Burroughs Adding Machine Co., the Packard Motor Car Co. and the Federal Truck Co.; treasurer, John Kelly, Detroit, formerly with the United States Pattern & Manufacturing Co., pattern and manufacturing expert; secretary, Thomas W. Booth, at present associated with the Burroughs Adding Machine Co. as production manager of the Canadian branch, with which company he has been associated continuously for the past 14 years.

The board of directors is composed of the foregoing, together with William J. Murray, president of the Murray Cartage Co.; Edwin T. Harms, vice president of the Detroit Vapor Stove Co.; M. N. Nahikian, insurance broker and capitalist, and Harry F. Lacey, cost accountant expert of Detroit.

The chief engineer is H. I. Phillips, A. E., M. T., formerly experimental engineer of the Northway Motor Co., Detroit; also Bureau of Air Craft, United States army, graduate U. of M. Godfrey E. Hamel, Detroit, formerly with Price, Waterhouse & Co., certified public accountant, is auditor, and the company's attorney is Ex-Senator Clarence E. Gittens, Detroit, of the firm of Gittens, Heald & Lux.

MAC-LAR BATTERY CO. BECOMES MICHIGAN CORPORATION.

At a recent meeting of the board of directors of the Mac-Lar Battery Co., Inc., Detroit, it was decided to change the company from a Delaware to a Michigan corporation, and to increase the capital to $125,000.

In the year and a half of its existence the Mac-Lar Battery Co. has attained a nation-wide distribution for its product, the Mac-Lar "Spike-Test" lighting and starting batteries. The new plans of the company provide for following up this successful record with an even more intensive merchandising campaign and largely increased production.

The officers of the organization are: President, Walter L. Malotte, director and Michigan representative of the Gilliam Manufacturing Co. and vice president of the A. E. Bowman Co. of Detroit; vice president, A. E. Bowman, president of the A. E. Bowman Co., automobile accessory jobber of Detroit; secretary, W. J. Clark, Michigan representative of the Standard Bolt Co., Columbus, O., and of the Fitzgerald Manufacturing Co., Torrington, Conn., also second vice president of the A. E. Bowman Co.; treasurer, L. A. Steele, former assistant secretary of the Newberry estate; production and factory manager, C. J. Larsen.

INCORPORATION OF VICTOR RITE-LITE CO.

The Victor Rite-Lite Co., Inc., 339-345 Bloomfield avenue, Montclair, N. J., has been incorporated with a capital of $125,000, and having purchased the Standley Non-Skid Chain Co., it will automatically take over the national distribution of the Standley products, which will include the well known collapsible luggage carrier, non-skid chain, rim tool, etc.

The Victor Rite-Lite Co., will manufacture and feature an invention which can be readily attached to any car, and which will enable the lamps of the car to swing with the wheels, namely the Victor Rite-Lite, that is, when the car turns a corner the light is where it is wanted, on the road. This invention is very simple and will be a great benefit to the automobile world, in that it eliminates the danger of the curve and makes night riding safe.

Due to the fact that the company has already sold its entire output for six months in advance, it is now recapitalizing for $3,000,000 in order to erect a foundry, enlarge the machine shop, drawing mill, warehouses, etc.

The concern is headed by Hector S. Hill, president, an eminent man in the automobile world; Benjamin Rotsman, vice president; George J. Crabb, treasurer; Edward J. Rennie, secretary.

NEW OFFICIALS OF MADISON CO.

The Madison Tire & Rubber Co., Inc., the general offices of which are at 20 West 60th street, New York City, announces the appointment of Jean Nehmelman as sales manager, and George Shortmeier as manager of the New York branch. Sylvan E. Weil will continue as assistant sales manager.

Central Auto Top Co. Formed

The Central Auto Top Co. of Indianapolis, Ind., which came into existence as a partnership in 1912, has been incorporated under the laws of Indiana and has taken the name of Central Auto Top & Leather Co. and will continue the same line of business and broaden its operations by the manufacture of leather products, such as belts, fan belts, automobile clutch leathers, leather specialties and belt repairing. The original company made automobile tops, victoria tops, seat, tire, radiator and hood covers, dust hood, door hand pads, back pads and repairing.

The capitalization of the Central Auto Top & Leather Co. is $75,000, and the officers are as follows: President, William Swoboda; vice president, Chester A. Carlisle; secretary, Charles Swoboda; treasurer, William Marble. The new line will be in direct charge of Charles Swoboda, who has been with the Hide Leather & Belting Co. of Indianapolis for 29 years as superintendent.

Officials of the Central Auto Top Co.: B, William Swoboda, President; C. Chester A. Carlisle, Vice President; A, Charles Swoboda, Secretary; D, William Marble, Treasurer.

The Central Auto Top & Leather Co. has grown from a small beginning until now it is probably one of the best known top companies in the Middle West, and through its fair policy has built up an enviable reputation. All the products are guaranteed for material and workmanship.

Its business has rapidly increased since its inception on Michigan street, and has made two removals necessary, first to 330 North Illinois street, and later to its present quarters at 421-425 North Capitol avenue, and a new factory is contemplated in the near future. Messrs. William Swoboda, Carlisle and Marble, the original partners, are experienced top makers, having gained their early experience in the carriage business before tops became standard on automobiles.

ROTH & SCHLENGER MOVE.

Roth & Schlenger, Inc., dealer in automotive accessories, tires and supplies, Newark, N. J., announces that it has purchased the building at 29 William street, corner of Halsey street.

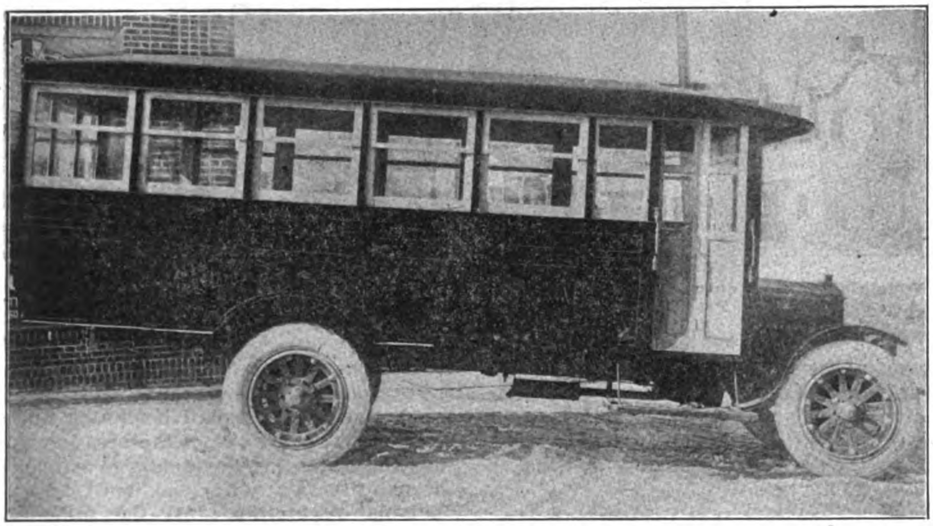
Rainier Omnibuses in China

Nantoon, China, is being made a model city a la America, and not the least of the a la mode touches will be the running of six motor omnibuses on Rainier chassis, each carrying 30 passengers. Chang Chein, former Chinese minister of commerce and agriculture, who has recently been studying American manners and customs, is the moving spirit behind this civilizing enterprise. He recently left New York and will return to his office at 721 Fifth avenue in the fall, his dream largely fulfilled.



One of the Fleet of Rainier Truck Chassis Equipped with Passenger Body, for Public Service in the City of Nantoon, China.

The Rainier omnibuses will be operated by a company controlled by Mr. Chang and will have definite routes and schedules. He believes truck transportation to be the foundation of progress in China and is going to try the Rainier trucks on the rebuilt roads of Nantoon in anticipation of larger fleets to follow. The Rainier omnibuses are to be the only means of transportation in Nantoon.

MOTOR BUS LINE IN PERSIA.

The Parsis Yaganegi Co. of Teheran, Persia, recently ordered a Federal truck with a body specially built and equipped for service in a modern mail and passenger bus line to be operated in that country. The body is mounted on a 1½-ton chassis, with enclosed driver's cab built integral with the body, with standard type windshield, fitted with curtains in front. Immediately back of the cab is a mail and baggage compartment with a door at each side, glass windows protected by wire screens, and a step below each door. The passenger compartment occupies the rear half of the body and provides leather upholstered side seats for from eight to 10 passengers. It is separated from the baggage room by a screen partition with sliding door. Each side has single drop windows, while the passengers enter and exit by double rear doors with step below. A rail around the top provides additional space for luggage.

Pneumatic tires are used on all four wheels, which is almost an absolute necessity for passenger traffic over the poorly paved streets of Asiatic cities.

HAYNES REPRESENTATIVE IN ONTARIO, CAN.

British & American Motors, Ltd., 77-85 Avenue road, Toronto, Canada, successor to the well known firm of Wolseley Motors, Ltd., has acquired the exclusive selling rights for Haynes Character cars throughout the Province of Ontario. The president of British & American Motors, Ltd., is W. H. Gooderham, who is well known to the motoring public of Toronto.

Motor Shows to Be Held Abroad

Consul E. J. Norton of Sydney, Australia, gives notice that, owing to the success of the motor show in that city last January, preparation for an even larger show the early part of 1921, under the auspices of the Motor Traders' association of New South Wales, is already in progress. Applications for space will be received during and after August and and must be forwarded through the motor dealers of Sydney who are members of the association. The association strongly recommends a display of moving picture films of American industrial and manufacturing enterprises each night of the show in connection with the exhibits.

The date for the international exhibit of samples, etc., to be held at Barcelona, Spain, has been fixed as Sept. 25 to Oct. 10 inclusive.

AMERICAN CARS IN SHANGHAI.

In Shanghai, China, American cars are in the ascendancy, according to Consul W. Roderick Dorsey, who reports that on June 30 last in the Shanghai consular district the number in use was:

Passenger cars, 1790; commercial vehicles, 45; cycles, 186. The totals for the years 1916, 1917 and 1918 were 1002, 1373 and 1728 respectively.

It is estimated that there are about 350 public passenger cars and about 75 miles of road suitable for motor traffic in and near Shanghai, including the recently constructed highway to Woosung.

INDIA WANTS HIGH PRICED CARS.

Although recent statistics show an enormous preponderance of American-made automobiles in the import trade of India, it is stated by American consular officials there that there is apparently little attempt to introduce high priced cars there and, in fact, there is a general supposition that America makes only low and medium priced machines.

The fact is that there is fully as much ostentation among wealthy Indians as among other peoples, and if a car was seen there worth $10,000 there would be an immediate demand for still more expensive ones.

Personal News of Industry and Trade

Berry Is Stevens-Duryea Manager

George M. Berry assumes on July 1 the duties of the office of vice president and general manager of the new factory at Chicopee Falls, Mass., of the Stevens-Duryea Co. Mr. Berry first became prominent in the automotive industry with the Jeffery Co. at Kenosha where, after serving in several capacities, he became vice president and treasurer. Upon leaving the Jeffery forces some years ago he joined the Willys-Overland staff at Toledo where, as director of branches, he had charge of building, equipping and organizing the extensive branch system of that company. More recently his duties had been widened to include general sales as well as branches.

George M. Berry, Vice President and General Manager, Stevens-Duryea Co.

E. A. Samels, who less than a year ago, entered the sales department of the Four-Wheel Drive Auto Co., Clintonville, Wis., has been appointed assistant sales manager. Mr. Samels received his early experience in the Chicago office of the Locomobile Co. of America, which had charge of a number of the company's branches and territorial supervision over 24 states. Later he acted as special Chicago representative for A. J. Banta, president of the Maxwell Sales Co.

E. A. Samels, Assistant Sales Manager, F-W-D Auto Co.

Frank J. Wessley has sold his garage on Lexington avenue, Mount Kisco, N. Y., to the Mount Kisco Laundry, Inc.

Charles P. Newby, who joined the Bethlehem Motors Corporation in the fall of 1919 as field manager, has been appointed general sales manager. Mr. Newby was connected with the interests of Walter E. Flanders for over 10 years. In the early days of the automobile industry he was branch manager of the E-M-F Co. at Sioux Falls, S. D., and later branch manager of the Studebaker Corporation at Minneapolis, Minn. He became the first district manager for the Maxwell organization with the northwest as his territory, and was promoted to western sales supervisor and then to sales manager. After leaving the Maxwell factory organization he became distributor of Maxwell cars in Iowa and then on the Pacific coast. In undertaking his new duties, Mr. Newby finds the 1920 Bethlehem production schedule carrying an increase of 275 per cent. over 1919. The company has under way additional buildings and equipment to cost $1,300,000, which will care for the increased demand. With the completion of these additions the capacity of the plant will be in excess of 20,000 vehicles yearly.

C. L. Strange and W. F. West have purchased the Fields Motor Co., Dalles, Ore.

C. P. Newby, General Sales Manager, Bethlehem Motors Corporation.

Sloan Becomes Buda's Treasurer

H. M. Sloan has been appointed treasurer of the Buda Co., Harvey, Ill. He was formerly assistant to the president of the Chicago, Milwaukee & St. Paul railroad and also served on the War Industry board during the war. After his graduation from school, Mr. Sloan started in railroad service with the Fremont, Elkhorn & Missouri Valley railroad, was later transferred to Chicago to the vice president's office, resigning such position to enter the comptroller's office of the Chicago, Rock Island & Pacific railroad in 1902. He became chief clerk in 1904 and was appointed auditor of disbursements Jan. 1, 1905. In July, 1906, he was transferred to New York, becoming assistant to the vice president and later assistant to the chairman of the executive committee. Dec. 1, 1909, he was appointed vice president of the Chicago, Rock Island & Pacific railroad, which office he held until the receivership, at which time he became assistant to the president until September, 1918, when he went to Washington.

H. W. Sloan, New Treasurer of the Buda Co., Harvey, Ill.

C. M. Eason, widely known in the automotive trade for his development of the tractor business of the Hyatt Roller Bearing Co., has been appointed sales manager of the Hyatt division of the General Motors Corporation, succeeding B. G. Koether, who has been made assistant general manager. Mr. Eason was formerly general manager of the Engineering Development Co., Moline, Ill.

Stanley P. McMinn, head of the McMinn Tire Co., Bridgeport, Conn., has added a wholesale department. He handles the products of the Gates Rubber Co.

Clifton Re-Elected President of N. A. C. C.

Col. Charles Clifton, of the Pierce-Arrow Motor Car Co., Buffalo, N. Y., was re-elected president of the National Automobile Chamber of Commerce at its recent annual meeting. Other officers chosen were as follows: First vice president, Roy D. Chapin, Hudson Motor Car Co.; second vice president, passenger car division, C. C. Hanch, Maxwell Motor Co.; second vice president, motor truck division, Windsor T. White, White Motor Co.; secretary, A. J. Brosseau, International Motor Co.; treasurer, H. H. Rice, General Motors Truck Co.; general manager, Alfred Reeves. The directors were Charles Clifton, Pierce-Arrow Motor Car Co.; Windsor T. White, White Motor Co.; Horace E. Dodge, Dodge Brothers; Harry M. Paige, Paige-Detroit Motor Car Co.; W. C. Sills, Chevrolet Motor Co.

R. Jackson Jones, Assistant General Manager, Traffic Motor Truck Corporation, St. Louis, Mo.

Captain Walter Wanderwell, driving a Moon Six car equipped with a special camping body, recently arrived in Los Angeles, Cal., on his trip around the world. In 1912 Captain Wanderwell began a walk around the world, starting from Posen, Poland, and finishing at Atlanta, Ga., in 1918, having gone 82,000 miles on foot in five years. In September, 1919, he left Atlanta, piloting the first official automobile tour around the globe since the world war. Up to the present time this party has travelled 68,000 miles, and expects to end the tour in New York in 1922.

G. E. Swartz, formerly mechanical superintendent of the Torbensen Axle Co., Cleveland, O., has resigned to become manufacturing manager of the Timken-Detroit Axle Co.

Edwin Riley Johnson, president of the Johnson-Dickerson Automobile Co. of Dallas, Tex., recently died in that city.

Louis Chevrolet, the internationally known racing driver, brother of Gaston Chevrolet, winner of this year's Indianapolis Speedway race, has retired from the track and will devote his time as a designer of engines for the manufacturer of the Monroe car. He is probably one of the oldest racing drivers in the sport in point of experience, having driven cars in every part of the world.

Col. Charles Clifton, Again Elected President of the N. A. C. C.

A. C. Barber has been appointed sales manager of Willy's-Overland, Inc., to direct, under the supervision of Edwin B. Jackson, vice president in charge of sales, whose office is in New York, the distribution of Oyerland and Willy-Knight cars from the factory at Toledo. Since the first of the year, Mr. Barber has been manager of two principal selling divisions in the Willys-Overland organization, the east central and west central, comprising the districts of Cleveland, Detroit, Chicago, Indianapolis and St. Louis. He joined Willy-Overland in 1916. From 1904 to 1916 he was sales manager for the Moline Plow Co. at Moline, Ill., and was advanced to that post from that of branch manager at Kansas City and Minneapolis, having started with the Moline Co. as salesman at Kansas City and later made assistant manager of sales at St. Louis.

A. C. Barber, Sales Manager, Willys-Overland, Inc.

Younggreen President of Advertisers' Club

Charles C. Younggreen, advertising manager of the J. I. Case Plow Works Co., Racine, Wis., has been chosen president of the Advertisers' club, recently formed in that city. Mr. Younggreen was formerly advertising manager of the Wisconsin Agriculturist, vice president and general manager of the Kansas Farmer, director of the Kansas State fair and manager of the First National tractor show at Hutchinson, Kan., and was in the aviation branch of the United States army during the war. The Advertisers' club will be affiliated with the Associated Advertising Clubs of the World.

Jules Goux, the French racing driver, winner of the 1913 Indianapolis Speedway race, and one of the contestants this year, was recently married to Miss Ruth Davis of Indianapolis. Mr. Goux is general sales manager for the Peugeot Auto Co. of Paris, France, and will go to France with his bride, but intends to return to this country to participate in the 1921 race.

Charles C. Younggreen, Advertising Manager, J. I. Case Plow Works Co., President Racine Advertisers' Club.

F. B. Kirkbride, who has been vice president of SKF Industries, Inc., New York City, since the organization of that company, has been elected president to succeed B. G. Prytz, who resigned the presidency to become managing director of the parent SKF company with headquarters at Gothenburg, Sweden.

James W. Powers, formerly with the Jaxon Steel Products Co., Jackson, Mich., has been appointed sales manager of the Motor Starter & Air Pump Co., maker of Long Stroke truck tire pumps and garage compressors, with offices at 562 Book building, Detroit, Mich.

L. H. Boydston has been appointed manager of the Chicago branch of the Service Motor Truck Co. He has been associated with this company for some time as division sales manager.

Garland Has Joined Wisconsin Parts

Ralph C. Garland has joined the Wisconsin Parts Co. as chief engineer. He is a pioneer in the motor truck industry, having been connected with the engineering department of the American Locomotive Co., Prvoidence, R. I., in 1906, when that company was making the Alco truck. He later was with the Thomas Taxi Cab Co., Buffalo; the Pope Manufacturing Co., Hartford; the United States Motors Corporation, the Crane Motor Car Co., the Edwards Knight Motor Car Co., New York City, and the Martin Tractor Co., Springfield, Mass. He also held positions as designing engineer with the Briscoe Motor Co., Jackson, Mich., and Willys-Overland Co., Toledo. During the past four years he has been in the engineering department of the General Motors Corporation, specializing on ball bearing applications. He also was one of the experts who had a part in designing the Class B motor truck. The Wisconsin Parts Co. proposes to install a large experimental laboratory of which Mr. Garland will have charge.

Ralph C. Garland, Chief Engineer, Wisconsin Parts Co.

George E. Yokem, Buick distributor at Port Huron, Mich., is to sell the White truck in Michigan and has opened sales rooms in Detroit.

Edgar L. Garson has been appointed sales manager of the Garson Motor Sales Co., which distributes Commonwealth products in Detroit.

C. R. Query has opened a vulcanizing and repair shop in the Jones building, Jackson, Mo.

F. M. Crawford has bought the Noll & Mayer battery station at Wamego, Kan.

Randall Ford has opened a tire repair shop in the Gazette building, next to the Brandt Garage, Plainville, Kan.

W. H. Batdorf, Columbus, O., has been appointed distributor of the Dixie Flyer for central Ohio.

B. G. Koether, Made Assistant General Manager, Hyatt Division, General Motors Corp.

F. E. Blanchard has been appointed assistant engineer of the engine division of the Buda Co., Harvey, Ill. He was formerly connected with the Milburn Wagon Co. as engineer and general manager of the truck division. His early experience was with the Pope-Toledo Motor Car Co. and later in the testing department of the Willys-Overland Co. During the war he was active in experimental air plane division of the Fisher Body Co., Detroit.

Joseph DeCarlo is to occupy a new show room and garage at Broadway and 16th street, Troy, N. Y.

Fred Butler and **Walter Chowning** have opened an automobile repair shop on West Main street, Laredo, Mo.

Walter J. Strittmatter has become manager of the exchange department of the Stearns-Detroit Sales Co.

E. M. Strause is sales manager of the Kreiser Automobile Co., Lowell, Mich.

John S. Edson has purchased the Dearing Garage at Dearing, Kan.

Paul H. Knoll, Purchasing Agent, J. I. Case Plow Works Co., Racine, Wis.

Koether Again Promoted by Hyatt Co.

B. G. Koether, whose promotion to vice president of the Hyatt Roller Bearing Co. several months ago was announced, has now been made assistant general manager of the Hyatt division of the General Motors Corporation. Although he still remains a vice president of the Hyatt selling company, he has relinquished his duties as director of sales and advertising work to devote his entire efforts to boosting Hyatt production to meet the enormous demand which he has played so prominent a part in creating. This work will keep him at the company's plant at Harrison, N. J., where he has made his headquarters since leaving Detroit.

Paul H. Knoll has been appointed by the J. I. Case Plow Works Co., Racine, Wis., as director of purchases. He has had wide experience in the tractor field and is well qualified for his new position. He was one of the original owners and executive officers of the Bull Tractor Co., and was, for many years, with the Simmons Hardware and Big Four Tractor companies.

F. E. Blanchard, Assistant Engineer, the Buda Co., Harvey, Ill.

J. H. Quackenbush has been appointed, by Walter P. Coghlan, general sales manager of the American Hammered Piston Ring Co., Baltimore, Md., as assistant to the general sales manager. Mr. Quackenbush, at the time of his appointment, was district sales manager of the company for New Jersey, Delaware, Pennsylvania, Ohio and West Virginia. He has a wide acquaintance in the automotive equipment trade throughout the East. B. B. Wolfe, a former factory representative in that district, succeeds Mr. Quackenbush as district masager.

Charles Ethan Billings, founder of the Billings and Spencer Co., Hartford, Conn., and chairman of the board of directors of that company, is dead, aged 85 years.

Earl Payne and **Will Haynes** have opened a garage at Meriden, Kan.

Willys Heads Republic Truck Co.

John N. Willys has been elected president of the Republic Motor Truck Co., succeeding F. W. Ruggles, retired. In November, Messrs. Willys and Ruggles, together with W. J. Baxter, acquired a majority of the stock of the Republic Co. from Cleveland interests, this carrying with it the control of the Torbensen Axle Co. Shortly afterwards Mr. Willys was elected chairman of the board of directors, in which capacity he served until the retirement of Mr. Ruggles. The concerns directly under Willys control now include Willys-Overland, Inc., Moline Plow Co. and Electric Auto-Lite Corporation.

Frederick Spencer has been appointed, by Sherwood Hall, Jr., president of the Hall Motor Co., of Boston, distributor of the Hupmobile, superintendent of the service department of the Hall Co. Mr. Spencer has been, for 15 years, with the Winton Co., during the last four of which he has been superintendent of the service station. Stafford Rogers, who has been associated with the Hall Motor Co. for the past year, lately as service manager, has gone into the sales department.

John N. Willys, Elected President of the Republic Motor Truck Co.

Kenneth A. Moore, formerly general agent of the New York Central railroad lines, has been added to the staff of the National Automobile Chamber of Commerce, as assistant traffic manager in the western district with headquarters at 1009 Ford building, Detroit, Mich.

Captain L. E. Gossett, a graduate of the Motor Transport Corps of the United States army, has joined the staff of the National Automobile Chamber of Commerce in the motor truck department to assist particularly in the rural motor express division.

David Galowitz has purchased six lots, 38 to 48 Providence street, Newark, N. J., as a site for a one-story, brick garage, 100 by 100, to cost about $30,000.

George A. Hammer, who has just associated himself with the advertising agency of MacManus, Inc., Detroit, Mich., is well known in the publicity field. His first connection was as assistant general manager and advertising manager of a large manufacturing plant in Chicago. He next joined Shaw-Walker at the time the publication, "System," was converted from a manufacturer's house organ to a general business magazine. In following years he was an advertising representative of the Butterick Publishing Co. and the Curtis Publishing Co., his connection with the latter extending over the last 11 years.

H. C. Osterman, vice president and field secretary of the Lincoln Highway association, met his death while driving on the highway between Tama and Marshalltown, Ia., the night of June 7. In turning out for an approaching car the machine which Mr. Osterman was driving skidded and overturned, instantly killing the driver. Mr. Osterman had been connected with the association since 1913 and was making his 21st transcontinental drive at this time.

S. A. Host, who was connected with the Lincoln Highway association in the capacity of assistant secretary and publicity director during 1916, 1917 and 1918, has rejoined the association in the same capacity as assistant to A. F. Bement, vice president and secretary. Mr. Host has been for the past 15 months connected with the advertising and sales department of the Goodyear Tire & Rubber Co. in Akron, O.

B. E. Aaronson, who has succeeded M. S. Lines as sales manager of the Gordon Tire & Rubber Co., Canton, O., has been special sales representative of the Mohawk Rubber Co. for the past three years. Before that he was connected with the Empire Rubber Co. in the sales department and previous to that was with Goodyear.

Lewis F. Johnson is manager of the Rhode Island branch of Hare's Motors that was recently opened at 163 Broad street, Providence. Mr. Johnson has been in the automobile business for 15 years, having been connected with the White, Packard and Pierce-Arrow companies.

John C. Boice, manager of the Vesta Storage Battery Co., has started to make extensive alterations on the premises at 47-49 West 63rd street, New York City, recently leased, involving an expenditure of about $350,000.

W. C. Arthur was recently made assistant secretary and counsel for the B. F. Goodrich Co., Akron, O. He was formerly manager of the legal department of that company and is a graduate of the University of Pennsylvania law school.

W. R. Eaton, formerly advertising manager of the Gates Rubber Co., Denver, Col., has been elected vice president of the Penny Rose Advertising Agency, Chicago, in charge of automotive and rubber products accounts.

Charles Weed, one of the best known salesmen along the Automobile row of New York City, has joined the sales department of E. S. Partridge & Co.

Seiberling President of Highway Assn.

F. A. Seiberling, president of the Goodyear Tire & Rubber Co., Akron, O., has been elected president of the Lincoln Highway association, succeeding H. B. Joy, who became the head of that body last December. Mr. Sieberling did not accept re-election at the annual meeting at that time, because of the press of other business matters but, with the inability of Mr. Joy to serve longer than four months, Mr. Seiberling agreed to again devote part of his time to the development of this gigantic highway project in which he has always been deeply interested.

S. E. Ackerman, sales manager of the Franklin Automobile Co., Syracuse, N. Y., is in Europe, where he will make a general study of business conditions. His itinerary includes London, Paris and Brussels. The Franklin Co. now has direct sales representation in Holland, Denmark and Norway.

F. A. Seiberling, Who Has Been Chosen President of the Lincoln Highway Association.

Henry Caldwell, formerly automobile editor of the New York Tribune and New York Herald, has been made publicity representative of Hare's Motors, Inc., 16 West 61st street, New York City.

Frank B. Willis, sales manager of the Kelly-Springfield Truck Co., has been in Chicago installing a branch at the former headquarters of the Winton Co., 2501 Michigan avenue.

C. B. Morse, late advertising manager of the New York Packing Co., has been appointed general advertising manager of Hare's Motors.

A Vito, proprietor of a new garage in Webster, Mass., has taken the agency for Chandler and Cleveland cars.

S. J. Wise, formerly a salesman with the Kelly-Springfield Rubber Co., has joined the Fisk Rubber Co. forces.

Robert A. Loving, president of the Loving-Oldfield Auto Co., Baltimore, Md., recently died in that city.

PLANS OF THE AMERICAN ROLLS-ROYCE CO.

Rolls-Royce of America, Inc., which recently acquired the factory of the American Wire Wheel Co., at Springfield, Mass., plans to produce 380 chassis a year at the outset, the list price of which will probably be about $12,000. The American built car will be an exact duplicate of its English prototype, the materials being of American production insofar as they can be secured of high enough quality to pass the scrutiny of the company's technical experts.

The American company is capitalized for $3,500,000 seven per cent. cumulative participating preferred stock ($7,500,000 authorized), and 35,000 shares of common stock (75,000 authorized) of no par value.

HAYNES DISTRIBUTOR IN THE EASTERN TERRITORY.

Wayne Smith & Co., 22nd and M streets, northwest, Washington, D. C., has acquired the exclusive selling rights for Haynes cars in the territory comprised by the District of Columbia, St. Mary's, Calvert, Charles, Prince George's, Montgomery, Washington, Alleghany and Garrett counties in Maryland, and 20 counties through the northern part of Virginia.

The service department of the new Haynes distributor in Washington will be in charge of Harry B. Hartung and Earl Ennis.

NEW FORD PRODUCTION RECORD.

All previous production records at the factory of the Ford Motor Co., Detroit, were broken in the month of March, both for the number of cars produced in one day and in one month. March 27, 4256 cars left the assembling lines at the home plant and branches, while the record for the month was 94,299 cars. These figures represent production in the United States only.

Notwithstanding the fact that production in April dropped to less than 50 per cent. of normal, because of the strike, Ford officials say that for the fiscal year, which ends July 31, they will have attained the million mark of production.

PRODUCTION RECORD OF CLEVELAND AUTO CO.

In its first eight months of operation the Cleveland Automobile Co., Cleveland, O., attained a production of 7500 cars, with a little more than half of its plant completely equipped. The schedule called for an output of 3000 cars a month by June 1, and a total of 25,000 for 1920.

BLAKE & BRYAN ENLARGE.

Blake & Bryan, which has been conducting an automobile business in the Slemmer building, Centerville, Md., has purchased the Connolly blacksmithing and wheelwrighting shops, which will be converted into an automobile repair shop.

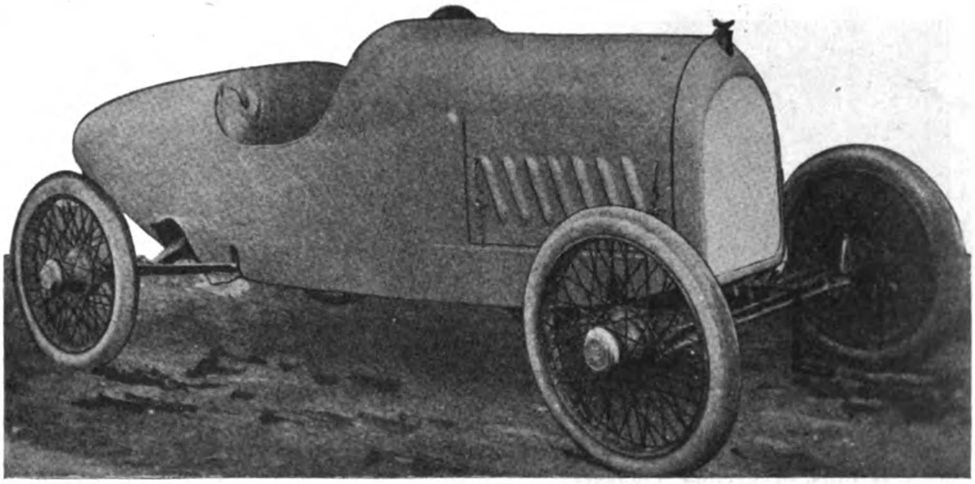
Speedway Bodies for Ford Cars

Accompanying illustration shows Speedway body for Fords and other cars, made by Morton & Brett, 811-815 East 23rd street, Indianapolis, Ind., which is designed to afford a combination body of improved racing type with the riding comforts of a touring car. The Speedway body is depicted on a standard chassis, equipped with underslung parts made also by Morton & Brett.

It is claimed by the manufacturer to be the strongest and best constructed body on the market for Fords. It has a radiator shell of foreign design, with extension filler, which fits over the regular Ford radiator of any model and allows proper cooling. The hood is perfect fitting and has large, deep, pressed louvers, giving additional ventilation. The cowl is designed to divert the wind and dust over the driver's head—a beautifully flared cowl—and a better lined one it will be hard to find on track or road, the maker states. The leg room is ample and this adds to the comfort of riding and, with the deep upholstery which is plain, securely fastened and supplied with plenty of springs, makes another feature not to be overlooked in the selection of a body

The seat and back are removable, giving access to the ample storage space provided. The regular Ford gas tank is retained in the rear, without any alteration, the necessary arrangements for this being made. In addition to these desirable qualities this body presents the famous Speedwell wedge tail, which is stated in itself to be worth the price of the body, inasmuch as it gives a great reduction in wind resistance and increases the speed from five to 10 miles an hour. The underslung feature lowers the regular Ford frame 4½ inches by a simple but unbreakable device, correct in design and construction, made of the toughest material obtainable, yet at a price within the reach of anyone wishing to lower the Ford frame, and allowing high speed with safety. In this reconstruction the front axle extends three inches in front of the radiator and the spring is hung behind the axle. A removable crank replacing the original Ford part is another feature. The rear end of the frame is shortened 5¾ inches by moving the rear cross member ahead, allowing the rear spring to be hung in front of the rear axle. No other work has to be done to lower the frame and very little mechanical experience and few tools are required. The parts have been in use for 10 years on track and road at high speed and this has been found the safest and best method of underslinging a Ford car.

Morton & Brett states that it will furnish dealers' and distributors' proposition and prices upon request.



Speedway Body for Ford and Other Cars Made by Morton & Brett, Indianapolis, Ind.

SHIPMENTS OF MULLINS BODY CO. LARGE.

The shipments of the W. H. Mullins Co., Salem, O., automobile body makers, for the first four months of the year, were, despite transportation difficulties, more than 100 per cent. larger than the value of sales for the corresponding period a year ago, figuring $1,170,000, as compared with $567,000 a year ago. The company's earnings for four months, before taxes, amounted to $337,000, as compared to profits of $123,000 a year ago. The current profits are at the rate of above $10 a share on the stock. Unfilled orders on hand are in excess of $4,000,000.

NEW EDELMAN FACTORY.

E. Edelman & Co., Chicago, Ill., announces the formal opening of its new factory at 2638-2656 North Crawford avenue. The event marked the 10th anniversary of the organization of the company.

MARMON SALES CONVENTIONS.

The Nordyke & Marmon Co., Indianapolis, manufacturer of Marmon motor cars, held a salesmen's convention in that city, in two sections; the first, June 28-July 2, and section two, July 6-10.

Officials of the Chandler Motor Car Co., Cleveland, O., state that shipments in the first four months of 1920 were 3½ times as large as those in the same period of 1919.

Jenkins Vulcan Spring Co's 10th Anniversary

JULY 15, 1920, marks the 10th anniversary of a pioneer in the spring replacement field, the Jenkins Vulcan Spring Co. of Richmond, Ind. Although it is now 10 years since the company assumed its present corporate form, Vulcan springs had their beginning 16 years ago in Sumter, S. C., where they were fitted to the famous Cadillac single cylinder model.

The Jenkins Vulcan Spring Co. today is operating a large plant which is devoted exclusively to the manufacture of high grade springs for replacement purposes. This is the only plant in the world devoting its production exclusively to spring replacement, with an organization specializing on that class of work, studying carefully the needs of the business as to quality and types of springs, maintaining a distribution which places the needed spring within reach of any motorist without delay.

A. L. Ellis, Production Manager.

T. B. Jenkins, president of the company and the original founder of the business, commenced his business career as a bicycle dealer, having a very small shop in Sumter, S. C., immediately after his discharge from the army at the close of the Spanish-American war. The business was very small in the beginning, but at once began to realise substantial growth. It was in 1903 that Mr. Jenkins embarked in the automobile business as a side line to his bicycle business. In a few years the bicycle business was closed out and his entire effort and capital directed toward the building up of an automobile agency.

The very first springs for replacement purposes were sold in 1904 for the Cadillac one-cylinder car, for which car Mr. Jenkins had the agency in a number of counties. These springs were made under contract by a spring maker in the North. The roads in the South were very bad and there was much spring breakage requiring a stock on hand at all times for the models in current use.

T. B. Jenkins, President.

From the very beginning the possibilities of this particular department of the automotive business were recognized, and the stock of springs was enlarged as rapidly as possible, to insure the widest service that could be given. In 1907, the trade name Vulcan was chosen as being representative and easily remembered. As early as 1908 there were several thousand springs carried in the Sumter stock, and shipments were made freely into seven or eight states from that establishment.

Following insistently his idea of developing this business to its fullest extent, Mr. Jenkins closed out entirely his automobile sales business and, just 10 years ago, on the 15th of July, 1910, it was decided to enlarge the scope of the business, and to deal exclusively in spring replacements on a national scale, with headquarters and factory in St. Louis. From that date, the business was known as the Jenkins Manufacturing Co., and realized substantial growth, keeping pace with the growth of the industry as a whole.

In October, 1917, the company was reorganized with a capital stock of $500,000, the new corporate name being the Jenkins Vulcan Spring Co. Factory and headquarters were located in Richmond, Ind., the present center of activity for the company, which now operates seven of its own branches in the principal strategic centers of distribution. Several hundred of the most influential jobbers in the United States are carrying full stocks of Vulcan springs, and thousands of dealers are prepared to supply quickly an exact duplicate of almost any broken spring.

D. T. Hersey, Director of Sales.

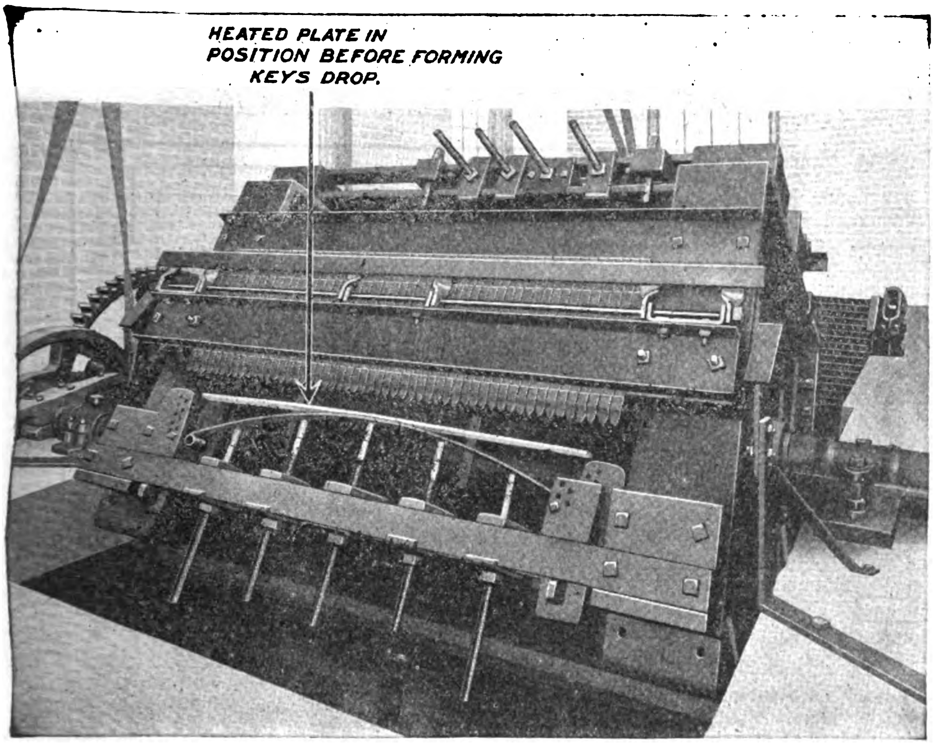
The company advertises extensively in about 20 of the principal trade papers, and in leading periodicals of national circulation. The production today is approximately 600,000 springs a year, and will be much larger when raw material can be obtained. The stock of springs that must be carried on hand for a proper maintenance of the service is nearly 4,000,000 pounds, about 30 per cent. of which is distributed in seven branches, the remainder in the stock rooms of the company in Richmond.

Edgar F. Hiatt, Vice President and General Manager.

Edgar F. Hiatt, vice president and general manager, formed his connection with the business about one year ago. Mr. Hiatt has been president of one of the leading banks in Richmond for a number of years, and is a business man of recognized vision and ability. Mr. Hiatt forebook a banking career of acknowledged prominence and high promise to come actively into the manufacturing and distributing field, which offered even greater possibility of substantial development.

Recently the company has connected with it, in the capacity of production manager, A. L. Ellis, who is probably one of the most experienced production executives in the leaf spring industry in this country. Mr. Ellis has been more than 20 years actively engaged in leaf spring production and, before coming to the Jenkins Vulcan Spring Co., was for 12 years superintendent of the spring division of the Detroit Steel Co.

In charge of the sales department, as director of sales, is D. T. Hersey, a sales



Some of the Special Machinery Used Is of the Company's Own Patented Design.

executive of wide experience in the automotive accessory field. Mr. Hersey was for a number of years actively connected with the Splitdorf Electrical Co. in the capacity of assistant general manager of sales. There are few executives in the automotive industry with a wider acquaintance among the principals engaged in accessory distribution.

The replacement spring business has reached very large proportions and is today one of the principal factors in the automotive industry. It is estimated that there are several million springs broken annually in the United States, the breakage being directly traceable to three causes: First poor workmanship in the springs themselves; second, irregular surfacing of the roads; third, overloading. There are other causes, such as excessive speeding and improper design of the springs themselves with reference to the work they are called upon to perform, and neglect of the spring as, for instance, inattention to lubrication and the tightening of clip bolt nuts, etc.

A trip through the Jenkins Vulcan factory is a most interesting and informative experience. The equipment is modern in every respect, and some of the special machinery used is of the company's own exclusively patented designs, with marvelous capacities for both production and quality. The entire production is being constantly Brinnell-tested, and the testing laboratory is complete in every detail. The manufacture of springs in itself is a most interesting study, and the layman is accustomed to taking for granted a number of things, with reference to the making of the spring, which, as a matter of fact, require the closest possible scrutiny and care.

It is with truth stated that a man can lift, in one hand, $1,000,000 worth of watch hair springs. That value represents little more than the skill and care exercised in manufacture, and inasmuch as one man can lift such a large value, it is sufficient argument that the raw material itself is insignificant except as to correct formula of analytical content. In like degree it is important that the utmost care be taken in the making of a thoroughly good automobile leaf spring. This is the guiding principle of the Jenkins Vulcan Spring Co.—to build them with the utmost care.

The results of this policy have shown themselves clearly in the performance of Vulcan springs. Vulcan methods of manufacture have put strength and endurance into a part of the car on which comfort, service, and even safety depend. The realization of this fact, by the motoring public, is demonstrated in the steady growth of Vulcan sales. Added to this quality is the wide-spread service afforded by Vulcan distribution. A spring for any make or model of car is available without delay throughout the greater part of the United States and Canada. More dealers are constantly being enlisted in the Vulcan ranks, and the company will not rest satisfied until it has met, in the fullest measure, the requirement of its slogan, "In Every Town for Every Car."

WESTINGHOUSE UNION BATTERY CO.

Recent publicity of the Westinghouse Union Battery Co., Swissvale, Pa., has led to a misunderstanding, as it was interpreted to mean that the Westinghouse Electric & Manufacturing Co. was entering the storage battery field. The latter concern authorizes the statement that the Westinghouse Union Battery Co. is owned and controlled by the Westinghouse Air Brake Co., Wilmerding, Pa., and that the Westinghouse Electric & Manufacturing Co. is in no way connected with the manufacture, distribution, sale or service of its product.

HAWTHORNE MANUFACTURING CO. CEASES BUSINESS.

The Hawthore Manufacturing Co., Bridgeport, Conn., maker of automobile and bicycle lamps, has announced the permanent suspension of business. E. A. Hawthorne, vice president of the company, stated that the shut down was caused by the inability to get raw materials and that the affairs of the company would be liquidated at once. The plant has been in operation for about 10 years and employed 300 persons.

BIG TRANSFER IN THE BRONX.

The Hotchkiss Garage & Repair Co. has leased the four-story garage at Southern boulevard and 163rd street, known as the Allen Garage, in the Bronx borough, New York, for a period of 21 years at an aggregate rental of $357,000.

Service the Keynote of Repair Shop Efficiency

(*By H. G. Fitch, Director of Service, Willys-Overland, Inc.)

SERVICE—A labor performed for the benefit of another, or at another's command. That's the way Noah Webster defines the most abused, misused and misunderstood term in the entire automobile lexicon. Not one word does he mention about service, meaning "getting something for nothing," yet that is the way too many car owners have interpreted it, with the result that service to many dealers has come to mean a large overhead expense from which there is little or no direct financial return. Yet no single factor of a dealer's business can be made to contribute as much towards his reputation and success as the proper administration of this vital department, besides being made to add to the profit side of his ledger.

No matter how good a car our respective companies build, if the buyer does not receive the value he anticipates—within the bounds of reason, of course—he will not consider another car of the same make when next he is in the market for an automobile. It is, in a great measure, up to the dealer's service department to assist the customer to get maximum efficiency out of his car at minimum expense.

But this does not involve the giving of something for nothing. On the contrary, the dealer only weakens his reputation when he gives something to which an owner is not justly entitled. He will create more respect for himself through business like, but firm methods, than through liberal, but loose dealings. There are times when a dealer may desire to make a policy adjustment, which may consist of free labor or parts, but the facts of the case should always warrant such action and should so be explained to the customer.

The dealer should never lose sight of the fact that his service department, like his sales department, has something to sell and fully as much care should be devoted to the proper disposal of its goods as is used in the merchandising of automobiles.

That care is "Repair Shop Efficiency," the subject imposed upon me by our service committee, under which, like Atlas lugging the world upon his shoulders, I am struggling, but which I am afraid is too big for my un-Atlaslike shoulders, with the result that what I am going to tell you is just what we at the Willys-Overland Co. have concluded to do about service problems and how we have endeavored to cooperate with our dealers in putting their service and repair departments on a paying basis.

It has been our experience that there are causes outside of the four walls of the repair shop itself, yet bearing on proper service which can make or unmake the best repair shop in the world. On one or two of these I would like to dwell briefly.

Unfortunately, we have found that the policy underlying the operation of a service department has never been as clearly defined as it might be.

We have printed service warranty after service warranty. In numerous instances these have been but bundles of legal verbiage, which have meant little or nothing to the dealer and less to our owner. In consequence, every dealer has had his own method of taking care of his service problems.

A Service Policy.

Quite recently we evolved a service policy, not only from our own actual experience with these dilemmas, but also from the experiences of hundreds of our dealers and distributors. This we have passed on to our field organization and we are glad to know that a good percentage of them follow our recommendation. This policy runs as follows:

1. The car should be thoroughly inspected before delivery to make sure that everything is in the best of order and complete as to equipment.
2. The purchaser should be carefully instructed as to the operation and maintenance of his car.
3. There should be available a well-assorted supply of repair parts.
4. Courteous and prompt attention should be given to every customer and capable mechanical attention should always be available, when required for a proper remuneration.

Adherence to such a policy, we are sure, will give complete and lasting satisfaction to owner and dealer alike.

Should Give Complete Instruction.

With a workable and satisfactory service policy in hand, the next step a dealer should take should be to follow the old adage about an ounce of prevention being worth a pound of cure. When a dealer sells a car to an owner he should give the purchaser complete instructions, not only how to drive his car, but also how to keep his car running properly.

To assist in this we publish owner's instruction books, which are included in the tool kit of every car shipped from the factory. The books we now send out are non-technical in every sense of the word, written, one might say, in words of one syllable; and in terse paragraphs that can be read and understood by the most inexperienced automobilist. It simply aims to tell the owner how to run his car and what to do to keep it running. We particularly stress the section on lubrication, telling him what will happen if he doesn't oil and grease his car at proper intervals. I am sure that you will agree with me that 90 per cent. of all automobile troubles are attributable to improper or total lack of lubrication.

Our campaign of education does not end here. We are trying to show the value of owner-education to our dealers at every step. We suggest circular letters from time to time on various service topics, such as proper driving methods, engine lubrication, anti-freeze solutions or motor drainage in cold weather.

If an owner drives up to a dealer's establishment with a cylinder missing fire and tells the dealer to overhaul the motor, when all that is required is a new spark plug, we want that dealer or his mechanic to show the owner what is wrong and how to replace that spark plug and thus save himself needless repair bills.

We have men touring the country, investigating and inspecting dealers' methods and systems and the result of our researches has been the formulation of a service organization and its underlying principles, so flexible that it can be compressed to suit the needs of a one-man garage, yet can be expanded to meet the requirements of the distributor with an annual turnover of millions of dollars.

In this organization we have specified the duties and responsibilities of the salient positions of a service department, which can be allotted to one, two, four, or as many men as the size of the business warrants.

First, the Service Manager.

First of all we must consider the service manager, or head of the service department. He should have charge of all work in connection with the management and direction of this department. He should be responsible for the employment, discipline and direction of all employees in his department and should see that they are familiar with the duties assigned to them. All questions of guarantee and policy should be submitted to the service manager for interpretation and settlement, as well as work done over, free of charge, to the owner.

He should watch with care the interpretation of the guarantee and policy, as these sources of expense will reflect greatly his ability as service manager. Complaints by customers which are serious enough to warrant his attention should be referred to him and he should personally meet and talk to the owners, getting necessary information at first hand.

Next, the Service Salesman.

Next in importance in a well-regulated repair shop is the order taker, or service salesman. In our experience we have found that this position is the keystone of the service department, as a majority of complaints on service rendered can be traced to the taking of the owner's order. Either the owner's word for the trouble may have been taken and the repair made as specified, when something else was at fault; or else the owner's directions may not have been specific enough and much work done that was not called for; or, as has often happened, an attempt has been made to correct imaginary troubles in the car merely because an owner thought his car was not running properly, no doubt, due to improper driving methods.

Customers should be waited upon

---

*Read at Service Managers' convention at Indianapolis, Ind.

promptly, courteously and in turn as they enter the service station. The order taker must appreciate the value of a customer and his good will in the expansion of the dealer's business. The order taker should be competent to discuss with a customer the troubles which he has with his car, or if not, there should be available a competent mechanic or tester to diagnose the complaint. If the trouble has to be located, it is well to have the customer go out on the road with the order taker or tester, so that an intelligent order can be written up to correct the trouble complained of. Very frequently a small adjustment or instructions can be given to a customer on such a trip which will entirely overcome his difficulty.

Therefore, care should be exercised to fill this all-important position with a man or men qualified in every way to make correct mechanical diganoses, as inaccuracy means needless expense to the owner, with a resultant loss of confidence in the dealer's establishment.

Repair Order Should Be Clear.

The repair order should be written up clearly and distinctly. The first important step should be to get the customer's name, address and telephone number correctly. If he does not have a telephone, arrange to get in touch with him, should additional instructions with the repair job in process be required.

All questions of guarantee, policy, work done over, or other circumstances which involve the dealer's responsibility, should be settled when the order is written up. Exceptions, of course, are in order when the conditions complained of are subject to shop inspection upon disassembly of parts. Such conditions should be clearly indicated in the repair order. Then when the repair order is fully made out it should be signed by the customer, or confirmed in writing.

We have found it mighty convenient in our practise, to group repair items under proper headings, such as motor, clutch, steering, brakes, rear system, etc. Paint and trim work should be listed separately.

In writing up electrical work care should be used to state whether trouble is in ignition, starting motor, generator or lighting circuits.

Above all the order taker should avoid writing up such broad orders as "take knock out of motor" or "repair electrical system." Such an "R. O." can run up expense without limit and cause endless wrangle between owner and dealer.

When recommending repairs to an owner the order taker should try to save the customer all possible expense. Don't induce him to go into extensive repairs when they can be avoided. His interests should always be considered as though the order taker were spending his own money.

The order taker should always seek to avoid the necessity for additional orders, except when a customer is quoted a "lead" price for dismantling the car or parts to see the extent of repairs that will be necessary.

After an order is taken clearly and specifically, the next important step is the matter of price. Wherever feasible the customer should be quoted a price before the work is started, as this will avoid controversy when the bill is presented.

It is also the order taker who is expected to make delivery promises. By close contact with the repair shop foreman he should be able to promise with certainty the day and the hour when the car will be ready. When a promise is given to a customer this should be lived up to. The order taker should never promise the impossible, nor take a chance on the job being completed at a certain time. If he finds that a promise cannot be kept, due to unforeseen circumstances, the owner should be notified in advance. It is very bad business to promise delivery at a certain time to a customer and have him find, after making a special trip to the service station, that his car is not ready. It is just such instances that bring service stations into ill repute.

We have found it good practise, when a car is sent to the shop for overhauling or for extended repairs, to have the order taker make a complete check and remove all owner's equipment and tools. It is also important that he note scratches, dents or blemishes, as this avoids controversy with the customer, in case he claims damage has been done to the car while in the service station.

The Shop Foreman.

Third in importance in the service department is the shop foreman, whose duty it is to see that all work performed under his supervision is done properly, economically and promptly by competent mechanics; he should see that the shop equipment and tools are kept in order and repair; and should make necessary recommendations for improvement of repair shop equipment and methods from time to time.

He should be consulted at all times as to promises on work in progress, or work to be sent to the shop when a promise is desired.

When the volume of work is sufficient to justify such procedure, mechanical work in the shop should be divided and grouped, such as motor, clutch, steering, transmission, differential, electrical and other units. Better results can be obtained by thus arranging the men in gangs or units to specialize on various repair work.

Care of the Garage.

A vital factor in "Repair Shop Efficiency" is the care of the garage. It should be neat, clean and orderly. Cars should be grouped and placed in spaces assigned as far as practical, as follows:

Demonstrating and company cars, service trucks, customers' cars waiting for repairs, customers' cars, repaired and awaiting delivery.

All cars on which repairs and adjustments have been completed should be properly tested and inspected before being turned over to the customer. Upon completion of this inspection the tester should "O. K." the shop job card and sign it. The tester should also make it a point to see that the floor boards, running boards, upholstery, steering wheel, etc., are clean before the car is turned over to the customer. No matter how satisfactory the job that is performed by the repair man the customer is far from pleased when he receives a car soiled with oil and grease. Many of our dealers also have a commendable practise of cleaning the motor and washing each car that comes in for repairs, before delivering it to the customers. There is good psychology in this practise.

The customer who receives a car in the same muddy and dirty condition that he turned it in may get the impression that the repairs he specified were not performed; but if he receives a car that has been washed and cleaned, with a spick and span motor, as a rule he will be readier to pay the slight sum additional for cleaning, which can be included in the repair charge, than he would be to pay the price for the repair only, and receive his car covered with the same grime as when he turned it in. While this applies more particularly to cars that come in for extensive overhauling, yet such a practise on almost all cars that come into the service station can be pursued with success.

Simplified Service Forms.

Our recommended service organization for dealers also includes a series of service forms. Here again we have endeavored to simplify as far as possible. The list includes:

Repair order and invoice, on which the job is written up.

Work ticket, or time slip, for the man in the shop who does the actual work.

Repair shop requisition and repair shop credit requisition, for requisitioning parts from the stock room on repair jobs.

Repair order envelope, in which are filed repair order, work tickets and repair shop requisitions.

Customers' repair record, on which is entered the date and number of every repair order under each customer's name, enabling the dealer to keep an accurate record of every repair or adjustment performed for his customers, information which is handy in settling controversies.

Daily shop report, made out by the shop foreman and showing a summary of the day's work done by each mechanic.

Daily business report, showing the amount of work taken in and delivered each day, also estimates, actual cost of the job and the profit or loss.

Cash sales of gas and oil.

Cash sales of parts.

Identification tag, with space for the owner's name and address, repair order number and tester's O. K.

Contrary to the usual practise we do not print these forms and sell them to our dealers. Instead, they are reproduced in a book which we send to each dealer and the dealer is advised to have these forms made up by local printers.

Nor does our cooperation end here. Besides endeavoring to standardize shop practise among Willys-Overland dealers, we have also been trying to standardize actual repairs, but there is always one best way. With this in view we published last summer a repair manual on our new Overland car, containing a complete sequence of operations on practically every major operation on this car that a service department might have to tackle.

We are trying to standardize tool equipment. In our service department at the factory we maintain a tool division, whose sole duty it is to design and sell tools that will make possible better service on our cars. When a tool is designed, tested and found satisfactory a quantity is ordered and the dealers are notified that we have this tool in stock and that it is available for purchase.

Collect on Delivery.

Before I pass from the scene there is just one point on which I want to dwell, which can make or break a repair shop. And that is—Collect on delivery! I would like to see every repair shop in the land enforce a rule that the invoice should be ready for the customer the moment he calls for his car and that he should pay for the work done before he leaves the establishment.

How often has it happened that a car has been delivered to a customer in bang-up shape. He has had the work charged, drives out, meets with an unfortunate accident, or runs into some trouble for which the dealer is in no wise to blame. But the customer insists that the initial repairs were not properly made, or that in making repair the dealer or his mechanic loosened or broke some other thingumbob on the car! As a result he refuses to pay the first bill.

One of our most successful distributors, who has built his business from a modest 100-car trade to a point where his annual contract runs well into the millions, attributes his success solely to his "strictly cash" policy in his service department. Instances are related of intimate friends of his who call for their cars and want repair bills charged. This is diplomatically refused and the matter is referred to the distributor himself. He tells them the policy of the house, adds that he will gladly pay the bill himself and will consider the item a personal debt. Either the matter rests this way, or the customer, abashed but, nevertheless, respecting the distributor's adherence to a sound business principle, pays the bill without further ado and, in future, never fails to have the money on hand to pay for work on his car. And this distributor's circle of friends is one of the staunchest and biggest in his home town.

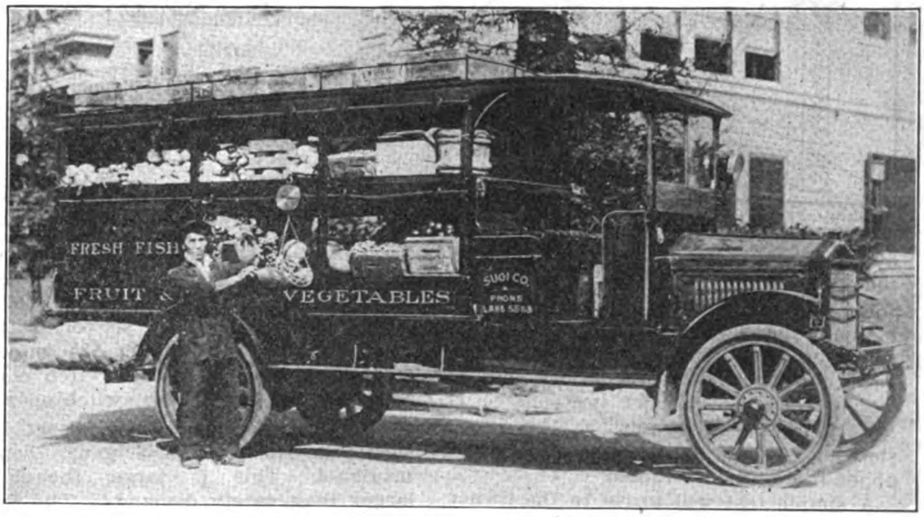
Summed up, to achieve repair shop efficiency a dealer should cooperate with the factory in educating the owner to properly use and maintain his car, in order that he get maximum service out of it at minimum cost; but when the owner requires the service of his repair department he should provide a capable organization, with each men's duties and responsibilities distinctly outlined, backed by a sound and constructive business policy, a clear record on paper of every transaction and, to top it all off, the slogan of "Rapid and Accurate Workmanship, Paid for on Delivery!"

LOCKWOOD CO., MAKER OF AUTO FABRIC ACCESSORIES.

The Lockwood Manufacturing Co., maker of the Lockwood line of automobile fabric accessories, through its managing director, Paul Lockwood, announces the removal of its eastern branch office and plant from Brooklyn to Buffalo, N. Y., and the opening of an export sales branch in the Grand Central Palace, New York City. The new Buffalo factory, at 368 Massachusetts street, gives the company additional space and larger equipment.

The western office and factory, which is the parent plant, remains at Seventh and Wyandotte streets, Kansas City, Mo., and the Chicago sales branch at 3021-3023 South Michigan avenue.

The Lockwood Manufacturing Co. recently bought and assumed complete charge of the automobile fabric accessories division of the Baker & Lockwood Manufacturing Co., taking over the entire line of accessories that formerly bore the name of "Baker."



The Unusually Attractive Garford Truck Equipped for the Sale of Fruit, Vegetables and Fish by a Japanese Vender in Berkeley, Oakland and Alameda, Cal.

FACTORY FOR GUARANTEE BATTERY CO.

The Guarantee Battery Co., Denver, Col., has started the manufacture of a battery with a two-year guarantee which, it is claimed, will eliminate automobile starting, lighting and ignition troubles. The company is capitalized at $100,000 and is located at 1826-1830 Blake street. It is two stories, of brick construction, and affords a floor space of 16,000 feet, all of which will be used in the making of batteries.

The Guarantee battery is stated to be compact in appearance and combines non-corroding, non-sulphating and foolproof qualities that render it practically indestructible. All of its parts, terminals, connectors and separators are of special design. The plates or grids are cast in proportion heavier than the average plate and contain eight per cent. more active metal filler.

DIVISION OF FRANKLIN CO. EXPENDITURE.

A statement just issued by H. H. Franklin, president of the Franklin Automobile Co., Syracuse, N. Y., will give an idea of the division of cost in the economical manufacture of the typical motor car of today. Of every dollar expended, Mr. Franklin avers, the cost of raw material, supplies and parts eats up 45 cents. Labor is paid 26 cents of every dollar in wages, this constituting the second largest item.

Income added to working capital takes eight cents. This represents the fund devoted to expansion purposes, which in turn gives employment to more labor with each succeeding year.

Administration and operating expenses of the factory uses up eight cents. The selling expense attached to merchandising the car is five cents, this latter item including the expenses of the sales, advertising, service and traffic departments. Taxes exacted by the federal and state governments takes four cents, and the depreciation in property value takes two cents more. Two cents on every dollar is paid in dividends on stock.

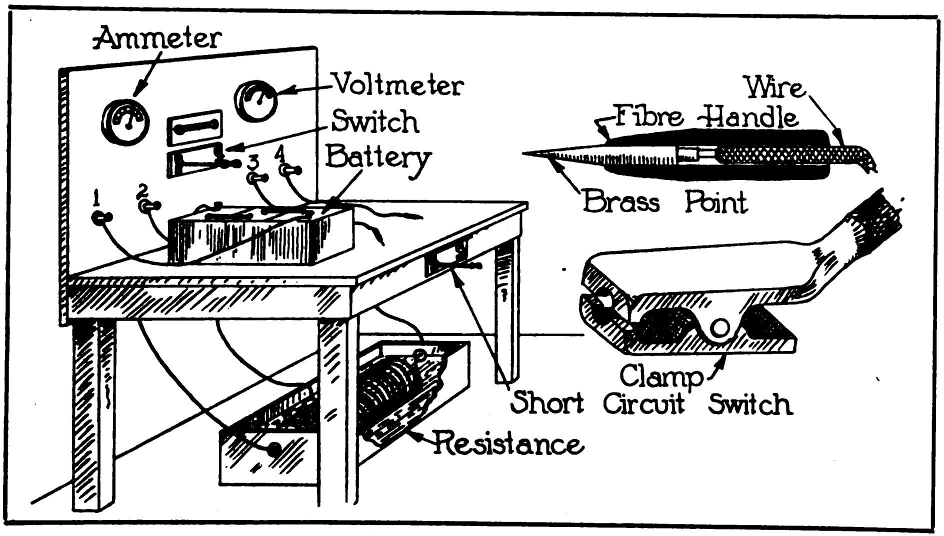
The Franklin Employees' Cooperative Store has been opened at Syracuse, N. Y., for the benefit of the 5000 workmen of the Franklin Manufacturing Co., maker of Franklin motor cars, where groceries of all kinds are on sale at prices about 20 per cent. under the current retail rates. It is expected to do a business of $10,000 weekly.

DETROIT GAS INDICATOR CO.

The Detroit Gas Indicator Co., of which C. C. Starkweather is president, has begun the manufacture, at Detroit, of a device which, it is claimed, holds in reserve a surplus of two gallons of gasoline after the engine indicator signals "No Gas." It is reported to be under production at the rate of 400 a day, at present exclusively for Buick and Dodge cars, but all other vacuum feed cars will be supplied eventually.

Testing Batteries by Short Circuit Method

IT IS the common practise among service station repairers to test a battery for an inoperative cell or cells by means of a portable volt-ammeter while the battery is in the car. While this method is quick and usually gives results, yet it does not always satisfy the owner of the battery. To please the customer it is the better policy to install some form of testing that will be permanent and will show at a glance the condition of the battery in volts and amperes. An outfit of this nature that is simple to assemble and inexpensive is shown in the diagrams, at the lower showing how the outfit is wired and the upper the outfit assembled.



Arrangement of Stand for Testing Storage Batteries.

A simple test will prove to the owner whether one, two or three cells are inoperative, and whether charging, or tearing down and repair are necessary. The test, in brief, is to short-circuit the battery momentarily, and while it is short-circuited to take voltmeter readings of each cell. When not short-circuited each cell may show normal voltage. But when short-circuited the defective cell will show a low voltage, and it must be repaired.

To test the battery it is necessary to place it on the stand, to snap the clips to the battery terminals, leading from 1 and 2 and to close the circuit by closing the switch at the side of the table. The voltage of each cell is then taken by placing the test points on the poles of each cell in turn.

In constructing this set the following equipment is necessary: One 300-scale direct-current ammeter, with shunt; one 30-3 scale voltmeter; two single-throw, 150-ampere capacity knife switches; 90 feet quarter-inch soft annealed iron wire. In addition there should be a supply of No. 5 B. & S. gauge insulated copper wire, a small amount of No. 10 B. & S. insulated copper wire, two test points and two short-circuiting clamps.' The lumber for the bench may be gotten out by the repairer to suit his needs.

The iron wire is used as resistance and is arranged in three-inch coils, placed in a wooden box filled with water to keep the wire cool. Three leads are taken from the coil, one running direct to the battery, one from the center of the coil for six-volt cells, and one from the end for 12-volt cells. Make the first connections from the coil temporarily, changing them later to suit the battery; although the length of the coil is about 45 feet, this may be changed according to the grade of wire used. A six-volt battery in the circuit will register 125 amperes at the ammeter with the switch closed and 70 amperes with the switch open.

All wires carrying the direct load should be No. 5, B. & S. gauge, copper insulated. This is large, though no larger than safety demands. The leads from the shunt to the ammeter may be No. 10, B. & S. gauge, copper insulated, as are those from the voltmeter to the testing terminals three and four. Quick attachment to the battery terminals is made through snap clamps, connected through heavy woven cables to terminals one and two. These should be marked positive for the positive pole of the battery and negative for the negative. The test points are brass rods, sharpened and held in fiber handles, connected to terminals three and four by lamp cord wire. The sharp brass points, when placed on the battery terminals, assure a perfect contact for the voltmeter. The battery, once placed on the testing stand, is easily accessible for testing and it is claimed that two minutes time is sufficient to show the condition of each cell.

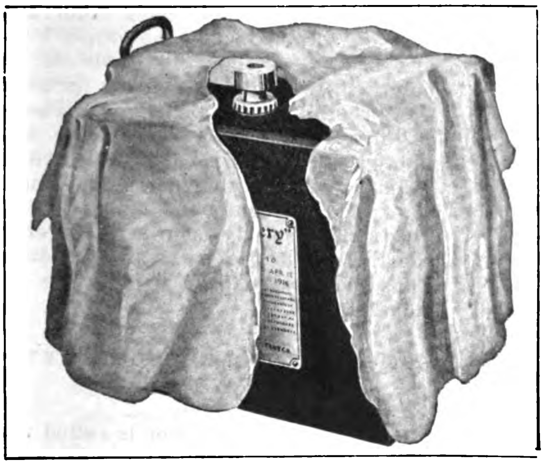
BRAKE LUBRICATION.

The bands of automobile service brakes too often receive little or no attention. Then, glazed surface of the lining does not act quickly, nor is it dependable. The first step is to go over the lining with a squirt gun full of kerosene; while this is soaking well into the lining, go over the opposite brake also with kerosene, cleaning as well the connections for inspection and adjustment if required. Allow the kerosene a half hour at least to soak well into each lining, then giving a second application of kerosene if necessary. After this treatment, fill the squirt gun with clean engine oil and inject this into the bands, leaving it to soak into the open pores over night. In the morning wipe off the surplus oil, start the car and apply the brakes several times to get rid of any excess oil between the bands and the drums. This attention once each month or two will keep the brakes dependable and silent in operation.

Keep tires fully inflated. Soft tires wear quickly and consume power.

REPAIRING HOLES IN BOILER SETTINGS.

A mortar that can be made from materials easily obtained and is particularly fitted for stopping leaks in chimneys, etc., is also good for stopping cracks in boiler settings and other brick structures, when not exposed to too high temperatures. Although of an improvised and primitive nature it answers the purpose very well, and has the merit of being made of material available almost anywhere.



Cover Battery with Wet Cloth to Prevent Explosion of Gas.

Mix hard wood ashes, three quarts; chimney soot, one quart; common salt, one quart, and sufficient water to make a stiff mortar. Apply at once as it hardens quickly.

TO PRESERVE SCREWS.

Most repair men and machinists save the small screws and nuts that are left over from jobs. The common practise is to place them in tin boxes or trays in the stock room where they soon become rusty and simply represent so much junk. A better method of storing them is to put screws and nuts of various sizes in large neck bottles, each size in a bottle by itself. Each bottle is provided with a cork and labeled if desired. In this way the repairer can see instantly just what sizes he has and how many of each and they will be kept free from rust.

MAKING SOCKET WRENCHES.

Herewith are a few suggestions as to methods of making a set of socket wrenches: The wrenches can be made from Ford radius rods that have been junked. As these rods taper, several sizes of wrenches can be made from a single rod. First, cut the length of the wrench desired from the rod, then heat the end of the tube to a cherry red and bend it to shape around a nut. The piece of radius rod must be large enough to fit over the nut and a hole drilled in the opposite end of the socket so that a punch or a small rod can be inserted and used as a handle.

Prevent blowouts by avoiding severe jolts and maintaining full pressure.

Lead Burning of Batteries

IN BATTERIES having burned connections, the joints are made by melting the parts to be joined and forming a solid weld. The process is called "lead burning," and is carried out by means of hydrogen gas and compressed air, illuminating gas or natural gas and oxygen, or by an electrically heated carbon.

In all lead burning, absolutely clean surfaces are essential to good workmanship. Lead is soft and very readily cleaned with a scraper or file. In the case of a battery that has had electrolyte in it, the surfaces to be burned should first be wiped with ammonia to neutralize the acid and then allowed to dry before scraping.

Before starting to burn the connector or terminal should first be lightly taped to a snug fit on the post. The top of the post should be one-eighth inch below the top of the connector to allow space for burning. If the post is too long, remove connector and trim off post. The top of the post should be melted first and then fused to the connector, after which lead from a piece of burning strip can be run in until the joint is flush.

In order to avoid the possibility of an explosion of the gaseous mixture contained in the upper part of a cell, when doing repair work with a gas flame or carbon burning outfit, the following precautions should be taken: The filling plugs should be in place and the entire battery, with the exception of the part on which the burning operation is to be performed, should be covered with a cloth thoroughly wet with water. The cloth should be pressed down upon the vents of the cells, or wet waste may be packed around and over the vents. A large piece of burlap or a towel thoroughly soaked with water is suitable.

The wet cloth is recommended for two reasons: First, it prevents the burning flame or arc from communicating to the interior of the cell and, second, if an explosion should occur, the cloth will prevent the solution and small parts from being thrown about.

The outfit consists of a special burning tip and mixing valve. Sufficient 5/16 inch hose should be provided, and the hose wired to the apparatus in making connections. The comparatively high air pressure renders this precaution advisable. A supply of compressed air is necessary, the proper pressure ranging from five to 10 pounds, depending upon the length of hose and the size of parts to be burned. When air from a compressor for inflating casings is used, a suitable reducing valve must be introduced. This outfit is designed for use with the ordinary city gas supply; ~~natural gas can~~ not be used with this equipment.

Connect the air hose to cock A, the gas hose to cock B. The leader hose, which should not be more than five or six feet long, is connected at C and to the burning tip at D.

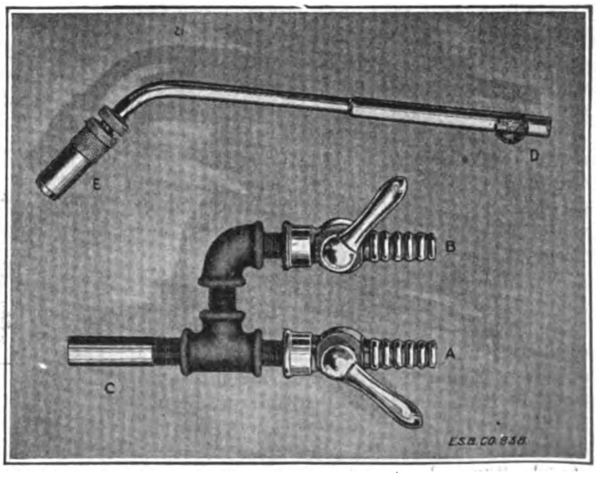
When the air pressure at the source is properly adjusted, close the air cock at A and turn the gas cock at B on full. Light the gas at the tip and then turn on the air. If the flame blows out the air pressure is too high and must be reduced, preferably at the scurce.

With the gas turned on full the flame will have a ragged appearance and show a waist about one-half inch from the end of the tip, the flame converging there and spreading out beyond. This flame is not suitable for burning. Slowly turn off the gas until the outer portion at the waist breaks and spreads, with an inner tongue of flame issuing through the outer ring. The flame will now have a greenish color, and is properly adjusted for burning. If the gas is turned off further, or too much air is turned on, the flame assumes a blue color, gradually becoming invisible, and is then deficient in heating power.

When properly adjusted the hottest part of the flame is just past the end of the inner point.

Do not hold the flame too close to the work when burning, as its heating effect is greatly reduced and the flame is spread so as to make control difficult. The burning tip is provided with an outer sleeve and lock nut E. The sleeve is removable and can be taken off in case any of the holes in the tip become clogged. The position of this sleeve is adjustable, varying with the flame, etc. The best position should be determined by experiment.

A still better method of burning is by use of illuminating gas, either artificial or natural, and oxygen in tanks for which suitable apparatus has been developed.



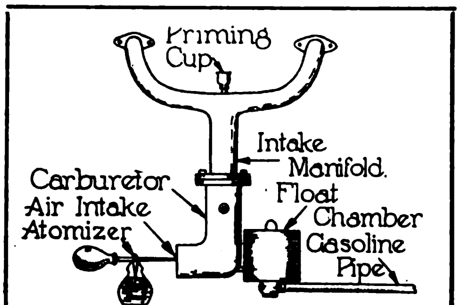
Lead Burning Tip and Connecting Tubes for Gas and Air, Provided with Shut-Off Cocks.

It may be taken as a sure sign that the crankshaft is not quite true when the crankshaft or connecting rod bearings are found to be worn a little more on the ends than in the middle.

Mechanical Hints for Garage and Repair Shop

Removing Carbon with Water

Much has been said in regard to using kerosene for removing carbon accumulations in the combustion chambers of an engine while the engine is operating. This method is good and does the work up to a certain point. The idea is to soften the carbon with kerosene, leaving it to the engine to work it out through the valves.



Simple Method of Removing Carbon

Another method that is proving popular with many motorists is that of using water. It is claimed that better results are obtained by delivering the water in small quantities, introducing it through a connection provided in the intake manifold, the bulk of the water being held in a tank of from one to two quarts capacity, either fastened to the dash or fitting the top of the engine. The water is led to the intake manifold fitting through a copper tube provided with a suitable shut-off which regulates the flowage of the water.

On cars not provided with equipment for supplying water in this manner it may be furnished to the engine by an atomizer, similar to those for spraying the nose and throat. This size of atomizer will deliver the water in about the right quantity so that the chance of the engine stalling will be reduced to a minimum. The water is supplied to the air intake of the carburetor and enters this tube in the form of a mist or spray, readily mixing with the gasoline and air.

It has been noted that engines treated with water for the removal of carbon show an increase of power almost immediately and its use does not seem to be detrimental to the engine.

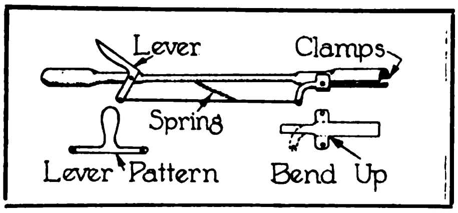
Engines of the stationary type, operating on kerosene or distillate, are provided with devices which supply water at stated periods, removing the carbon while it is in a softened state, thus preventing its forming into a scale.

To give the engine a water treatment for carbon it should be well warmed, as after a long run. The engine should be operated with the gears in neutral at a speed corresponding to about 15 miles an hour in high gear. The atomizer should be filled with water and sprayed into the carburetor air intake pipe, keeping up a steady flow. Do not be afraid of putting in too much water, as an atomizer will not supply more water than the average engine will take in without stopping. The atomizer should be filled several times; as much as a quart of water can be used to advantage. Allow the engine to operate for at least five minutes after the water supply has stopped.

On an engine equipped with a priming cup fitted into the Y of the intake manifold the water can be supplied through this cup instead of at the carburetor air intake. The cup should be opened so that it leaks just a little and the water is then fed in as fast as taken by the engine. If the priming cup is small a piece of rubber tubing can be slipped over it and the other end put in a jar of water. The suction of the engine pistons will draw the water from the jar and supply it, in the correct proportions, to the engine.

WELDING ROD HOLDER.

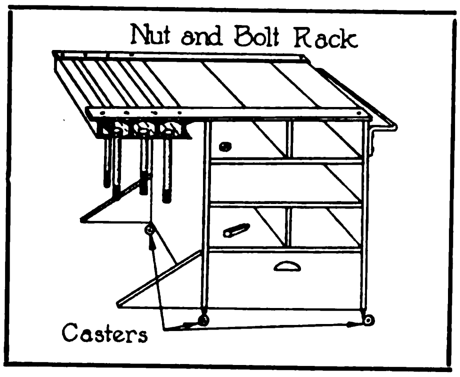
The frugal welder is many times undecided to know just how to use up the small pieces of welding rods that accumulate from welding jobs. The tool in the illustration shows how these odds and ends can be successfully used up without burning the fingers, at the same time using up what would otherwise be waste material.



The long rod to which the handle is fastened is made of 5/16-inch round stock, while the grips or jaws are made from ⅛ inch by 7/16-inch iron. The movable jaw and lever are cut from the flat stock and bent up as shown in the illustration. A coil spring maintains a constant pressure on the jaws, and it is necessary only to squeeze the lever on the handle to release or adjust the hold on the welding rod.

HANDY BOLT RACK FOR THE REPAIRER.

A handy bolt rack for the shop can be made from odds and ends around the shop and can be put together in spare time. The rack is made in such a manner that it can be rolled around the garage to any job and carries an assortment of bolts and nuts usually required on the job.

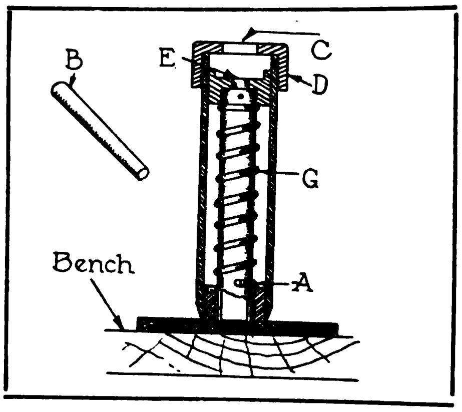


The principal feature of the rack is the overhang at the end, made from angle iron and girders, cut to the proper length and spaced so that the heads of long bolts will be held between the flanges of the girders and the angle iron. The top of the rack proves a very handy place to lay tools, while spaces or bins are provided below for other tools and smaller sizes of bolts, nuts and washers. The illustration clearly shows the general construction of the box, while the dimensions may be changed to suit the individual fancy.

HOME-MADE PUNCH FOR CUTTING FELT WASHERS

Many times the repairer is called upon to cut out felt washers or washers of other soft material and finds it next to impossible to get them perfectly round with a jack knife. A home-made cutter can be made with little trouble that will not only cut them round, but that will also take out the center hole as well.

Choose a piece of gas or water pipe about six or eight inches long and of a diameter that is most used. Grind one end to a cutting edge. The other end should be threaded and fitted with a pipe cap. Drill a hole C at the center of the cap to take the pin B; this pin is tapered and fits against the head of bushing E. The inside cutter is made similarly to the outer cutter, from a piece of smaller pipe ground to a cutting edge at the lower end, provided with a loose bushing A, which distances the inside cutter from the outer. A Spring G is provided which throws back the inner cutter after the center hole has been cut.



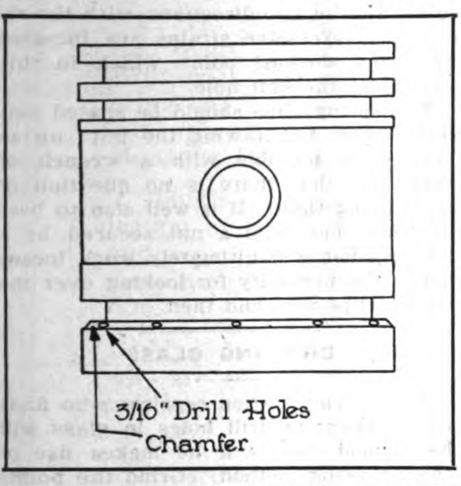
To use the tool, insert the wooden pin at C, strike the top with a hammer, driving down the inner cutter; the spring will return the cutter to position. Remove the pin and strike the cap D, cutting the washer with the outer cutter. The slugs of the inside cutter are pushed out by a rod worked down through hole E.

Exports of automobiles and parts, including tires and engines, have in 20 years, aggregated $1,000,000,000.

Mechanical Suggestions for Repair Shop and Garage

PREVENTING PISTON FROM PUMPING OIL.

Quite often the service station repairer is called upon to remedy an engine whose pistons, one or more, are pumping oil by the rings, fouling the plugs and forming carbon accumulations on the head of the pistons and the head of the combustion chamber. Many repairers suggest that new rings be fitted to the pistons to overcome this difficulty and many times this is done, but more often the evil is not cured. It takes time to wear in new rings, even if they are properly fitted by lapping, unless the work is carefully done.



Showing Chamfered Edge of Oil Groove with Drill Holes Spaced Equidistant.

Still other repairers adopt a newer method of curing the trouble and one that is inexpensive, by drilling a series of 10 or 12 holes 3/16 or 5/32 inch around the edge of the lower ring groove or the oilway found at that point.

Besides the fouling of the combustion chamber the waste of oil when this leakage is present is prodigious if allowed to continue. Drilling the holes in the skirt of the piston will tend, in connection with the scraping action of the piston and its rings, to return the oil through the drilled holes back and into the engine base, where it is used again by the lubricating system of the engine.

It may be necessary, if the ring is equipped with a fourth ring at the bottom, to chamfer the edge of the groove slightly with a file, bringing it more to a level; the holes are then drilled through the piston at the bevel. It will be found that where this is done most of the oil trouble will disappear, and the oil consumption of the engine will decrease materially.

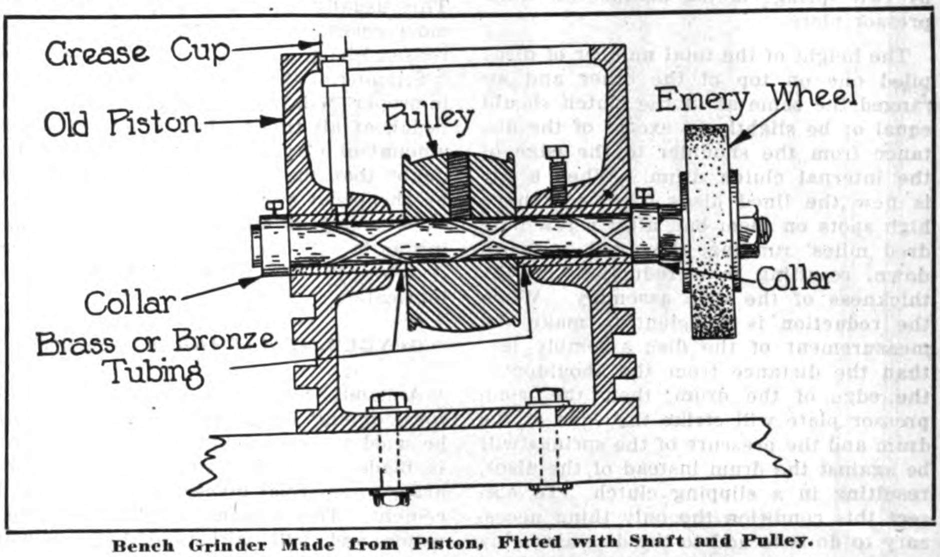
The width of the chamber will vary according to the size of the ring used; narrow rings will allow a smaller chamfer, while wider rings will allow more metal to be taken off, making a wider bevel.

TEMPERING COMPOUND FOR STEEL.

The following recipe has been found very useful as a tempering compound when it was impossible to procure a good grade of steel. This compound will be found especially good for cold chisels, center punches, lathe tools, drills, etc., and, in fact, almost any tool not having an irregular form or thin cutting edges. To six quarts of clean rain water add one ounce of corrosive sublimate and two pints common salt. Stir until thoroughly dissolved. This compound seems to both harden and toughen steel; the tools are dipped and drawn in the usual manner.

BENCH GRINDER OR POLISHING HEAD MADE FROM OLD PISTON.

There are many uses for discarded pistons, but probably one of the most unique is this: A badly worn piston from an old gasoline or automobile engine can easily be made into a bench grinder or polisher by fitting bushings of either brass or bronze to the piston bosses, or by filling them with babbitt after the shaft has been placed. The belt pulley is placed inside the piston and is surrounded by the skirt of the piston, forming a guard for the belt. The grease cup, mounted as shown, furnishes lubrication and the oil or grease should be distributed by means of grooves cut in the shaft, which is held in place by collars fitted with set screws. The piston may be either bolted to the work bench or to a special stand made on purpose for it. The stand should, however, be very stiff to withstand the high speeds at which these tools are run.



Bench Grinder Made from Piston, Fitted with Shaft and Pulley.

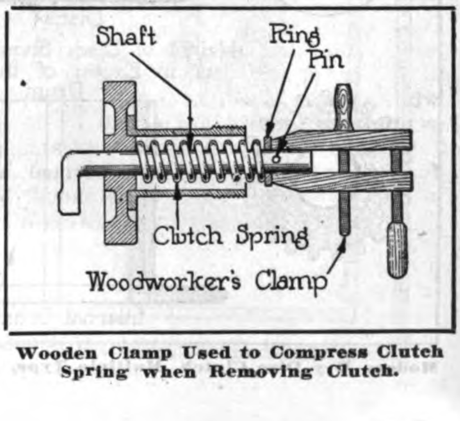
BELT GLUE FORMULA.

A glue for belts may be prepared as follows: Soak 50 parts of gelatin in water, pour off the excess fluid and heat till the water boils. Stir well and add first, by weight, five parts glycerine, 10 parts turpentine and five parts linseed oil varnish and thin with water as required. The ends of the belt to be glued are cut obliquely, the leather warmed and the hot glue applied. The ends should be placed in a press and compressed till the glue has a chance to dry thoroughly. To make the job still more secure punch holes at equal distances and fit copper rivets in them, heading over the rivets. The solid head of the rivets should come on the inside of the belt, or the side that travels over the face of the pulley.

COMPRESSING CLUTCH SPRINGS.

A woodworkers' clamp is a very handy tool to use when compressing clutch springs when removing the pin through the shaft, or replacing the pin in the shaft. To use the clamp, simply tighten the jaws on the shaft by turning up the wooden screws, having the jaws bearing against the ring or collar which retains the spring in position. The clamp is driven on with a hammer, compressing the spring until the retaining pin can be either removed or replaced, as desired. The advantage of the clamp method is its adaptability to different sizes of shafts. Awkward places are many times encountered in which springs are difficult to compress; with the clamp these are easily reached by the protruding jaws of the clamp.

An Indianapolis man is the inventor of a lathe for grinding valves in which centering is done automatically by placing valve stems in the machine.



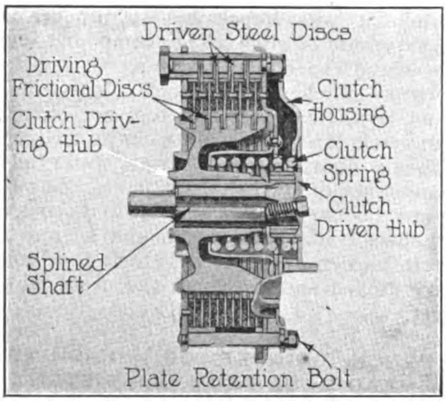
Wooden Clamp Used to Compress Clutch Spring when Removing Clutch.

The Proper Care of Dry-Disc Clutch

THE multiple and single plate disc clutch as used in the modern car, is not as difficult to adjust and care for as it seems to the uninitiated. The disc clutch is a mechanism of unusual qualities: Simple, easy to operate, efficient and lasting. In view of the severe work which it has to perform and the excellent manner in which it does it, without attention, it becomes a unit of almost 100 per cent. perfection. There are times, however, when one of these clutches, after a period, will begin to slip. This condition usually develops after the first two or three months' service if at all.

The clutch of the dry disc type is made up of a number of discs arranged alternately with a steel plate against one fabric-lined. The edges of the fabric-lined discs have a series of teeth cut around the outer circumference which mesh with corresponding grooves in the outer drum. The steel discs have keyways cut in the edges of holes in the discs which engage with keys in the internal drum. When the clutch is engaged, these discs are firmly compressed by two springs acting against the compressor plate.

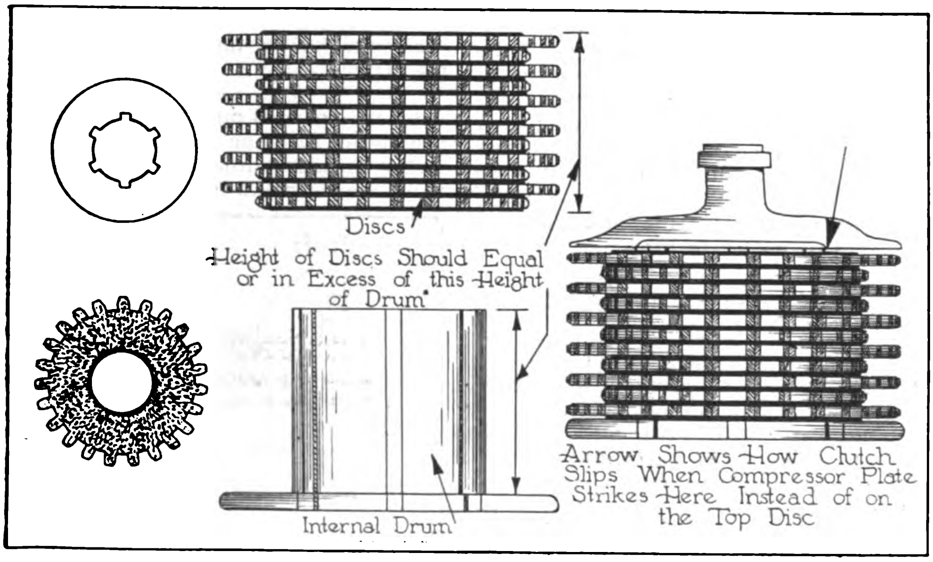
The height of the total number of discs piled one on top of the other and arranged the same as in the clutch should equal or be slightly in excess of the distance from the shoulder to the edge of the internal clutch drum. When a car is new the lined discs frequently have high spots on them but, after a few hundred miles' running, they will be worn down, resulting in a reduction in the thickness of the disc assembly. When the reduction is sufficient to make the measurement of the disc assembly less than the distance from the shoulder to the edge of the drum, then the compressor plate will strike the edge of the drum and the pressure of the springs will be against the drum instead of the discs, resulting in a slipping clutch. To correct this condition the only thing necessary to do is to add to the disc assembly in order to increase its thickness. This can be done by installing one extra steel disc and the best place to put it is against the shoulder of the drum. One disc is usually sufficient to make up the required amount. Do not put too many discs in as there would then be a possibility of the clutch not releasing properly. Very often, when one of these clutches starts to slip, the operator will pour on gasoline or tighten the springs. This usually does not help much as, in most cases, slipping is caused from the reason given.



Units of Multiple Dry-Disc Clutch.

Slipping of the clutch is also caused by improper pedal adjustment. The clutch pedal, at all times, should have a slight amount of play so that there may be no doubt that the clutch is being held out by the pedal stop.

Do not pour oil into the clutch housing as it will damage the lining, making it too soft. Keep the thrust bearing lubricated.



Discs
Height of Discs Should Equal or in Excess of this Height of Drum
Internal Drum
Arrow Shows How Clutch Slips When Compressor Plate Strikes Here Instead of on the Top Disc

Modern Dry-Disc Clutch, Multiple Type, Showing Construction and Cause of Slipping.

GLYCERINE LITHARGE CEMENT.

A handy cement to have in the shop for stopping leaks, etc., and which can be used for cementing glass, brass, etc., is made by mixing equal parts of litharge, commercial glycerine and Portland cement. This cement will harden under water and will withstand hydrocarbon vapors.

TIGHT SPRING CLIPS.

If any proof be required of the necessity of keeping spring clips tight, it may be found in the fact that neither dealers nor manufacturers will replace a spring that is broken through the center bolt hole—the place where most springs give way.

Breakage of this nature is taken as evidence that the springs clips were not kept tight. The spring clips are subject to bending in two directions, with the result that excessive strains are imposed upon the weakest point, which in this case is at the bolt hole.

The spring clips should be seated perfectly tight by drawing the nuts up as closely as possible with a wrench of such size that there is no question of their being tight. It is well also to bear in mind that even a nut secured by a lock washer will ultimately work loose; hence the necessity for looking over the spring clips now and then.

DRILLING GLASS.

The service station repairer who finds it necessary to drill holes in glass will have good results if he makes use of the following method: Grind the points from one corner of a small three-cornered file on the bias from the other. Fix this file in a bit brace such as is used for boring holes in wood work. Place the glass to be drilled on a smooth surface covered with a blanket or similar material, to cushion the glass. Start to drill the hole, in the exact spot you wish it. When a slight indentation has been made, surround this with a wall of putty and fill the dam thus made with turpentine to prevent the drill from heating. Light pressure on the drill while boring the hole is best, otherwise the glass is liable to crack.

WASH FOR WHITENING METAL.

Mix whiting and white lead with boiled linseed oil to a thick paste, add some Japan dryer and thin with benzine or gasoline. This makes a fine preparation for whitening sheet iron and other work previous to laying out, as any lines drawn on the surface show up very distinctly. It can also be used to advantage when stencilling or marking sheet metal.

PAINT FOR THE BATTERY BOX.

Black asphaltum paint is an excellent medium to use in repainting the battery box, as it prevents the eating away of the material of the box by solution that is spilled. The box should be given a heavy coat of this paint several times a year. Incidentally, washing soda or ammonia solution will neutralize the effect of battery acid while it is still wet.

TO KEEP HANDLES ON TOOLS.

Fill the handle with powdered rosin and a little rotten stone. Heat the tang of the tool hot and then push it down hard into the handle. When it cools it will be held firmly.

Long Distance Service a Brunswick Certainty

THE assurance of dependability over all roads, in any weather, is the chief factor in Brunswick Tire popularity. Tire after tire, they bring unvarying quality and plus service. Each one upholds the high merit reputation of the House of Brunswick.

This reputation should guide you in your selection of tires. For here are 75 years of skill and experience in the making of highest quality merchandise to pledge you utmost tire satisfaction.

Made in our own great factories by workmen who are guided by the world-known Brunswick policies, these tires combine all wanted features.

With car owner and tire dealer alike, Brunswicks are in high favor. If you are a tire user, try one Brunswick. You be the judge. If you are a tire dealer, write for Brunswick evidence and dealer plan.

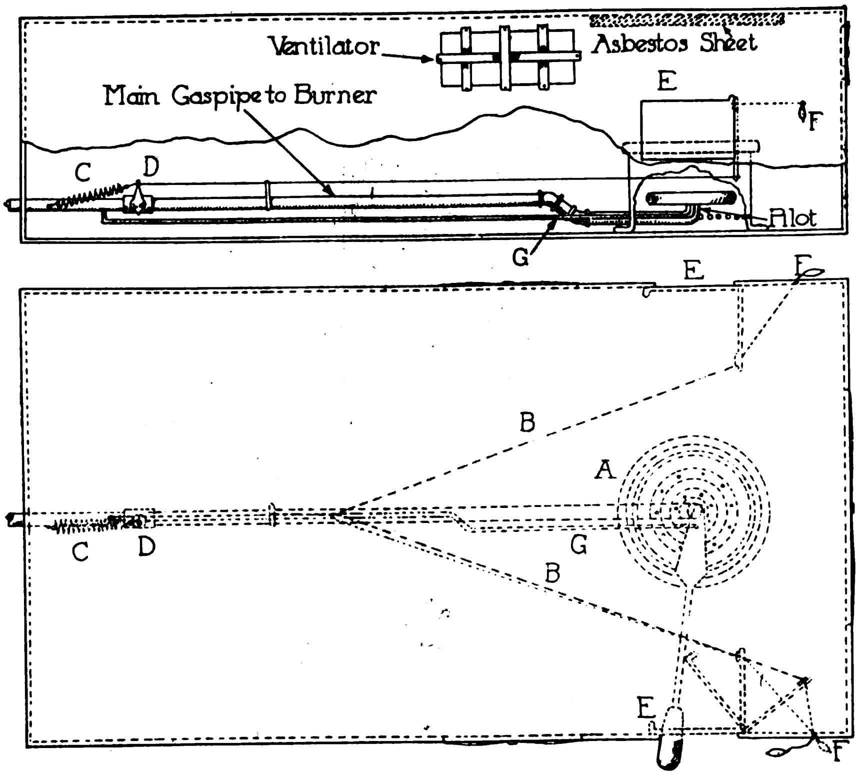
Gas Heater for Soldering Coppers

A satisfactory gas or stove for heating soldering coppers can be constructed at odd times from material picked up around the service station and the cost will be very small, as the fittings can be made from waste material and the few accessories, such as bolts, hinges, etc., will not cost much.

The stove is made in the form of a rectangle, which shape is much preferred by radiator repairers on account of the additional length and the fact that the box can be made wider. Ordinary sheet iron is used for the sides, top and ends of the heater, as well as the floor, while the sides are fastened to the ends, top and bottom with small angle pieces, drilled and fitted with stove bolts. Or if a more perfect job is desired, angle pieces can be cut and fitted that will extend the full height of the side and are riveted to the sides and ends. This type of construction adds greater strength to the heater and will tend to make it hold its shape.



The height of the heater may vary from six to eight inches, six inches being about the average desired by most radiator repairers, while the length should be about 16 inches and the width about 10 inches. Doors are cut about two inches from the front and hung in such a manner that they swing inward, one door at either side. The hinges can be fastened to the sides by drilling holes and riveting the hinges; ordinary strap hinges will answer the purpose. An arm is fastened to the upper front corner extending inward, and to this arm is secured the wire that opens and closes the gas valve when an iron is inserted through the door opening, and over the gas jet. Ventilation is provided by cutting a two by five-inch opening at either side and fitting a grating of metal strips riveted to the sides, as shown in the illustration.

The gas pipe enters through an opening cut in the rear end and is fitted with a shut-off valve and spring, which closes the valve automatically when either of the side doors are closed.

The gas pipe leads forward to a plate between the doors at the center, while a pilot light is provided which is tapped into the main gas pipe behind the automatic valve and is led forward to a point just below the main burner or gas plate. The opening from this pilot is very small, so that only a small amount of gas is allowed to pass, its object being to light the burner when either door is opened and a copper placed on for heating.

Outside of the heater box a regular valve is provided which shuts off the gas both to the main burner and the pilot light when the stove is not in use.

As will be noted from the illustration, A is the main gas burner; B, B, the wires connecting the automatic valve with either side door; C, the spring which automatically closes the gas valve when the door closes; D, the gas valve on the main line; E, E, side doors; F, F, wire pull which allows the iron to be removed from over the burner without the door pinching the handle of the iron; G, pilot pipe to main burner.

TO FILE CAST IRON.

Frequently it is necessary to file a piece of cast iron that has been subjected to friction and has acquired a glaze or skin. The best way to get through this skin is to use the edges of an old file. If a new file is used on this sort of surface it may be ruined.

BE CAREFUL TO ELIMINATE GRIT WHEN REPLACING CYLINDERS.

In fitting cylinders to the engine base after their removal for repair work, care should be taken to eliminate all chances of grit entering at the bottom and working up on to the cylinders walls, causing the pistons to score the cylinders. The better method is to wipe the interior walls of the cylinder with a clean cloth slightly coated with oil, which will remove any traces of grit. Do not allow the hands to come in contact with the walls of the cylinder, as they are oily and grit may unknowingly be deposited on them in this way. Small loose parts, after being cleaned with gasoline should be kept wrapped in clean cloths to prevent the entrance of grit and not jumbled together in a box, as is the usual custom. The chief destructive agent in an engine is grit and other abrasive matter, and though it is physically impossible to keep it out entirely, it will repay the trouble taken to keep it to a minimum by scrupulous care when replacing the part after handling.

CEMENT FOR FASTENING LEATHER OR PAPER TO PULLEYS.

Soak six pounds of carriage glue over night, then heat thoroughly till dissolved and add six pounds of white lead ground in oil. Reduce the mixture with oil until it is of a free working consistency. Add one ounce of nitric acid and stir till thoroughly mixed. The pulley surface should be made thoroughly clean and should be warmed to about 125 degrees Fahrenheit. Then apply the cement and clamp on the leather and let stand 12 hours before using. If the job is done right, it is claimed the leather will have to be turned off in a lathe in order to remove it.

LIQUID METAL POLISH.

A good liquid metal polish for cold smooth surfaces, either iron or brass, may be made from the following ingredients: To three quarts of benzine add two ounces of oxalic acid and 1½ pounds of silicate acid powder. This polish may be made in large quantities and set aside for further use provided it is kept in tightly closed bottles. Shake well before using. Apply the solution with a piece of cloth. When dry, polish with a soft, clean cloth.

COMPRESSION TESTER.

The shell of an old spark plug, in conjunction with a tire gauge, makes a very handy compression tester. The porcelain of the plug is removed and a washer is fitted at the bottom. The gauge is next inserted and the packing tamped in around it. The packing nut forces the packing down around the base of the gauge until a perfectly tight joint is made. This instrument is screwed into the spark plug opening and when the engine is turned over by hand the compression is registered in pounds on the gauge.

"More Than a Million a Month"

THE Piston RING COMPANY
MUSKEGON, MICH.

Development of O. K. Giant Battery.

Paul B. Rabe of Chicago, a business man with a mechanical turn of mind, is credited with being responsible for revolutionizing the battery business in a way for the development of a dry rechargeable battery that is claimed to put an end to much of the battery expense and many of the troubles of the motorist. This is now being manufactured at the plant of the O. K. Giant Battery Corporation, Gary, Ind., of which Mr. Rabe is the president. This battery will not freeze and illuminates the service station problem. It has been subjected to the most severe tests that could be given a battery and has always functioned properly. Its development was the result of a chance visit made by Mr. Rabe to Bert H. Krafft, the inventor of the O. K. dry rechargeable battery.

Mr. Rabe was out in his wife's electric. He had had considerable trouble with his batteries. Being of a mechanical turn of mind he began to think that a dry rechargeable battery ought to be within the bounds of possibility. He knew Mr. Krafft was an electrical engineer. He was only a short distance from Mr. Krafft's house when these thoughts passed through his mind. He called and suggested the feasibility of such an invention.

"Why, I've been working on that for 20 years," was the reply of Mr. Krafft. "There is just one thing I don't seem able to get right."

"Don't stop," was the rejoinder of Mr. Rabe. "If you have got that far, give it another whirl, I'll help you."

Mr. Krafft took the advice of Mr. Rabe and in three years he perfected the invention which is now being turned out at the plant of the O. K. Giant Battery Corporation at Gary.

One of the most severe tests to which this battery has been subjected was freezing in a discharged condition, in a cake of ice for three days and letting it stand outside for 12 hours with the temperature at 11 degrees below zero. That treatment never fazed the O. K. It lived up to its name.

The O. K. Giant Battery Corporation has new buildings in course of construction for the equipment of which special standard machinery is being made at an expense approximating $500,000.

Two buildings are now in use, and contracts call for the completion of 12 more by Dec. 31 of the present year. The corporation has a tract of 40 acres, and the eventual development plans call for the erection of a total of 40 buildings on this plat.

More than 2000 skilled and unskilled men will be employed by the time the eighth unit is completed this fall. To convey an idea of the scale on which the operations of the O. K. Giant Battery Corporation are going forward, it may be stated that, in No. 2 unit, there have been installed $72,000 worth of electrical charging boards of the most modern type, having a capacity for 200,000 dry rechargeable batteries of all types a day.

Paul B. Rabe, President of O. K. Giant Battery Corporation, Gary, Ind.

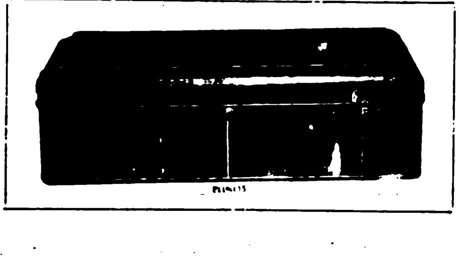
SECURITY AFFORDED BY PEERLESS TOOL BOX.

There has, of recent years, been a notable increase in the theft of tires, tools, chains and accessories of all kinds that are left insecure in parked automobiles, and this points out the necessity of some means of curbing these depredations. Motorists should be careful to see that all tools and equipment are out of sight and deposited in some safe receptacle. To serve this purpose the Corcoran Manufacturing Co., Cincinnati, O., makes the No. 30 Peerless tool box for Ford cars, which is shown herewith.

This box is of a convenient size, 22 inches long, nine inches wide and seven inches deep. It is scientifically constructed with a full finished steel body, corrugated, which permits of great strength and durability, but is not handicapped with the excess weight ordinarily necessary to incorporate strength into a box of this size. The lock, which is rust proof and guaranteed for the life of the box, is concealed. The hinges are riveted, not welded, making it impossible to break them off. The lid, which has a crown top and a reenforced beading along the edge, will not dent, and the corrugation on the bottom of the box allows air to circulate, preventing the formation of rust.

The Peerless tool box was primarily designed for the carrying of tools, but its usefulness is increased by the motorist who carries his chains and other valuable equipment in it.

An inquiry to department F will bring detailed description of the Peerless tool box, as well as information on the Corcoran company's complete line of Peerless products for Ford cars: Radiators, radiator and hood combinations, hoods and fenders.



NEW BOOKS.

Starting and Lighting Troubles, Remedies and Repairs, by Harold P. Manly. Published by Frederick J. Drake & Co., Chicago, Ill.

This book is designed for use in electrical service stations, battery stations, repair shops and garages in general; also for the car owner who makes his own repairs.

Systematic methods are given for quickly locating the exact form of trouble that may be present. These are supplemented by instructions for either the remedy or repair called for, these being in such a form that it is possible to perform the operation in a proper manner and with the least possible effort and time.

The volume is divided into three distinct parts:

First, trouble location charts which, when the condition of the lights and starter is observed, tell of the steps necessary for finding the fault and correcting it.

Second, detailed instructions for making the correct tests to determine the kind of fault that may exist in any of the several parts of the electrical equipment, including an explanation of the construction and use of electrical equipment.

Third, diagrams of the wiring, both internal and external, are given, including equipment used from 1912 to 1920 inclusive.

It is assumed that the reader has some knowledge of the principles of electric lighting and starting such as given in a previous volume by the same author under the heading of "Automobile Starting and Lighting." However, if one is acquainted with electrical work of a general nature such knowledge is not essential.

Automobile Battery Care and Repair, by Harold P. Manly. Published by Frederick J. Drake & Co., Chicago, Ill.

Automobile Battery Care and Repair is intended as a manual of storage battery work performed in battery stations, in shops handling starting, lighting and ignition repairs, in general garage work and in the service of car owners handling their own upkeep problems.

The text is confined strictly to the automotive field; that is, to the lead-acid battery of the pasted plate type. Treatment of the subject is from the practical and commercial standpoint as affected by the problems met with in every day work.

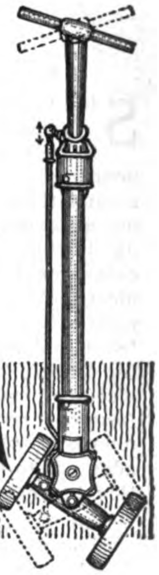
Especial attention has been given to the subjects of charging, repairing and the remedy of battery troubles, as these are matters that directly concern the worker in this line. Systematic rules have been developed and all necessary reference information has been included.

"The Wheels Pivot--

—that's why I can get your car out quickest with a WEAVER New-Way Jack

The Sign of Good Service

WE USE
WEAVER
GARAGE
AND SHOP
EQUIPMENT
FOR
SERVICE



"BY being able to steer this Jack by pivoting the wheels, I can place it in position JUST where I want it the first shot out of the box. I don't have to pull and push it back and forth a half dozen times to get it located just right under the axle or differential—a simple twist of the handle guides this Weaver Jack to just the proper spot while I am rolling it under the car.

"You can't imagine how much time that saves in the course of a day, Mr. Car Owner—and it keeps busy men like you from getting peeved and impatient while you are waiting for me to get your car out of a "pocket".

"Then it is of great advantage in getting a car out of a close corner like this one, where I can't conveniently operate the Jack from either front or rear end of the car.

"I can shoot Mr. Jack into place under the differential in this way—then by cutting the wheels of the Jack into line with the axle of the car I can pull the car straight to the side without having to raise the car high enough to permit the near end of the Jack Frame to pass directly under the car wheel. I only raise the car high enough to free the tires from contact with the floor. One notch on the ratchet is often sufficient.

"It's so easy to operate too! It has the same leverage principle as the ordinary little single standard Jack which you operate with one hand—while this long lever handle supplies enough leverage to enable me to raise or lower the heaviest passenger car with perfect ease.

"Notice particularly when I release the ratchet to lower your car it requires but little effort to resist the weight of the car, on account of the enormous leverage I have in this handle. ....You need never be afraid of the handle of a Weaver New-Way Jack being slammed against your fender or radiator in letting the car down.

"Yes, it rolls very easy, because it is equipped with roller and ball-bearings in the wheels and castor. Then another thing—the hardened steel ratchet and the two ratchet dogs make it mighty safe and durable. ....But you're not interested in that of course.

* * * * * *

"You're welcome. I could have done it in one-fourth the time if I hadn't talked so much—but I sure am strong for this NEW-WAY JACK.

NOTE:--This Coupon is for your garage man. He will appreciate your calling his attention to it if he has not already received one of our handsome Window Transfer Signs, and our CATALOGUE.

Care of Electrical Measuring Instruments

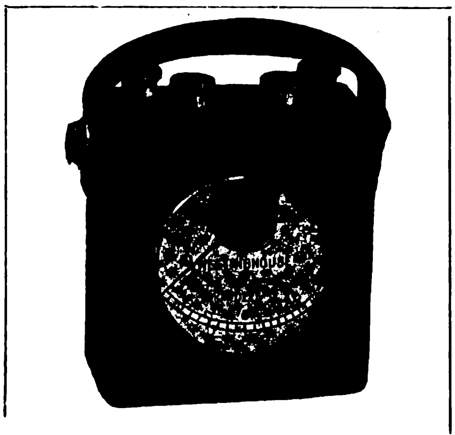
SINCE electrical equipment of some type for starting and lighting, as well as for ignition, is found on nearly every make of motor car, this means that the repair man, besides being an expert on gas engines, as well as on the general mechanics of the machine, must also have a knowledge of the electrical equipment, and the methods used to determine the source of any trouble that exists. All logical methods for finding trouble require the use of an electrical measuring instrument in the form of an ammeter or voltmeter, or modifications of these two, especially adapted to starting, lighting and ignition troubles.

The motor, generator and storage battery are all articles that are built to stand more or less rough usage and their care and upkeep are familiar subjects to the average garage man. The ammeter and voltmeter, however, are the tools that are given him for locating trouble, but not much has been said of their care, or how they should be handled. The object of this article is to point out a few of the major points regarding the construction and care of the general types of measuring instruments.

The best known form of portable instrument used for direct current testing is known as the D'Arsonval type. It consists of a permanent magnet of the horse shoe form and between its pole pieces swings a pivoted moving coil. This coil consists of a few turns of fine copper wire wound on an aluminum frame. The current is led to and from the coil by two flat spiral springs which also restrain the movement of the coil. The action of the meter can be compared to that of a motor. The magnetic flux passes across between the poles of the permanent magnet, the same as between the field poles of the motor. The current in the coil reacts against the flux in the same manner that the armature current in the motor reacts against the field flux, causing rotation. As the coil rotates the springs are wound up and the coil comes to rest when the backward torque of the springs equals the forward torque of the coil. Attached to this coil is a pointer which passes over a calibrated scale. As the forward torque of the coil is proportional to the amount of current in the coil winding, and as the backward torque of the springs is proportional to the angle through which they are turned, the position of the coil and also the pointer would be a measurement of the current in the coil.

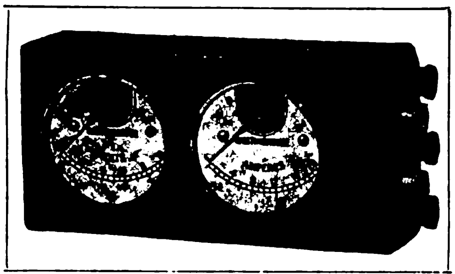
If a constant resistance is connected across a source of voltage, such as across the terminals of a storage battery, the amount of current that will flow through that resistance is directly proportional to the voltage. Consequently, if a resistance is connected in series with the moving coil of the instrument, the amount of current flowing through the coil is a measure of the voltage of the source, and the instrument is known as a voltmeter.

Since the current must be carried to and from the coil by the two spiral springs, it must be kept at a low value. When the current of a circuit is to be measured it is necessary to pass only a small part of that current through the instrument coil. This is done by passing the current through a constant resistance called a shunt, and connecting the moving coil of the instrument in parallel with it. The current will divide between the shunt and the coil inversely as their resistances, and as these resistances are practically constant the current through the instrument coil is directly proportional to the main line current and the instrument is an ammeter.



Westinghouse Voltmeter.

The full scale torque of one well known type of instrument, or that force working through the lever arm of one inch is 0.0031 of an ounce. When working with such small forces all friction must be reduced to a minimum. Therefore, the coil is supported by very highly polished steel pivots turning on sapphire jewel bearings. These pivots are V shaped and the points are ground to a radius of about .0005 of an inch. The sapphire jewels are also V shaped, but are a little larger than the pivots, having a larger angle and also a radius at the tip of about 3/10,000 of an inch. The weight of the movement of this instrument is 0.0308 of an ounce, so that the pressure on the small bearing surface of the pivot is approximately 200,000 pounds a square inch. When one remembers that a sudden jar is liable to increase this value to two or three times this amount, it is very easy to see why an instrument is fairly easily damaged. Instruments are made rugged, to be sure, but the degree of ruggedness is much less than with the other parts of the car equipment. However, they will stand the usual run of usage and will last years if they are properly handled.



Westinghouse Combination Instrument: Voltmeter on Left; Ammeter on Right.

If instruments get off zero they can readily be adjusted by using a screw driver, and turning the screw just below the dial on the front of the case. This screw should be turned carefully for it only takes a fraction of a turn to get the desired results, and if turned too far the screw comes out of the adjusting slot and cannot be adjusted further.

If the instrument becomes damaged so that excessive friction exists, or the coils are burned out by a severe overload, it should be returned to the factory because of the possibility of further damaging the instrument, for repairs on such work as this require an expert and should never be attempted by one not fully familiar with it.

WILL MANUFACTURE SHERIDAN CAR AT MUNCIE, IND.

Announcement is made that the Sheridan Motor Car Co., a newly created division of the General Motors Corporation, will manufacture the Sheridan car at Muncie, Ind.

D. A. Burke, formerly in charge of the Buick Motor Co.'s business in Chicago, and who previous to that had held several other official positions with the Buick organization, is president of the new General Motors division.

The latter has purchased and greatly improved the plant at Muncie, formerly used by the Inter-State Automobile Co. This plant, now one of the best arranged and equipped in the country, has a possible output of 300 cars a day, with sufficient vacant property around it to permit the growth that is anticipated.

The new Sheridan, production of which is expected to begin in August, will be made in two sizes, four and eight cylinders. Each will be manufactured in roadster, touring, coupe and sedan models. Further announcements with respect to the details of the car will be made in the near future.

Mr. Burke's long contact with the automobile trade and car buying public gave him definite ideas and ideals which he has incorporated in the Sheridan, the new car being his creation, working with the General Motor's engineers, and is said to be a masterpiece in design, stability and completeness.

WICHITA GOODRICH BRANCH.

The Wichita, Kan., branch of the B. F. Goodrich Rubber Co. is in a new location at 318 South Lawrence avenue, where it will have triple its former floor space and will be able to increase its stock of tires from $50,000 to $250,0000.

ACE HARD TIRE MOVES.

The Ace Hard Tire & Service Co., Kansas City, Mo., has moved from 1924 Grand avenue to 2740 McGee Traffic way.

$150,000.00 Sales Power Back of this Accessory

Dealers! You have a virgin field. Every Ford car owner is a prospective buyer.

This Amco Shutter is the only Ford accessory of its kind on the market. No competition—and it's priced to permit a generous retail profit margin.

Full pages in the Saturday Evening Post—every three or four weeks from August to April will give new impetus and rouse new buying action every few weeks. Farm journals, newspapers and motor publications carry the story of Amco Shutters to millions of Ford owners.

Amco Shutters make Fords usable all winter. Cars in use need accessories and tires, hence Amco Shutters develop your winter sales. Amco Shutters protect engine against cold and stalling. Opened and closed by lever controlled from dash board. Twelve adjustments. Fit snug, ride noiseless, increase resale value.

Write us for complete details but do it now as materials are scarce and supply limited.

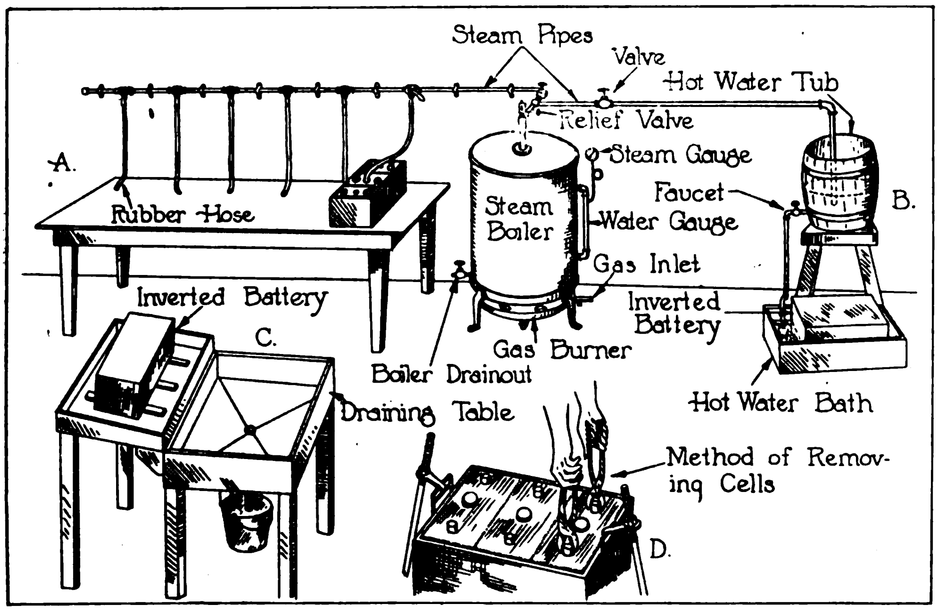
AMCO SHUTTER

Use of Steam for Separating Battery Cells

STEAM for loosening the individual cells of a battery is a method that is now in use among battery repairers. The process previously employed has been either the gas flame, scraping or heated tools, and this has proved tedious, requiring considerable time and has not given satisfaction to the customer in all cases. The new method, employing steam, requires a boiler either coal burning or gas for generating the steam. A brief description of a small installation of this type will be given:

The illustration shows the arrangement of the units, which is self-explanatory. In this case a small boiler was used, such as is found in a house or shop for heating water.



Arrangement of Units for Steaming Batteries: A, Steaming Bench; B, Heating Battery Cells with Hot Water; C, Draining Bench; D, Removing Steamed Cells by Pliers.

A gas burner supplies the heat beneath the boiler and may be regulated at the will of the operator. The boiler is equipped with steam gauge, water glass, with suitable connections to the water main, and a steam line. It was claimed by the owner of the outfit that steam pressure sufficient for the work could be generated in from 10 to 15 minutes.

Valves are placed on the steam pipe at convenient points and from these short lengths of rubber hose lead to the bench. For unsealing an individual cell the vent in the cell is removed, the hose inserted and the steam turned on. When the cell is properly heated it may be removed with a pair of pliers and taken to the bench. Most repairers prefer to remove all the cells in the battery and in that case the cells steamed should be covered with a cloth, to prevent them from cooling too rapidly before removing.

Still another method employs hot water instead of the live steam. In this case the steam is connected to a tank filled with water and the steam is allowed to heat the water to the proper temperature, the battery is placed in the water inverted and with the vent plugs removed. After a few minutes the battery is removed, given a shake and the cells will drop out. For this outfit a much larger boiler is required, as a larger amount of steam is used in the operation.

At the left of the steaming table is the draining table and here the battery is left in the inverted position to drain or to be separated into its component parts. Some repairers prefer to take apart and inspect every cell of the battery on the assumption that if one cell is inoperative there may be more or less defects in them all.

REPAIRING WATER JACKET.

A small leak in the water jacket of the engine may be repaired, without the cost of welding, by a simple rust method. While this is not considered as good as welding, it costs practically nothing and will often be found a handy makeshift in cases where it is found impossible to get to a repair shop to be welded before using the car.

The part of the jacket which has been injured is exposed and filed bright. If the leak is the result of freezing, the two ends of the crack are determined and two small holes drilled through at these points. A soft iron or copper rod is then driven into the hole and the ends filed off flush. This checks any tendency of the crack continuing.

Iron filings are then forced into the crack if it is a wide one, and a solution made of a quarter-pound of sal ammoniac in one quart of water. A small cup of putty is then built onto the side of the jacket, which, when filled with the solution, completely immerses the crack. The mixture rapidly rusts the iron, and soon the crack will have been completely filled with rust.

The whole cooling system should be washed out thoroughly after the crack is filled, to check excessive rusting of other iron parts.

HARDENING HIGH SPEED STEEL.

A hardening paste made according to the following formula has been used on high speed steel with success, enabling it to be hardened by heating in an ordinary gas oven, and thus making unnecessary the very high heat usually called for in hardening such steels: Mix two pounds rye meal, one pound common salt, ¼ pound pulverized borax, ¼ pound pulverized charcoal, 1/3 pint (or ¼ pound) liquid cyanide of potassium, ½ gill or two ounces of water glass (silicate of soda) and three pints of water. The liquid cyanide is made by dissolving three ounces of pulverized potassium cyanide in one pint of boiling water. Mix thoroughly to form a paste.

When using the paste it has been found best to apply it in the following manner: Provide a small cast iron vessel or a crucible of the shape of a drip pan and spread a thin layer of the paste on the bottom. Put the work in the pan and cover that with paste also. Place in the gas oven and heat until it reaches a nice full red. Dip in sperm, fish or kerosene oil.

PREVENTING RUST FORMING.

To keep iron of any kind, and especially those parts of machines which are made of steel or iron, from rusting, take one-half ounce of powdered camphor and melt it before the fire in one pound of good lard. To give it a dark color, add as much fine black lead as is necessary to produce the desired effect. Clean the iron work and smear it over with this preparation. After this treatment it should be allowed to remain untouched for 24 hours, when the grease should be removed by wiping the iron work with a soft cloth.

TO CASE HARDEN CAST IRON.

The following recipe is said to have been successfully used in case hardening cast iron: Pulverize and mix together equal weights of saltpeter, prussiate of potash and a half ounce of sal ammoniac. Heat the cast iron pieces till red hot, roll them in the powder and then plunge them into the liquid.

BETTER COOLING.

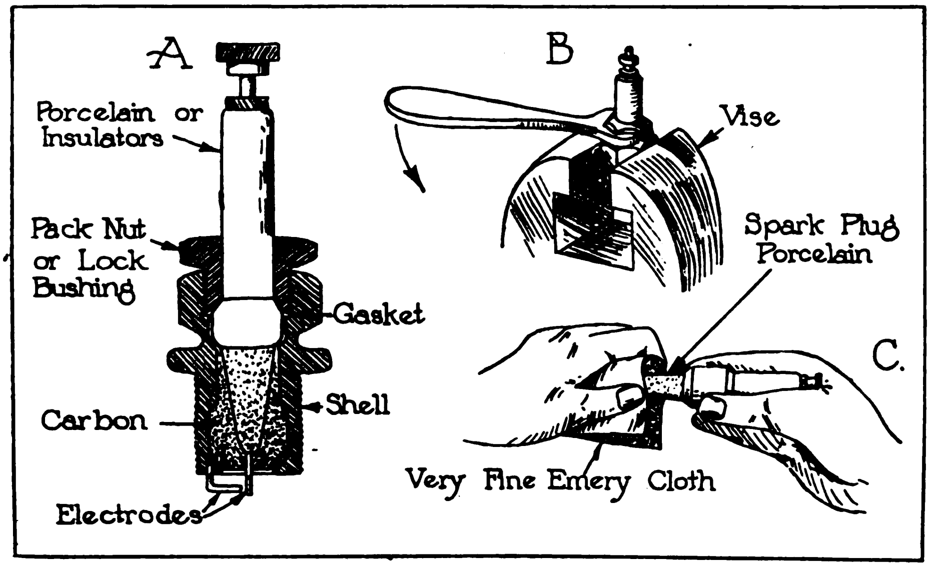
Two pieces of thin metal fastened under the hood in such a manner that the wind from the fan will be deflected more directly against the cylinders and away from the intake manifold will increase the cooling function and also protect the ingoing gasoline mixture.

It is possible to prevent the formation of scale in fine jewelers' dies and similar tools and still retain the finished brilliancy of the surface, by applying a mixture of powdered ivory black and sperm oil, mixed to the consistency of paste. It is only necessary to apply a thin coating.

Cleaning and Care of Spark Plugs

SPARK plugs, as used at the present time, are of several different types. A few seem to have the preference among manufacturers, dealers and motorists and only those that have proved popular will be described herewith.

One type of plug employs mica for the insulator. The mica being in the form of discs which are strung on the center electrode and held securely by a nut at the top. The insulator and electrode are held tightly in a shell of steel or other metal, which fits into the spark plug opening in the end of the cylinders, by means of a threaded bushing which extends down into the shell and over a shoulder formed on the mica insulation.



A, Sectional View of Separable Spark Plug; B, Correct Method of Loosening Porcelain; C, Correct Way to Clean Carbon Deposit from Porcelain.

A second type is the plug with a porcelain insulator. This is made in two forms, one being separable, in which the porcelain may be removed from the shell for cleaning carbon, renewing the porcelain, etc., while the second is of one-piece construction, in which the porcelain cannot be removed.

Method of Cleaning.

The mica plug is usually of two-piece construction, so that the mica can be removed for cleaning and renewal. The placing of the plug in a vise and setting the jaws up against the shell allows the repairer to loosen and remove the bushing, after which the mica insulator is taken out.

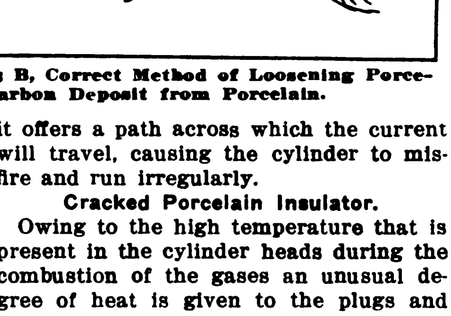
The two-piece porcelain plug is disassembled in the same manner, and is cleaned similarly. After the insulator and the electrode have been taken from the shell the carbon accumulation may be removed by scraping lightly with a knife, or with a strip of emery cloth. In the porcelain insulator care must be taken not to cut through the glazing of the porcelain as carbon will collect much more quickly where this is marred. Oil and fine carbon dust can be removed by dipping the plug parts in gasoline, leaving the parts in the pail for a few moments while a second plug is being disassembled and cleaned with emery cloth.

The one-piece plug cannot be disassembled and can only be cleaned with a thin-bladed knife, a piece of tin or some other thin instrument, by scraping the carbon accumulation from the inside of the shell and the side of the porcelain insulator.

It should be borne in mind that an accumulation of carbon inside the shell and covering the porcelain insulator will tend to short-circuit the plug at its points, as it offers a path across which the current will travel, causing the cylinder to misfire and run irregularly.

Cracked Porcelain Insulator.

Owing to the high temperature that is present in the cylinder heads during the combustion of the gases an unusual degree of heat is given to the plugs and especially to the insulators. Occasionally plugs will be heated to a point considerably above that which they are designed to stand with the result that the porcelain will crack inside the shell. This may be caused by shortage of water in the cooling system, operating the engine on too rich a mixture, failure of the water pump to operate, driving with a retarded spark, dragging brakes, etc. Still another cause of cracked porcelains may be traced to screwing the threaded bushing too tightly against the gasket of the shell, forcing unnecessary pressure upon the insulator and causing liability of cracking the porcelain.



A, Threaded Bushing; B, Porcelain Insulator and Center Electrode; C, Spark Plug Shell and Fixed Electrode.

When cleaning the plug, after disassembling, examine the porcelain for cracks and if noted with the eye, supply a new porcelain in the two-piece type or purchase a new plug if of one-piece construction.

A good plan, after assembling the plug and before screwing it into the engine cylinder, is to test it with a battery and coil or by connecting the plug terminal wire to the plug, allowing the shell of plug to lay on the top of the cylinder. Switch on the ignition and turn the engine over either by hand or with the starter, noting how the plug fires. If battery ignition is used allow the plug to fire steadily for a few moments to observe if the spark jumps the points properly. If not, adjust the points; they should be set about 1/32 inch apart for battery ignition and slightly closer for magneto ignition. One can also note whether the porcelain is leaking at this time as the spark will not jump the points, although set properly, but will instead, jump from the electrode through the crack in the porcelain to the shell, cutting out the points entirely.

It should be remembered that a battery spark differs from a magneto spark and that a plug that fires perfectly on a battery may not work on the magneto. This is especially true of the Ford magneto. To test this point, switch over on to the magneto, after the engine is started, and with the plug still resting on the top of the cylinder, with the shell touching the head, note how the plug fires from the magneto. If irregular, bend the points closer till the plug fires steadily.

Compression Leaks at the Plugs.

After the plugs have been cleaned and tested for cracked porcelains, etc., and replaced in the cylinders, they should be tested while the engine is running for compression leaks. Many times an engine will fail to develop its power simply because the plugs are not fitted tightly enough.

Take an oil cup filled with engine oil and squirt a small quantity around the threads of the plugs where they are screwed into the cylinders. Leaks will be shown by bubbles working their way up through the oil. Plugs denoting this should be tightened till the bubbles cease to rise.

Two-piece plugs should have the threaded bushing turned down against the gasket which is between the seat in the plug shell and the shoulder on the porcelain, so that compression leaks will not occur. They should not, however, be screwed down so tightly that the porcelain will be cracked when the engine heats up.

Plugs using mica insulators can be drawn down as tightly as possible without danger of doing harm to the insulator, the tighter the better in this case, as the mica discs closely compressed will prevent the passage of the current and the possible chance of short-circuiting the points.

PLATE XXXII.

GENERAL TRUCK AND CAR GARAGE

A Structure Designed for Enclosure on Three Sides, to Utilize Fully All Floor Space and Have a Maximum Main Floor for Vehicle Storage.

Designed by the Architectural Department of the Automobile Department.

HERE is a real novelty and yet a very practical one, for a general garage for motor trucks and pleasure cars. It is in the shape of an octagon. Many will ask what advantage this type, or shape, has over the square, or rectangular figures. First of all, a car may be driven in, circuiting around until its proper place has been found, and then a direct reverse into position. Cars may also be placed directly to their stands from the turntable at the center of the floor, thus eliminating unnecessary manouvering. A large number of cars may be stored, owing to the fact that there are no "dead" ends. Again, cars may be placed two deep, as all that is necessary is the freedom of the turntable, as shown.

The accompanying illustration is for a structure one-story high, size 100 by 100, general dimensions, or the area of land could be the same. At the rear and at the left will be found a repair shop, ample in size and fully equipped to handle work of any nature. A large pit is shown, this being advantageous on numerous occasions. There is shown a large closet for storage of movable articles, such as tools. Work benches of ample size are also provided.

A stairway leads from this department to the boiler room, situated beneath it. Light and ventilation are afforded by a huge skylight, forming the entire roof of the shop.

At the right of the repair shop and also in the rear of the building, will be found the machine shop. A passage way runs between the machine shop and the repair shop, affording direct communication without having to pass through the general garage each time one desires to visit either one of these departments.

The machine shop is designed to have sufficient area for essential machine tool equipment, and for practical work of all kinds this should include lathes, a milling machine, a shaper, a drill press, a radial drill, and in addition a power saw will be found to serve a very useful purpose. The arrangement of the equipment will be planned by the owner or the shop foreman to best serve requirements, but suggestions are included in the plan that may be a basis for judgment. There is a work bench at the rear, and in connection with the shop is a spacious hand tool closet, which will have a distinct value, for with this responsibility can be established with reference to station property and the tools protected against loss or damage by unauthorized use.

Attention is directed to the lighting of this shop and the repair shop, which are both lighted and ventilated by large metal skylights nearly the size of the floors. This construction was adopted because the building may be surrounded on all three sides, and wall lighting may not be possible. The ventilators are constructed in the frames of the skylights and can be controlled perfectly. The ventilators and skylights should be made of first class galvanized metal and built by a reliable maker.

In the forward compartments there is an office on one side, while opposite is located the stock and oil room; also there are toilets for the men in the shop. The office is amply large for a garage of this size, being well lighted and having an entrance from the street leading off the porch. In connection with the office there is a toilet and wash room for the office help. The stock and oil room is equipped for handling accessories and parts of all kinds; also various qualities and kinds of oils, as this item is one of very great importance and should receive due consideration. This department also has a separate entrance from the street. A gas pump is located on the sidewalk, so transit trade may be accommodated with as little inconvenience as possible.

Construction is of a slow burning nature; in fact, it is fireproof outside of the planking in the roof and wood fittings around the different shops. Brick has been used throughout for general construction with a sub-structure of concrete. Light steel trusses with steel purlins comprise the general frame up of the roof. Plank is used for a covering on which is laid a standard form of roofing, there being several that can be used with entire satisfaction. Windows are of a standard make, steel sash type, double hung, as shown. A large door of an electrically operated type slides to the sides on opening, one-half going to either side.

Heating is by steam wall radiation, using pipe system, or wall radiators if owner prefers to expend money for them.

The cost of such a building would be between $10,000 and $15,000, owing to the manner in which it is fitted and equipped and the grade of materials used.

Any information regarding this structure can be had at request made to the Architectural Department, and the requests should specify the precise character of the detail desired, so that facts and not generalities can be stated, and the inquirers can be the better served.

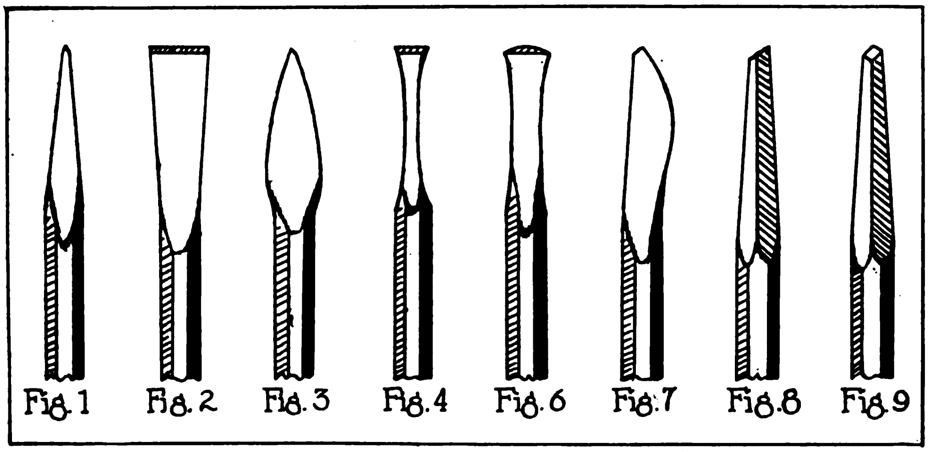
Making Special Tools for the Repair Shop

AMONG the many branches in which the up-to-date automobile repair man should show proficiency, that of making special tools to do special work occupies a field by itself. Many times when a special chisel, drift, punch or cutting tool is needed to complete a job it is found that it has been broken or is missing. If the shop is equipped with a forge and the necessary concomitant tools, and the repair man has a knowledge of blacksmith work, he will be able to make the tools that he needs from bar stock.

It may be well to give a brief idea of how the various hand cutting tools are made for the benefit of those who, perhaps, are not well acquainted with this branch of work. The ability to make such tools as chisels, punches, drills, and even taps and dies if needful. considerably increases a workman's power of dealing with any repair that may present itself. Tools that are bought may always be excellent, but tools that are made in the shop always seem better, and the skill acquired in making them is of service in many other ways.



Types of Steel Cutting and Grooving Chisels That May Be Made During Spare Time in the Shop.

Small chisels and punches are made of octagonal tool steel, which is sold by the pound. Small drills are usually of silver steel rod, sold in 13-inch lengths in all sizes. The heat necessary for forging may be obtained from a brazing hearth, or in the forge, as tool steel is forged at a low red heat. A heat approaching white would burn the steel. If an anvil be not at hand any sufficiently solid block of metal will serve.

Perhaps the easiest tool to begin with is a flat chisel, Figures 1 and 2 of 5/16-inch octagonal tool steel. The method in detail is as follows: Heat the bar to a low red and draw down to shape on the anvil, remembering to discontinue the forging and reheat the work when it reaches a blue heat, or it will forge hollow and be liable to crack. In any case the end will probably split a little, so allowance must be made for this, and the flat drawn down longer than is required in the finished chisel. There is a little knack in drawing down that deserves a few words of explanation. The blow of the hammer must not be delivered in a direction vertical to the anvil face, but somewhat towards the operator, and the end of the bar held in the hand must be higher than that which is resting on the anvil. How much towards the operator the blow should be delivered and how much higher the end held should be than the other, depends upon the angle of taper it is desired to produce. Figure 5 will make this clear. The practical tip when learning to draw down is that when the blow is struck the wrist must be higher than the hammer head.

The work should be turned over frequently in order that it may be hammered equally on each side, and the sides of the flat should be kept square by occasional light blows, the bar in this case, of course, being horizontal, and the hammer blow vertical. The hammering during forging serves not only to shape the metal, but to pack it. A good smith would probably forge so small a chisel in one heat, but the beginner may find it necessary to reheat the work several times.

The forging being completed the end where it is split may be trimmed off on the anvil chisel, and the chisel itself may be cut off the bar.

Cape a Cross-Cut Chisel.

A cape or cross-cut chisel, Figures 3 and 4 after a little drawing down is forged on the beak of the anvil, and the inward curve of the sides thus formed gives clearance for the edge of the tool in deep grooves. A chisel for cutting oil grooves, Figures 6 and 7, is forged in a similar manner. A diamond point chisel, Figures 8 and 9, is drawn down square, while a punch is drawn round, the bar being rotated a little between each blow.

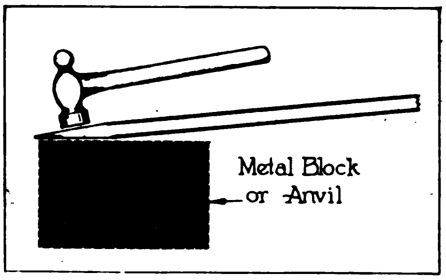


Fig. 5—Metal Block or Anvil Used to Shape Up the Chisel.

The taper in these should be about the same as for the flat of a flat chisel—that is, five degrees or a little more.

To forge a flat drill, Figures 10 and 11, a rod of silver steel is taken, half the diameter of the hole the finished drill is intended to make. It is heated to a cherry red and the end flattened and spread out to a fan shape, the blows being delivered evenly and equally on either side in order to keep the blade true and its fan shape symmetrical. The edges of the fan are not hammered.

Tools after forging are ground or filed to their finished shape, hardening and tempering being the final process. Either an emery wheel or a grindstone can be used for grinding, and it is desirable that the wheel should revolve away from the operator, especially in grinding drills.

Grinding.

In grinding flat chisels the hammer marks are ground out of the flats, and the sides ground square and reduced a little at the back, leaving the flat widest at the cutting edge, which may be ground for general purposes at an angle of 60 degrees. A cape or cross-cut chisel is ground on the sides and flats, care being taken to get them symmetrical, especially the curve of the sides; this will be found to present some difficulty until one has had practise in grinding. The edge of the cross-cut chisel may be ground at 60 degrees. The sides of a grooving chisel may also be given clearance, and the face ground at an angle at the top flat, the back being rounded rather sharply to meet the curve of the back, Figure 7. A diamond point chisel is ground on the four flats, and the end ground diagonally about 45 degrees. Punches may be filed in the vise, but preferably in the lathe, which is indeed necessary in the case of a center punch, the point of which should be filed to 60 degrees. All these tools used with a hammer should have the heads chamfered.

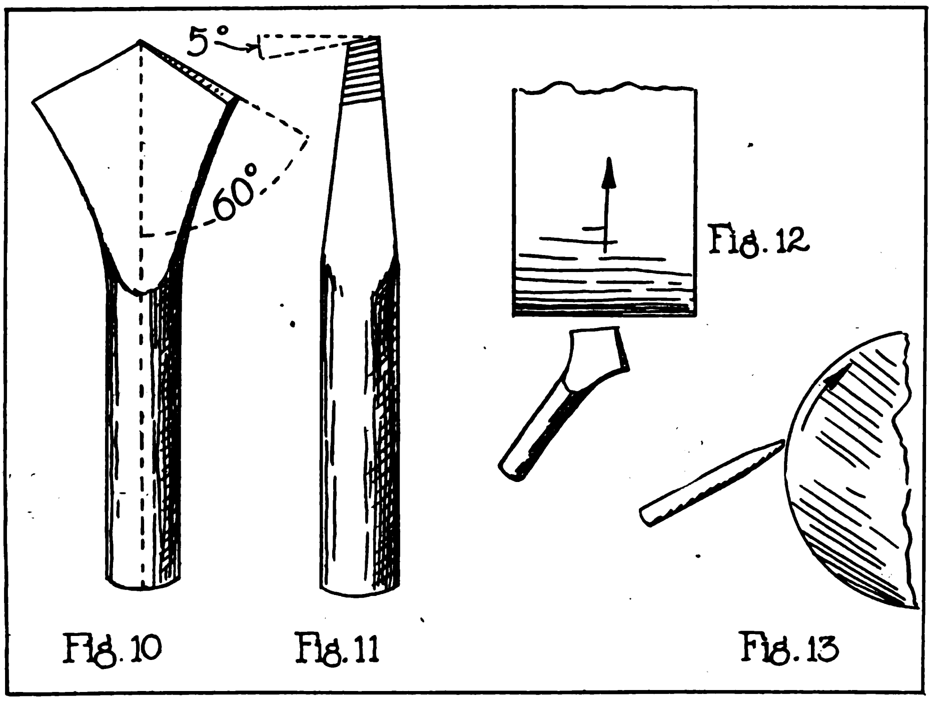
The grinding of drills requires a little practise. The flats should be ground bright and the fan edges, which are rounded after forging, may be ground flat a little way up. The lips must be of equal length and at an equal angle, 60 degrees with the axis of the shank.

The cutting edges should have a clearance of three degrees to five degrees. Figures 10 and 11. The drill should be presented to the wheel as in Figures 12 and 13, which gives a right hand cutting drill.

Hardening and Tempering.

The last part of the process is the hardening and tempering. If tool steel be heated to redness and suddenly cooled by quenching in cold water, it becomes extremely hard, the degree of hardness depending upon the quality of the steel and the temperature to which it was heated. When hardened it cannot be filed or worked in any way except by grinding, and it is too brittle for the metal working tools which are now being described. It is accordingly subjected to a further process known as tempering, which renders it less brittle and, although less hard, still hard enough to retain its cutting edges in use. Tempering consists of slowly heating the steel, after hardening, to a temperature between 430 degrees and 610 degrees Fahrenheit, according to the degree of hardness required in the finished tool; the higher the temperature reached the softer will be the cutting edge of the tool.

The method used in tempering a small tool, such as a chisel, punch or drill, after hardening, is to polish it bright with emery cloth at the part where it is to be tempered—the blade of the chisel or the taper of the punch—and then to heat the shank slowly. Soon a light yellow tinge will be seen to creep from the shank up the polished part. This will deepen to straw yellow, brown yellow, light purple, dark purple, clear blue, pale blue, as the temperature rises. These "temper" colors, as they are termed, are due to oxidation, and as each of them corresponds with sufficient accuracy to a definite temperature, the actual temperatures attained in working may be disregarded and the operator may be guided solely by the temper colors. When the blade or end of the tool shows the desired color the tool is quenched as, otherwise, the heat in the shank, passing by conduction up the shank of the tool, would lower the temper of the blade more than required. It is desirable to heat tools slowly when tempering, firstly, because the colors then run up slowly and the tempering can readily be stopped at any desired point; secondly, because the temper will more likely be gradual all the way up. A punch, for example, will have a blue on the taper near the shank, fading evenly through the purples and brown yellow to straw color at the point. A well tempered tool should have the temper colors fading imperceptibly one into the next; at any point where a sharp difference of temper occurs a breakage is likely to result.



Types of Drills That May Be Made from Steel in the Shop.

A temper color for punches is a straw yellow, and for drills, lathe tools and chipping chisels, a little deeper yellow. Chisels for rough work may be "let down," as it is termed, to a light purple; springs are let down to a blue and quenched in oil.

It must not be forgotten that the temper colors are merely indications of the temperature to which the steel has been raised when tempering it; the actual hardness of the tool after tempering depends upon its hardness after hardening, as well as upon the temperature when tempering.

All that now remains to be done is to clean and polish the tool. The sides of the octagonal part of chisels, etc., may be left rough and oiled, but the bright part should be polished with smooth emery cloth to get as good a finish as possible, for well finished tools are a credit to the maker and pleasant to handle.

TO RECUT OLD FILES.

Old files that have seen considerable use can be put in shape for further service by the following method of treatment: Brush the files with a wire brush to remove loose material sticking to the surfaces, put them in a tub, cover with water and add six ounces of caustic soda for each 100 files. In about two hours remove them from the solution and give them a brushing, to free them from any grease and metal. Place in a lead lined box, fitted with a wire shelf, laying the files in such a manner that they will not touch one another. Cover them with a solution of nitric acid and water, one pint of acid to each gallon of water. Allow them to remain for 25 minutes, then remove and wash in running water, afterwards brushing with an ordinary hair brush, after which put them back into the liquid to which is added one more pint of nitric acid to the water already in the solution. In about 50 minutes remove again, brush, after washing in water, and put back in to the liquid, to which has been added one-half pint sulphuric acid for each gallon of water. In 15 minutes remove the files, wash first in water, then in concentrated lime water till all trace of the acid has disappeared. When dry the files will have the appearance and cutting qualities of new ones.

In handling the files that have been immersed in acid, either nitric or sulphuric, rubber gloves should be worn, otherwise the acid will injure the hands.

TO PREVENT HOT LEAD STICKING TO WORK.

Mix common whiting or cold water paint with wood alcohol and paint the part that is to be annealed. The hot lead, from the bath used in annealing, will not stick to the metal that is thus painted, no matter how long the piece is held in the pot. The work should be lowered quickly into the hot lead and removed as soon as possible, in order to prevent drawing the temper of the hard end, and then the whole should be plunged in a pail of cold water. Water will do as well as alcohol to mix the paint, but alcohol is the most convenient inasmuch as it can be used without waiting for the paint to dry. If water is used the paint must be thoroughly dry, as otherwise the moisture will cause the lead to fly.

BALL CHECK REPAIR.

In engines having pressure feed oiling there is generally a regulator with a ball check valve in a housing. If this ball gets stuck or lacks sphericity, it is difficult to remove it for replacement. A good way of getting it out is to take an L shaped tube or rod of a diameter slightly smaller than the sphere. On the end of this rod or tube stick a small lump of grease. Putting the rod through the opening carefully the grease on the end will usually pick up the ball and bring it out.

REMOVING A BROKEN MACHINE SCREW.

To remove a small machine screw when the head is broken off, take a small soldering copper, tin the broken part of the screw, being careful not to get solder on the other parts. Take a machine screw that is a trifle larger than the broken one, file the end bright and tin it. Sweat the two screws together with solder and when it cools a screw driver will turn out the broken screw.

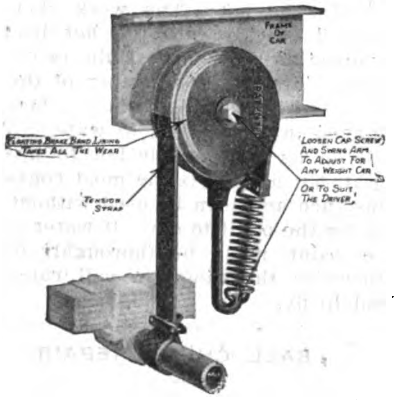
TO PRESERVE REFERENCE TABLES.

Reference tables are very convenient to use, but soon get dirty and torn. To prevent this, pour some lacquer in a shallow tray and dip the paper into it and hang up to dry. This not only makes the paper dirt proof, but toughens it as well.

ACCESSORIES, EQUIPMENT AND TOOLS FOR THE GARAGE AND REPAIR SHOP

Bull Dog Bounce Absorbers are designed to be attached to any make of car and can be adjusted to suit the requirements of the operator. They do not prevent the downward action of the springs, but snub the rebound, checking it gradually till it is absorbed without the danger of breaking the springs or injuring the tires.

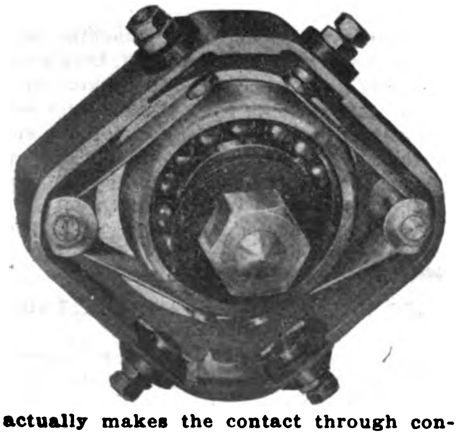
It is stated that Bull Dog Bounce Absorbers can be easily applied with the usual tools found in the car, that they are made from the best of material and that, once in place, they not only check the rebound, but also sidesway of the car. It is recommended that a car be fitted with the full set of four, as the benefit to be gained is greater when four are used than when only two are fitted.



Frame Of Car
Floating Brake Band Lining Takes All The Wear
Tension Strap
Loosen Cap Screw And Swing Arm To Adjust For Any Weight Car
Or To Suit The Driver

Manufactured by the Channon-Hughson Co., 220-233 West Erie Street, Chicago, Ill. Price, per set of four, $24; per set of two, either front or rear, $12.

The Wayne Ball Bearing Timer for Ford Cars is designed for replacement purposes and embodies new and novel features, chief among which is the eccentric motion imparted by the camshaft, through the ball bearings, to the steel ring which actually makes the contact through contact springs. Due to the wiping action of the ball bearing and the eccentric motion, imparted by the camshaft, the large contact points are definitely closed by the power of the engine itself through the medium of the ball bearing.

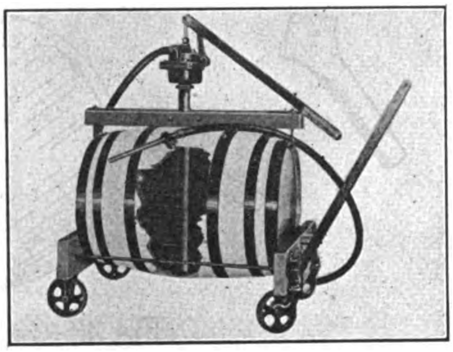


The bearing is packed at long intervals with heavy lubricant and requires very little attention. The bearings are large enough, it is stated, to stand a load of 480 pounds and, as the load on them is less than one pound, they should last almost indefinitely.

The contact points are of large size, the wiping action keeps the contacts clean and avoids pitting, it is claimed.

Manufactured by the Wayne Engineering Co., Honesdale, Pa. Prices and literature on application.

The Woods Grease Injector is a device that may be used by garage and service station repairers to supply grease direct from the original barrel to the units of the car, such as the differential and gear-set, by simply wheeling the barrel to the car, connecting the hose from the pump to the car unit and pumping in the grease with the pump. It is stated that the pump will deliver exactly one-quarter of a pound of grease a stroke. A special non-drip nozzle instantly stops the flow of grease when through pumping. The pump is quickly and easily attached to any grease barrel, which is carried on a special truck to any part of the garage or factory.

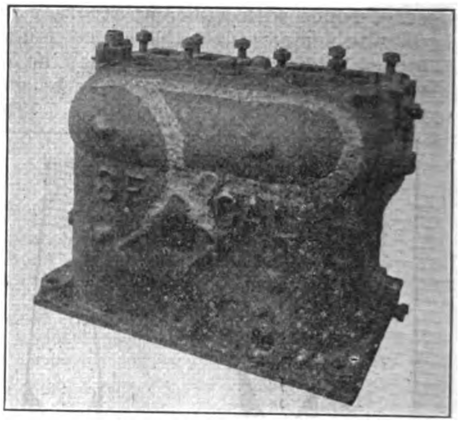


It is stated that at the present time more than 12,000 of these pumps are in daily operation in all parts of the country, and in each instance the Wood's injector has proved itself a very necessary labor saving device.

Manufactured by the Bennett Injector Co., Muskegon, Mich. Prices and literature on application.

Hard Silverine Solder a New Repair Metal, which consists of a semi-hard solder suited to use with a soldering iron and makes, it is stated, a strong bond with all common metals. It readily adheres to even hard, dense cast iron, making a permanent, non-corrosible union.

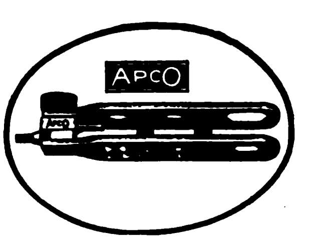
Hard Silverine Solder is an alloy of non-ferous metals of widely differing specific gravity and melting point, presenting such difficulties of mixing that previously they have not been used together. It is stated that this alloy is harder and stronger than soft solder, has a higher melting point and does not disintegrate. Its union with ferrous metals is so perfect, it is claimed, that four years of use in the presence of salt water and heat has failed to break it down either by direct corrosion or through the action of local electrolysis.



Hard Silverine solder may be used for such purposes as filling cracks in engine cylinders, breaks in engine casting, etc. Silverine aluminum solder can also be obtained for mending aluminum sections that have become broken or damaged.

Manufactured by McKenzie-Waterhouse Co., Inc., 717 East Pike Street, Seattle, Wash. Prices, Silverine hard solder, $3.50 a pound in 1½ pound bars; aluminum solder, $7 a pound in one pound bars.

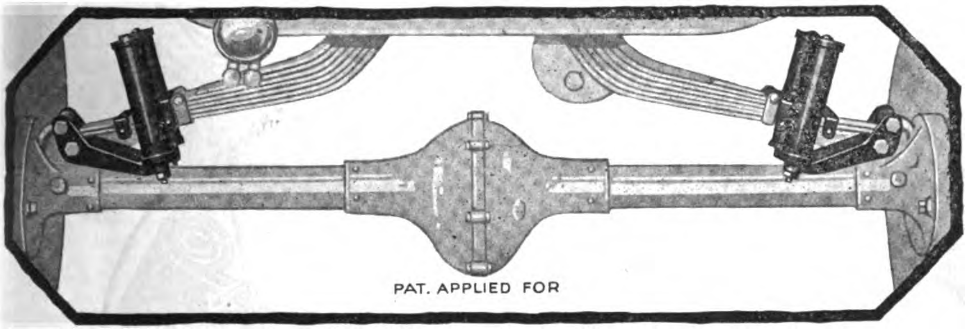
The Apco Tire Valve Tool is designed for the garage repairman and car owner and combines in one tool a tap for the inside of the valve, a die for the outside where the cap fits, a die for the outside where the dust cap and lock nut is attached, and a wrench for the nut holding the valve in the tube; also a wrench for the lock nut which holds the valve to the rim. The tap is made tapering, so that a badly bent valve stem can be easily repaired, while both dies are provided with guides to prevent cross threading. The tool is made of the best steel obtainable for the purpose and is hardened.



Manufactured by the Apco Manufacturing Co., Providence, R. I. Price on request.

Universal Shock Absorbers for Ford Cars, it is stated, do three things: Absorb the road shocks, snub the rebound and prevent side sway. In the Universal shock absorber there are two sets of springs. The upper set absorbs the shock, and then, on the rebound, the lower set comes into action and the rebound is snubbed. Side sway is prevented by the combined action of the two sets of springs. The suspension of the Ford car is such, it is stated, that there is a tendency for the body to sway sideways on the axles and lower part of the chassis. When the car is equipped with Universals, it is claimed that this tendency is checked by a compression of the shock absorbing springs on one side and the snubbing springs on the other, all of which makes for much easier riding and holds the car to the road.

The springs are encased in a steel cylinder, which prevents the accumulation of road dirt, at the same time giving the absorber a very neat and attractive appearance. Universal shock absorbers are made entirely of steel and have no working joints to wear loose. They are very easily applied to a Ford car, as all that is required to be done is to remove the spring shackles and replace with the shock absorber levers which take their place. It is not necessary to change the original construction of the Ford car in any way. The fitting can be done by anyone handy with tools in a few hours time.



Distributed by the Universal Sales Co., 507 Odd Fellows' building, Indianapolis, Ind. Distributors' proposition and prices furnished upon application.

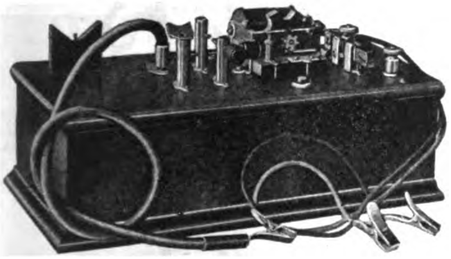
The Red Devil Pin Punch Set No. 483 consists of six tools nine inches long packed in a neat khaki carrying case, pocket size, and includes the following in point sizes: ⅛ inch, 3/32 inch, 3/16 inch, 7/32 inch, ¼ inch and 9/32 inch. These tools are in constant use by machinists and service station repairers throughout the country, the manufacturer claims, and find a ready sale. They are made from 80-point carbon steel, Swedish analysis, octagonal stock.

Manufactured by the Smith & Hemingway Co., Inc., Irvington, N. J. Prices and literature on application.

The Igni-Test unit is designed for the garage and service station and by its use it is claimed that faults can be located in high-tension magnetos and armatures, inductor magnetos, high-tension spark coils, condensers, low-tension magnetos and coils, insulation, wiring, fuses, etc.

Tests can be carried out equally well on cars equipped with battery ignition and starting and lighting units, equipped with low-tension apparatus.

The device is self-contained, the unit being fully equipped with all necessary appliances for carrying out the test, with the exception of a battery, either storage or dry cells, to supply the source of current.



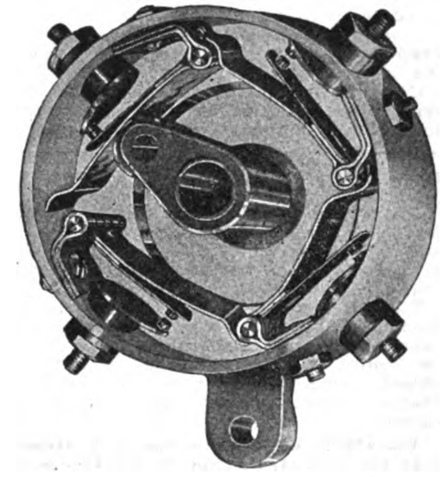
Full instructions and diagrams accompany each unit, so that the repairer will have no difficulty in making the tests and locating the troube.

Manufactured by the Testall Electric Manufacturing Co., San Antonio, Tex. Price of outfit, complete, including full instructions, $35, cash with order or C. O. D.

The K-L Timer for Ford Cars has many new features not usually found in timers of this type, chief among which is that the contact points are spring supported, are made from a special alloy which is said to equal aluminum in conductivity and will make a better contact.

The inner contact points are riveted to a spring which acts as a cushion when contact is made, thus preventing burning of the points and also obviating misfiring in case of a worn camshaft bearing. The cushion spring is, in turn, riveted to the hinge support made of cold rolled steel having a phosphor bronze bearing fitted at the hinge.

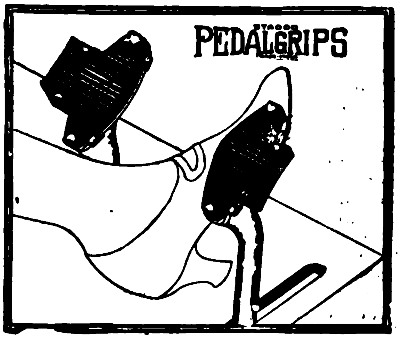
A brass roller frame carries a fiber roller which has a ¼-inch bearing and shaft and presses the cushion spring support, making a soft, positive contact, as shown in the illustration. The terminal bolts are insulated inside and out with large fiber washers; also with special insulation between the shell and bolt which makes it capable of resisting 500 volts.



The K-L timer is guaranteed for 20,000 miles; the prices will be refunded if the buyer is not satisfied with it at the end of 15 days.

Manufactured by the M-R Co., Lincoln, Neb. Price, $7. Distributors, salesmen and dealers' proposition on application.

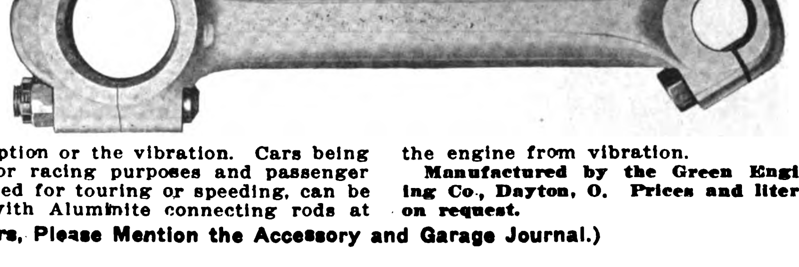
Pedalgrips for the Ford Car are designed to be attached to the Ford transmission brake, slow speed and reverse pedals. They are held to the pedals by small metal clips which fit over the edge and bend under forming a perfect fastening, which is claimed not to loosen in use. Pedalgrips are faced with rubber pads to prevent the foot from slipping and are made of a suitable width and provided with a guard at the side, which prevents the foot from slipping sideways.



Pedalgrips are attached to the pedals without the use of screws or bolts and may be fitted by anyone in a few minutes time.

Manufactured by the Stadeker Metal Specialty Co., 300 South Canal Street, Chicago, Ill. Retail price, $1 a set.

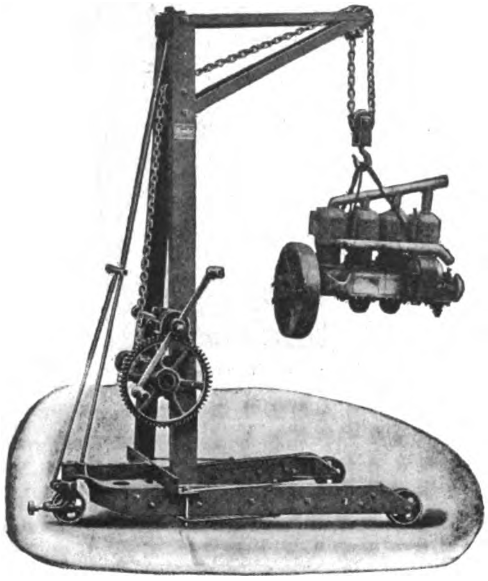
Aluminite Connecting Rods are designed for cars in which it is desired to increase the speed and power of the engine, without increasing the gasoline consumption or the vibration. Cars being fitted for racing purposes and passenger cars, used for touring or speeding, can be fitted with Aluminite connecting rods at small expense by any mechanic.



Aluminite connecting rods are composed of an aluminum alloy, making them light in weight and, it is stated, their use frees the engine from vibration.

Manufactured by the Green Engineering Co., Dayton, O. Prices and literature on request.

The Manley Portable Floor Crane is designed for such heavy lifting jobs about the service station as raising engines from car frames, bodies from the chassis, gearsets, etc. The superstructure is made of structural steel, cantilever bridge design, giving the necessary lightness and great strength. The base is of heavy cast iron and I beam construction, bringing down the center of gravity and preventing the crane from being top heavy.



It is stated that the three cardinal points in a crane of this type for automobile work are incorporated in the Manley Portable Crane, that is, high lift, deep overhang and light weight. It is claimed that one man, with this device, is able to raise a load of full capacity and to move the crane to any point desired in the service station.

The ½-ton crane is particularly adapted to handling lighter cars, such as Ford, Maxwell, etc., while the one-ton model covers practically the whole range of passenger car and light truck work. The two-ton crane is fitted for the heavier passenger cars and trucks.

The device is operated by a hand crank and winch, securely bolted to the uprights of the crane, while the lifting cable consists of a heavy chain which passes over pulleys at the top of the uprights and the end of the boom, through a block which is hooked to the unit to be lifted.

Heavy roller casters provide a means of moving the crane about the service station.

Manufactured by the Manley Manufacturing Co., York, Pa. Prices, ½ ton, $70; one ton, three sizes, $100, $105 and $110; two ton, two sizes, $140 and $147.

The Dilso System of Spring Lubrication embodies many features that will recommend themselves to truck and passenger car owners, chief among which is that of supplying oil direct to spring leaves, equipped to receive oil in this manner, through ducts and wells stamped in the end of the leaves. A felt pad is fitted to the well, which retains the oil, feeding it to the leaf as needed by the action of the spring.

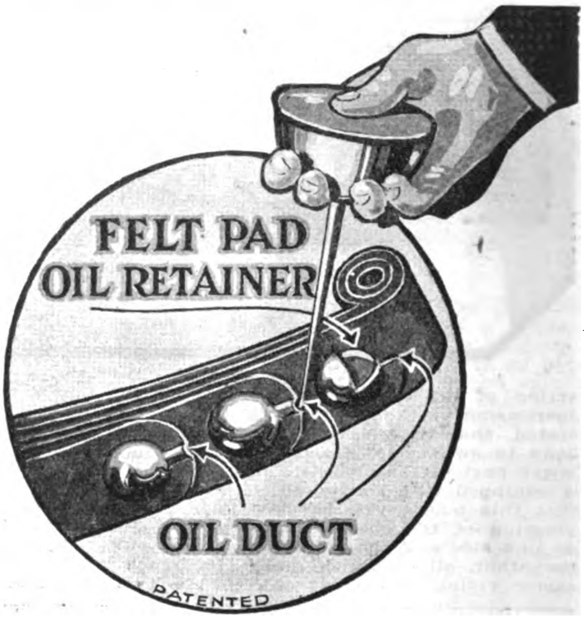
When the spring is assembled this piece of absorbent felt, saturated with free-flowing oil, is placed in each cup or reservoir. The felt is cut thicker than is necessary to fill the cup so that it is under constant pressure. As soon as the spring goes into action a gentle kneading process takes place, which tends to force the oil out of the felt on to the spring leaves.

The leaves of a spring are slightly concave and there exists a continuous capillary attraction which draws the oil towards the center bolt, thus covering all parts of each spring with a film of oil.

The maker of the system claims that it costs the spring manufacturer but a trifle to stamp into his spring leaves the Dilso self-oiling cups and ducts, and that the saving effected in doing away with the coating of the springs with graphite and grease practically defrays the expense of the extra operation.

Cars and trucks equipped with the Dilso system are said to be much freer from spring trouble than those not so equipped, and it is claimed that the trouble of leaves sticking or freezing is eliminated when this system is used.

It is reported that recently a decision was made in the courts which establishes the validity of the Dilley patents. The license for its use by car or truck manufacturers is based on a very small royalty on the total tonnage of spring steel used in yearly production.



Sold by Buxton & Owen, 30 North La Salle Street, Chicago, Ill., exclusive licensors under the Dilley patents to manufacturers. Prices and literature on request.

The Red Devil Chisel and Punch Set No. 169 is designed for service station and machine shop repairers. The tools are made of octagonal stock, Swedish analysis, 80-point, carbon steel, and are packed in a neat pocket size khaki case.

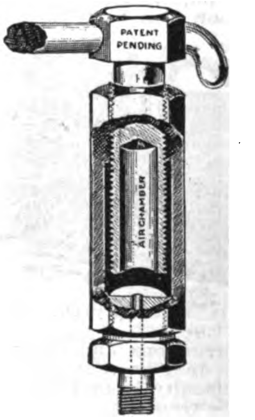
"RED DEVIL"
CHISEL AND PUNCH
AUTO KIT
SMITH & HEMENWAY CO.
EVERY TOOL GUARANTEED

An almost constant use may be found for these tools for such purposes as removing valves and piston rings in cylinders, cotter pins in crankshafts, relining brakes, etc.

The outfit consists of 12 tools five inches long as follows: Two cold chisels, two cape chisels, two machinist's pin punches, two solid punches, one half-round cape chisel, one round-nose chisel, one diamond-point chisel and one center punch.

Manufactured by the Smith & Hemenway Co., Inc., Irvington, N. J. Prices and literature on application.

The High Pressure Grease and Oil Gun is designed for use on passenger cars, motor trucks and motor boats. It consists of a hexagon steel barrel chambered internally and threaded for a heat treated steel plunger which is provided with an air chamber. The lower end of the hexagon barrel is internally threaded to receive nozzles which, are threaded on their outer end to screw into grease cup openings. These nozzles are interchangeable and are made in standard sizes, both male and female, to fit all standard openings. Special nozzles can be furnished at small additional cost to fit any car. All guns are provided with ⅛ inch pipe thread nozzle, which takes care of grease cup openings on over 90 per cent. of all cars.



The grease gun is easily filled for use by removing the plunger and packing the barrel with grease. The plunger is replaced and the gun fitted to the cup opening after the cap has been removed. Apply moderate pressure to the pump plunger, then move the bearing slightly, till grease shows. Repeat the process, applying pressure to the plunger till the bearing is filled with grease.

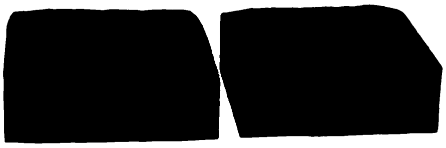
It is stated that with this grease gun a pressure of 900 pounds can be exerted upon the grease when necessary, forcing out any old grease that may be in the bearing or spindle, replacing it with new, clean grease in a few minutes tme.

Extra nozzles are obtainable in sets consisting of 17 pieces, including one extra ⅛-inch nozzle and one elbow in a neat hardwood case.

Manufactured by T. H. Strickler, 4231 Wilcox Street, Chicago, Ill. Price of gun, $2.50; set of extra nozzles, $9.75.

The Kant Sag Seat Cushion for the Ford Car fills a long felt want among Ford owners, as it not alone offers a seat which will not sag after months of use, but is also fitted with pleated upholstery, which adds much to the appearance of the car.

The cushions are made in two sections for the front seat and in one section for the rear seat; they are built throughout of the best of material and consist of 48 steel coils specially treated and tested, covered with a woven wire top. The whole is built on a steel frame and covered with a high grade covering material.



It is stated that on account of the depth of the coil springs and the construction of the cushions, shock absorbers are unnecessary; the deep Turkish seat cushion in cathedral pipe pattern will absorb the road shocks perfectly.

Manufactured by the Kant Sag Corporation, 9-13 Abbott Street, Detroit, Mich. Prices, single seats, front or rear, $10; divided front seats, $12.50.

Easyon Tire Chains are traction chains intended primarily to prevent the wheels from spinning around without driving the car. Many motorists at the present time are using non-skid tires and do not feel that they require chains to prevent skidding. Many others realize that they are liable, at times, to get into bad places where the wheels will spin. Easyon chains are designed for such conditions. They consist of eight single chains packed in a small bag which can be easily carried under the car seat. These chains can be fastened to the spokes of the driving wheel even when in mud up to the hubs. They are equipped with an especially designed gripping member which takes a very strong hold in deep mud or snow and yet, it is claimed, causes no bumping.

Easyon Chains

Easyon chains are also made for solid tires, but much heavier and stronger.

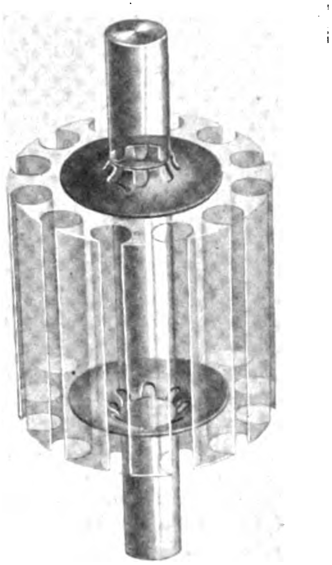
Manufactured by the Woodworth Manufacturing Corporation, Niagara Falls, N. Y. Prices, small size for three and three and one-half-inch tires, $4 a set; medium size for four and four and one-half-inch tires, $5 a set; large size for five and five and one-half-inch tires, $6 a set.

The Hold Tite Lamination Lock is a patented device consisting of a cupped and toothed metal disc. When slipped over a spindle containing a groove the toothed edges may be snapped into this groove, thereby forming an abutment. The laminations may then be applied, a lock slipped over the other end of the spindle and by compressing the whole the second lock is snapped into position, as illustrated herewith, thereby securely holding the laminations in place. The use of this lock does away with expensive machine work on spindles, besides the necessary key or other locking devices commonly used.

The Hold Tite products are used to take the place of jam nuts, castellated nut and cotter where it is necessary to secure a nut on a bolt. The Hold Tite nut lock is applied as follows.

First, set the nut up on its bolt in the proper position; then drop the nut lock over the bolt, teeth toward the nut, touching its outside face. If there is working end enough on the bolt, a second nut may be screwed down upon the nut lock to flatten it. In the event of there not being sufficient working end to permit of using a second nut, a hollow set, piece of pipe, or other convenient device sufficiently large to slip over the bolt may be used as a set and the nut lock flattened into place by a vigorous blow with a hammer.

It will be seen that the projections on the inner side of the Hold Tite nut lock have a tendency to cross the threads on the bolt, some of the projections striking the point of the thread, others striking the root above this point and still others striking the root below, each projection being partially crimped by the pressure in flattening, thereby wedging the nut lock into position.



The Hold Tite nut lock has been tried out for efficiency under severe conditions and it has been found that it sticks to the job. It may be removed by the use of a file, hack saw or cold chisel to cut through the outside rim of the lock.

The standard Hold Tite nut lock is made of cold rolled, annealed steel and is furnished in polished or sheradized finish. Standard sizes range from 3/16 inch to 1½ inches, advancing by 1/16 inch to the one-inch size and by ⅛ inch above that size.

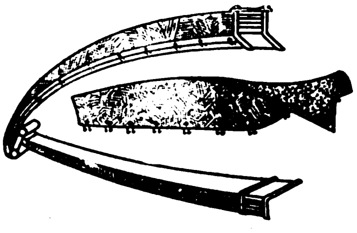
The Hold Tite nut lock is used on ignition timers for securing the terminal posts in position without the necessity of using an extra nut. Its use in securing machine screws and other devices of this kind in electrical work is also recommended.

Made by the Nutlock Corporation, 166 Montague Street, Brooklyn, N. Y. Prices and literature on request.

The Woodworth Lubricating Spring Cover consists of a covering for the spring leaves of automobiles and is made of oil and water-proof material, having a felt wicking on the inside which is saturated with oil before the covers are fitted to the spring. The covers enclose the spring from the U-bolt clamps at the thick part entirely to the thin end. The covers not only, it is claimed, keep the spring perfectly lubricated but they also keep out all moisture and dirt.

The felt lining in the Woodworth lubricating spring covers will hold sufficient oil to lubricate the springs for a year or more and can be re-oiled, it is stated, without removing the covers from the car, although it is recommended that the covers be removed about once a year and thoroughly re-oiled. The covers are adjustable in width so that only seven sizes are necessary to fit all cars except Fords, for which special sets are made.

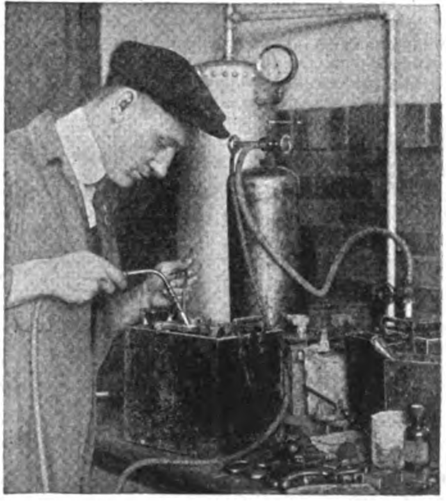
The covers are black in color, the best quality being of genuine leather, and the cheaper of imitation leather. The covers may be easily fitted to the springs by anyone handy with tools as the edges are held together by means of steel hook fasteners.



Manufactured by the Woodworth Manufacturing Corporation, Niagara Falls, N.Y. Prices range from $3.50 a set for Ford cars to $17 a set for the Pierce-Arrow covers. Sold by all first-class jobbers, or can be obtained direct from the manufacturer.

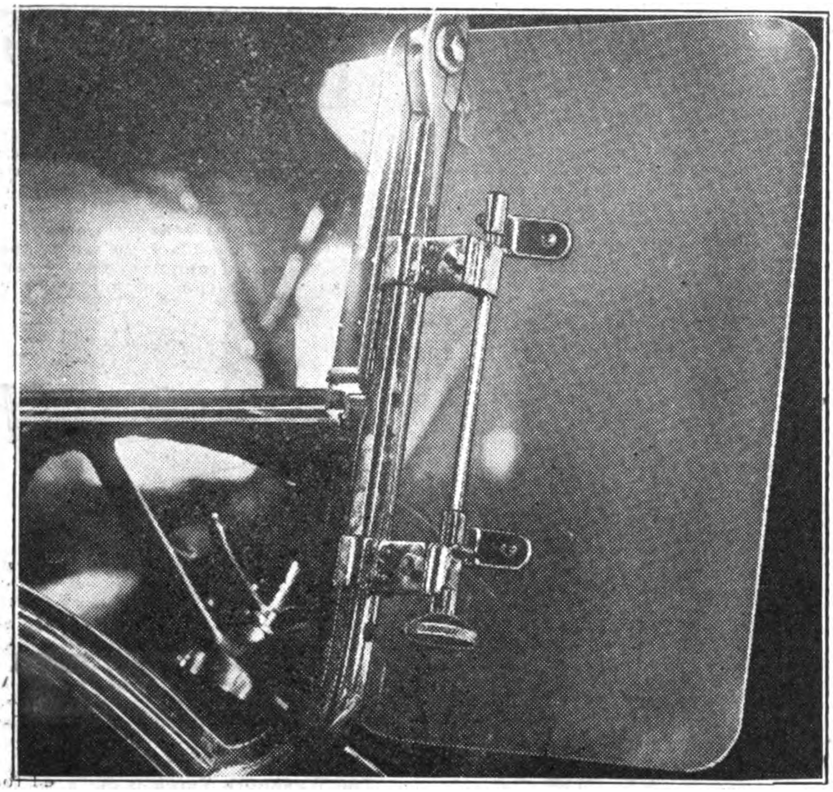
The Washburn Torch is designed for use in garages and service stations, especially those located at a distance from a supply of oxygen, where it is necessary to depend on acetylene gas for a hot flame. In the Washburn torch a patented mixing valve supplies air in correct proportions to the car, affording a flame which gives intense heat from the size of a needle point to the full length of the flame.

It is especially valuable to radiator repairers, metal workers, acetylene welders and all repairers requiring a small, intense flame for close work. This torch is especially suited for lead burning in battery service stations and brazing in the shop. All metal parts of the Washburn torch or mixer are guaranteed for one year. Any part showing a defect in any way will be replaced upon return of the faulty part.



Manufactured by the Washburn Burner Corporation, Kokomo, Ind. Price, $25.

The "Shureloc" Windshield Wings are designed for use as wind deflectors with the regular type of windshield, being attached to the side members of the shield by clamps. The wings are adjustable as to angularity by means of a knurled nut and notched collars at the bottom of a rod, which is fastened to the wings by brackets, and to the windshield clamps by hinged joints.



Loosening the knurled nut allows the wings to be adjusted to deflect the wind at the desired angle, while the notched collar prevent them from working loose after the adjustment has been tightened.

It is stated that the wings, besides deflecting the cross-wind currents, prevent dust and rain from striking the face of the operator, and provides ventilation to the interior of the car during sultry days.

All metal parts of the wings or guards are of brass and bronze highly nickel finished, while the glass is of the highest grade obtainable. The angularity of the wings can be easily changed by the operator without leaving the seat.

Manufactured by the Automotive Accessories, Inc., Kokomo, Ind. Prices and literature on request.

The Dover Electric Soldering Iron is designed for the radiator repairer, sheet metal worker, and all repairers in garages and service stations who have need of an iron for soldering.

The Dover iron is manufactured in several sizes, each being equipped with special tips besides the regular tip, making it possible for the repairer to handle the average run of work with the one iron equipped with the special tips.

The heating unit is mounted on a special pure nickel core which fits snugly inside the heating unit and is surrounded by a casing of blued steel.

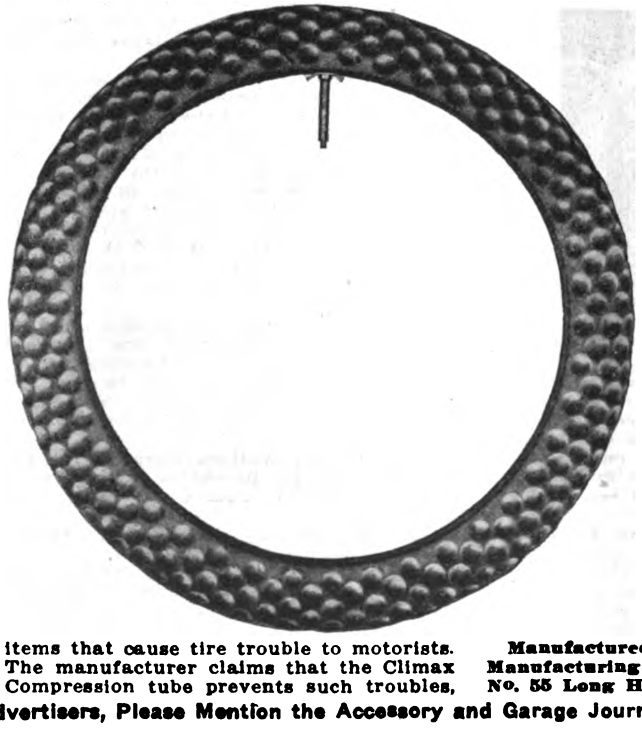
The electric current is conducted to the heating unit through a fiber terminal block where the lead wires are soldered to the cord wires, screwed connections not being used. Dover tips are cut from bars of pure drawn copper and are replaceable, having threaded shanks which screw into the core. All copper tips are tinned ready for use.

Dover electric soldering irons are guaranteed against mechanical and electrical defects, the factory agreeing to replace faulty parts free of charge within one year from date of purchase.

The outfit is complete with the necessary tips for the weight of iron desired, connection cord and plug, to fit any electric light socket.

Manufactured by the Dover Manufacturing Co., Dover, O. Prices and literature upon application.

The Climax Compression Inner Tube has been designed with the idea of supplying a tube that cannot pinch, creep, heat or leak through puncturing, the four chief items that cause tire trouble to motorists. The manufacturer claims that the Climax Compression tube prevents such troubles, due to its peculiar cup-like construction, by which air spaces are formed between the tube and tire when the tube is inserted in the tire, these depressions smoothing out when the tube is fully inflated with a cushion of air imprisoned between the tube and the wall of the time. The inner portion of the tube, which comes in contact with the rim, is made unusually heavy, so that this contact will not affect the wear of the tube. The reinforcement at this point also acts to prevent the valve stem from creeping and causing a leak where the stem is fastened to the tube.



The manufacturer guarantees the fulfillment of the many claims of superiority made for this tube and calls attention to the fact that they have been in use for some time and have been thoroughly tried out in service.

Manufactured by the Climax Rubber Co., 27 West Gay Street, Columbus, O. Prices and literature on request.

Long Henry Spark Plugs for Ford Engines were designed, it is stated, to give the Ford car owner the most durable and efficient spark plug that money can buy. The insulator and porcelain are extra heavy. The shell is much longer and heavier than standard equipment, while the hex is extra long, allowing the plug to be easily removed with almost any type wrench. The extra long shell raises the porcelain further up inside the hex, away from the oil and heat, which has a tendency to make the Long Henry spark plug, the manufacturer states, as near carbon proof as a spark plug can be built.

The extension below the threaded portion of the hex carries the spark deep into the heart of the mixture, below the dead gas, making the engine easier to start, giving more power and a smoother running engine.

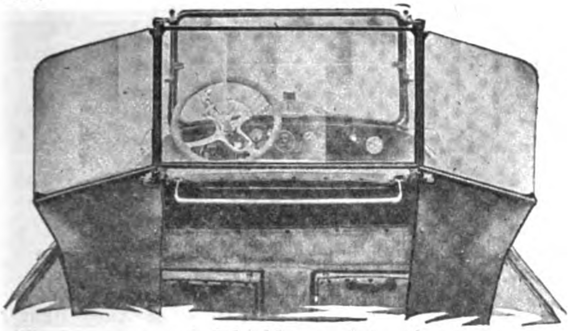
This company also manufactures the Blazer No. 775 stone insulator plug for automobiles, tractors, air planes and trucks, which offers many features not usually found in spark plug construction. The insulator, being constructed of stone, is claimed to be unbreakable, while the hex is unusually large and strong. The electrodes are made heavy to withstand the high temperatures of the combustion chambers, and are guaranteed not to melt while in use.

The mica used in their construction is specially selected and will not break, oil soak or short circuit.

LONG HENRY
AIM
REG. U.S. PAT

Manufactured by the Auburn Ignition Manufacturing Co., Richmond, Ind. Price, No. 55 Long Henry, 90 cents.

The Perfection-Hartford Tonneau Windshield is designed for the protection of the occupants of the rear seat from wind, rain, dust and dirt. This appeals particularly to women motorists and the Perfection-Hartford tonneau windshield gives them the same service as the regular windshield and side wings on the front seat.



The tonneau windshield consists of a front glass panel which is securely fastened to the back of the front seat. This panel is constructed either of one piece of plate glass, or or two stationary sections on the sides and one movable center panel which may be opened to permit of conversation between the occupants of the front seat and those in the tonneau. A folding side wing on either side breaks the side and back draughts of air. They may be folded back out of the way when the occupants of the tonneau wish to leave the car.

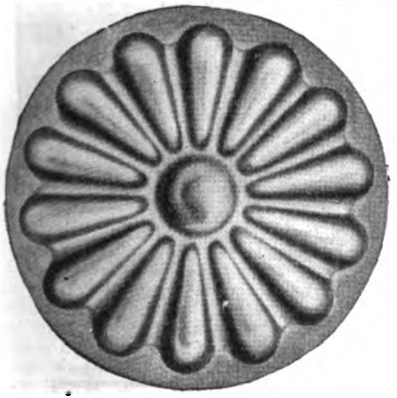
It is stated that the Perfection-Hartford tonneau windshield makes an absolutely rigid, rattle-proof assembly on the back of the front seat. All of the metal parts are of heavy steel stampings with bronze friction points. The glass is the best quality thick plate. The assembly is bolted to the back of the front seat and held firmly in place by means of two heavy iron rods, beneath the upholstery.

Manufactured by the Perfection Windshield Co., 2411 North Illinois Street, Indianapolis, Ind. Prices and literature on application.

The Filmolens is a new device by which the rays of light from the head lights are diffused in such a manner that the glaring rays are dissipated before they strike the road. It is stated that with the Filmolens it is possible to throw the diffused light 200 feet ahead and 40 feet on each side of the car and that the road is clearly visible and free from shadows.

Filmolenses are not made from glass, but from special light diffusing pyralin, .010 inch thick and are, therefore, non-breakable.

The ideal light is claimed to be the one which, without materially reducing the illumination, will so diffuse the rays that no glare results from any angle, and not only the road ahead, but all sides, are so lighted up that road bed, ditches and obstacles of every nature are clearly visible. This the Filmolens is claimed to do perfectly.



Manufactured by the Sales Co., 1001 Penobscot building, Detroit, Mich. Price $1.75 a pair.

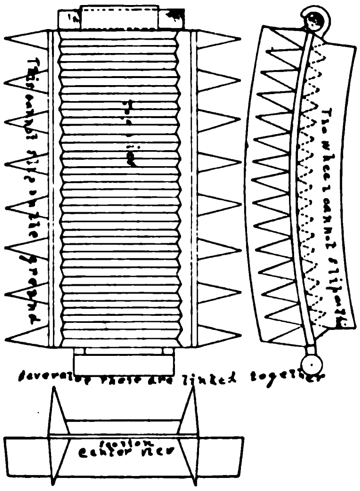
Ford's Automobile Polish, after many years of careful experimenting, has been developed to a high state of perfection, the manufacturer states, and today is being used by such concerns as the Packard Motor Car Co. of New York and many others handling high priced cars.

TRE FORD PARA AUTOMÓV
FORD'S AUTO POLISH
EXCLUSIVAMENTE PARA AUTOMÓVILES
PRIMEROS Y ÚNICOS FABRICANTES
AUTO POLISH COMPANY
INSTRUCCIONES

A feature of Ford's auto polish that is worthy of mention is that very little rubbing is required to obtain a high finish. It is stated that the polish does not leave a greasy surface and that dust will not cling to it. Wherever the polish is used a fine permanent luster is produced, which lasts for some time. Many other claims are made for this polish which recommend it strongly to motorists desiring a high-grade polish that will not injure the finest car finish.

Manufactured by Ford's Auto Polish Co., Inc., 815 Flatiron Building, New York City. Price, 12-ounce bottles, 75 cents each; 32-ounce bottles, $1.50 each.

The Leslie Track Tractor consists of a fluted band which conforms to the shape of a truck or passenger car tire and provided with grips or flanges at the sides and underside which grip the ground in case the vehicle becomes mired. Several sections may be joined together by means of hook and bar joints, forming a continuous section that will fit around the circumference of the wheel, making an endless traction for the wheel while passing over soft or miry ground.



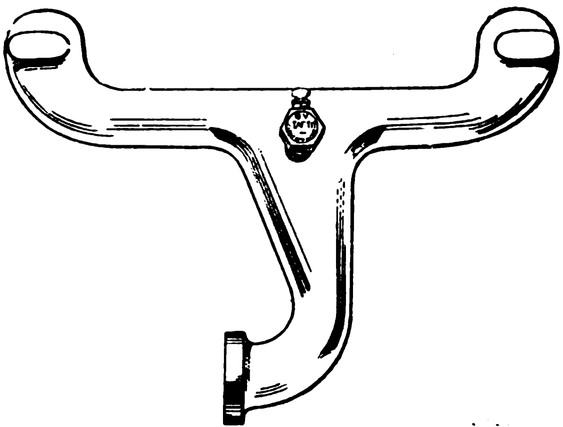
This cannot slip on the ground
The wheel cannot slip on it
Several of these are linked together
Section center view

The device is strongly made throughout of the best of material and with ordinary care will last indefinitely, the maker claims. The Track Tractor is easily attached to the wheel of the vehicle in a few minutes time and is stated to be guaranteed to pull the vehicle out of mud, sand or snow.

Manufactured by A. M. Leslie, 833 Asbury Avenue, Evanston, Ill. Prices and literature on application.

The "Startit" Manifold Electric Heater and Vaporizer consists of an electrical heating unit which is fitted at the Y of the intake manifold, heating the gas mixture as it passes on its way to the combustion chamber.

The device is easily fitted by removing the manifold and drilling a 15/32-inch hole in the center of the Y of the manifold and tapping it with a ¼-inch pipe tap.



A suitable connection is provided on the end of the device to which a wire, from the battery, through a switch located on the dash and to the connection, leads the curent for the heating unit, the current from the unit passing back to the battery through a ground.

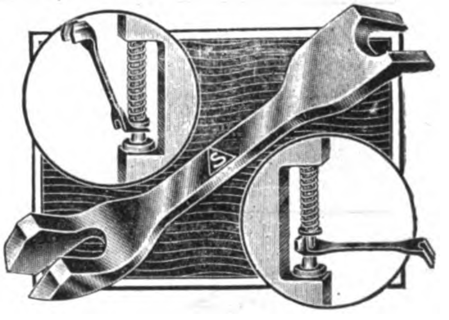
The unit is built to operate on a three-cell or six-volt battery and, in case of 12 volts being supplied by the battery, it is necessary to halve the voltage, taking it from three cells instead of the six.

It is stated that Startit will facilitate starting the engine and cause it to work to better advantage under adverse conditions than is possible with any other method, as the gas is not warmed till it passes through the manifold, and that it may be used on any car.

Manufactured by the Startit Sales Co., 521 South Wabash avenue, Chicago, Ill. Prices and literature on application. Special proposition now open to dealers and jobbers.

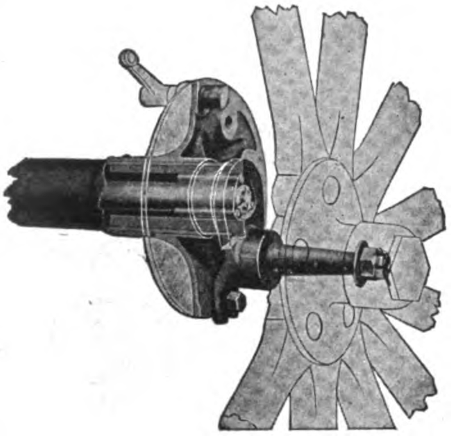
The Stevens Valve Lifter for Fords consists of a single casting provided with a wedge end for lifting and holding the valve spring and cap while the pin is being removed, and it may be left in the lifted position while the valve is being ground, facilitating the assembly of the valve spring and cap after the valve is ground.

The opposite end of the casting is provided with a hammer claw which instantly raises the spring from the push rod guide then, with a quick upward thrust, the spring is lifted past the pin hole. By means of these two cleverly shaped ends it is possible for the service station repairer to dissemble or assemble a valve complete in a fraction of the time usually required and, it is stated, it is not necessary to remove the carburetor or any other part of the engine to perform the work.



Manufactured and sold by Stevens & Co., 375 Broadway, New York City. Price, 35 cents each.

The Slipon Emergency Repair Axle for Ford Cars and Trucks has been designed with the idea in mind of making it possible for Ford owners or service station repairers to drive cars to the nearest service station when an axle shaft breaks. In case of a broken axle, the emergency repair arm is fitted to the brake disc by slipping the large hub into the axle housing after the roller bearing has been removed and over the broken axle. The device is fastened to the disc by a bolt, which passes through a slot at the bottom and the bolt hole in the disc. Serrated rolls are provided which fit around the broken axle shaft between it and the hub of the repair arm, preventing the broken axle from turning. The wheel is fitted to the arm in the usual manner and the car may then be driven to the service station under power from the engine driving through the undamaged wheel.

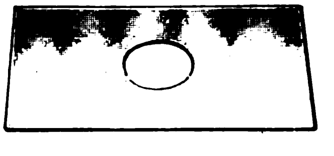


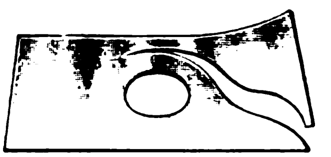
The Slipon emergency axle repair arm is small enough to be carried in the tool box and could be included to advantage in the list of tools carried by service stations, as its use simplifies moving a car with a broken axle, shortening the time required and effecting a considerable saving to the owner of the car.

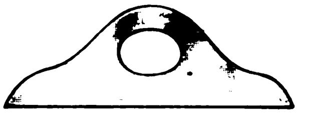
Manufactured by the Slipon Co., Milwaukee, Wis. Price, $6.

Universal Shim Blanks are designed to supply repair men with shim blanks having center holes punched accurately and without burrs, on the same principle that washers are furnished, having the center hole punched and ready for use.

Universal shim blanks have holes accurately centered, are made from the best grade of shim brass and can be easily fitted to any bearing by simply trimming the edge with a knife or tinner's shears.







They are put up in a neat box containing the following sizes and assorted thicknesses as follows:

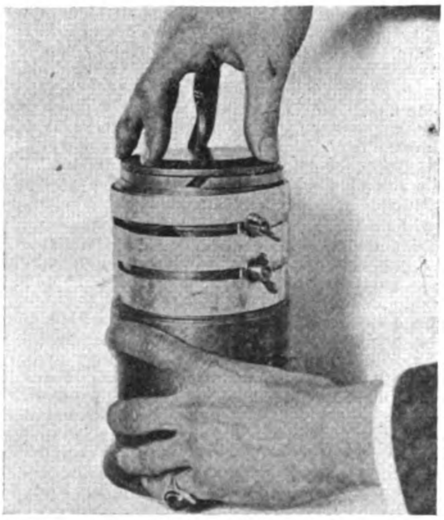
Size 2½ by 1⅛ inches (100 shims to a box): 40 shims, .002 inch; 40 shims, .003 inch; 10 shims, .005 inch; 10 shims, .010 inch.

Assortments are also put up with 100 13/32-inch blanks for ⅜-inch bolts, or 100 17/32-inch blanks for 7/16-inch and ½-inch bolts.

100
Universal Shim Blanks
PRICE $1.25

Manufactured by the Utility Products Co., Waterbury, Conn. Price, per box, $1.50.

The Cloud Piston Inserter consists of three strips of flexible 22-gauge nickel plated, cold rolled steel, joined to a cross member at one end. Two bolts, provided with wing nuts, are spaced equidistant in the cross member and are provided with washers. To use the device the three strips of flexible steel are passed around the piston and rings, giving the piston about ¼-inch leeway into the cylinder. the steel strips are drawn tight and fastened with the two wing nuts, forcing the piston rings into their grooves. The piston is then lowered into the cylinder without difficulty.



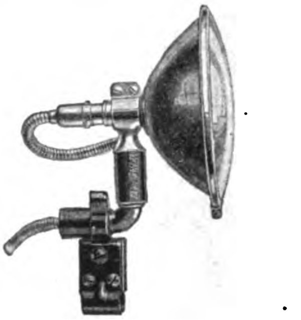
It is stated that the piston inserter can be adapted to any size piston or rings, and can be changed from one size to another in a few minutes time. And that it is also adapted for inserting pistons in the cylinders through the base by opening the inserter at one side and passing it around the connecting rod.

Manufactured by the Cloud Accessories Corporation, Chicago, Ill. Price, $2.

The Howe No. 17 Spot Lamp is a somewhat lighter type than that usually made by this company, and is designed for high-grade cars where fittings of unusual merit are desired.

Like other Howe models, the No. 17 has the Howe flexible control, a feature which is patented. The construction of the patented swivel joints is such that they always remain flexible. The lamp is easily movable, it is stated, yet is held firmly in any position in which it may be placed, unaffected by the vibration of the car when driving over uneven pavements. The spring tension of the swivel joints automatically overcomes the effect of wear and also eliminates the danger of stiffness which might otherwise result from exposure to rain and weather.

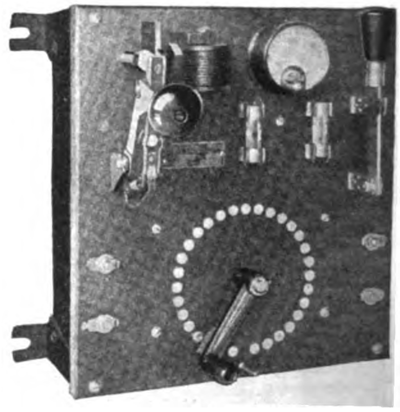
The No. 17 spot lamp is made entirely of brass with the exception of the bracket and clamp. The lamp is equipped with a large convex lens, while all trimmings are nickel and the body of the lamp is enameled. The parabolic reflector, the conduit cable and other fittings are finished in triple nickel plate. The lamp is equipped with a focussing device which permits the concentration of the light into a long, piercing beam for spotting objects at a distance. All wires and the control switch are of water proof construction.



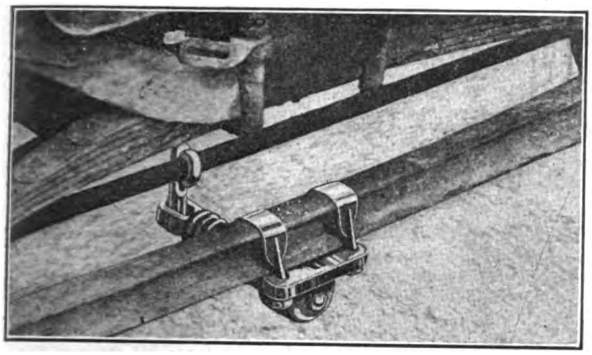
Manufactured by the Howe Lamp & Manufacturing Co., Chicago, Ill. Price, $10; with plate mirror, $11.50.

A New Charging Panel for Lighting, Starting and Ignition Batteries has been developed for charging secondary batteries used for electric lighting, starting and ignition on gasoline cars. The new charging equipment, shown in the illustration, which is to be used with a direct current source of supply, consists of a slate panel mounted on a wall type frame and carrying a low current cut-out, single-pole main line knife switch and fuses, ammeter and 30-step rheostat, and is capable of charging any number of cells in series from three up to 42 or the maximum number that can be charged on the voltage of the circuit. The resister is mounted in the frame back of the panel. The ammeter and knife switch may be omitted if desired, or the 30-step rheostat may be furnished alone or with an ammeter and double-pole fused knife switch.

The line lugs are on one side of the panel and the battery lugs on the other side. After line and battery connections are made for charging the knife switch and low current cut-out are closed in succession, making sure first that the rheostat handle is in the position of "all resistance in." Resistance is then gradually cut out of circuit until the charging current is brought up to the right valve, as indicated by the ammeter. Should the line voltage drop to a low enough value to cause the battery to discharge back into the line, the low current cut-out will automatically release, disconnecting the battery from the line. The charge is terminated by opening the knife switch, which causes the low current cut-out to open, and interrupts both sides of the charging circuit.

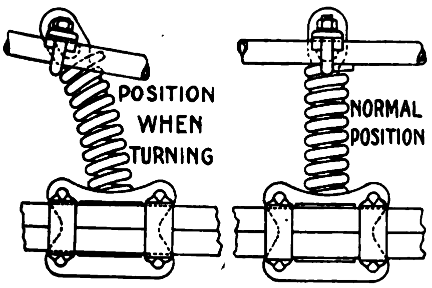


Manufactured by the Cutler-Hammer Manufacturing Co., Milwaukee, Wis. Prices and literature on request.



The D. & O. Safety Steering Control for Ford Cars is a unique device, which is fastened to the front axle of the Ford car and also to the steering tie rod between the front wheels. Its object is to assist the driver in keeping the front wheels running straight ahead and at the same time to prevent the wheels from turning sideways abruptly when small obstructions are met in the roadway.

The device consists of a heavy coiled spring fastened at one end to the large plate and clamp which fits around the axle and, at the other end, to a steel member provided with an opening in the end through which fits loosely the plate and clamp that is attached to the tie rod. In turning the steering gear the spring swings to the side, following the movement of the tie rod, but if the car is traveling straight away the tendency of the spring is to hold the tie rod in that position.

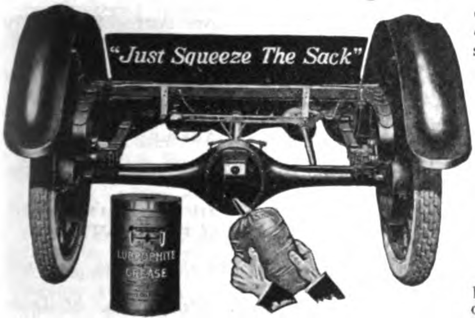


It is stated that a great many benefits are gained by the use of the safety steering control, inasmuch as many steering troubles are overcome.

The device is easily attached by anyone familiar with the use of tools.

Manufactured by the Green Sales Corporation, 99 State Street, Boston, Mass. Price, $5; in Canada, $7.50.

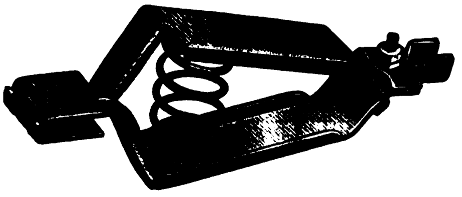
Lubrophite Transmission and Differential Grease is compounded for the discriminating motorist who desires to use the best lubricant in his car differential and gearset that the market affords. This is a fibrous lubricant manufactured from pure mineral oils, particularly designed for lubricating differential and gearset gears. It cushions the gear teeth meshes thoroughly, it is stated, and is of the proper consistency to reach and lubricate all shaft bearings.



The product is contained in an original package arranged so as to protect the hands and clothing from becoming soiled with grease. The package itself is covered with a flexible, moisture proof bag, protected on the outside by a cotton sack. The neck of the bag is fastened to a metal funnel or spout, four inches in length, which tapers down to a half inch hole. The capacity of the grease gun is six pounds. To operate the spout is inserted in the oil hole of the gearset or differential case and the bag squeezed.

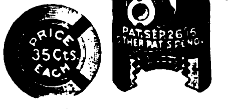
Manufactured by the Lubrophite Oil Products Co., 1515-17 West Sixth Street, Cincinnati, O. Price, $1.75 a package.

The Universal Battery Clamp, No. 33-A, has been designed for battery service stations where a heavy charge or discharge is to be handled. The capacity of the clip is 200 amperes, although it is stated that it will handle 400 to 500 amperes for short tests without overheating. The clips are made of pure copper with just enough alloy to prevent its melting under extreme load. Reinforcing flanges are provided at the sides, and angles to prevent bending under the tension of the spring. The jaws are smooth, while the spring is of heavy tension, making a firm contact with the battery terminals. The jaws open to a width of two inches while a copper shunt is provided at the hinged joint, preventing the springs transmitting current or possibly overheating.



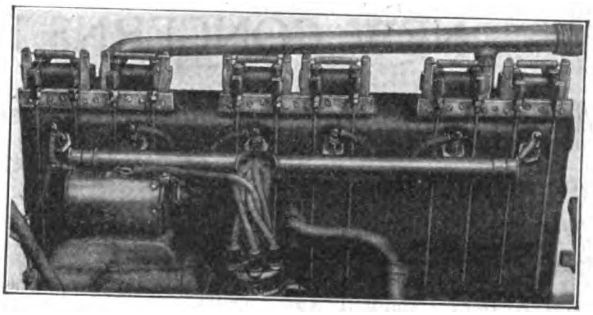
Manufactured by the Mueller Electric Co., 2131 Fairmount road, Cleveland, O. Price, 33-A, $1.35 each; in lots of 10, $1.20 each.

Schrader Universal Five-in-One Valve Repair Tool No. 3263 is designed for the tire and tube service station, motorist and repair shops in general, combining as it does in thoroughly practical unit all of the single tools required to rethread the valve stems, either on the inside or outside, to remove the inner plunger or replace it in the stem and to run threads over damaged threads on the outer part of the stem. The tool occupies but little space and will in a short time earn its purchase price many times over. Valve caps are usually fitted for removing or replacing plungers in the stems, but many times they become lost and much time is lost in locating tools to do the work. The Five-in-One Tool can be carried in the pocket or tool box and is always ready for use.



SCHRADER REG.U.S.PAT.OFF. VALVE REPAIR
UNIVERSAL REG.U.S.PAT.OFF. TOOL No.3263
PRICE 35Cts. EACH
PAT.SEP.26'16 OTHER PAT'S PEND.

Manufactured by A. Schrader's Son, Inc., Brooklyn, N. Y. Price, 35 cents each.



A Valve Silencer for Overhead Valve Engine has been perfected and patented, which is claimed to silence the valve mechanism to such a point that noise and side motion of the valves, when operating, are practically eliminated, doing away with excessive wear and constant oiling of the valve mechanism.

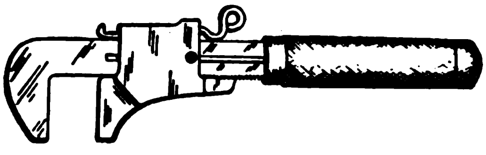
The device consists of two vertical arms, supported by a plate at the bottom which rests on the cylinder head. The lower end of the arms is riveted to this plate, while cups midway of the arms, slip over the end of the rocker arm pins, outside of the cotter pins. A spring is fitted across the top of each two uprights, over the rocker arm, supplying sufficient tension to hold the side members tightly against the rocker arm, preventing it from working sideways and causing unnecessary noise.

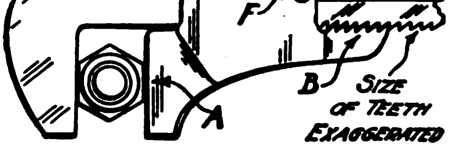
The device is easily attached in a few minutes' time, and, in use, it is stated, will give much the same effect as though the valves were operating enclosed.

Manufactured by the Newton Manufacturing Co., Plainville, Conn. Price, four cylinder, $7.50; six-cylinder, $10.

The Lightning Adjustable Wrench is a patented device that is designed for general use by motorists and at general service stations. The wrench is claimed to be the quickest adjusting tool on the market and is extremely simple in construction, control being by the thumb while the wrench is held in one hand. It is made throughout of high grade steel, is well finished and case hardened.

To operate the wrench to open the jaws, simply pull with the thumb at D. Fit the jaws to the nut and the spring in the handle closes them on it. The nut can then be turned without locking the jaws as they will not open except by a pull at D. The pressure of the nut at A brings the teeth of the movable jaw at B into mesh with the stationary teeth of the handle and the jaw cannot open farther. To lock the movable jaw at any position requires but a push of the thumb at C. To release requires only a pull with the thumb against D. The spring in the handle always exerts pressure at F, it is stated, closing the jaws by means of a rod G on either side.





Made in six, eight and 10-inch sizes, with jaw openings one, 1¾ and 2½ inch.

Manufactured by the Lightning Wrench Co., Denver, Col. Prices and literature on request.

Philadelphia, Pa.; J. H. Feeser Co.; one-story garage, at 859-863 North 28th street, for Herman Sacks; $1200.

Philadelphia, Pa.; F. L. Hoover, 1023 Cherry street; one-story garage, 20x106, at 613 North Eighth street, for C. H. Fowler, 1207 North 11th street; $5000.

Philadelphia, Pa.; Albert Boschner, 1625 South Orkney street; two-story garage, 52x121, at 705 Tasker street, for J. Waldow, 3118 Columbia avenue.

Philadelphia, Pa.; Fred C. Hoehn & Son; one-story garage at 4349-4351 North Seventh street, for Adolph Noell; $2500.

Philadelphia, Pa.; J. S. Kline; one-story garage, 45x50, at 936-920 Mountain street, for Mrs. Mary Moran; $4500.

Philadelphia, Pa.; Barclay White & Co.; one-story brick garage, 21x85, west side 23rd street, south Westmoreland, for Sharpless Specialty Co.; $3500.

Philadelphia, Pa.; William H. Gravett; two-story garage, 30x50, at 1827-1829 South Front street, for Lotz Brothers; $10,000.

Philadelphia, Pa.; Metzger & Fisher; one-story brick service station, southeast corner Broad and Lycoming streets, for Atlantic Refining Co.; $15,000.

Philadelphia, Pa.; William Steele & Sons Co.; one-story brick forge shop, south side Hunting Park avenue, west Rising Sun avenue, for Commercial Truck Co.; $15,000.

Philadelphia, Pa.; H. D. Prettyman; one-story garage, 16x18, at 2239-2241 South Third street, for Murphy Brothers; $3000.

Philadelphia, Pa.; H. D. Prettyman; one-story brick garage, 45x77, at 2146-2148 South Third street, for James Devine; $6000.

Pittsburgh, Pa.; H. Hysong, 7307 Keely street; two-story brick garage, 43x66, for E. J. Bonner, 612 Homewood avenue.

Pittsburgh, Pa.; Henry Geschwender, 1244 Juniata street; two-story storage garage and sales room, 50x180, for Allegheny Motor Co.; $65,000.

Reading, Pa.; L. H. Focht & Son, Baer building; two-story public garage, 45x90, at Washington street and Madison avenue, for Central Taxi Cab Co., 35 Poplar street; $25,000.

Reading, Pa.; H. J. Randenbush, 1324 Perkiomen avenue, Philadelphia; 1½-story private garage, 30x34, for I. A. Hopelman, care of F. A. Muhlenberg, 901 Flanders building, Philadelphia; $5000.

Wilkes-Barre, Pa.; W. H. Miller, 89 Marlborough avenue; one-story public garage, 30x71, at 17 Sterling street, for Jay Fuller, 50 Church street; $13,000.

Providence, R. I.; Interstate Construction Co., 29 Weybosset street; one-story public garage for Dimond Co., 244 Westminster street; $30,000.

Woonsocket, R. I.; John F. Fleurant & Son, 158 Rathbun street; 1¼-story public garage, 60x90, at Pond and East School streets, for P. J. Bresnahan.

Greenville, S. C.; H. K. Ferguson Construction Co., Cleveland, O.; one-story daylight type building, 100x260, for Cyclone Starter & Truck Co.; $140,000.

Sioux Falls, S. D.; Sioux Falls Construction Co.; one-story private garage, 50x140, for Minnehaha Co.; $12,500.

Brownwood, Tex.; R. E. Dudley; one-story brick garage, 100x100.

Texarkana, Tex.; C. A. Hamer; one-story brick and cement sales room and filling station, for State Line Motor Co., State Line and Fifth streets; $25,000.

Norfolk, Va.; Baker & Brink; three-story public garage, 120x238, for Travelers' garage.

Norfolk, Va.; Twin City Construction Co., Dickson building; two-story garage and storage battery station, 40x104, at Jamestown boulevard and Monteo street, for Reliance Electric Co., 771 Granby street; $65,000.

Richmond, Va.; A. C. Houston & Son, 9 South Sixth street; one-story public garage, 90x60, for W. T. Hawks, 918 West Gary street; $15,000.

Martinsburg, W. Va.; Richard R. Fuller Co; two-story garage, 99x55, for Stephen Bowers.

Moundsville, W. Va.; W. H. Batson; two-story garage, for H. W. Perkins; $31,000.

College Camp, Wis.; Alfred Pihl, Williams Bay, Wis.; one-story garage, 50x125, for Y. M. C. A. college.

Madison, Wis.; L. B. Gilbert, 16 Ellsworth building; two-story public garage, 50x60, for William Brueske; $12,000.

Milwaukee, Wis.; Wisconsin-Oakland Co., 325 Jefferson street; three-story sales room and service station, 98x120, at Oneida and Jackson streets.

Milwaukee, Wis.; C. B. Danielson, 638 Mineral street; one-story garage, 50x92, at Park and 12th avenue, for Northwestern Malleable Iron Co., 756 Park street; $11,000.

Milwaukee, Wis; M. G. Winter, 5029 North avenue; one-story garage and repair shop, 50x119, at 35th and Libson avenue, for Adam Freshberger, 508 54th street; $15,000.

Racine, Wis.; Julous Sorenson, 1805 West Sixth street; one-story garage, 40x45, for Tom Ross.

Racine, Wis.; Charles O. Johnson, 224 South LaFayette avenue; one-story garage and sales room, 56x154, at 10th and Washington avenue, for Guy H. Dixon, 834 Hayes avenue.

Reeseville, Wis.; Berninser & Newberger; two-story garage, 50x100; $10,000.

River Falls, Wis.; A. H. Ostness; two-story public garage, 66x120, for C. St. Jensen; $25,000.

Coming Events

July 17-25—Prague, Czechoslovakia, 12th Annual Automobile Exposition, Czechoslovak Automobile Club of Prague, Industrial Palace, Prague Exposition Grounds.

July 17-18—Inter-Club Run, Chicago Automobile Club.

July 24—Watertown, N. Y., Dirt Track Races. Frank G. Bell, Manager.

July 31—Fulton, N. Y., Dirt Track Races. Frank G. Bell, Manager.

August—Paris, France, Grand Prix Race, Sporting Commission, Automobile Club of France.

August——Italy, Jacques Schneider International Sea Plane Race.

Aug. 1—Felixstone, England, Sea Plane Test.

Aug. 7—Erie, Pa., Dirt Track Races. Frank G. Bell, Manager.

Aug. 7-Sept. 15—Antwerp, Belgium, Show of Motorcycles, Side Cars, etc.

Aug. 10—Niagara Falls, Ont., Automotive Metal Wheel Association, Clifton House. Standardization Discussions.

Aug. 14—Buffalo, N. Y., Dirt Track Races. Frank G. Bell, Manager.

Aug. 15-22—Danzig, Germany, Second Danzig Fair.

Aug. 20-21—Middletown, N. Y., Dirt Track Races. Horace P. Murphy, Manager.

Aug. 21—Elgin, Ill., Road Race, Chicago Automobile Club.

Aug. 21—Johnstown City, Pa., Dirt Track Races. Frank G. Bell, Manager.

Aug. 23-27—San Francisco, Cal., National Traffic Officers' Convention.

Aug. 23-28—Stillwater, Okla., Oklahoma Farm Power Show, direction State Board of Agriculture.

Aug. 27-28—Flemington, N. J., Dirt Track Races. Horace P. Murphy, Manager.

Aug. 28—Canadaigua, N. Y., Dirt Track Races. Frank G. Bell, Manager.

Aug. 30-Sept. 4—Milwaukee, Wis.; Annual Fall Automobile Show, auspices Milwaukee Automotive Dealers' Association, Wisconsin State Fair Grounds. Bart J. Ruddle, Manager.

Sept. 1—New York-San Francisco Glidden Tour.

Sept. 1—Felixstone, England, Large Air Plane Trials.

Sept. 1-3—Chicago, Ill., 13th Annual Convention National Gas Engine Association.

Sept. 3-12—Detroit, Mich., 71st Annual Exposition, Michigan State Fair Association.

Sept. 5—Sicily, Targa Florio Race.

Sept. 6—Hornell, N. Y., Dirt Track Races. Frank G. Bell, Manager.

Sept. 6—Cincinnati, O., Speedway Events, Cincinnati Speedway Co.

Sept. 6—Uniontown, Pa., Speedway Events, Uniontown Speedway Association.

Sept. 16-17—Cleveland, O., Credit Convention, Motor and Accessory Manufacturers' Association.

Method of Relining Internal and External Brake Bands

IN RELINING brake bands there are a few simple rules which if adhered to by the repairer, will considerably shorten the time needed to reline the bands and simplify the work, insuring a finished job that is correct.

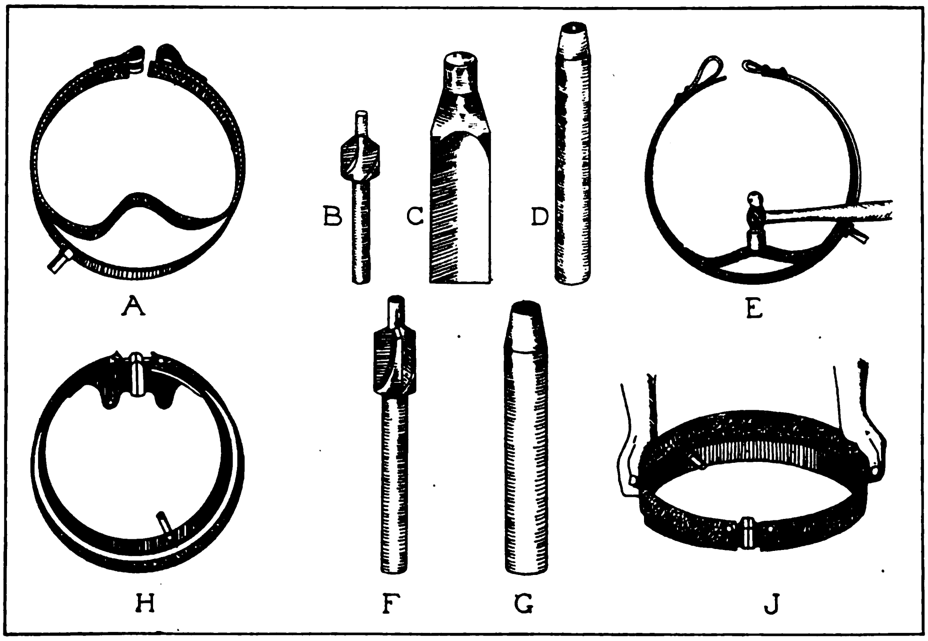

Figure 1. Fitting Brake Lining, Tools Employed.

It is always a good idea to cut the brake linings somewhat longer than required for the outside or service band; then when the lining is finally fastened in place it will draw down without wrinkling and will not be too short. The tools necessary and the methods employed are clearly shown in Fig. 1.

For brakes of 10 to 16 inches in diameter cut the lining ⅜ of an inch longer than the brake band. The ends are first attached, allowing the lining to bulge in the center as at (A). To attach the ends mark the position of the holes by piercing the lining with an awl. Drill the four holes (two in each end of the lining), then countersink the holes so that the rivet head (use solid rivet 10/16) will be at least 1/32 of an inch below the surface of the lining. For this purpose use the tapered countersink shown at (B). Then holding the ends of the lining in position so that the holes in the lining and brake bands correspond, put the rivets in place, using the anvil shown at (C), which is secured in the vise, having the small end up, and the head of the rivet resting on the anvil. Head the rivet with a hammer, using the hollow rivet set shown at (D). Next flatten the lining against the band as shown at (E), locate the holes and punch with the awl. Drill the lining and countersink the holes as before, using tubular rivet countersink shown at (F). Use tubular rivets ½ of an inch and head over with tubular rivet set shown at (G).

The internal brake bands are lined similarly, but slightly different methods are employed. Cut the lining one-half inch shorter than the band in order to stretch the lining tightly around the band. Drill and countersink the end rivet holes, then place the band flat on bench with the open end away from you. Put in two solid rivets in upper rivet holes only at each end of the band, as shown at (H). Care should be taken not to have the lining wrapped around the band when attaching these rivets, as the ends will be drawn too far apart. Head over the solid rivets as before, then force the rest of the lining around the band as shown at (J). Insert solid rivets in the two remaining holes in the end of the band and head over. Proceed to attach the balance of the lining, using tubular rivets, countersinking the holes with the tubular rivet countersink and heading them over with the tubular rivet set (G).

In attaching lining to Ford transmission bands where split rivets are used, start at one end and work toward the other end, securing one rivet at a time by forcing it through the lining with the head on the outside and coming in contact with the steel band. When the split rivets are forced through the band and lining the points of the rivets will protrude just enough to permit turning over with the hammer and rivet set.

Still another method of relining brakes that does not require special tools outside of what are usually found in the repairer's tool kit is shown in the second illustration, Fig. 2.

In this method, flat-headed copper rivets are used entirely as shown at (A). In several makes of cars is used a sort of indurated fabric for the brake linings, wire cloth being woven into the fabric, which may be obtained already cut in strips of the exact width and length required.

The tools necessary, besides a hammer and vise, will be a small hand drill for making the rivet holes in the lining, a cold chisel, an old file, a punch about 5/16 inch in diameter, another small punch, less than ⅛ inch, for removing old rivets, and a pair of cutting nippers, side cut preferred.

Remove the brake band and pry out the remnants of the old lining, leaving the flat head rivets in place, as shown at (B). Cut these old rivets off flush with the inside of the brake band, placing the cold chisel as shown at (C), but always taking the precaution of placing the band between the vice jaws to do the rivet cutting. Care should be taken never to cut the rivets in the band (D), unless the band is held rigidly between the jaws of the vise. In this manner all danger of bending or breaking out a section of band (D) is avoided.

With the small punch, drive out all the rivets after the ends have been cut off as at (C). Place the cold chisel or punch in the vise as shown, the cutting end bearing upon the screw sheath of the vise. By placing the chisel thus and using it to rivet upon, the lower side of the brake band may be placed underneath the vise jaws and the band will balance very nicely upon the chisel. Insert the first rivet close to the end of the band and take great care that the first hole is made exactly right, so that the lining will lie evenly against the band. More time should be spent in placing this first rivet right than with any three of the others. If the rivets protrude too far, as shown at (F), cut them off with the cut nippers. Cut the rivets as shown at (M), rest the head of the rivet on chisel and hammer the end down loosely as shown at (H) and (I). It is not necessary to head off the rivets completely smooth.

Two of the rivets at one end of the lining will have to be driven with the 5/16 inch punch, as they are in countersunk holes at one end of the lining. Later these two rivets must be finished while

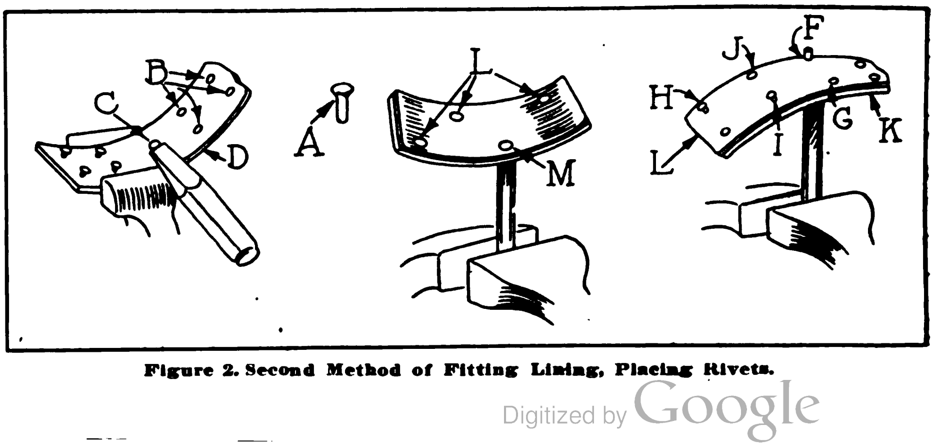

Figure 2. Second Method of Fitting Lining, Placing Rivets.

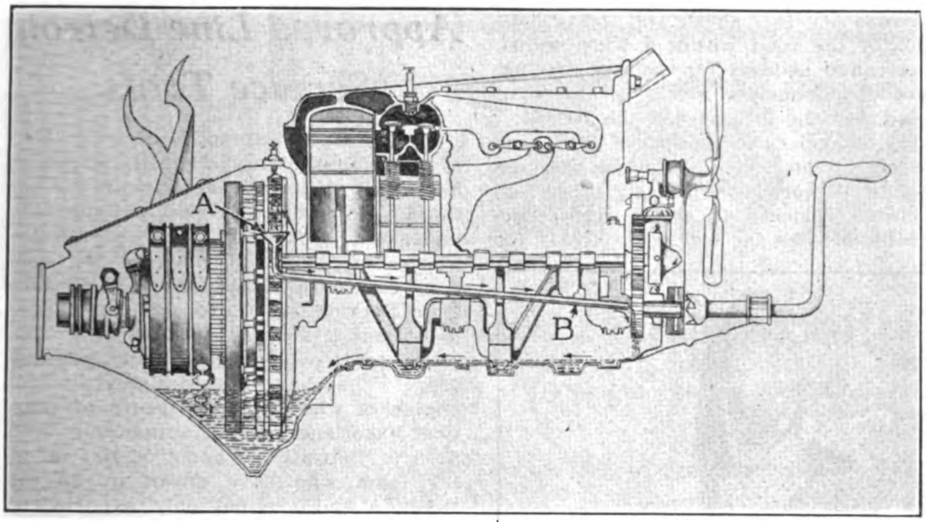


Ford Engine Lubrication: A, Oil from Flywheel Enters Trough; B, Oil Pipe Conveying Oil to Timing Gears.

resting upon the small end of the punch while it is held in the vise, with the small end up for the rivet head to rest upon. Put rivets in all the holes at the ends of the lining, but along the middle, it is best to stagger the rivets as at (H), (I) and (F), leaving vacant the holes (J) and (G), etc. These holes need not be drilled in the lining (K), which is left smooth as shown at (L).

Ream Holes Slightly.

Having drilled through lining (K), it is well to ream the holes slightly for the taper heads of the rivets. Punches and reamers are easily obtained for this work, and usually the repairer has one or more of them in his kit. However, some garage men ream the holes with the tang of an eight-inch mill file.

After inserting all the rivets and slightly heading them down, as shown at (H) and (I), reverse the brake band, placing it upon the vise. Hold cold chisel or punch as shown at (L), (L), (L). Then hammer each rivet down into the wire woven fiber until the head is fully flush with or just a little below the fiber surface as shown at (M). Do not leave any portion of the rivet projecting above the surface of the brake lining. This completes the job so far as most of the rivets are concerned. There are, however, two rivets which will have to be hammered down while their ends are resting upon the 5/16 inch punch while held in the vise as shown.

KEEP TANKS FULL.

The radiator requires to be kept filled with water. Generally speaking, once a day the cap must be removed and water added if necessary. The beginner should find out how to tell when his gasoline tank requires replenishing. Many tanks are fitted with a gauge, while in other cases a gauge may be easily supplied, which will save considerable bother and guess work. The method of filling the tank and of unscrewing the cap of the gasoline tank should be ascertained. As regards the oil reservoir in the base of the engine, the motorist should find out from the agent how to tell when oil is required and what kind is recommended.

Lubrication of the Ford Car

The lubrication system of the Ford engine is of a simple character. The lower part of the flywheel casing forms the sump, from which the circumference of the flywheel, as it rotates, picks up the lubricant, and throws it into a small copper funnel that is fitted at the upper end of a sloping copper pipe, the latter extending forward inside the crank chamber and terminating so that the oil drips on to the timing gears. From this point it runs back into the bottom of the base chamber, through troughs provided for the big end bearings of the connecting rods by splash. Incidentally, too, the flywheel throws up oil on to the brake drums and gearset gears, all of which run continuously in a smother of oil. Two pet cocks, one a high level and the other a low level indicator, are provided in the back of the lower half of the flywheel casing, and the maker's instructions are that, normally, oil should be poured in through the filler in front of the engine on the off side, until it begins to run out from the upper level cock. However, if the oil level be kept as high as this, considerable carbonization of the cylinder heads and pistons is liable to occur, and the oil will rapidly burn away until the level reaches a point about half way between the top and lower cocks. From this point, although one's safety margin is still ample, very little oil will be used; in fact, the second half of the oil supply will last three times as long as the first half.

Unless a sight oil gauge is fitted, it is impossible to know when the level of the oil is half way between the two cocks, and for this reason it is desirable to equip the engine with one of the various oil gauge glasses sold by the accessory houses.

It is unnecessary to mention in detail all the parts of the Ford chassis that need lubrication, but it is well to be liberal in greasing the universal joint at the front end of the propeller shaft and front plain bearing of the propeller shaft itself. It is important that the steering pivot pins on the inner ends of the stub axles should be oiled freely. They should also be taken out periodically and the oil channel thoroughly cleaned with kerosene.

REPAIR SHOP ORDER PROTECTOR.

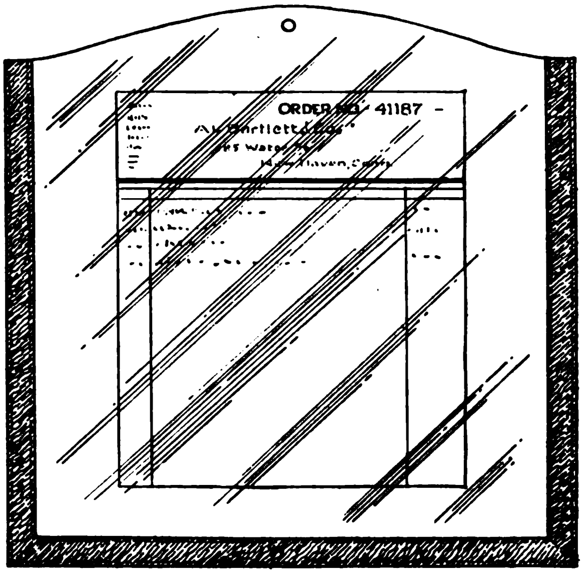
Work orders are often mislaid, soiled and torn while in use in the repair shop or garage. The accompanying cut pictures a practical order carrier and protector.

A sheet of transparent sheeting—the same material used for lights in automobile curtains—is cut to desired size. A piece of light weight leather substitute is then cut about one-half of an inch larger all around than the piece of sheeting. This extra half inch allows for a lap over on all but the top side of the protector. The lap may be stitched by a sewing machine down to the sheeting, forming a large flat pocket, open at the top for the insertion of the order.

Both the transparent front and the coated fabric back are water proof and grease proof. Dirt or grease may be easily wiped or washed off without injury to the material.

ADJUSTMENT OF THE CARBURETOR.

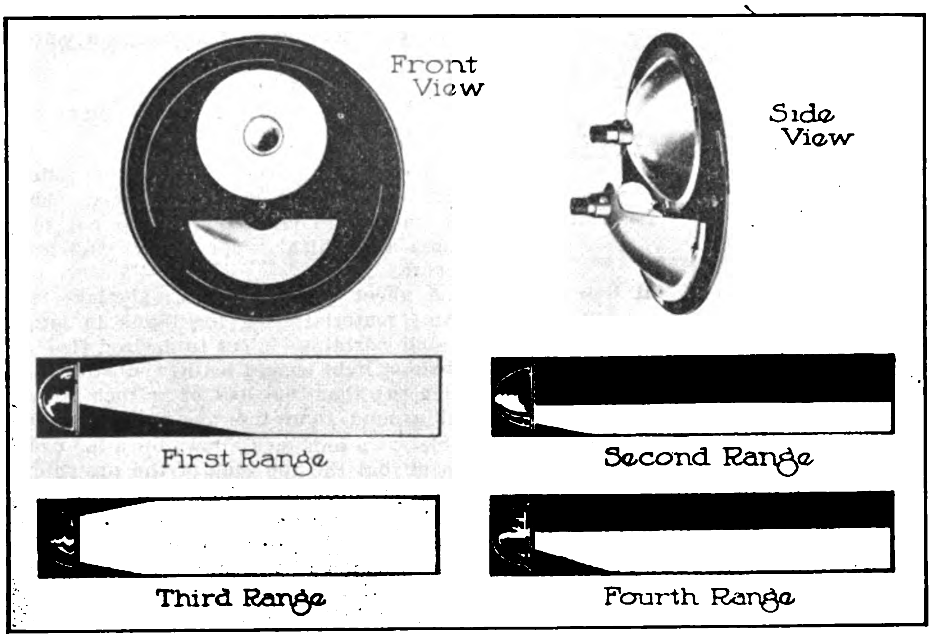
Tinkering with the carburetor often causes most disastrous results. Not only will it often result in excessive carbon deposit, waste of gasoline and power, but may cause the engine to misfire and lose speed. Unless the operator has had considerable experience he will do well to leave the carburetor severely alone. If it is thought that changed conditions necessitate carburetor adjustment, the car should be taken to the nearest service station.



Practical Protector for Order Sheet in Repair Shop or Garage.

Alvo Light Obviates Glare

Walter F. Voight and H. W. Brown, two Ashland, O., men, have developed a new form of head light designed to meet the varying needs of the modern motorist, known as the Alvo Four-Range light.



Alvo Four-Range Light Made by Alvo Manufacturing Co., Ashland, O.; Showing Ranges of Illumination.

It was their aim to do more than merely meet the requirements of city traffic regulations. The Alvo is, first of all, an efficient light to drive by. It provides the motorist with four instantly controlled ranges, which make him master of all the varying conditions of traffic, road and weather.

One of its most important features is the non-glare range; a distribution of light produced by shielding the lamp bulb from view so that the rays have a maximum height of 42 inches above the road and cannot throw a glare into the eyes of approaching motorists. The advantage of this non-glare range in the Alvo light is that glare is made impossible without the sacrifice of lighting efficiency.

The four ranges of light are produced by the use of two reflectors, one above the other. The upper reflector is five inches in diameter and the lower reflector (which is cut off in the center by a horizontal shield) is six inches in diameter. The upper reflector is a paraboloid, and the lower reflector half of a paraboloid. Both reflectors are scientifically accurate in design and commercially accurate in the smoothness and regularity of their contour. They are made of spun brass, with a polished nickel surface covered by a highly polished silvered coating. The unusually high efficiency of the Alvo four range light is made possible by the painstaking accuracy with which the principles of illumination are carried out in these two reflecting surfaces.

The advantages which the Alvo four range light offers to the motorist are these: The upper reflector throws a conical beam of light that searches out the road 500 feet ahead and lights both sides of the road within a wide radius. This range is ideal for country driving, since it commands not only the road ahead, but the ditches and the fences.

The second range is that of the lower reflector alone, which should be used for city driving or when meeting other machines. It meets all traffic regulations and illuminates the street so clearly for 175 feet ahead that small objects can be distinguished easily. There can be no question as to whether this range meets the regulations against glare. The lamp bulb is entirely hidden from view and the light is so controlled by being cut off at the horizontal that glare cannot reach the eyes of approaching motorists.

There are occasions when an unusually powerful light is required, as in driving over rough roads or in foggy or stormy weather. Under such conditions both reflectors should be used together.

The fourth range of light is that of the lower reflector with the lamp dimmed by resistance. This range is for use in parking. With this less than two amperes of current are consumed.

The various ranges of the Alvo light are obtained by a simple switch arrangement on the dash. Motorists who have installed this head light are enthusiastic in their commendations of it. They say that it makes night driving much safer and, therefore, much more pleasant.

The service which accompanies the Alvo includes not only the installation but wiring. There are various refinements in minor details, such as the clamping device on the socket of the lamp bulb, which holds the bulb securely in its focal position; and adjustment screws on the front plate, which permit the lower reflector to be tilted slightly upward or downward.

The Alvo Manufacturing Co. of Ashland, O., is manufacturing this device. A large and well equipped factory is now nearing completion and the company expects to produce the Alvo Four-Range light on a quantity basis by August.

Approved Line Detroit Service Tools

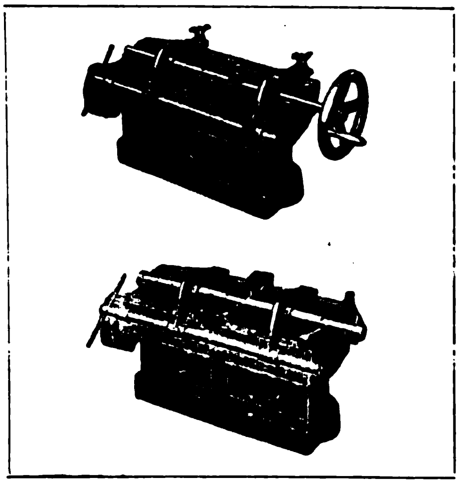
The Detroit Garage Equipment Co., East Columbia stret, Detroit, Mich., is marketing a line of equipment for garages, repair shops, service stations, etc., under trade name of "Detroit Service Tools, the Approved Line." The company calls attention to the fact that Detroit Service tools are not an experiment, but a finished product of proven merit, as is evidenced by many satisfied users. They have been designed by tool engineers who have had years of practical experience in the automobile business in Detroit, the home of the industry; men who have grown up in the business and are not only experienced in the designing of tools, but are actually engaged in the service departments of leading manufacturers.

Detroit Service tools are designed to meet the requirements of service stations and are absolutely guaranteed against any defects in material or workmanship.

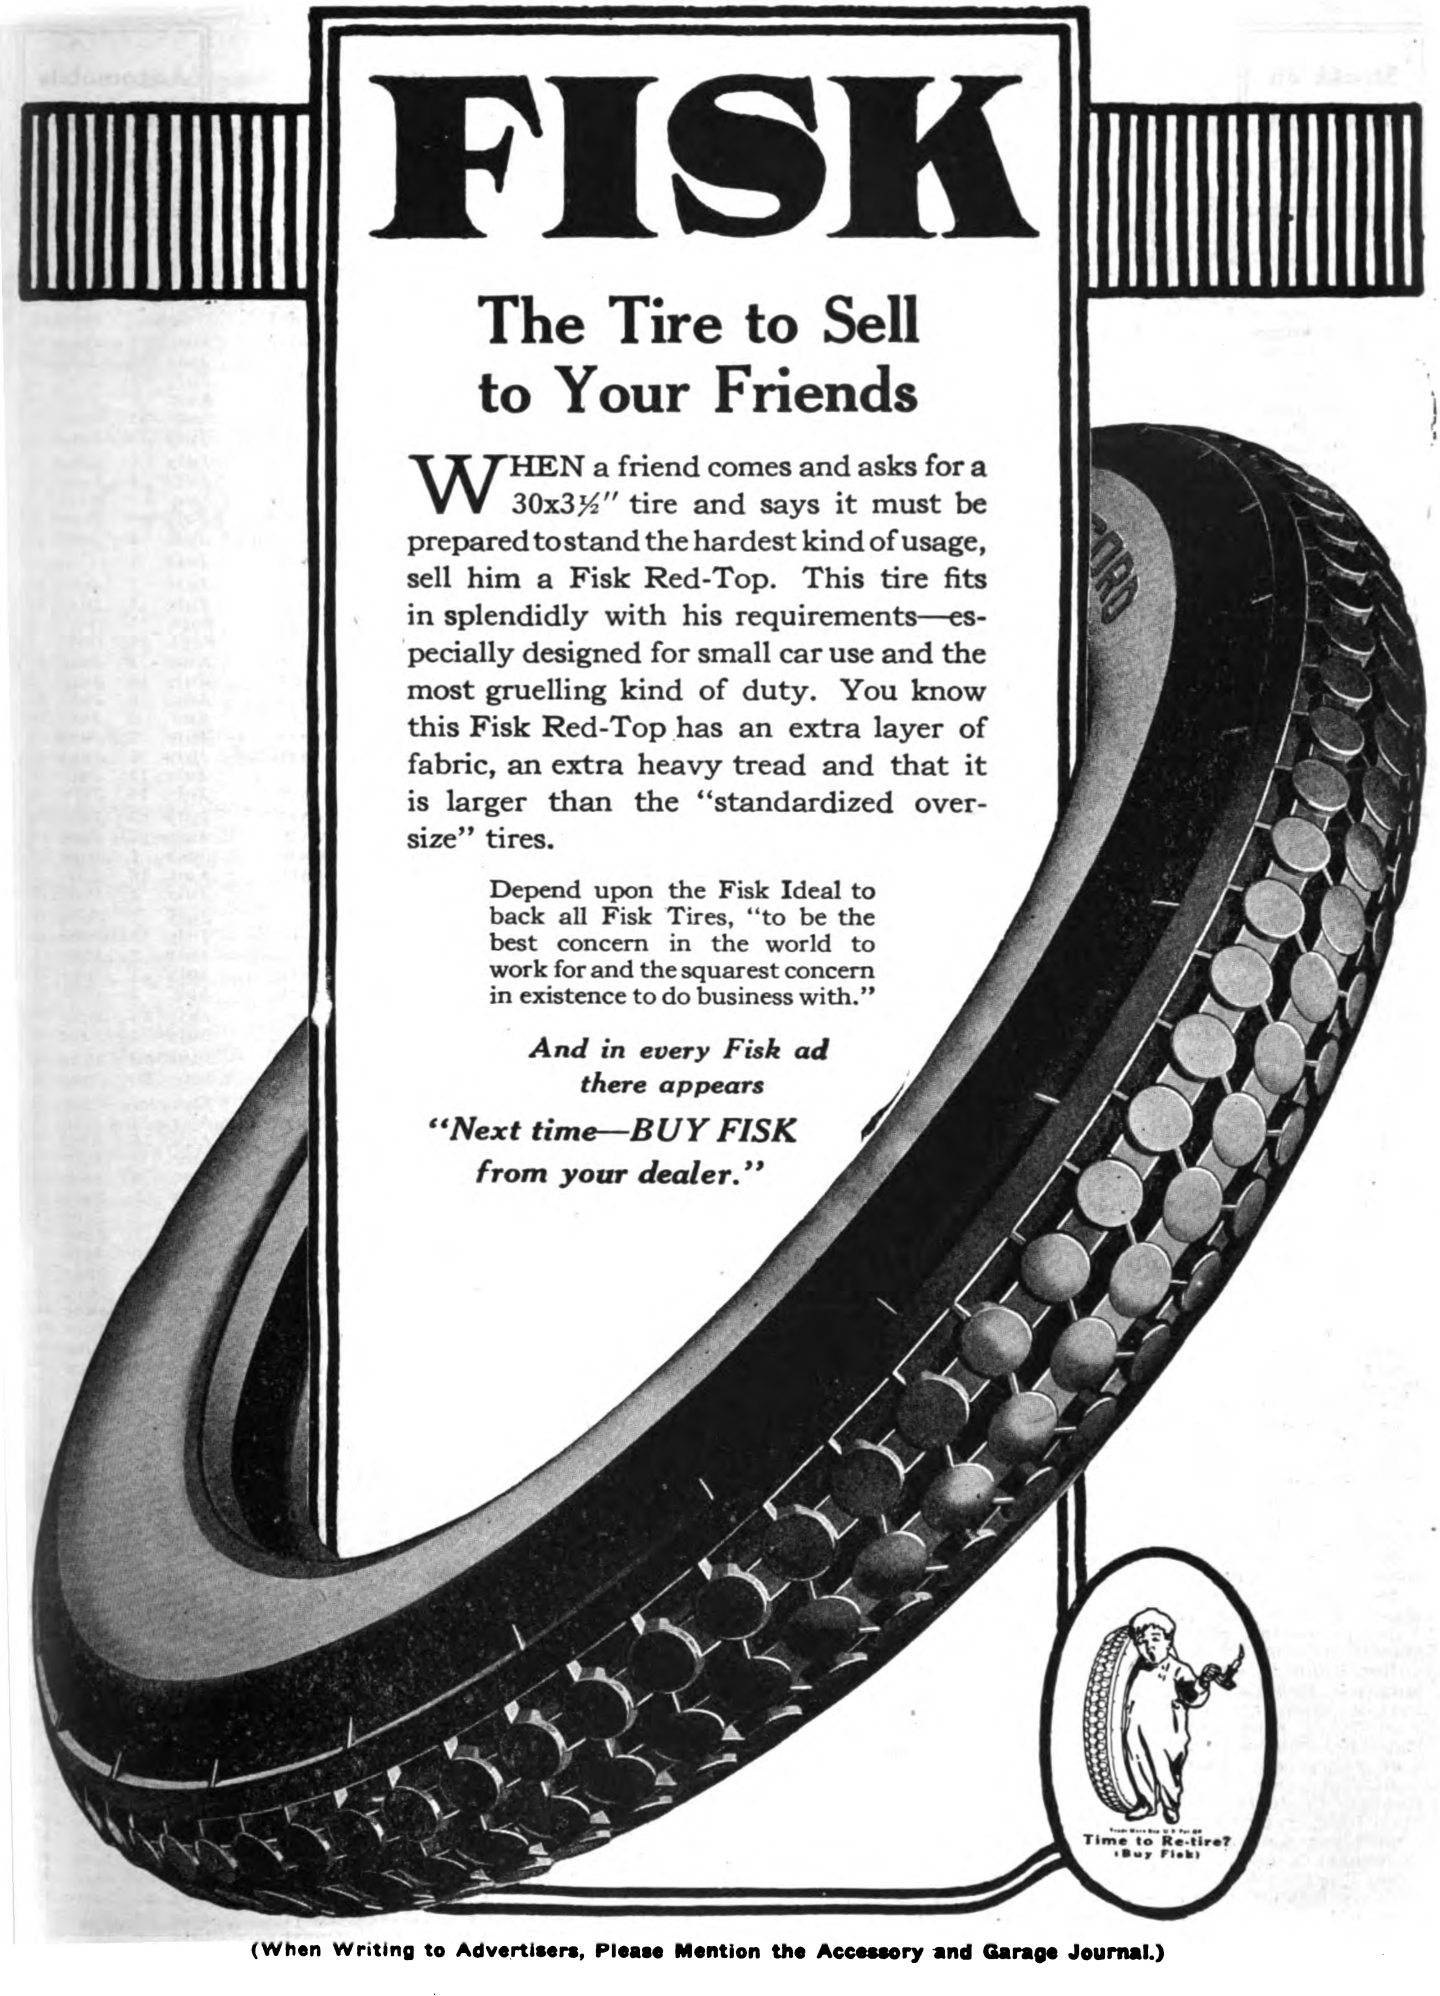
Among the useful equipment featured is the Detroit rebabbitting and reboring outfit for Ford Model T or Fordson tractor main bearings, also made in combination for both, and the Detroit combination arbor straightening press and truing up machine with a guaranteed capacity of 200 tons. These tools, as is the case with all of the Approved line, turn out the work for which they are designed accurately and quickly, one of the chief requisites for a service station.

NEW ERA BOOK OF SONGS.

In connection with the spring meeting of the Automotive Equipment association at Del Monte, Cal., the New Era Spring & Specialty, Grand Rapids, Mich., issued a Book of Songs for free distribution among the trade, which presented original and appropriate verses for many of the popular songs and choruses of the day, as well as the words of familiar old melodies of the North and South. A roster of the Sante Fe special party is also included, making it an interesting souvenir of the trip.



Detroit Rebabbitting and Reboring Outfit for Ford Model T Cars and Fordson Tractors.



FISK

The Tire to Sell to Your Friends

WHEN a friend comes and asks for a 30x3½" tire and says it must be prepared to stand the hardest kind of usage, sell him a Fisk Red-Top. This tire fits in splendidly with his requirements—especially designed for small car use and the most gruelling kind of duty. You know this Fisk Red-Top has an extra layer of fabric, an extra heavy tread and that it is larger than the "standardized oversize" tires.

Depend upon the Fisk Ideal to back all Fisk Tires, "to be the best concern in the world to work for and the squarest concern in existence to do business with."

And in every Fisk ad
there appears
"Next time—BUY FISK
from your dealer."

The ACCESSORY and GARAGE JOURNAL

VOL. X. PAWTUCKET, R. I., AUGUST, 1920 No. 4

Good Roads an Important Factor in Automobile Industry

Dealers Should Cooperate with Other Agencies to Secure Proper Maintenance and Increased Mileage

IN PREVIOUS articles in the Accessory and Garage Journal endeavor has been made to point out the responsibility of motor car dealer in the matter of cooperation to secure the stability and continuance of the industry on a sound and conservative basis for the future.

Another important factor that very essentially enters into the increased safe and pleasurable operation of the automobile today and will, consequently, affect the status of the business of every motor car and accessory dealer, as well as garage and repair shop, in the land, is the construction and maintenance of good roads. These activities should, therefore, if only from the purely selfish motive of continued and increased business, cast their votes with and add their influence and endeavors to those of the motorist in favor of every movement to advance the building of new and the proper upkeep of old highways.

"Better Roads Mean More Business," could well be the dealers' adaptation of the good roads slogan which is now becoming well nigh universal throughout America. All fees for licenses, registration, taxes, etc., should be all the more cheerfully paid when it is borne in mind that in nearly all, if not all, the states of the Union a considerable proportion of the money thus collected is expended on the roads in one way or another, and the motor car driver is thus directly and the dealer and manufacturer indirectly benefitted.

A Great Road Building Era.

Even the most conservative observers place the funds available for road building in this country during the present year at not less than $700,000,000, outside of cities and other municipalities, and the estimates run all the way up to $1,000,000,000. The unprecedented stimulus given highway construction in the United States in the four years that have passed since the Federal government entered upon its policy of aiding road improvement, is shown by the fact that road operations under the Federal aid road act thus far initiated aggregate in length nine times the distance from New York to San Francisco, according to Thomas H. MacDonald, chief of the bureau of public roads, United States Department of Agriculture. The Federal government's share in this stupendous undertaking is greater than the cost of the Panama canal. The participation of the national government in highway improvement marked a departure from a policy which had been followed for nearly a century. "Federal cooperation with the states on approximately a '50-50' basis has counted more than any other factor," says Mr. MacDonald, "in initiating highway construction that is being carried on under adequate supervision, and in accord with a programme coordinating local, state and national needs."

Highways of Splendid Type.

Second only in importance to the size of the present road building programme is the excellence of the roads being built. Sixty per cent. of the total allotment of Federal funds which has been approved to date will be spent for roads of such durable types as bituminous concrete, Portland cement concrete and vitrified brick. These roads, when built, will in-

Typical Good Surfaced Road: Section of the Lincoln Highway Over the Tuscarora Mountains in Pennsylvania.

crease by 7600 miles the total of 14,400 miles of roads of this class which existed in the United States before the federal aid road law was passed. But these figures by no means represent the total mileage affected.

In 1915 the total expenditure for roads and bridges by all the states and local governments was $267,000,000, while this year the estimated funds available for main road construction are nearly three times that amount, or $633,000,000. In all federal funds to the amount of $266,750,000 have been apportioned among 48 states without a suggestion of favoritism so adequate are the provisions for a just distribution.

Many New State Highway Departments.

One of the early and most far-reaching results directly attributable to the adoption of the federal aid programme was the creation of adequate state highway departments in 17 states which previously had either no state department, or departments insufficiently equipped. Within one year after the passage of the Federal Aid Road act more constructive state highway legislation was placed upon the statute books than had ever been enacted in a similar period in the history of the country.

The insistence of the government upon the construction of federal aid roads under the supervision of engineers of the state departments has resulted in placing a much larger proportion of road work under skilled direction. In 1915, the year before the Federal Aid act was passed, only 30 per cent. of the money for roads and bridges built in the United States was expended under the supervision of state highway departments. This year these departments will exercise control over fully 80% of the large sums that will be spent for road building.

The Result of Two Acts.

The Federal government's present programme of highway improvement is the result of two acts, the Federal-Aid Road act signed by the President July 11, 1916, and provisions in the Postoffice Appropriation bill for 1920 signed Feb. 28, 1919, containing an amendment to the original Federal-Aid Road act. The original appropriation of $75,000,000 was made available for rural post roads in installments at the rate of $5,000,000 for the fiscal year ending June 30, 1917; $10,000,000 for 1918, $15,000,000 for 1919, $20,000,000 for 1920 and $25,000,000 for the fiscal year ending June, 1921. Ten million dollars for forest roads was made available at the rate of $1,000,000 a year after July 1, 1916. The apportionment of the post road appropriations of the states, after deducting the administrative fund, which must not exceed three per cent., is based upon area, population and mileage of rural delivery and star routes in each state. Each of these factors have a weight of one-third.

Federal Activities Broadened.

Three months after the signing of the armistice, the Postoffice Appropriation bill for 1920 became a law. One of the important amendments which it contained provided that the term "rural post roads" as used in the earlier act was to be construed to mean "any public road a portion of which is now used or can be used, or forms a connecting link not to exceed 10 miles in length of any road or roads now or hereafter used in the transportation of the United States mails."

The law also changed the limitation that the government expenditure could not be in excess of $10,000 a mile (exclusive of bridges of more than 20 feet clear span) by raising the maximum to $20,000 a mile. This Postoffice Appropriation bill carried an additional appropriation of $200,000,000 for the construction of federal aid roads and $9,000,000 additional for the construction and maintenance of roads and trails in the national forests.

These federal funds may be expended only for construction and must not exceed 50 per cent. of the value of the roads. In other words the states, either directly or through county or other government units, are required to bear something more than half of the total cost of their road improvement.

Under the law the secretary of agriculture is charged with the administration of the Federal Aid act. He has assigned the details of administration to the chief of the Bureau of Public Roads, a branch of the department, which is considered to be in closer touch with the highway situation and requirements of the country as a whole than any other agency in the United States.

States Must Initiate Projects.

The Federal Aid act requires that road projects for federal aid be initiated by the states. As a first step, a statement is forwarded to the district engineer of the Bureau of Public Roads, announcing in effect that the state proposes to build a piece of road of a certain type and length in a certain location. This notice, known as a "project statement," is accompanied by an estimate of cost. The project statement is examined by the district engineer to determine whether the project complies with the Federal Aid Road act. If his decision is favorable he forwards the statement to the Washington office with his recommendation. There it is examined by the chief engineer and his assistants and, if they concur in the recommendation of the district engineer, the project is placed before the secretary of agriculture for his approval. Until the secretary has acted, no further action is taken by the state. Over half of the projects handled are passed by district officers in an average of five days—an illustration of the manner in which work can be expedited even where a large organization and complex procedure are involved.

Up to June 30, 1920, 2985 projects, involving a total of 29,319 miles of road had been approved by the secretary of agriculture. The preliminary estimate of the cost of these projects is approximately $384,900,000, of which about $163,841,000 will be approved as federal aid. On the same date 2116 projects, representing approximately 15,944 miles, had either been completed or were under construction. The estimated total cost of these projects in various stages of construction and completed, is $200,000,000.

It should be borne in mind, however, that all of this federal aid money for good roads must be increased by at least equal amounts raised by the individual states, as stated previously. And most of the commonwealths, counties and municipalities are not content with the comparatively smaller amounts made available by the turning back to them of a share of the money collected by the payment of license and registration fees, but are raising large sums by the authorization of bond issues for road building.

Statistics compiled by C. M. Wood, who is in charge of the newly created Good Roads bureau of the Goodyear Tire & Rubber Co., show that legislation is now pending to authorize good roads bonds to a total amount of $391,253,800 with excellent chances of being passed. Texas is reported to take the lead in the amount authorized, with bond issues totalling $88,708,000; Pennsylvania is to spend $76,217,945; California, $68,435,000; Illinois, $69,152,845; Michigan, $53,100,000; Alabama, $30,000,000; Georgia, $15,375,000, and North Carolina, $13,459,635.

Some of the provisions of the federal aid bill and postoffice appropriation act, under which government money is now being expended on roads, have met with strong disapproval in some quarters, and this opposition has taken concrete form, during the past few years, in a number of proposed amendmends and new measures, the most comprehensive of which is, perhaps, the so-called Townsend bill.

One of the chief objections against it is that it proposes a substantial increase in appropriations, inasmuch as it authorizes the expenditure of $425,000,000 for the four fiscal years beginning July 1, 1920, and ending June 30, 1924. Fifty millions of this is to be immediately available, $75,000,000 for the fiscal year ending June 30, 1921, and the balance at the rate of

APPROVED AND COMPLETED TO JAN. 1, 1920

$100,000,000 a year for the ensuing three years.

Differences in Two Bills.

Following are the principal points of difference between the two plans as outlined by Representative William N. Vaile of Colorado in the National House of Representatives:

First, the Townsend bill would give the nation a connected system of main trunk lines designed to meet the needs of interstate transportation and leaves the construction in the hands of the national government or requires federal supervisory power where state highway departments are made use of. On the other hand, the federal aid plan deals with each state as a separate unit and provides only that the government shall cooperate with the states, leaving actual construction to the state highway departments.

Second, the Townsend bill would relieve the states of the heavy financial burden involved in the construction of trunk lines and facilitate feeder development by releasing state funds for that purpose, whereas the federal aid plan forces the state to match dollar for dollar with the national government in highway construcion.

Section of Main Highway Near Beaver Falls, Pa., Constructed to Endure Under Extreme Climatic Conditions.

Third, the Townsend bill specifically provides that the national government must forever maintain all national highways, this insuring the least possible waste and greatest possible efficiency, while setting sound precedents for state, county and district construction. The federal aid plan, on the other hand, spefically forbids the states to use national funds for maintenance, thus placing the burden of road upkeep upon the states and civil subdivisions,

Fourth, the Townsend bill would place national construction in the hands of a commission of five men appointed by the President, with the approval and consent of the Senate, and with final power to accelerate the use of funds along sound and economical lines. The federal aid plan places national administration in charge of a bureau of a government department, with the result that legal procedure might greatly delay actual construction.

Fifth, the Townsend bill directs the commission to investigate the principles of transportation and to locate and construct highways to meet the requirements of future traffic and concentrates the expenditure of national funds on a selected system of mileage, while the federal aid plan makes no provision for the scientific location of highways with respect to future traffic development and permits the funds to be scattered over disconnected parts of the total road mileage of 2,500,000 miles without regard to their importance as parts of a connected system.

Sixth, the Townsend bill directs the commission to secure the advice of the state highway departments, with respect to the location of links of the national system, but leaves the final power of selection in the hands of the commission with the proviso that connecting roads must be constructed with the needs of interstate transportation as a first consideration. The federal aid plan leaves the location of federal aid routes to state highway departments, which are obligated to expend the state funds primarily to meet the needs of traffic within the state instead of between the state and adjacent states with the tendency that the federal funds are not concentrated on any main system even within the state itself, but that they are scattered all over the state according to the pressure exercised by the constituents of the department.

Seventh, the Townsend bill has as one of its primary purposes to provide the nation with a connected network of highways which would serve as effective agencies of through transportation in time of war, while the federal aid plan takes no account of the possible military needs of the nation.

Uniform Regulations of Traffic.

Eighth, the Townsend bill provides for uniform regulations of traffic on national highways with the proviso that the civil and criminal jurisdiction of the state shall not be affected thereby, while the federal aid plan makes no provision for uniform regulations of traffic.

Ninth, the Townsend bill provides that only such "durable" types of surface shall be adopted as will adequately meet any existing or probable future traffic needs. The federal aid plan defines an acceptable project as one which is "substantial in character," and it is claimed that 60 per cent. of the total mileage approved to date by the Department of Agriculture has been of a type lower than macadam.

10th, the Townsend bill provides that, where states have constructed sections of highways which are selected as a part of the national system and which are of a standard of construction deemed adequate by the commission, the reproduction cost shall be valued at current prices and wages and the commission shall construct or contract with the state to construct other highways connecting or correlating with the national system and of a mileage equal in value to the highway or part thereof so selected as part of a national system, with the proviso, however, that no cost of maintenance of such roads shall be borne by the government. There is no provision in the federal aid acts for the acquisition by the government of roads already constructed.

11th, the Townsend bill modifies the provision of the federal aid act by which all condemnation proceedings must be instituted by the states, by requiring states to turn over rights of way to the government so far as may be legally possible under the constitution of the state.

12th, under the national system provided for in the Townsend bill, all highways are to have a right of way of not less than 66 feet and a wearing surface of not less than 20 feet except where this is rendered impracticable by physical conditions, excessive cost or legal obstacles. The federal aid acts do not provide any standard widths of roadways.

13th, the Townsend bill unifies all road building activities of the Department of Agriculture under the heading of the Federal Highway commission, which is to take over also such highway duties as are not vested in the Council of National Defense, while the federal aid acts are primarily for the construction of postal routes.

Explanation of Tables.

The accompanying table gives a complete record of the road building projects in the various states in connection with federal aid provisions since the acts went into effect and up to the opening of the present year. The last section, "Project Agreements Executed," gives the actual amount of work done, and a comparison of the totals with those of the other sections will show the proportion between the projects contemplated, approved and actually performed. These comparisons may also be readily made for any particular state or group of states. It will also be noted that the estimated cost of construction and the amount of federal aid desired is included. Under the heading of "No." is stated the number of the different projects or sections of road into which the work is divided. The cost per mile in any state may be easily computed by a consideration of the length in miles in connection with the estimated cost.

Notes of the Industry and Trade

Hebner is President of Bearings Co.

At a recent meeting of the board of directors of the Bearings Service Co., Detroit, Mich., Ralph S. Lane, Harry J. Porter and Alfred K. Hebner tendered their resignations as president, treasurer and secretary, respectively, of the corporation. To fill these vacancies Mr. Hebner was elected president and Dana H. Torrey secretary and treasurer. Messrs. Lane and Porter continue as members of the board of directors.

Messrs. Hebner and Torrey have been connected with the Bearings Service Co. since its inception, the former as general manager and the latter in charge of sales work. Mr. Hebner retains the title of general manager, together with that of president. W. J. St. Onge, formerly with the Wire Wheel Corporation, has been appointed to supersede Mr. Torrey as sales manager.

Founded on a trade mark and an idea in September, 1916, the Bearings Service Co. has grown, in that short space of time, to a nationally known corporation having 33 direct branches and more than 1000 authorized distributors. The concern acts as the service department of the Timken and Hyatt roller bearing companies and the New Departure Manufacturing Co.

NEW CORCORAN LAMP FACTORY.

Due to the increased demand for its product, the Thomas J. Corcoran Lamp Co., Winter place, Cincinnati, O., has been obliged to construct a new factory, an illustration of which is shown. It is unnecessary to add that this building is modern in its every detail. It will supply 100,000 additional square feet of floor space.

The Thomas J. Corcoran Lamp Co. manufactures the well known Cor-Co-Lite automobile lamps.

The Roller-Smith Co., 233 Broadway, New York City, announces changes in sales organization:

G. L. Crosby, previously sales manager, is now general sales manager at New York City: M. Frankel, previously assistant sales manager, is now western sales manager at Chicago: W. J. Shire, previously a sales engineer, is now eastern sales manager at New York; C. G. Kahant, sales engineer, now export and district sales manager, N. Y.

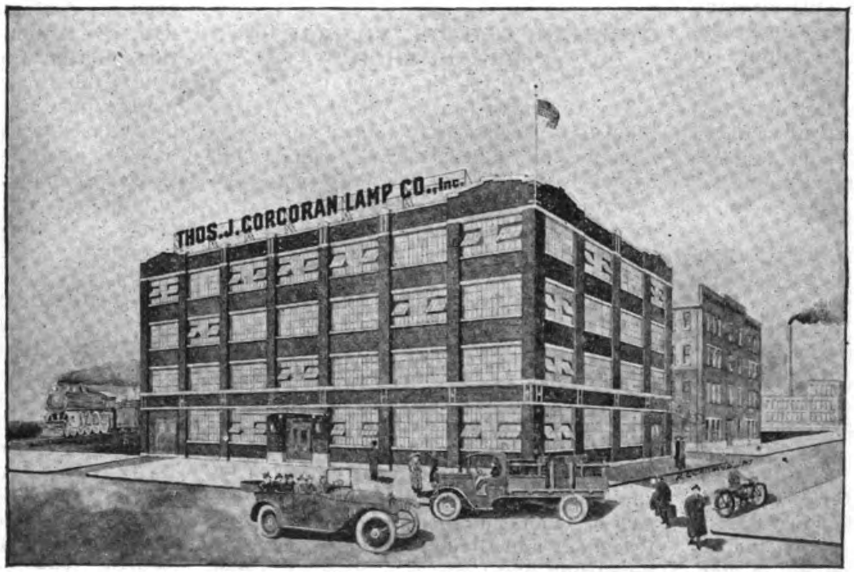
Alfred K. Hebner, New President of Bearings Service Co.

SEMI-ANNUAL STATEMENT OF EISEMANN CORPORATION.

The statement of business transacted by the Eisemann Magneto Corporation, Brooklyn, N. Y., for the first six months of 1920 throws light on the status of the automobile industry as a whole since its condition is directly reflected in the production of ignition apparatus.

Orders and contracts on hand Jan. 1, 1920, totaled $2,978,362, or $1,500,000 increase over the corresponding date last year. Orders and contracts on hand July 1, 1920, were $3,442,380, or an increase of 100 per cent. over July 1, 1919.

Net sales for the first six months of 1920 were $2,316,482. For the last six months of 1919 they were $1,665,581, the first six months of 1920 showing an increase over the preceding half year of $650,000.



THOS. J. CORCORAN LAMP CO., Inc.

New Factory of Thomas J. Corcoran Lamp Co., Cincinnati, O.

New Addition for Heil Plant

The Heil Co., maker of Quality tanks, bodies and hoists, Milwaukee, Wis., is constructing an addition to its factory in that city. The annex is 136 by 260 feet, which will make a total of approximately 150,000 square feet of floor space. The new equipment will include two crane runways, one 40 and the other 50 feet, for 10-ton cranes. This will make a total of seven 10-ton cranes in operation.

The addition is to be used for a stock room and new machinery for cutting steel is being installed. Part of the increased space will be devoted to the mounting of truck bodies, hydro hoists and compartment truck tanks, and considerable room will be taken up by the building of gasoline storage tanks in which field the Heil Co. is a leading manufacturer.

FEDERAL TRUCK CO. NOT TO CLOSE.

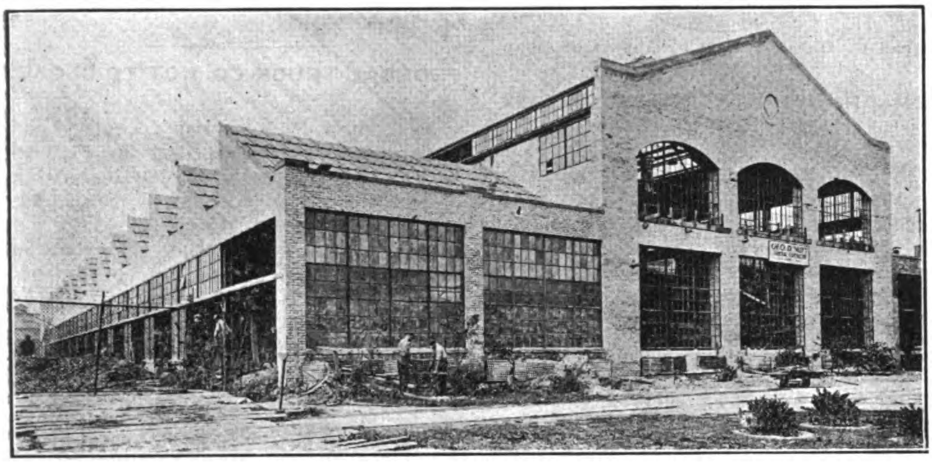
An erroneous story has recently been circulated to the effect that the Federal Motor Truck Co. contemplated shutting down its plant on account of lack of orders. The Federal Motor Truck Co. authorizes the statement that that concern not only has no intention of closing, but is, on the other hand, continuing on the greatest production schedule in its history, laid out at the beginning of 1920, and has produced, up to July 1, in spite of switchmen's strikes and other delaying factors, more than its original schedule for six months. In spite of this there has never been a time when the end of orders has even been within striking distance. The Federal Co. has been far behind orders, both domestic and foreign since April of last year. Further, not a man in the Federal factory has been laid off—new machinery is being placed, and a new building of 60,000 square feet area, which is badly needed, is being rushed to completion, to supplement the 250,000 feet now under roof and crowded with trucks in the process of manufacture.

More than this, Federal is not only carrying the largest inventory in its history, but is constantly making large additions to it. This is necessary because of the greatly augmented production schedule undertaken because of the demand for trucks this year. The demand for Federal trucks has not waned.

Detroit Steel Products Adds to Plant

It is stated that additions to the motor spring department of the Detroit Steel Products Co.'s plant at 2250 East Grand boulevard, Detroit, now nearing completion, will make that concern the largest motor leaf spring manufacturer in the world. This new shop will have a capacity of 1,920,000 springs a year, enough to equip 45,000 cars and trucks a month, or 540,000 vehicles a year. For several months, with its present facilities, the Detroit Steel Products Co. has been turning out 2000 tons or more of springs a month, and when the addition is under operation this will be increased to 3000 tons a month.

A new forge shop, with steel storage bins, 242 by 65 feet, is included in the addition. The steel will be unloaded directly from the cars by means of 10-ton electric cranes that will transport it to the storage bins and forge shops. The bins will have space for 20,000 tons of steel. The forge shop will be equipped throughout with the latest designed spring making machinery, an example of which is the new spring-forming machine that forms, quenches and hardens the leaf in a single operation. This machine turns out an eight-leaf spring each revolution, requiring about one minute of time and greatly reducing the labor.



New Addition to Motor Spring Department of Detroit Steel Products Co., Detroit, Mich.

At the present time the Detroit Steel Products Co. is making about 110,000 completed springs a month and supplies about 50 pleasure car and truck manufacturers, and among them may be mentioned the following:

Acason, Acme, All-American, Commerce, Columbia, Denby, Dodge, Auburn, Gary, GMC, Cole, Hawkeye, Apex, Winther Maxwell, Graham, Wichita Triangle Master, Jumbo, Bell, Hall, Tower, Traffic, Stewart, Transport, National, Chalmers, Paige, Defiance, King Trailer, Signal, Olson Unit, Huron, Lone Star, Bollstrom, Higrade, Ace and Stephens Six.

The Detroit Steel Products Co. also manufactures Fenestra WindoWalls in what is claimed to be the largest factory in the world engaged exclusively in making steel windows.

MEETING OF ACCESSORIES BRANCH, NATIONAL HARDWARE ASSN.

The third annual meeting and exhibition of the accessories branch of the National Hardware Association of the United States will be held in the Coliseum, at St. Louis, Mo., Tuesday, Wednesday, Thursday and Friday, Nov. 30, Dec. 1, 2 and 3. Each associate member of the association will be allotted, without charge, a booth for the display of accessories, supplies or equipment. The Hotel Statler has been selected as headquarters and arrangements have also been made for the accommodation of delegates at the Planters', Jefferson and Marquette hotels.

SEWELL CUSHION WHEEL DISTRIBUTORS.

The Sewell Cushion Wheel Co., Detroit, Mich., announces the following appointments as distributors for Sewell cushion wheels:

Gibbes Machinery Co., Columbia, S. C., state of South Carolina; 805 Tire Co., Fort Wayne, Ind., for northern Indiana; Casper Supply Co., Casper, Wyo.

Direct factory assembly plants are under erection in Chicago, New York and San Francisco.

DYCKMAN GARAGE VILLAGE AND REPAIR SHOP.

The Dyckman Garage Village & Repair Shop has purchased 10 lots in the Dyckman section on 202nd street, east of 10th avenue, New York City, on which to erect a number of garages, each with steam heat and water supply, with a central supply structure.

HAYNES TO HAVE SERVICE CONVENTION.

The Haynes Automobile Co., Kokomo, Ind., is to hold a two-day business convention for the benefit of its dealers and salesmen at the factory Aug. 30 and 31. Arrangements are in the hands of 10 committees, each headed by an executive or official of the company with Vice President and General Manager Alton G. Seiberling and Gilbert U. Radoye in general supervision.

National Chemical Industrial Exposition

Among the exhibitors at the Sixth National Exposition of Chemical Industries in the Grand Central Palace, New York City, Sept. 20 to 25, inclusive, are listed the following:

Allis-Chalmers Manufacturing Co., American Hard Rubber Co., American-La France Fire Engine Co., Barrett Co., Brown Instrument Co., Carborundum Co., E. I. Du Pont de Nemours, General Bakelite Co., General Electric Co., Midwest Engine Co., Northwestern Chemical Co., Warner Chemical Co., Westinghouse Electric & Manufacturing Co.

Among the other features on the programme will be a symposium devoted to "Fuel Handling and Economy," which will be of especial interest to those concerned in the automotive industry.

NEW MERCER CATALOGUE.

An attractive catalogue, descriptive of the Mercer car, has just been issued by Hare's Motors, which now controls and operates the Mercer and Locomobile factories.

Two models have been added to the Mercer line this season, a touring limousine and a four-passenger coupe. The new touring limousine is of the sedan type with an adjustable glass partition between the driving and rear compartments. It thus appeals particularly to the owner-driver.

The standard 22.5-horsepower Mercer chassis, with 132-inch wheelbase, is used on both these new models, and the body construction is up to the standard of the other members of the Mercer line.

The new cars are to be available for delivery this month, and the catalogue may be obtained from Mercer distributors or from Hare's Motors, 16 West 61st street, New York City.

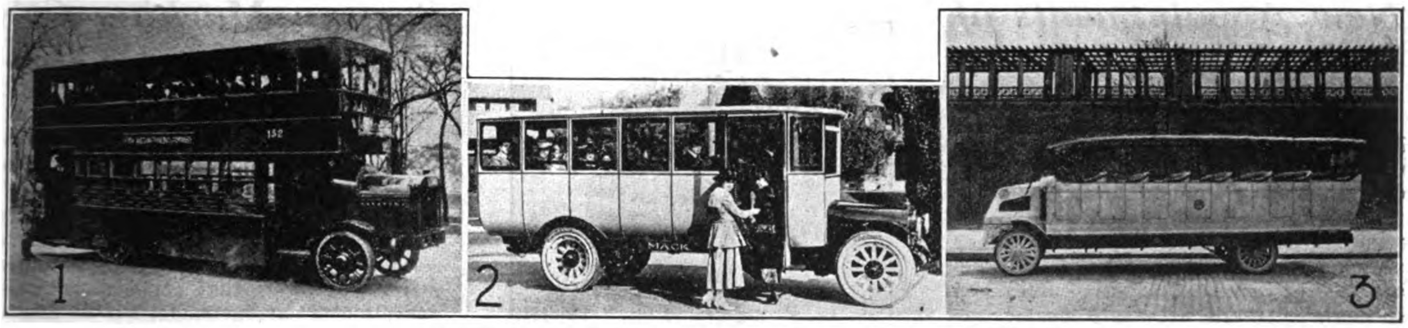
PHILADELPHIA USED CAR DEALERS' ASSOCIATION.

The Philadelphia Used Car Dealers' association, which consists of reputable used car dealers of that city, cooperating with the Automobile Salesmen's association, Better Business bureau, Philadelphia Sabbath association and similar organizations, started a movement the first of the season to keep closed Sundays, and the plan has worked so well and met so unanimously with the approval of the public that all members of the associations have agreed to continue to stay closed Sundays.

OAK RUBBER CO. REBUILDS.

The Oak Rubber Co., Ravenna, O., is erecting new buildings on the site of its plant which was burned last March. The new factory will consist of a one-story work shop, 60 by 170, and main building, 60 by 180.

The Miller Defee Tire Co. has entered business at 111 East Fifth street, Fort Worth, Tex., as authorized agent for Gates half-soled tires.



Some of the Latest Types of Passenger Busses: 1, Two-Deck Bus Now in Service at Chicago; 2, Standard Single-Deck Enclosed Bus Body; 3, Open Bus with Folding Top and Side Door Body on a Mack Chassis.

Samson Managers' Sales Conference

The Samson Tractor Co., Janesville, Wis., recently held its first semi-annual sales convention at the factory, which was attended by branch managers from as far North as Canada, Texas in the South and Syracuse, N. Y., in the East, as well as from many points West. The aims, policies and selling plans of the organization were outlined by President J. A. Craig and General Sales Manager C. C. Clay.

In the accompanying illustration is shown a group of the company's executives, taken during the convention. Reading from left to right are seen J. F. Campbell, branch manager, Samson Tractor Co., Indianapolis, Ind.; L. L. Putney, branch manager, Samson Tractor Co., Syracuse, N. Y.; L. R. Wright, branch manager, Samson Tractor Co., Atlanta, Ga.; James McMullen, branch manager, Samson Tractor Co., Denver, Col.; R. L. Samuel, branch manager, Samson Tractor Co., Fargo, N. D.; W. C. Manning, branch manager, Samson Tractor Co., Kansas City, Mo.; L. A. Gano, branch manager, Samson Tractor Co., Baltimore, Md.; S. S. Bean, branch manager, Samson Tractor Co., Peoria, Ill.; H. M. Craig, assistant to sales manager; W. E. Husting, branch manager, Samson Tractor Co., Janesville, Wis.; C. C. Clay, general sales manager; M. C. Parrott, branch manager, Samson Tractor Co., Des Moines, Ia.; L. F. Garlock, assistant to sales manager; W. L. Sample, branch manager, Samson Tractor Co., Minneapolis, Minn.; J. S. Rapley, Flint, Mich.; C. E. McTavish, sales manager, Samson Tractor Co. of Canada, Ltd., Oshawa, Ont.; W. D. Hoyt, branch manager, Samson Tractor Co., Omaha, Neb.; K. V. Hook, branch manager, Samson Tractor Co., Dallas, Tex.; A. J. Ferrielle, branch manager, Samson Tractor Co., Memphis, Tenn.; D. W. Robinson, manager advertising division; J. W. Miller, manager parts and service division; F. E. Walser, branch manager, Samson Tractor Co., Sioux Falls, S. D.

NEW ADDRESS OF NATIONAL CHAMBER OF COMMERCE.

The National Automobile Chamber of Commerce announces that it has moved into its new headquarters in the Marlin-Rockwell building, New York City, and that its address is now 366 Madison avenue, at 46th street. The telephone number will remain as formerly, Murray Hill 5804.

JACQUET MOTORS NOT TO MOVE.

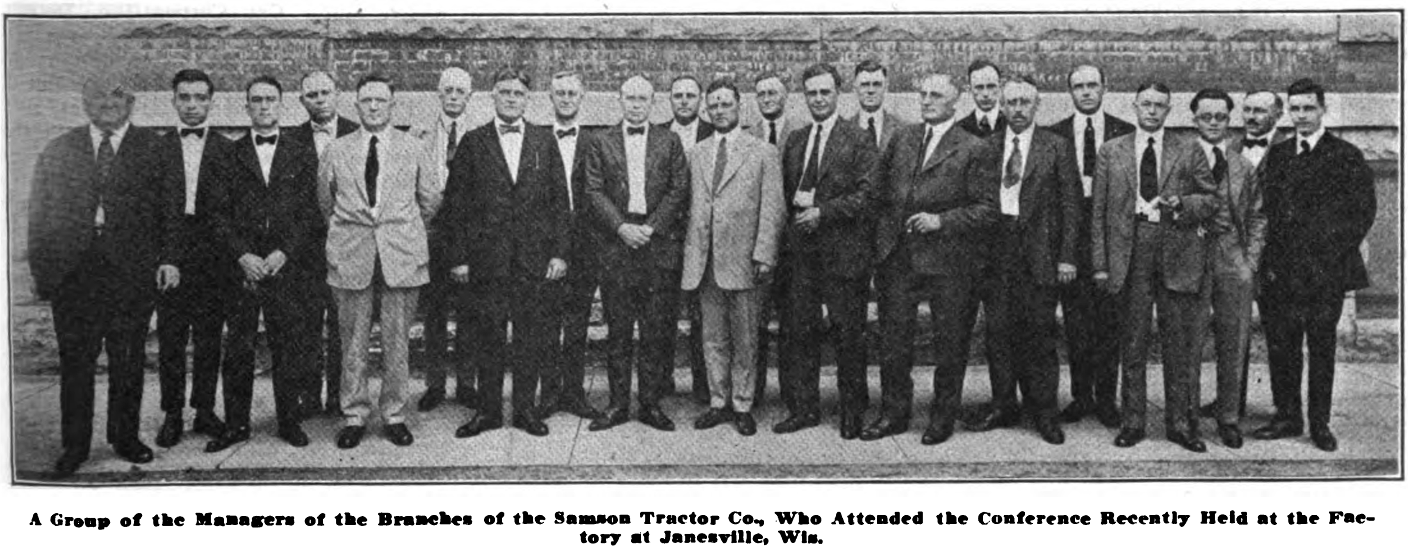
L. W. Wilson, vice president and general manager of the Jacquet Motors Corporation of America, Belding, Mich., states that rumors recently circulated to the effect that that concern was to move its factory to Manitowoc, Wis., were absoluely without foundation. Mr. Wilson says that his company does not intend to move its factory to any other town.

Passenger automobiles or trucks, or both, are made in 32 states in this country.

New M. A. M. Association Members

The following automotive concerns have recently been elected to membership in the Motor & Accessory Manufacturers' association:

Adams Axle Co., 433 West Main Cross street, Findlay, O., manufacturer of passenger car, truck, tractor and trailer axles; Asch & Co., Inc., 16-24 West 61st street, New York City, flower vases, belt hinges, locking devices, etc.; Atlas Crucible Steel Co., Howard avenue, Dunkirk, N. Y., carbon and alloy steel; Duplex Rim Device Co., 7546-7548 South Chicago avenue, Chicago, Ill., rim devices and other accessories; Kalamazoo Spring & Axle Co., 401 Portage street, Kalamazoo, Mich., flat leaf automobile, carriage, wagon, motorcycle and bumper springs; Kelso Manufacturing Co., 58 Market street, Trenton, N. J., asbestos brake lining and clutch facing; Miller Rubber Co., Akron, O., automobile tires, tubes, accessories and repair material; Norton Co., New Bond street, Worcester, Mass., grinding wheels, machinery and abrasive materials; Rome Wire Co., Clyde avenue, Buffalo, N. Y., automobile lighting, starting and ignition cables; Russell Manufacturing Co., Middletown, Conn., brake linings, woven and fiber clutch facings, fan belts, web straps, top webbings, hood and radiator lacings, anti-squeak webbing, belting; Tillotson Manufacturing Co., City boulevard and M. C. R. R., Toledo, O., carburetors; Westinghouse Union Battery Co., Swissvale, Pa., lead storage batteries.



A Group of the Managers of the Branches of the Samson Tractor Co., Who Attended the Conference Recently Held at the Factory at Janesville, Wis.

New Appointments of Corcoran Co.

The constantly increasing demand for Peerless Guaranteed products for Ford cars, and the swiftly expanding business of the Corcoran Manufacturing Co. in the western territory has caused the appointment by that concern of Rex H. Finney as manager of western sales, with headquarters at Denver, Col. Mr. Finney was formerly a retail accessory dealer, going from that into the accessory jobbing business, for years being active in the organization of the Hippee-States Co., Des Moines, Ia. He thoroughly understands the Peerless line and will personally travel in the Middle West and Western Coast states and western Canada in the interests of the nationally advertised line of Peerless radiators, fenders, hoods, tool boxes, etc., for Ford cars.

The Corcoran Manufacturing Co. also announces the appointment of Edward L. Allis to be manager of eastern sales, with headquarters in Boston. Mr. Allis organized and formerly managed the accessory department of Butts & Ordway of Boston and was also formerly sales manager of the Motor Car Equipment Co. of that city. He is thus well versed in all phases of the accessory business and will render intelligent service to the trade in his field.

THE BROWN SPRING OILER.

A satisfactory way to obviate annoying squeaks in spring shackles, leaves, etc., is to equip with Brown spring oilers, which are being marketed by the Brown Spring Oiler Co., 6911 Carnegie avenue, Cleveland, O., and are especially designed to feed the lubricant in between the spring leaves automatically while the car is running. This works out the rust and polishes the leaves. Brown spring oilers permanently maintain a film of oil between the spring leaves by feeding the lubricant continuously through the sides. Capillary attraction draws the oil between the leaves and the feathering action of the spring forces the oil along their entire length. A liberal supply of oil will quickly flush out the worst rust, it is claimed, and, with the rust gone, the leaves soon begin to polish themselves. In this condition the springs flex freely and carry their load smoothly.

The company also makes a special type of pump oil can, which is recommended for general oiling, at a list price of $2.50.

NEW ACME TRUCK CATALOGUE.

The Acme Motor Truck Co., Cadillac, Mich., has just issued the 1920 edition of its motor truck catalogue under the appropriate title, "Pointers to Profits." It includes complete information of the construction, specifications and tested utility of the vehicles manufactured by this company, and is effective in the subject matter of its text and clarity of its copious illustrative features. The various body equipments are detailed and specifications given showing their adaptation for different classes of work.

Rex H. Finney, Manager of Western Sales for Corcoran Manufacturing Co.

COLUMBIA DATA SHEET SERVICE.

The National Carbon Co. of Cleveland, O., and San Francisco, Cal., has recently increased the scope and efficiency of the Columbia data sheet service for users of motors and generators so that they may now be assured of absolutely correct brushes for these machines. The data sheet furnished has 20 blank spaces in which the user indicates whether the brushes are needed for a generator, motor or rotary converter, also the service for which it is used, whether the current is direct or alternating, the name of the manufacturer, the type and serial number of the machine, voltage, capacity, load measurements, etc.

From these data, in connection with exhaustive laboratory tests, it is possible for the National Carbon Co. to furnish Columbia Pyramid brushes best suited for the exact operating conditions. Through this service of investigation, analysis and specification, it is possible to guarantee satisfaction with these brushes.

Edward L. Allis, Eastern Sales Manager for Corcoran Manufacturing Co.

Puritan Machine Co's Recent Purchases

The Puritan Machine Co., Detroit, Mich., has recently completed the consummation of important business connections as follows:

It has taken over from the Rutenber Motor Co., Marion, Ind., the complete service business covering all motors manufactured by that concern with the exception of current model No. 25 now in production.

From the Fairbanks-Morse Co., Three Rivers, Mich., the complete service repair business of marine engines has been purchased on all components formerly manufactured by that company; also that of the Sheffield Car Co.

The purchase is announced by the Puritan Machine Co. from the Standard Parts Co. of the complete service business covering the Hess axle division formerly located at Cincinnati, O. This is the 371st service taken over by the Puritan Co.

All service parts, tools, jigs, blue prints, etc., belonging to these various concerns have been moved to the main plant of the Puritan Machine Co. at Detroit, and all orders in the future should be directed to the Puritan Machine Co., Lafayette boulevard, at 10th street, attention factory sales department.

MORE MOTOR CARS IN MAINE.

Up to the first of June, this year, automobile fees to the amount of $614,934 have been received in Maine as against $520,655.75 for the corresponding period last year, an increase of $94,278.25.

A total of 58,954 operators' licenses have been issued and 41,907 automobiles, 5728 trucks, 573 automobile dealers, 923 motorcycles and 20 motorcycle dealers have been registered. Last year 48,856 operators' licenses were issued and 36,175 automobiles, 4301 trucks, 493 automobile dealers, 978 motorcycles and 17 motorcycle dealers were registered in the same period.

SAXON TO SUPPLY ALL PARTS.

When the manufacturing policy of the Saxon Motor Car Corporation, Detroit, Mich., was recently changed, it was predicted that the owners of earlier models would be unable to secure parts. But C. L. Fox, sales manager, states that, as a matter of fact, in conformity with the inflexible standard of service, always maintained by the Saxon Co., new parts will be supplied direct from the factory for every model of the Saxon that has ever been produced; that the Saxon organization stands back of every car produced and is equipped for full protection and constant service.

LARGE ORDER FROM FORD CO.

The Automotive Products Corporation, Hazelton, Pa., manufacturer of pistons, piston pins, etc., is at present at work filling an order of 350,000 pistons and 1,000,000 wristpins for Ford Motor Co.

Personal News of Industry and Trade

Wilson Sales Manager for New Chrysler

E. B. Wilson, formerly director of sales for the Buick Motor Co., has been appointed sales manager for the new Chrysler six-cylinder car to be introduced this season by the Willys Corporation. Mr. Wilson's headquarters are at Elizabeth, N. J., where the offices of the Chrysler car are located. This appointment follows a long and close acquaintance with Mr. Wilson's qualifications by Walter P. Chrysler, executive vice president and general manager of the Willys Corporation. Mr. Wilson's experience covers a long range of intensive motor car merchandising. His rise in that field has been rapid and steady since he resigned 10 years ago as branch manager for the John Deere Plow Co. at Columbus, O., to occupy a similar position with the Buick Motor Car Co. in Chicago, from which, after one year, he was promoted to be manager of the Memphis, Tenn., branch. Eighteen months later he became Buick manager in Philadelphia, and was made director of sales at the end of 1918. A huge plant is being constructed for the accommodation of manufacturing operations on the new Chrysler car at Elizabeth.

Jay Chamberlin has been appointed manager of the Cleveland, O., branch of the Pennsylvania Rubber Co., Jeannette, Pa., and L. J. Waldron, manager of the New England territory, with headquarters at Boston. Mr. Chamberlin has been identified with the Pennsylvania company for the past two years as a representative in the Chicago territory, and Mr. Waldron has for the past five years acted as assistant manager at the Boston branch.

Arthur J. Lewis has joined the Franklin Automobile Co., Syracuse, N. Y., as an assistant in the chemistry laboratory, and will make a special investigation of paints, varnishes and enamels in connection with their use on automobiles. He is a graduate of Amherst college and passed the last three years as head of the paint division of the United States bureau of standards at Washington, D. C.

Charles P. Grimes, who was in charge of dynamometer laboratory tests for the government during the war, has joined the Franklin Automobile Co., Syracuse, N. Y., as research engineer. He was formerly experimental engineer with the Wheeler & Schebler Carburetor Co., Indianapolis, Ind.; the National Motor Car & Vehicle Co. and the Root & Vandervoort Engineering Co., Moline, Ill.

Nathaniel Stone, general manager of the Cadillac Automobile Shop at Albuquerque, N. M., the largest plant of its kind in the state, recently died in that city. He is survived by a wife and one daughter.

F. C. H. Troesch, export manager for the American Rubber & Tire Co., has sailed for Europe for an extended business trip.

K. P. Drysdale, Who Recently Joined Brooke, Smith & French Agency.

George H. Kiley has been appointed assistant district manager for the Goodyear Tire & Rubber Co., with headquarters at Denver, Col. He was formerly assistant branch manager at New York and before going to Denver was in charge of the field activities of Goodyear's "Motorize the Farm" bureau. He has been with Goodyear for 10 years.

E. L. Triffitt, formerly secretary of the Chamber of Commerce, Connersville, Ind., and who has had wide experience in the publicity field, has been appointed advertising manager of the Rex Manufacturing Co., Connersville, Ind.

William R. Parker is erecting a one and two-story garage and service building, 58 by 177 feet, at 1316-1320 Poplar avenue, running through to Ogden street, to cost $30,000.

E. B. Wilson, Sales Manager, for New Chrysler Car.

Drysdale Makes New Agency Connection

K. P. Drysdale, a widely known advertising man, has joined the agency of Brooke, Smith & French, Inc., Detroit, Mich., as special advertising and merchandising counsel. For more than 12 years Mr. Drysdale was associated with the Cadillac Motor Car Co., first as assistant sales manager and for 10 years as advertising manager. His work as an analyst of media and copy has earned for him recognition as one of the foremost directors of publicity. Among the increasing list of clients of Brooke, Smith & French, of which Mr. Drysdale will assume direction, is the Lincoln Motor Co., headed by Henry M. and Wilfred C. Leland, for many years the chief executives of the Cadillac Motor Car Co., Detroit, Mich.

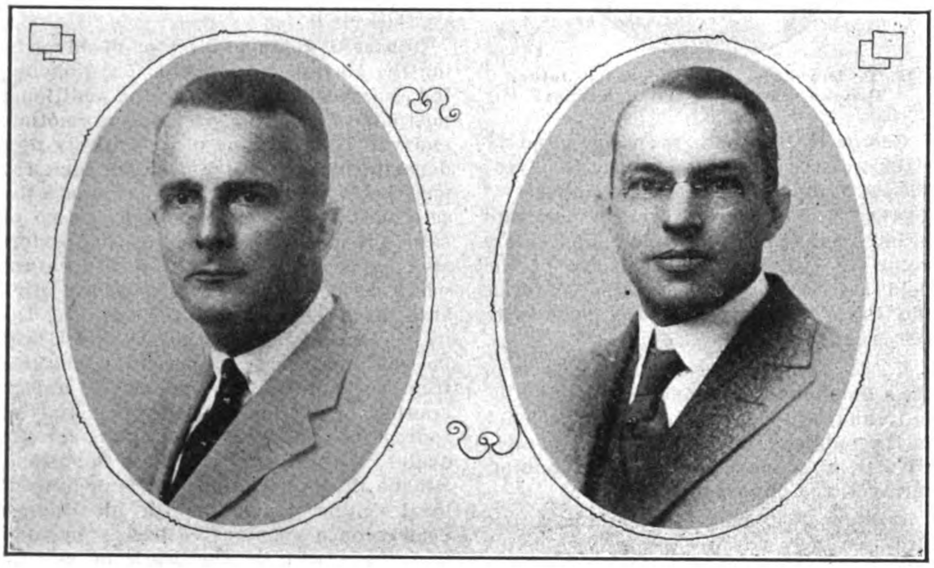
Gilbert U. Radoye, director of advertising the Haynes Automobile Co., Kokomo, Ind., has been appointed to the additional position of director of sales promotion, and will be in charge of an entirely new department to be organized by him, the purpose of which will be to stimulate the sale of Haynes cars through a system of sales promotion. Mr. Radoye had extensive experience in work of this nature while associated with the selling division of the Packard Motor Car Co., Detroit. One feature of the new work will be the analyzing of potential markets from both the factory and dealer angle; another will be the development of sources of prospective customers for the dealer; a third, and the most important, will be the preparation and launching of local selling campaigns for all Haynes dealers on a cooperative basis. In addition there will be the work of getting high-grade representation everywhere, the preparation of prospect letters for dealers, the compiling of detailed information, statistics and specifications and the furnishing of data to salesmen concerning the Haynes selling and advertising plans.

Joseph L. Hardig has been appointed by H. A. Brown, Jr., manager of the motor bearings division of the Hyatt Roller Bearing Co., as advertising manager of this division. Mr. Hardig was for several years advertising manager of the Remy Electric Co., during which time he produced the book, "Starting, Lighting, Ignition—Simplified." For the past 15 months he has been assistant advertising manager of the motor equipment division of the General Motors Corporation. Mr. Hardig will direct all the advertising activities of the motor bearings division which covers the motor car and truck fields.

Edward Kippax of Philadelphia, formerly an official of George W. Kendrick & Co., banker, has become treasurer of the Spacke Machine & Tool Co., Indianapolis, Ind., succeeding W. N. MacAfee of Pittsburgh, Pa. Mr. Kippax will make his headquarters in Indianapolis.

Carroll Sales Director for Fairbanks

Hazen Carroll has been appointed director of sales for the Fairbanks Co. in the United States and Europe. He is an engineer by profession and was formerly in the experimental department of that company in Detroit. The Fairbanks Co. is doing some publicity work at the present time in the moving picture field, as 4000 feet of film has been prepared showing the labor saving devices and machinery of the company. This service will be extended in the fall to the principal cities of foreign countries, head lines and titles of course being in the various languages to accompany the films. The company is also planning to continue the "clinics" that proved so successful the past season. One item in the extension of the service department is the recent completion of a service station in Chicago. 360 by 100 feet.



George H. Crossan, President, and S. X. Newman, Vice President, Automatic Safety Tire Valve Corporation.

B. C. Helm, C. R. Norton, H. S. Norton, Fred H. Miller, J. Murray Page, C. A. Kingsley and Erle E. Devlin have been appointed by Henry Lansdale, vice president of Hares' Motors, as special representatives. Mr. Helm was recently eastern district manager of the Packard Motor Car Co. H. S. Norton was recently vice president of the Packard Cleveland Co. Mr. Miller was recently general carriage sales manager of the Packard Pittsburgh branch and formerly metropolitan district manager of the Packard New York branch, and prior to that manager of the Packard branch in Brooklyn. Mr. Page was with the Locomobile Co. of America for 15 years as branch manager in Los Angeles, Cal., and Chicago, Ill., and was more recently Locomobile western representative. Mr. Devlin was formerly a district manager attached to the Buick Philadelphia branch and later general manager of the Bigelow-Willey Motor Co., Paige distributor in Philadelphia, New Jersey, Delaware and Maryland. C. R. Norton was formerly general distribution manager of the Packard Motor Car Co. in charge of all sales of passenger cars, trucks, air planes, etc. He has been assigned to the western field for Hare's Motors. Mr. Kingsley, a veteran Locomotive executive, recently Locomobile branch manager in Pittsburgh, Pa., and has been in the Locomobile western district and a special Locomobile representative in New England, on the Pacific coast and in the South.

Hiram Harris, president of the Bethlehem Motors Corporation, has resigned this office to which he was elected last January. He has also been general manager for the past year. Mr. Harris joined the Bethlehem organization originally in connection with the work of enlarging the great plant of the company at Allentown, Pa., and in putting into large production the big plant at Pottstown, where Bethlehem motors are made. His work had to do with the building up of the organization generally and having completed the task he undertook he has tendered his resignation to take up other duties after a brief respite. It will be remembered that Mr. Harris also achieved great success during his connection some time ago with the Republic Motor Truck Co., Alma, Mich.

Harry G. Robinson of Bridgeport, Conn., has taken the position of general superintendent of the Lincoln Machine Co. of Pawtucket, R. I., manufacturer of automobile parts, textile feed rolls, special machinery and tools. During the past four years Mr. Robinson has been assistant superintendent of the Locomobile Co. of Bridgeport, in charge of production methods and general equipment. He also at one time held an executive position with the Taft-Peirce Co., Woonsocket, R. I.

Robert Gordon, 3rd, and C. A. Selheimer, under the firm name of Gordon Motor Co., have assumed the representation of the Hanson automobile at 723 North Broad street, Philadelphia.

Charles W. Hatch, well known in the automobile trade in Brooklyn, N. Y., died Aug. 11 at his home on the Glenham road, St. Albans, N. Y.

Automatic Tire Valve Officials

George H. Crossan, president and **S. X. Newman**, vice president of the Automatic Safety Tire Valve Corporation, New York City, manufacturer of the Whistler pressure regulator for tires, will represent that concern at future conventions of the Automotive Equipment association. The Automatic Safety Tire Valve Corporation has just been elected a member of the association, which is an indication of the steadily increasing popularity of Whistlers among accessory jobbers and dealers.

Henry Lansdale, vice president in charge of distribution and maintenance of Hare's Motors, the controlling company for Locomobile, Mercer and Simplex cars, has announced the following appointments: P. W. Hine has been made general distribution manager with offices in New York City, to succeed E. A. Travis, who has taken over the New York Locomobile branch. Mr. Hine was, until recently, Locomobile division distribution manager, and prior to that assistant sales manager of the Locomobile Co., being connected with the Locomobile Co. previous to the organization of Hare's Motors for eight years. Mr. Hine was succeeded as distribution manager of the Locomobile division by H. C. Wessman, who was manager of the specification department of Hares' Motors. L. B. Waters succeeds Mr. Wessman.

Harry A. Biggs has been appointed a director and vice president of the Studebaker Corporation of America, in charge of domestic sales, in recognition of his efficiency as general sales manager of the automobile division for the past year. E. H. McCarthy, Mr. Biggs' chief assistant, will hereafter have the title of assistant to the vice president. L. J. Ollier director and vice president, who has just returned from a trip around the world, will be in charge of export sales, including Canada. H. S. Welch will remain with Mr. Ollier as assistant to the vice president.

Frank C. Kip, formerly sales promotion manager of the Packard Motor Car Co., has disposed of his interest in and resigned as president of the Automotives Products Corporation of California to become general manager of the George D. Bailey Co., Chicago service division for Shafer roller bearings. Mr. Kip will have entire charge of sales and advertising, in which field he has had broad experience.

M. L. Pulford has been appointed service engineer in charge of the service department of the Commerce Motor Car Co., Detroit. He has been in the employ of the Commerce Co. for the past seven years, most of that time in the engineering department.

C. B. Morse has become general advertising manager of Hare's Motors, with headquarters in New York City, succeeding John A. Kingman. Mr. Morse was until recently advertising manager of the Packard Motor Car Co. of New York.

Cooperation Between Sales and Service Departments

(*By R. B. Perry, Service Manager, Allen Motor Co.)

WHAT THE SERVICE DEPARTMENT EXPECTS OF THE SALESMAN.

First—That he inform himself fully in regard to the functions and policy of the service department.
Second—That he will, as a rule, follow the policy of "hands off" in matters pertaining to service.
Third—His hearty support at all times.
Fourth—To report conditions that call for attention.
Fifth—That in recommending dealer contracts full consideration be given to the importance of the dealer's service facilities.
Sixth—That he refrain, in general, from technical discussions unless thoroughly qualified to participate therein.
Seventh—That he know the limitations of the car he is selling and makes no extravagant claims.

WHAT SERVICE DEPARTMENT OWES TO SALESMAN.

First—It should supply him with necessary information in regard to functions and policy.
Second—All claims should be promptly adjusted.
Third—It should support the salesman at all times
Fourth—A representative should be sent to any point needed on short notice.
Fifth—Salesman's choice of dealers should be backed up by thorough and intelligent educational effort to the end that they may learn to help themselves.

IT WOULD be quite possible to condense this paper into a single word, which would be a comprehensive statement of the ideal relations between sales and service—the word "cooperation." Nor would such a statement be likely to invite criticism. There are some watchwords which, popular for a time, eventually fall into disrepute through misapplication or misuse. It would probably not be difficult to start an argument here over such terms as "System" and "Efficiency." Both are elements essential to the proper conduct of any business, but we have come to understand that both may be overworked. "Too much system" has spelled defeat to many an enterprise and "efficiency" is a good servant, but a poor master.

Cooperation cannot, however, be placed in this category. It is expressive of the principle which actuated our primitive forbears to band together against common foes; it is the underlying principle of government; it supplied the motive for the formation of these United States of America; it was the formula which merged the somewhat conflicting interests of our allies in the world war into a single driving force which led to victory; it is the solution to the vexing problem of the relations between capital and labor. It is, nevertheless, a principle which has been to some extent overlooked in our industrial relations. This is the day of specialization. In every field of endeavor we have become specialists. Nor is this tendency to be discouraged. As the fund of world knowledge grows, each one of us must of necessity select some comparatively narrow field in which to specialize. Yet it is highly important that each one of us keep his perspective and recognize that his own endeavor is important, not so much in itself, as in its relation to the endeavor of his fellows—in other words the higher the degree of specialization the greater the need for cooperation in its fullest sense.

Starting with this text, let us pass to a consideration of our subject—dividing it, for it is really a double subject—and taking up first the question of "What the Service Department Expects of the Salesman."

Service Department and Salesman.

First, the service department expects that the salesman—whether he be connected with the factory organization or a retail man dealing with our friend, Mr. Ultimate Consumer—to inform himself fully of the functions and policy of the service department. There are perhaps no more serious problems in service than those resulting from promises or inferred promises made by salesmen who are not sufficiently informed or who are carried away by misdirected zeal. The prospective dealer or owner accepts statements made by salesmen as official and his faith in the organization with which he is dealing, if not in the product itself, is badly shaken if he later discovers that he has been misled. Certainly sound business is founded on sincerity and misleading statements cannot be construed as other than insincere. The service department expects the salesman, therefore, to sell only such service as is offered by the company he represents.

Salesmen and Service.

Second, the service department expects that the salesman will, as a rule, follow the policy of "Hands Off" in matters pertaining to service. The traveling service representative or service manager who would, in his relations with the trade, undertake adjustments in territory or revise schedules for delivery would certainly be unpopular not only with the sales department, but with the management. Yet has a salesman, on the other hand, any more right to arrange adjustments on defective parts or to agree to send a service territory man on a specified date for an unlimited stay in some dealer's territory? Surely the service man may suggest or recommend revisions of territory or shipping schedules if he has information which permits him to make suggestions or recommendations intelligently and surely the salesman may make similar recommendations with respect to service functions, but in both cases action on the part of sales or service men should be strictly limited to recommendations and should never be complicated by promises made the dealer or owner.

Hearty Support for Service Department.

Third, the service department expects the salesman's hearty support. It should be taken for granted by the salesman that the service department is operating in a manner satisfactory to and in accordance with a policy approved by the management. In his travels through the territory the salesman will inevitably meet dealers and owners who will complain of service. Without question the service department, from the nature of its functions, is constantly subject to criticism. If a repair part does not arrive promptly, or the wrong part is received, the service department is usually blamed. Yet the service department has no control over the vagaries of the mails and telegraph—it cannot regulate express and freight movements, nor can it be held responsible if an order calls for a propeller shaft when an axle shaft is really wanted. Nevertheless, the dealer or owner will complain and if the salesman at this more or less critical point takes the stand that he is right, serious harm may be done. Let him learn in detail the nature of the complaint and refer it to the service department for investigation, assuring the dealer or customer that all errors for which his company may be responsible will be rectified.

---

*Abstract of paper read at Service Managers' convention at Indianapolis, Ind.

Salesman Should Report Conditions.

Fourth, the service department expects the salesman to report conditions in the territory which call for attention on the part of the service department. It is recognized that well intentioned effort on the part of this department may at times result in complications in certain territories which in turn develop sales resistance. The quickest way to clear up such situations is to report fully with respect to each case from the salesman's angle. Not only should the service department profit from each case of this kind with which it has to deal and be in a position to avoid repetitions, but the salesman will shun the risk of losing prestige which is likely to result from efforts to make adjustments on his own initiative.

Importance of Service Facilities.

Fifth, the service department expects that the factory salesmen will, in recommending dealer contracts, take into full consideration the importance of the dealer's service facilities. It sometimes seems that the salesman's estimate of a prospective dealer's desirability from a factory standpoint is based upon the dealer's location on Automobile Row, his financial responsibility and the size and quality of his sales force. Those of us who have, however, struggled with problems of service would be more likely to push through the imposing show room, brush aside the courteous and attentive salesman—even shut our ears to glowing recommendations of the bankers—and see for ourselves whether or not the dealer we were considering had a well-lighted, well-manned and clean service station, provided with necessary equipment and backed up by a well stocked parts room. We would be interested to learn whether or not the same courtesy were extended the owner by the service department that had been accorded him by the salesman and whether the owner recommended the dealer in the same hearty terms as did the banker. If we found conditions favorable here we could overlook certain shortcomings in the matter of location, sales force or even finances, because we would feel that these shortcomings would be speedily overcome as a result of the sales impetus which would be sure to be derived from thoroughly satisfactory service. So the service department expects the salesman to inquire into this vastly important detail and, other things being equal, recommend as a desirable dealer the man who is well grounded on the foundation of good service.

Salesman Should Refrain from Technical Discussions.

Sixth, the service department expects the salesman, unless he be thoroughly qualified, to refrain in general from technical discussions. He should without question be informed as to troubles—particularly those of a chronic nature—occurring in the product he is selling. He should be informed also as to remedies which are being applied. He should be advised of any critical conditions which may be preventing prompt shipment of parts. But this information should be employed by the salesman only to the extent of meeting the trade intelligently. He will learn the gratitude of the service department if he does not embarrass it by attempts to diagnose specific cases of trouble, but instead relies upon the service department to investigate and correct.

Salesmen Should Know Car's Limitations.

Seventh, the service department expects the salesman to know what are the limitations of the car he is selling. If, for example, the car has a maximum speed of 60 miles an hour under favorable conditions, it is useless to attempt to meet the argument of the prospective buyer or dealer that "the car is not fast enough" by arranging to have a service man call upon him to "tune the car up" so that greater speed will be possible. Very frequently the salesman overrates the car and relies upon the service department to make good his assertions. This practise can only result in the embarrassment of the salesman and purposeless effort on the part of the service department.

Now then, what is the other side of our cooperative plan? What does the service department owe to the salesman?

First, without doubt the service department, in demanding that the salesman be familiar with its functions and policy, owes it to him to supply the necessary information. Through the medium of factory conferences, bulletins and letters the salesman should be kept fully advised of these subjects.

All Claims Should Be Promptly Adjusted.

Second, if the service department expects the salesman to refrain from attempts to adjust disputed claims or other complications of a purely service nature, then it owes the salesman in return its best efforts to settle all disputes promptly. Unless this be done the salesman will be badly handicapped by the dealer's or owner's attitude that he is not interested in future business until he can save pending claims adjusted. Nothing is better calculated to discourage the dealer than inattention to such details. His inquiries must have prompt answers, his complaints and suggestions must be given immediate consideration, his credits must be issued without delay, if the service department hopes to retain his good will and pave the way for the salesman's efforts.

Service Department Must Support Sales.

Third, if the service department expects the salesman's support then in return it must support the salesman. Any condition which is reported by the salesman as affecting sales effort, merits prompt investigation and appropriate action. Even though the fault may not lie with the service department, the report should not be disregarded. The dealer's or owner's erroneous conclusion in such a case should be met with a courteous statement of the facts and the salesman should receive a copy of the statement for his information. He is entitled to the knowledge that his report has been received and disposed of and if, as will doubtless be true in the majority of cases, the fault does not lie with the service department, the salesman's faith in his own organization will be strengthened and he will be better able to handle subsequent complaints.

Dealer and Service Man.

Fourth, the service department owes it to the salesman to be so organized that it is in a position to send a representative on short notice to any point where he may be needed. Very naturally the dealer is prone to take up with the salesman any problem which may be vexing him. From the nature of his duties the salesman is likely to be the member of the factory organization with whom the dealer feels best acquainted and whom he sees oftenest. Doubtless we have in the past left the salesman too much on his own resources. We have made it necessary for him to attempt the diagnosis of specific cases of trouble, to answer inquiries of a technical nature, to discuss disputed claims, because we have not backed him up with well organized service. We should have our service representatives call on the dealer as frequently as do the salesmtn.

The dealer will be much better satisfied to discuss technicalities with one qualified to give definite information and to take positive action. The service department will be more nearly fulfilling its mission of keeping in touch with each new development and many a trivial misunderstanding will be adjusted before it has reached the stage of a heated controversy.

Help the Dealer to Help Himself.

Fifth, we have said that the service department expects that the salesman will pay due regard to the importance of service in connection with the placing of dealer contracts. Yet it should not be overlooked that the salesman will rarely be able to select ideal representation. The service department, therefore, owes it to the salesman to back him up with thorough and intelligent educational effort. Even though the dealer may not be fully alert to the importance of service, he is usually open to suggestions. Practical assistance can be given him in a variety of ways, in the main being directed toward making him able to help himself. The local situation should be analyzed—he should be advised as to his repair stock requirements. Suggestions and aids may be given in the matter of stock and repair records, shop equipment and arrangement, and in variety of other ways. Such a programme will help the dealer to make his business successful—will tend to render the salesman's work effective and permanent.

The Essential Functions of Ideal Service

(*By F. E. Moskovics, Vice President, Nordyke & Marmon Co.)

NOTHING in the world has the right of existence that does not serve humanity. You can build the best motor car in the world and get the best sales department in the world for it, but if you do not arrange for the service on this car to be conveniently obtained by the owner, both the work of the best engineering department and of the best sales department will fall.

Given the right product properly presented; given a properly functioning service organization and the work of the sales department is indeed a thing of pleasure and joy.

After a concern has been in operation a sufficient length of time for its product to have attained a fair saturation point in relation to its market, I believe that if the service department functions as it should, from 50 to 70 per cent. of the ensuing product of the company can be merchandised to its old owners. In other words, assume that there are 40,000 cars of a certain make in existence; assume an output of that factory of 12,000 cars a year; I maintain that the manufacturer has a reasonable right to expect that from 6000 to 9000 cars can be sold to the 40,000 owners then in existence annually. But you can readily see that this will only be true if the service department is functioning well and supporting the sales department by making these 40,000 owners satisfied. And mind you, their main work is on after the guarantee period has expired.

Sales and Service Parallel.

Now, if this is true, you will readily see that there is a very close relation between the two departments, and they should operate along very parallel lines. Also this will show you the tremendous influence the service department can eventually wield on sales. A poor service department can ruin more sales than a good sales department can make—also a good sales department cannot permanently sustain the ill effects of a poor service organization. If I were a dealer and were forced to make my choice of two evils—that is, a poor service department or a poor sales department—I would prefer to have the poor sales department, which is another way of saying that the dealer must have a good service department if he has any right to future existence. Therefore, you can readily understand why I am essentially more in sympathy with the service man than with the salesman.

The salesman retailing motor cars has a right to expect from the service department a few fundamentals, without which the department is unworthy of its name.

Fundamentals of Service.

First, the department must have the physical equipment, which means proper room, machinery and a sufficient supply of parts to reasonably take care of the business. We consider this so important that within the past few months the Nordyke & Marmon Co. has established what is known as a Field Maintenance department. This department has the duty of seeing that every dealer of the Nordyke & Marmon Co. has the proper physical equipment to give reasonably good service, and the knowledge of how to do this. It is not a part of this department's function to see that the dealer actually gives service—simply that he has the proper physical equipment, properly located and arranged stock rooms and proper systems for handling the work and the stock. It is also the function of this department to see that the executives of the shop know how to do this work. This department, in other words, is the mechanical adviser of all our dealers in the arrangement of their shops and their layouts and routing of work and material.

Second, the salesman has a right to expect that the service department has a most intimate knowledge of the product and, given the proper equipment, knows how to utilize it.

The Bugbear of Broken Promises.

Third, he has a right to expect that the service department has the mental grasp and organization to take care of the work when it comes in and to take care of that most terrible enemy of the salesman, broken promises. I believe that all the imaginary troubles between these two departments rests mostly on this one ground, broken promises. Nothing can so provoke a customer as to be promised a car on Thursday, when he is planning to leave for the week end on Friday, and then when he gets it to find it incomplete, or in place of his car he gets a nice promise, which when deflated will not take him very far on his trip. The salesman has the right to expect the service department to courteously inform the customer sufficiently in advance if unforseen contingencies, over which the service department had no control, would not permit the car to be delivered on time, that the customer could make other arrangements to avoid these 12th-hour disappointments.

Fourth, courtesy; and there the salesman usually makes his biggest kick. This is the cheapest thing the service department has to dispense. The salesman has the right to demand that special study and attention be given to this one little thing, and how few service departments actually deliver on this, the cheapest thing they have.

I do not believe a sales department can expect more than these things from a service department, but given these things and given a ground of common understanding, the service department is of immeasureable benefit in advancing and furthering sales. One of our sales executives has called the service department the "Rear Door Sales Department."

The two departments should have a sufficient meeting ground to understand each other. They should get together frequently and frankly tell each other their mutual troubles. This will permit the salesman to really sell the service, and if the meetings are sufficiently frequent, and if they come to understand each other better, you will eliminate the danger of the salesman exaggerating the possibilities of the service department. In other words, I believe it is the duty of you gentlemen to see that the sales departments connected with your dealers fully understand all the real problems of service; understand the terrible, harrowing difficulties that we are going through at the present moment in the transportation of parts, the obtaining and training of help; the obtaining of adequate room and what it means to even keep up a semblance of truly good service in these times. Unless the salesman well understands this you cannot blame him for expecting too much and taking the side of the customer at all times.

Importance of Service Men.

In our own work we are prone to take the side of the service man. We understand his problems, we have studied them carefully. We look upon the service man in the same light that the superintendent of maintenance of a railway should be regarded. We figure his duties are just as important, because in the last analysis he is keeping up one truly important line of transportation.

The service man has to be a mixture of salesman, diplomat, teacher and a monument of patience, in addition to the small qualities of being a perfect mechanic, a crack organizer, a lawyer and perhaps possessing a little medical knowledge, and to understand psychology would not come amiss. Given these attributes, we figure he has a fair chance for success.

Prime Facts of Service.

In our own work we try to get into the minds of the service man the following prime facts:

First, the proper physical equipment, including room and all special tools. The knowledge of how to use the equipment and the materials to use it with and, given this, we figure the salesman has the right to expect courtesy, reasonable promptness and good work.

We have never felt that free service was the great essential so much as prompt and efficient service. We figure that a man is willing to pay for good service, providing he gets it with reasonable dispatch. I do not feel the salesman has a right to expect that everything that is done to the car for a year after the owner purchases it should be done free, but he has the right to expect it to be done when promised and when it is done to be finished so it will "stay put." We have clothed the service department with a positive dignity. We do not look upon it as a necessary evil, but as a branch of the business fully on a par with the sales department and just as important to our future welfare and to the satisfactory performance of our product in the hands of that final judge of all of us, the owner.

---

ENLARGEMENT OF COLUMBIA AXLE PLANT.

After having reached a capacity production of $1,000,000 a month in six years, the Columbia Axle Co., Cleveland, O., maker of Columbia one-piece housing rear axles and Columbia front axles, has now acquired the land and buildings of the Properties Co., which are adjacent to its present plant. These increased facilities will take care of present unfilled orders and plans are being made for the rapid expansion of the business which appears to be imminent.

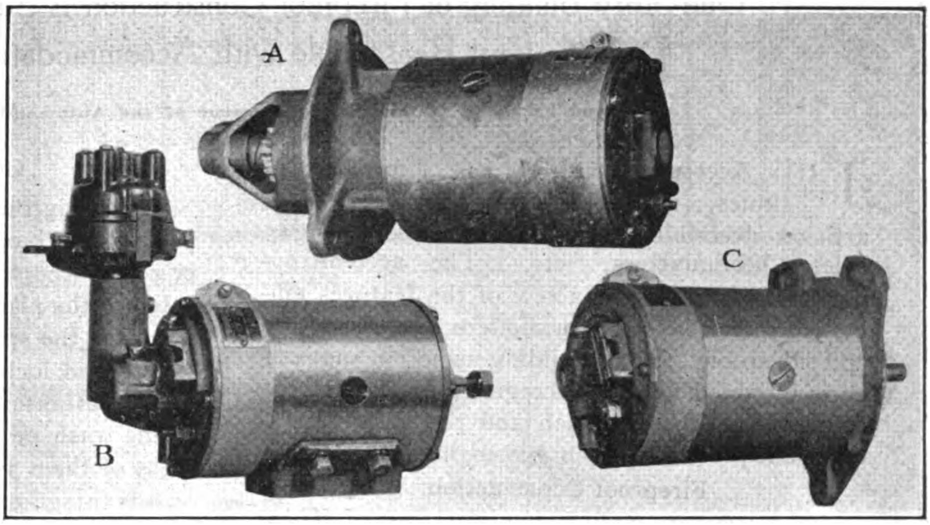
The holdings of the Properties Co. comprise 8½ acres of land, improved with two large factory buildings, one of four stories, and one of two. This gives the Columbia Axle Co. immediately the use of 300,000 square feet of floor space.

The common stock of the Properties Co. was purchased by the Columbia Co. in a deal involving approximately $1,000,000. E. H. Parkhurst is vice president and general manager of the Columbia Axle Co., and will continue in that capacity. W. R. Hopkins is president of the Columbia Co., Ben F. Hopkins is secretary-treasurer, R. E. Fries is chief engineer and general sales manager, and R. J. Goldie is factory manager.

The product of the Columbia Axle Co. will continue to be axles exclusively. It will do a general business in passenger car and truck axles, both front and rear, under the Columbia trade mark. The original company was organized in 1914, doing $136,000 of business during that year.

New Westinghouse Automotive Equipment

A NEW line of automotive starting motors and lighting generators has been developed for the 1920 season by the Westinghouse Electric and Manufacturing Co., this being in addition to the present line of machines furnished by the company.



New Westinghouse Line of Starting and Lighting Equipment: A, PW Motor for Sleeve Mounting Outboard Pinion Screw Shift; B, PW Generator with Westinghouse SC Ignition Distributor; C, PW Generator for Flange Mounting.

The chief feature of these new motors and generators, which are known as type PW, is the construction of the frame and the commutator end bracket. In the older type the frame was short and the bracket cylindrical. In the new the frame is extended and the bracket is flat; and the brushes, which are mounted on the bracket, are housed within the extension of the frame. Openings in the frame (covered ordinarily by an easily removed steel band) give access to the commutator and brushes. This construction gives additional mechanical strength to the machine. The brushes and commutator are especially accessible.

The generators, which are of the third-brush type, have an additional advantage in that the position of the third brush can be adjusted from the outside without removing the bracket. This is accomplished by mounting the brush on an arm which is pivoted around the bearing housing and is firmly held by screws on the outside of the end bracket. When these screws are loosened the arm and the brush can be turned through any desired angle.

These motors can be supplied for cradle, flange or sleeve mounting and with either inboard or outboard screw pinion shifts. The generators can be supplied for cradle, flange or foot mounting, with either ball or sleeve bearings, and with or without ignition brackets.

HARE'S MOTORS DINNER.

The first organization dinner of Hare's Motors, Inc., was held in New York City at Hotel Vanderbilt, Aug. 3, which was attended by executives from the engineering, production and distribution departments to the number of 45.

President Hare, in a brief address, announced that in his opinion the recent action of the Interstate Commerce Commission, in granting an increase to the railroads, was one of the most constructive steps taken in years, one that would contribute tremendously to the prosperity of the country, not only in eventually reducing the cost of living through better transportation, but in the general confidence it would give capital.

In referring to conditions in the automotive industry, he said, "If one considers it from the viewpoint of transportation he need not worry over present conditions. Obviously no temporary slump can change the fact that the actual need for quality transportation exists. Manufacturers of quality vehicles produce only a fraction of what the market actually needs. If we analyze the situation we find that the alarmist of today is the opportunist of yesterday."

REPRESENTATIVES OF NATIONAL MOTOR TRUCK COMMITTEE.

To give broader representation to matters directly affecting the truck end of the automobile industry, President Charles Clifton of the National Automobile Chamber of Commerce has increased the number of representatives on the national motor truck committee from seven to nine, and announces the following appointments:

Windsor T. White (White), chairman; George M. Graham (Pierce-Arrow), Victor L. Brown (Sterling), M. L. Pulcher (Federal), R. H. Salmons (Selden), Ray C. Chamberlain (Packard), A. J. Whipple (Diamond T), D. S. Ludlum (Autocar), D. C. Fenner (Mack), F. W. Fenn (N. A. C. C.), secretary.

This committee meets on the first Tuesday of each month, the day previous to that of the meeting of the directors of the National Automobile Chamber of Commerce.

HANDLEY-KNIGHT CARS SOON TO BE UNDER PRODUCTION.

Work in the new plant of the Handley-Knight Motor Co. at Kalamazoo, Mich., has reached the point where the temporary engineering and purchasing offices have been moved from Toledo to Kalamazoo, and the actual shipment of cars will be started by the latter part of September, it is reported.

The new Knight-Handley cars will be powered with the four-cylinder Knight sleeve-valve motor. The wheelbase will be 125 inches and the weight will be approximately 3200 pounds. The models to be manufactured at the outset will be a seven-passenger touring car and a seven-passenger sedan, both mounted on the same chassis.

TOURING BY ELECTRIC.

The New York Edison Co. has published, for free distribution to electric car owners, a booklet describing tours to points within a radius of 250 miles of New York. This brochure includes a list of the electric charging stations and garages in and around the Metropolis. Among the tours scheduled are a number depicted on two route maps from New York City to points as far away as Buffalo and Albany, N. Y.; Pittsfield, Mass.; Hartford, Conn.; Atlantic City, N. J., and Philadelphia, Pa.

PLATE XXXIII.

MODERN SERVICE STATION AND SALES ROOM

One-Story Building of Fireproof Construction Is Suggested for Average Dealer—Cost Reasonable with Accommodations Adequate.

Designed by the Architectural Department of the Automobile Journal Pub. Co.

THE Accessory and Garage Journal continues, in this issue, the series of articles describing service stations, garages, sales headquarters, etc. The accompanying sketches illustrate a few of the features embodied in the layout of a modern service station and salesroom. Such a building as herein suggested is intended for the average dealer, as its cost could be within his reach and the accommodations adequate for the needs of his business.

Fireproof Construction.

The structure would cover an area of 50 by 100 feet, the size of an ordinary city lot, and usually the only size obtainable in a desirable location. Our aim is to point out how compact, yet serviceable, a garage of this type can be made.

The plan is that of a one-story building of fireproof construction. The office and salesroom, shown in the forward part of the building, would be sufficient for the requirements of the average dealer. Flanking the office on the left is the entrance leading to the storage compartment, which is 50 by 60 feet, and which will house a considerable number of cars.

In the rear will be found a repair department, 24 by 18½ feet, having two pits to permit working on two cars at one time. This department could be well lighted by a large skylight, also affording ample ventilation.

Next we have the machine shop, the heart of the service station. Without such a place no station can give the service demanded in these modern times. Delay that would result in securing new parts could be saved by having the parts repaired on the job, or new ones turned out if necessary. The machine shop is so important that the dealer makes a mistake when he fails to provide for one.

Machine Shop.

The machine shop as shown in this plan would be 12 by 18½ feet, having room for a lathe, a punch, an emery wheel and a forge, also an anvil. A large sink is another feature. Provision is made for two toilets, one for the shop and the other for the office employees, and in these there would be modern lavatories with hot and cold water.

General Construction.

On the ground floor is a locker room for employees' clothing. A stairway leading to the boiler room occupies a portion of this room, as indicated in the plan. The boiler room is located underneath the space covered by the machine shop, toilets and locker room, and is 23 by 18½ feet. Special attention should be given to the location of the washstand and turntable, and the arrangement of them as this plan suggests will be found an advantage to all concerned.

The general construction is as follows: Foundation, concrete (see section); walls, 12 inches thick with 16-inch piers, and may be made with brick or cement blocks; main or front elevation designed for brick with concrete trimmings: steel beams used to support the roof, which is of plank covered with tar and gravel; floor four inches of rough concrete with two-inch dressing drained as shown.

Lighting would be furnished by large skylights in the roof, but which are not shown in the plan. A special feature would be a large door of wood automatically operated, being hoisted to the ceiling. The metal window sash shown adds much to the general appearance.

Cost of Building.

The cost of the building would be approximately $7500, equipped as shown. Any further details desired will be supplied on application to the Architectural Department of the Automobile Journal Publishing Co.

The plan presents many features that should prove valuable for a service station and salesroom, and the dealer who is contemplating the construction of a building to be used for such purposes will probably find it decidedly profitable to give careful consideration to these sketches. Of course, many variations could be made in the details and still the general plan followed.

The Architectural Department is having prepared plans for various types of buildings suitable for the use of those engaged in the automobile industry. Readers of Accessory and Garage Journal are invited to write to this department for additional information in regard to any of these plans.

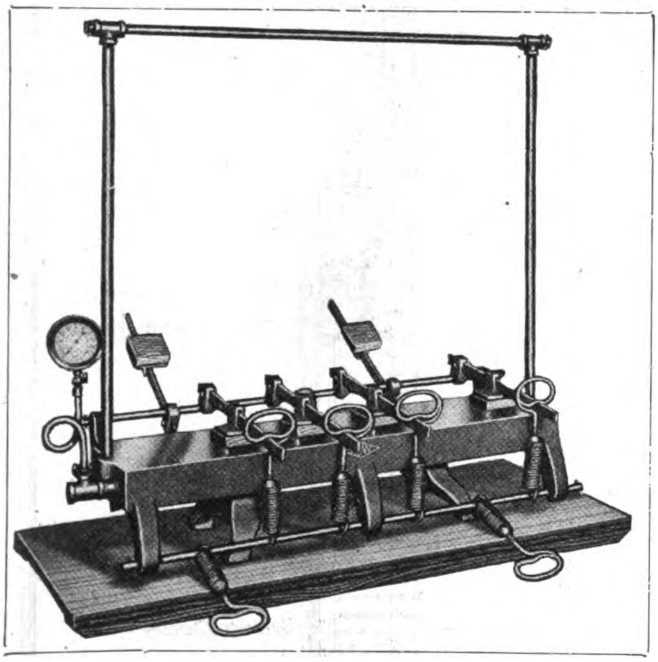
Akron-Williams Tire Repair Equipment

THE man who is the best equipped to do work is the man who is naturally going to make the biggest success of tire repairing. Many concerns in the larger cities specialize tire repairing in their localities and, while prosperous, are not widely known. There are larger concerns, some possibly connected with tire factories, that repair tires sold or guaranteed by them. It is to these two classes of concerns that the equipment dealt with in this article will appeal. There are also some service stations that do more or less of this work which may be interested.

The Williams Foundry & Machine Co., Akron, O., manufactures a very complete series of tire and tube vulcanizing machinery. The air bag system is used in the tire moulds manufactured by this company, which claims it is decidedly the better method of repair, basing the statement on exhaustive tests. The company maintains that practically all tire makers and most successful repair men use and recommend the air bag system. It is also claimed that it is reasonable to suppose that a repair should be cured in the same form the tire will have when on the rim and with the air tube tightly filling it.



Akron-Williams Outfit for Vulcanizing Inner Tubes.

When using the air bag for repairing it is put inside of the shoe, which is placed in the retreading rim that holds the beads as they would be held while on the wheel of a car. The tire on the retreading rim is placed in the tire mould, which it fits, the shoe being entirely surrounded by machine finished metal. Only one heat or operation is required to complete a sectional repair.

The tire is forced into contact with the mould by the expansion of the air bag from increased temperature. The flexible air bag adjusts itself to the uneven thickness of the repaired case, pressing the plies together with uniform pressure during the cure. Other methods require two or three operations.

Years of satisfactory service demonstrate that the Akron-Williams equipment for tire and tube vulcanizing is correct, and it has been proven very satisfactory with repair men because of efficiency, simplicity and economy.

The plates are very large, eight inches wide, finely machined and polished. Especial attention has been given to the steam circulation, so that the plate shall be evenly heated. The system consists of a series of baffles, or internal walls, which cause the steam to travel through every part before reaching the outlet, this construction greatly reinforcing the casting. Pressure is applied to the tubes while being cured by heavy oil tempered springs held in place by swinging levers. By adjustable handles the pressure may be regulated, the range being from six ounces to 50 pounds, in a few seconds time, this manner of adjustment meeting all requirements.

Three of the vulcanizers require separate steam, Nos. 21, 22 and 23. The width of the three plates is the same, eight inches, and the lengths of the plates are respectively 20. 36 and 54 inches, the large sizes having capacity for more repairs at a time than the small.

The steam generating tube vulcanizers consist of four models, Nos. 422, 1, 0 and 00, using gas or gasoline for heating, and are adapted for the tube and minor casing repairs of the small tire shop.

The unit system bears the recommendation of the Akron-Williams Co. and is a complete assembled unit, fitted with the necessary vulcanizers, tools, etc., for usual tire repair shop, and can be added to as needs of business require. All Akron-Williams vulcanizers are machine finished and polished. This is necessary where rubber comes in contact with hot iron. Clamps are of an improved type with quick acting thread nuts operated by a socket wrench, with which the pressure can be regulated.

Tire makers differ in the manner of building shoes and repair moulds must be made that are adaptable to differing constructions and types. Akron-Williams repair moulds are made adjustable to practically any tire, for they can be equipped with liners so that they will fit any size of tire.

Sectional vulcanizers are built in a localized heat type, in sections of one to five or more and also in the single-unit type with a steam chamber. These vulcanizers depend on an outside source for their steam, usually a steam boiler. They are built in various sizes from the smallest, having capacity for a 28 by three-inch motorcycle tire to the large car tire, 37 by 4½ inches. New types of vulcanizers have recently been added for the repairing of the large sizes of pneumatic truck tires and tubes.

The self-steam generating types are Nos. 16 for the six-inch tire, 17 for the seven-inch tire and 18 for the eight-inch tire, and can be purchased in the sectional steam type if required.

A series of vulcanizers is also manufactured for repairing bicycle tires. These are the sectional steam and the steam generating types for outside and inside work. Where gas is not available force feed gasoline is advocated. This outfit can be purchased from the Akron-Williams Co. at nominal cost. Tube splicing mandrels and tube deflators are a part of the Akron-Williams equipment and are very essential in repairing tubes, saving much time in handling.

The Akron-Williams equipment includes such useful articles for the repair shop as gas fired boilers in horsepowers from one to 12, coal fired boilers (vertical type) with horsepowers from five to 10, regulating valves, feed pumps, air compressors, air tanks, reducing valves and hose connections.

The Akron-Williams Co. equipment is very complete, meeting every requirement for tire repairing very thoroughly. Working drawings and plans can be obtained by those contemplating the installation of vulcanizing machinery.

PROGRESS IN TIRE MAKING.

When Howard Wilcox, a year ago, winning the Indianapolis sweepstakes, made but three tire changes, experts marvelled at the endurance of his tire equipment. This year's victor, Gaston Chevrolet, is reported to have made the entire 500 miles on his Oldfield tires, without a single change. Barney Oldfield, former race champion, who is at the head of the Oldfield Tire Co., Cleveland, O., which made the tires with which the winning Monroe car was equipped, as well as those used by Thomas and Milton, who finished second and third respectively, credits the severe test to which such components are subjected in races like the Indianapolis sweepstakes with much of the progress that has been recently made in tire making. "In no other laboratory can the tire builder secure such immediate and conclusive results," declares Oldfield in reviewing the event.

OVERMAN TIRE TO INCREASE CAPITAL.

The Overman Cushion Tire Co., Inc., New York City, is to increase its capital from $550,000, consisting of 5500 shares of a par value of $100 each, of which 1500 shares are common and 4000 preferred, to $900,000, composed of 5000 shares of common and 4000 of preferred of par value of $100.

Adaptation of Claudel Carburetor to American Requirements

THE Claudel carburetor, which has been widely used in Europe for 20 years, is now made in America by the Claudel Carburetor Co., Long Island City, N. Y. This highly perfected, plain tube mixing device was designed by Charles Henri Claudel, the pioneer in the development of this type of carburetor, who is recognized as one of the foremost authorities on carburetion in Europe.

Records made by the Claudel carburetor in European racing before the war included 93 first prizes taken in 1913 alone, in addition to the Indianapolis race and the breaking of all world's records on the Brooklands track in England. They were also employed extensively on the aviation engines of the Allied air craft during the war, including Rolls-Royce, Sunbeam, Peugeot, Samson, Hispano-Suiza and Renault. The Sunbeam engine of the British dirigible R-34, made the first round trip across the Atlantic, as well as the Rolls-Royce power plant of the Vickers-Vimy air plane, which was the first to make a non-stop flight across the Atlantic, were equipped with the Claudel.

The engineers of the Claudel Carburetor Co. have Americanized the European model of the Claudel to meet the particular requirements of engineering needs in this country. They have added several features demanded by the American motorist, such as a quick starting device and rapid acceleration with a cold engine.

The Claudel Carburetor.

Early carbureting devices employed a spring-controlled air valve in an effort to secure the proper mixture balance throughout a wide range of engine speeds. In 1903 Charles Henri Claudel of Paris, France, patented the first plain tube automatic compensating carburetor to operate without the use of moving parts. His early principle of breaking up the gasoline by a swift current of air, making an emulsion inside the jet itself before delivery to the carburetor proper, was original with him and has since been widely copied. The modern Claudel retains the same principle, refined and improved to vaporize the heavy fuel of today.

The automatic functioning of the Claudel carburetor is based upon the action of the diffusor jet assembly. This device combines three distinct principles of operation:

First, the orifice or jet which supplies all of the liquid fuel is placed at charge, or below the fuel level, where its flow is proportional to the difference in head; second, the diffusor proper is in "shunt" position, that is, enclosed in a chamber with openings at one end to the atmosphere and at the other end to the suction in the carburetor, thereby reducing the effect of the suction on the fuel flow; third, through the nozzle holes in the diffusor head the interior emulsion chamber of the diffusor is placed under the direct action of the vacuum in the carburetor, increasing the discharge as the vacuum is increased.

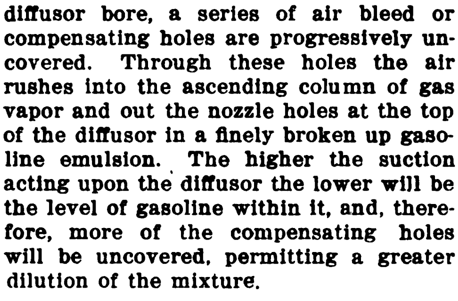
The combination of these three principles of operation, correctly applied, gives a balanced mixture exactly proportioned for the best results at every engine speed and load.

The Claudel is really a combination of two types of jet, one, the main jet, of constant flow per unit of time; the other, through a series of nozzle holes, of suction-controlled flow. Fuel from the float chamber flows through the main jet into the diffusor, then through the compensating holes into the reservoir or diffusor bore. It also flows through the idling jet into the idling tube, the level in the three tubes being the same as that in the float chamber.

The Diffusor.

Air at atmospheric pressure enters the outside base or air tube of the diffusor column, passes up this outer sleeve and over the top of the gasoline guard tube, which prevents the fuel from overflowing. As the throttle is opened gradually and the suction in the diffusor increases, thereby lowering the liquid level in the diffusor bore, a series of air bleed or compensating holes are progressively uncovered. Through these holes the air rushes into the ascending column of gas vapor and out the nozzle holes at the top of the diffusor in a finely broken up gasoline emulsion. The higher the suction acting upon the diffusor the lower will be the level of gasoline within it, and, therefore, more of the compensating holes will be uncovered, permitting a greater dilution of the mixture.

At the higher speeds the diffusor is practically empty and 21 spirally arranged air bleed holes are in action. As the gasoline globules are lifted by the suction, they must pass through a barrage of 21 air guns shooting at right angles into the ascending fuel. This turbulent mixture effect produces a finely divided fuel emulsion ideal for rapid flame propagation, extreme economy and high power. The diffusor discharge is in approximately the ratio of 15 parts of air to one part of gasoline by volume. This thorough intermixture of air and gasoline before it enters the carburetor barrel is the Claudel method of breaking up the heavy fuel of today for extreme economy.



American Type of Claudel Carburetor.

It will be easily seen that any kind of a power or consumption curve desired can be secured by changing the size and position of the compensating holes in the diffusor wall. For example, if the consumption curve shows a rich spot at an engine speed of 1000 revolutions per minute, the holes at this level of the gasoline in the diffusor could be enlarged, thinning out the mixture and bringing it to the point desired. In this way an exact gasoline and air ratio can be maintained for the best results.

The clean, streamline interior of the Claudel plain tube carburetor with the barrel throttle giving an extended venturi effect, leaves no obstruction in the path of the charge and consequently full volumetric efficiency is secured. Also the gradual taper of the interior walls holds the mixture in uniform suspension and velocity.

The Idling Device.

The idling device is incorporated in a central tube projecting up into the depression of the barrel throttle, where a strong pull is exerted on the idling jet for low speed action. The barrel throttle is slotted to pass around the idling jet and the only adjustment on the carburetor is a screw extending into the air space to partially block off the area of this slot as desired. Screwing it in lessens the air area and enriches the idling mixture. Screwing it out makes the mixture leaner.

Easy Starting Feature.

In the American type of Claudel, shown in the sketch, a decided improvement has been incorporated for strangling the air by means of a sliding air cone, controlled from the dash. This device assures quick starting and warming up in cold weather, and absolutely disregards temperature. The streamline air cone, concentric with the diffusor, may be raised into contact with the venturi, shutting off the air supply and puting the full suction on the diffusor. In this position it is only necessary for the cylinders to exhaust the air in the top of the carburetor before the diffusor discharge must commence. This action is instantaneous, as the volume is small.

Referring again to the cut, the sliding cone A, in its closed or strangling position, fits snugly into the venturi entry V. The streamline shape of the cone centers and steadies the air stream so that it passes the nozzle holes of the diffusor with high velocity and in an even column ideal for the best results. In its lowest position the cone offers no restriction to the maximum performance required and is of benefit in minimizing air intake turbulence.

In warming up a cold engine when a richer mixture is necessary, the cone A may be dropped slightly, forming a variable venturi. With the cone in this restricting position one may readily get away while his engine is still cold. Thus, in reality, the Claudel acts as a double carburetor—one of small venturi for normal driving, and, with lowered cone, another of full engine capacity.

The advantage of the Claudel cone over the common type of butterfly strangler valve, placed some three or more inches ahead of the fuel discharge nozzle, is very evident. In some of the latter type, all of the dead air lying between the nozzle and the strangler valve must be exhausted before fuel will begin to flow. In the Claudel type, suction on the nozzle is instantaneous.

When the common type butterfly strangler is only slightly open (condition when warming up), the small amount of air passing the fuel discharge nozzle has little or no velocity and hence can pick up very little fuel. Fuel, however, is discharged because of the greater pressure existing in the float chamber than in the mixing chamber, and instead of being picked up by the air this raw fuel runs down to the butterfly strangler, where the air velocity is highest, there to be only partially vaporized and carried into the engine. In the Claudel type, on the other hand, an emulsion is discharged from the diffusor nozzle, where it is immediately carried upward by the air entering at high velocity through the small, annular streamline passage between the cone and the venturi.

The Claudel is a very high-grade carbureting instrument built in a number of standard S. A. E. vertical sizes. A horizontal model will be announced later. Special models, however, for special installations are built to order, including air plane and duplex designs.

The Claudel carburetor is highly finished and carefully built for quality performance and appearance, and is universal with regard to levers and flange positions.

OPPORTUNITY FOR AUTO PAINTERS.

Automobile painting shops that do not include a top trimming department are neglecting a most profitable source of revenue. Only a small space is required and the equipment is inexpensive. The top trimming trade is not hard to learn and shops can usually readily secure workmen skilled in this work. As rubber top materials are usually uniform in texture and grain, a limited stock is sufficient to take care of all demands and little outlay of money is necessary.

If the automobile refinishing shop has a reputation for good painting its customers will be glad to add their top trimming work. Autoists usually have a tendency to keep the old top on the car as long as possible, but a little salesmanship on the part of the owner of the refinishing shop will be sufficient to convince them of the desirability of having a new top put on.

FILLING FOR CAST IRON.

One-quarter tumbler full of Japan dryer, 1½ ounces finely ground dry white lead. Mix and add one quart of finishing Japan. Stir in dry rotten stone until mixture is a thick paste.

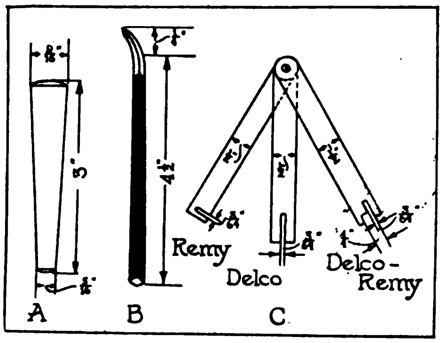
Handy Shim Locating Tool

The tool illustrated at A is very useful when removing the No. 45 motor generator from the 1915 Hudson model 6-40. In taking this generator from the base in which it rests the shims used in lining it up may become scattered and mixed. Several hours are consumed in replacing the shims again before lining up the generator.

This may be eliminated by turning down three hard wood pins as shown. After removing the three bolts that hold the generator to the base plate, insert the three wooden pins in place of the bolts. The generator can then be removed and the shims are held properly in place.

At B is shown an effective tool for cleaning the commutator. Hardened oil and carbon dust frequently collect on the mica and act as a conductor between the copper bars, causing a short circuit. The tool is made by bending the end of a triangular file and grinding the point to fit the slot between the commutator bars. Convenient dimensions are given in the illustration.

This tool is used in the service station in emergencies and in many cases eliminates the necessity of removing the generator from the car. It is in no sense to be used to undercut mica, but simply as a cleaning tool.



At C is shown a combination wrench used for adjusting Remy and Delco contact arms. This wrench allows bending the arms in any shape to give an accurate fit to the points. Holding two wrenches at right angles will give the leverage for bending.

BRASSING IRON.

Iron ornaments may be covered with copper or brass by properly preparing the surface so as to remove all organic matter which would prevent adhesion, and then plunging them into melted brass or copper. A thin coating is thus spread over the iron, and it admits of being polished or burnished. The better the article is finished and cleaned before dipping the better will be the final result.

TO TURN HARD IRON AND STEEL.

Use a drip can for the tool with the following solution: Petroleum, two gallons; turpentine, one gallon, and camphor, two ounces.

CLEANING SPARK PLUGS.

A somewhat novel method of cleaning spark plugs was brought to notice recently. It consisted of a blow pipe held in a gas flame, with the pipe held in the mouth. The plug was held with a pair of tongs, so that the blow pipe flame impinged on the points of the plug, the plug being held in the same line as the flame.

Where a foot power blower is available this may be used instead of the blow pipe and will prove more expeditious in burning out the carbon accumulation.

LOOSE FAN BELTS.

Sometimes an engine will overheat for no apparent reason. Occasionally a motorist will fuss with his power plant for some time before it is finally borne in upon him that the whole trouble lies in the fact that his fan belt is running too loose, causing the fan to run below its proper speed. If this condition is found he should either tighten the fan belt himself or take the car to a garage and either have the adjustments tightened or the belt shortened.

RADIATOR REPAIR.

To make a good emergency repair of a honeycomb radiator, use a small bolt longer than the depth of the radiator and fine enough to pass through the hole in the honeycomb. On each end of this bolt a steel washer is placed, with a rubber washer inside. Tighten the nut on this bolt and the rubber washers are drawn tight enough to stop the leak. This repair cannot, however, be made on a tubular radiator.

BLACK FINISH FOR STEEL.

The pieces of steel to be blackened should first be polished with No. 120 emery cloth. After polishing the surfaces should be cleaned carefully and then the work placed over the fire and drawn evenly to a second blue. The work is next dipped in lard or sperm oil for a few seconds and immediately removed and all loose oil shaken off. This prevents the forming of blisters. An old piece of rubber—a section of an old garden hose will do—is placed on the fire and as it burns the work is held over the flame and smoke that comes from the burning rubber until it is covered with a thick coat of black soot. Remove from the fire and permit it to cool slowly. When cool rub with an oiled cloth. One heat is used for the process.

LIQUID FOR ETCHING ON STEEL.

The following solution will be found excellent and reliable either for very deep etching upon steel or for producing beautiful frosted effects upon the surface: Mix together one ounce sulphuric acid, ¼ ounce alum, ½ teaspoonful salt, ¼ pint acetic acid or vinegar and 20 drops concentrated nitric acid. The etching effect produced by this liquid depends upon the length of time it is allowed to act upon the metal and is applied similarly to ordinary etching acid.

RECORD OF BUILDING OPERATIONS FOR AUGUST

Contracts Made and Plans Contemplated for Alterations or Erection of Garages, Repair Shops, Service Stations and New Plants.

PLANS AND SPECIFICATIONS.

Birmingham, Ala.; G. P. Dexter, 3470 Highland avenue; one-story fireproof garage, 54x140; $10,000.

Little Rock, Ark.; Lilbourne Shoemaker; two-story brick and concrete garage, 150x140; $300,000.

Malvern, Ark.; Rector Motor Co.; one-story fireproof repair plant, 50x150; $17,500.

Springdale, Ark.; Oxark Trail Motor Co.; one-story fireproof garage, 50x100; install garage equipment.

Bridgeport, Conn.; Bridgeport Gas Co.; two-story public garage, 185x50.

Hartford, Conn.; Puritan Motor Sales Co., 334 Pearl street; one-story public garage, 40x150; $30,000.

New Britain, Conn.; Mendel Sokelick, 117 Willow street; one-story brick garage, 70x60.

Washington, D. C.; Thomas F. Medford, 1631 Third street; two-story reinforced concrete garage, 300x200.

Washington, D. C.; Miller-Dudley Co., 1625 14th street; tw-story fireproof service station and repair shop, 40x60; install machine shop equipment and electric testing apparatus.

Abington, Ill.; E. E. Terwilliger; one-story fireproof garage and filling station at 303 Pennsylvania avenue; $3000.

Arthur, Ill.; Fleming Brothers; one-story garage, 66x100.

Chicago, Ill.; C. Arnesen, 2106 North Karlov avenue; one-story frame garage.

Chicago, Ill.; Mrs. George Andrews, 2708 Fletcher street; one-story frame garage.

Chicago, Ill.; G. C. Anderson, 4447 North Seeley avenue; one-story frame garage.

Chicago, Ill.; C. R. Abbott, Jr., 4942 Kammerling avenue; one-story frame garage.

Chicago, Ill.; H. R. Blodgett, 1704 West 100th street; one-story frame garage.

Chicago, Ill.; Peter Buckelhaupt, 7918 Carpenter street; one-story frame garage.

Chicago, Ill.; Dr. Barnslick, 7247 Luella avenue; one-story brick garage.

Chicago, Ill.; George Bogoorch, 2129 21st street; one-story frame garage.

Chicago, Ill.; H. P. Bodett, 4748 Race street; one-story frame garage.

Chicago, Ill.; Z. M. Burzycki, 2052 North Carolina avenue; one-story frame garage.

Chicago, Ill.; Edward Borner, 5015 South Marshfield avenue; one-story frame garage.

Chicago, Ill.; L. Burwick, 4709 Bernice avenue; one-story frame garage.

Chicago, Ill.; James Carden, 4831 Washington boulevard; one-story brick garage.

Chicago, Ill.; James E. Clark, 6142 South Washington avenue; one-story frame garage.

Chicago, Ill.; P. Carengo, 733 South Robey street; one-story frame garage.

Chicago, Ill.; C. E. Conklin, 37 North Lotus avenue; one-story frame garage.

Chicago, Ill.; F. Connelly, 1944 West 34th street; one-story brick garage.

Chicago, Ill.; Louis Dreyfuss, 4934 Vincennes avenue; one-story frame garage.

Chicago, Ill.; Henry Dressler, 3304 North California avenue; one-story frame garage.

Chicago, Ill.; A. E. Dittirck, 5541 West Quincy street; one-story frame garage.

Chicago, Ill.; Mrs. Edward Doyle, 4239 Michigan avenue; one-story frame garage.

Chicago, Ill.; Carl Eben, 2325 Thomas street; one-story brick garage.

Chicago, Ill.; B. L. Engelke, 4845 Dorchester avenue; one-story frame garage.

Chicago, Ill.; Karl Ekberg, 5717 South Peoria street; one-story frame garage.

Chicago, Ill.; B. J. Fallon, 6239 Winthrop avenue; one-story brick garage.

Chicago, Ill.; Lila J. Fairbairn; one-story garage and service station at 735-737 South Clark street.

Chicago, Ill.; Henry Finault, 3552 Beach street; one-story frame garage.

Chicago, Ill.; J. Francis, 220 East 56th street; one-story frame garage.

Chicago, Ill.; W. E. Gittings, 5643 Drexel avenue; one-story frame garage.

Chicago, Ill.; J. Golden, 4715 West Adams street; one-story frame garage.

Chicago, Ill.; M. Goldstein, 1427 North California avenue; one-story brick garage.

Chicago, Ill.; John Granquist, 1417 Raecher avenue; one-story brick garage.

Chicago, Ill.; H. Griffith, 2518 Blaine place; one-story brick garage.

Chicago, Ill.; H. A. Hansen, 6559 Whipple street; one-story brick garage.

Chicago, Ill.; William G. Haupt, 6449 Glenwood avenue; one-story brick garage.

Chicago, Ill.; H. T. Hawkins, 7330 South Shore drive; one-story frame garage.

Chicago, Ill.; W. Heinewan, 916 North Lockwood avenue; one-story frame garage.

Chicago, Ill.; F. E. Hemstreet, 13 South Whipple street; one-story frame garage.

Chicago, Ill.; Arthur Hess, 835 Irving Park boulevard; one-story frame garage.

Chicago, Ill.; A. J. Huber, 7402 Kenwood avenue; one-story brick garage.

Chicago, Ill.; Joseph Hylek, 2639 Iowa street; one-story brick garage.

Chicago, Ill.; L. F. Jelnick, 2200 North Lamon avenue; one-story frame garage.

Chicago, Ill.; H. Johnson, 1052 North Mozart street; one-story frame garage.

Chicago, Ill.; W. S. Jones, 2432 West Jackson boulevard; one-story frame garage.

Chicago, Ill; C. Karl, 7237 Langley avenue; one-story frame garage.

Chicago, Ill.; Catherine Kelly, 4016 West Monroe street; one-story frame garage.

Chicago, Ill.; S. W. Kendall, 4922 Winthrop avenue; one-story frame garage.

Chicago, Ill.; E. Knox, 8327 South Carpenter street; one-story frame garage.

Chicago, Ill.; B. Kopeck, 5012 Sunnyside avenue; one-story frame garage.

Chicago, Ill.; W. R. Kopp, 4527 Christiana avenue; one-story frame garage.

Chicago, Ill.; Charles Kruspe, 6552 South Lincoln street; one-story frame garage.

Chicago, Ill.; Frank Kulack, 4329 Schubert avenue; one-story frame garage.

Chicago, Ill.; P. M. Kzycke, 3046 North Hamlin avenue; one-story concrete garage.

Chicago, Ill.; William Laube, 1016 North Hoyne avenue; one-story frame garage.

Chicago, Ill.; William Leland, 5421 Cottage Grove avenue; one-story frame garage.

Chicago, Ill.; E. C. Leonard; one-story garage and repair shop; $90,000.

Chicago, Ill.; Libery Dairy Co., 852 North California avenue; two one-story frame garages.

Chicago, Ill.; I. Lipschitz, 847 Leland avenue; one-story brick garage.

Chicago, Ill.; P. Lundgoot, 2440 Ballou street; one-story frame garage.

Chicago, Ill.; A. Lupon, 2516 South Claremont avenue; one-story brick garage.

Chicago, Ill.; Charles McHerney, 7417 Langley avenue; one-story frame garage.

Chicago, Ill.; S. Marks, 6133 Prairie avenue; one-story frame garage.

Chicago, Ill.; Bert Merian, 6529 Whipple street; one-story brick garage.

Chicago, Ill.; J. D. Mey, 4156 West Harrison stree; one-story frame garage.

Chicago, Ill.; R. M. Meyer, 2445 Warner avenue; one-story frame garage.

Chicago, Ill.; William Molitor, 9801 Avenue M; one-story cement block garage.

Chicago, Ill.; W. H. McGann, 1317 North Harding avenue; one-story frame garage.

Chicago, Ill.; L. W. Molner, 2334 Burling street; one-story frame garage.

Chicago, Ill.; J. W. Molener, 1835 Kenilworth avenue; one-story frame garage.

Chicago, Ill.; H. M. Monson, 4104 Atlgeld street; one-story frame garage.

Chicago, Ill.; William Moorhouse, 139 East 110th street; one-story frame garage.

Chicago, Ill.; C. Mosa, 1228 North Menard avenue; one-story frame garage.

Chicago, Ill.; A. C. Mueller, 4026 North Albany avenue; one-story brick garage.

Chicago, Ill.; N. E. Mueller 2313 Lunt avenue; one-story frame garage.

Chicago, Ill.; N. Murray, 7645 Maryland avenue; one-story frame garage.

Chicago, Ill.; H. Naebor, 4317 Palmer square; one-story frame garage.

Chicago, Ill.; Fry & Jacobson, 3969 Elston avenue; one-story garage and accessory station; $35,000.

Chicago, Ill.; E. C. Leonard, care of A. P. Dippold, 4747 Cottage Grove avenue; one-story brick public garage, 100x253; $90,000.

Chicago, Ill.; Look & Brandgenberg, care of L. J. Ohrenstein, 509 West Washton street; one-story brick and stone garage, 95x125, at Sangamon and Monroe streets; $40,000.

Chicago, Ill.; John K. Neebee, 2522 Aubert avenue; one-story public garage, 100x110, at Western and Montrose avenues; $45,000.

Chicago, Ill.; Mrs. M. O'Brien, 7605 Emerald avenue; one-story frame garage.

Chicago, Ill.; O. Olsen, 7654 Champlain avenue; one-story frame garage.

Chicago, Ill.; C. Palmer, 6107 Vernon avenue; one-story frame garage.

Chicago, Ill.; H. Pekin, 1105 South Richmond street; one-story brick garage.

Chicago, Ill.; Herman Peter, 6035 North Hermitage avenue; one-story frame garage.

Chicago, Ill.; C. Peterson, 7929 Princeton avenue; one-story frame garage.

Chicago, Ill.; Charles Popper, 5323 Race avenue; one-story frame garage.

Chicago, Ill.; E. M. Punce, 5523 West Monroe street; one-story frame garage.

Chicago, Ill.; A. W. Rakebrand, 4730 North Tripp avenue; one-story frame garage.

Chicago, Ill.; R. R. Rathschlag, 2643 North Kimball avenue; one-story frame garage.

Chicago, Ill.; Bertha Roesecke, 3013 South Kildare avenue; one-story frame garage.

Chicago, Ill.; James Roman, 5020 Ellis avenue; one-story garage and accessory shop; $2800.

Chicago, Ill.; Henry Roscher, 2154 Addison street; one-story frame garage.

Chicago, Ill.; H. L. Schiele, 4158 North Irving avenue; one-story frame garage.

Chicago, Ill.; J. Schuerman, 500 South Crawford avenue; one-story frame garage.

Chicago, Ill.; J. P. Sharpless, 7641 Merrill avenue; one-story frame garage.

Chicago, Ill.; H. C. Shaw, 10,936 Church street; one-story frame garage.

Chicago, Ill.; Michael Sodlicke, 1328 Byron street; one-story frame garage.

Chicago, Ill.; James Soffe, 7247 Ridgeland avenue; one-story cement garage.

Chicago. Ill.; M. Sohlman, 1413 North Maplewood avenue; one-story frame garage.

Chicago, Ill.; George H. Spirs, Monroe street and Wabash avenue; one-story garage and repair shop at 5411 Broadway; $60,000.

Chicago, Ill.; Charles G. Stach, 9339 Eberhart avenue; one-story frame garage.

Chicago, Ill; H. G. Stallwood, 5914 Race street; one-story frame garage.

Chicago, Ill.; Standard Oil Co.; one-story garage and service station at 1000-1004 Roosevelt road; $5000.

Chicago, Ill.; Gust Strauf, 1938 Bernice avenue; one-story frame garage.

Chicago, Ill.; C. W. Stradell, 4257 West Monroe street; one-story brick garage.

Chicago, Ill.; A. R. Sundstrom, 10,704 Avenue M; one-story frame garage.

Chicago, Ill.; V. L. Swager, 1912 West Kostner avenue; one-story frame garage.

Chicago, Ill.; Ivan Swislet, 1747 Barry street; one-story frame garage.

Chicago, Ill.; Joseph Szarek, 1301 Houston avenue; one-story frame garage.

Chicago, Ill.; A. H. Tennyson, 5425 Hadden avenue; one-story frame garage.

Chicago, Ill.; G. Themes, 1844 North Sawyer avenue; one-story frame garage.

Chicago, Ill.; C. E. Thorne, 373 East 88th street; one-story frame garage.

Chicago, Ill.; J. Torgoff, 2729 North Kimball avenue; one-story brick private garage; $3500.

Chicago, Ill.; N. Ungar, 4018 West Monroe street; one-story frame garage.

Chicago, Ill.; Joseph Unhock, 8423 Carpenter street; one-story frame garage.

Chicago, Ill.; H. Vicker, 7216 Princeton avenue; one story frame garage.

Chicago, Ill.; C. C. Watt, 12,131 Normal avenue; one-story frame garage.

Chicago, Ill.; A. P. Weber, 7927 Princeton avenue; one-story frame garage.

Chicago, Ill.; Charles Weiner, 4859 Barry avenue; one-story frame garage.

Chicago, Ill.; C. D. West, 22 East 45th street; one-story frame garage.

Chicago, Ill.; Margaret Whalen, 626 North Lotus avenue; one-story frame garage.

Chicago, Ill.; F. M. White, 1101 North Lorll avenue; one-story frame garage.

Chicago, Ill.; Dr. H. C. Will, 4865 Sheridan road; one-story frame garage.

Chicago, Ill.; F. Williams, 2219 Jackson boulevard; one-story frame garage.

Chicago, Ill.; William Wilson, 2255 North Kildare avenue; one-story frame garage.

Chicago, Ill.; Tony Witkowski, 1942 Webster avenue; one-story frame garage.

Chicago, Ill.; Adam Young, 5444 South Hermitage avenue; one-story frame garage.

Chicago, Ill.; C. Zurcy, 5533 Aberdeen street; one-story frame garage.

Decatur, Ill.; C. F. Howell, Lovington, Ill.; one-story garage and repair shop; $1250.

Elmwood, Ill.; George Fogotte; one-story garage and accessory shop.

Hoopestown, Ill.; William McFerren & Co.; one-story garage and accessory shop at Third and Main streets.

Hopedale, Ill.; Jules Mieville; one-story garage and accessory shop.

Jonesboro, Ill.; Curtis Hunsaker; one-story garage and repair shop.

McComb, Ill.; C. E. Asher; one-story garage and repair shop on West Jackson street; $8000.

Oak Park, Ill.; F. A. Hill, care of E. E. Roberts, 82 West Washington street; one-story garage and repair shop at 702 Madison street; $20,000.

Oregon, Ill.; Benie Motor Co.; one-story brick and reinforced concrete garage and repair shop; $20,000.

Strasburg, Ill.; Swigert Service Co.; one-story garage and repair shop.

Trilla, Ill.; D. F. Jones; one-story garage and accessory shop.

Waterloo, Ill.; Monroe County Auto Co.; one-story garage and accessory shop.

Argos, Ind.; W. L. Rudd Motor Co., Plymouth, Ind.; one-story brick commercial garage, 45x160; $15,000.

Bluffton, Ind.; Main Street Garage Co.; one-story garage and repair shop; $45,000.

Jeffersonville, Ind.; Gwin Motor Sales Co.; 120 East Maple street; two-story commercial garage and sales room, 50x153; $75,000.

Kokomo, Ind.; Dennis White Auto Co.; three-story brick garage and sales room, 75x144, at Buckeye and Jackson streets; $125,000.

Scottsburg, Ind.; Prosser's Garage; one-story brick repair shop, 80x90.

Terre Haute, Ind.; Vigo Auto Co., 114 North Seventh street; one-story garage and service station.

Centerville, Ia.; Appanoose Sign & Auto Co.; one-story repair shop.

Clermont, Ia.; J. P. Paulson; one-story garage and filling station, 120x60.

Caldwell, Kan.; Standard Oil Co.; one-story garage and filling station; $8000.

Fredonia, Kan.; Harry and Charles Singleton; one-story garage and service station.

Goff, Kan.; Goodrich Auto Co.; one-story garage and repair shop.

Holton, Kan.; Fred May and Frank Glen; one-story cement block garage.

Hutchinson, Kan.; Kirk Auto Sales Co.; one-story garage and repair shop.

Manhattan, Kan.; Holt & Nixon Tire Co.; one-story garage and tire repair shop, 308 Houston street.

Topeka, Kan.; F. W. Boettcher; one-story garage and repair shop, 910 West Sixth avenue.

Topeka, Kan.; W. R. Smith & Sons; one-story garage and repair shop at 118 North Kansas avenue.

Topeka, Kan.; West Side Garage & Supply Co.; one-story garage and repair shop at 910-912 West Sixth street.

Wichita, Kan.; Grant Electric Battery & Service Co.; 324 South Market street; one-story garage and repair shop.

Wichita, Kan.; A. M. Weinschen, 231 North Bluff avenue; one-story brick automobile building, 324-326 South Market street.

Louisville, Ky.; Prince Wells, 717 Fourth street, one or two-story brick fire-proof garage, 74x200.

Owensboro, Ky.; Lee Tire & Sales Co.; one-story brick garage and sales room, 50x130; $25,000.

Owensboro, Ky.; Smith Brothers and Frank Faith; one-story brick garage and repair shop, 80x120; $25,000.

Biddeford, Me.; Cleaves & Sawyer; one-story brick public garage and sales room, 112x58; $20,000.

Baltimore, Md.; Frank Molnaur, 531 South Ann street; one-story garage; 42x93; $10,000.

Boston, Mass.; Mrs. Gussie A. Lavine, care of S. H. Bowfsky, 25 Pemberton square; one-story public garage at 183 Roxbury street; $15,000.

New Bedford, Mass.; Motor Sales Co., 514 Pleasant street; two-story sales room and service station at Pearl and Purchase streets; $50,000.

Jackson, Mich.; Michigan Buick Sales Co., 104 East Washington street; two-story brick public garage and repair shop, 58x120; $25,000.

Kalamazoo, Mich.; F. E. Fair, 218 North Rose avenue; two-story brick garage, 100x175; $75,000.

Kalamazoo, Mich.; Kalamazoo Co.; one-story private garage, 60x80; $35,000.

Lansing, Mich.; Lansing-Nash Co.; one-story garage and repair shop, South Washington avenue; $40,000.

Muskegon Heights, Mich.; L. Drittenhofer, 200 North Western avenue; one-story brick garage; $50,000.

Pinconning, Mich.; Texico Oil Co.; one-story garage and gasoline station.

Duluth, Minn.; John Boch, 4023 West Sixth street; one-story frame garage.

Duluth, Minn.; C. J. Hanson, 4207 North Fourth street; one-story frame garage.

Duluth, Minn.; M. W. Lind, 425 17th street; one-story frame garage.

Duluth, Minn.; Christopher Miller, 4311 West Eighth street; one-story frame garage.

Duluth, Minn.; W. T. Moyer, 5770 Olney street; one-story frame garage.

Duluth, Minn.; J. E. Singleton, 319 Snively road; one-story frame garage.

Kasson, Minn.; I. B. Eidem; one-story frame garage.

Meriden, Minn.; Albert Stendel; one-story frame garage.

Minneapolis, Minn.; H. E. Blair, 4822 Columbus avenue; one-story frame garage.

Minneapolis, Minn.; J. A. Dunn, 2840 Humboldt street; one-story frame garage.

Minneapolis, Minn.; O. N. Dyste, 3232 Holmes avenue, south; one-story frame garage.

Minneapolis, Minn.; Dr. Thomas Peterson, 4000 Harriet avenue; one-story brick garage.

Pemberton, Minn.; Dudley Hawkins; one-story frame garage.

Quitman, Miss.; John S. Dobbs; one-story concrete garage, 50x120.

St. Louis, Mo.; Columbia Taxicab Co., 4689 Delmar avenue; one-story brick fire-proof garage, 150x150.

Camden, N. J.; Gordon Motor Car Co.; one-story brick and reinforced concrete garage and service station, 50x100.

Elizabeth, N. J.; William Lawry Hotel, 78 East Jersey street; one-story public garage at 80-82 East Jersey street; $12,000.

Jersey City, N. J.; Caswell Motor Co., 73 East 130th street; three-story brick and reinforced concrete garage and machine shop; $100,000.

Jersey City, N. J.; Lewis Max, 52 Greene street; one-story garage at Montgomery and Colgate streets; $30,000.

Newark, N. J.; M. J. McGowan, 320 Market street; one-story brick public garage at 263-265 Lafayette street; $20,000.

Newark, N. J.; H. Slifen, 468 South 10th street, New York; one-story public garage at 468 South 10th street; $5000.

Newark, N. J.; William F. Taylor, Adams and Thomas streets; one-story garage at 331 South street; $14,000.

Paterson, N. J.; New Jersey Bus Manufacturing Corporation, West 34th street and McBride avenue; one-story brick garage and machine shop at 737-739 Madison avenue.

Pleasantville, N. J.; Bertram Ireland, Guarantee Trust building, Atlantic City, N. J.; one-story brick and concrete public garage, 50x150.

Brooklyn, N. Y.; Frank Burnett, 167 Rockaway avenue; one-story brick garage; $30,000.

Brooklyn, N. Y.; J. Faraldo, 222 Old Woodpoint road; one-story brick garage, 29x102; $16,000.

Brooklyn, N. Y.; J. Friedman, 60 Tapscott street; one-story brick garage; $20,000.

Brooklyn, N. Y.; O. Goetz, 261 Stogg street; two-story brick garage, 22x100, $15,000.

Brooklyn, N. Y.; Joseph Paladino, 5901 13th avenue; one-story cement block garage and repair shop at 59th street and 15th avenue; $14,000.

Ossining, N. Y.; Jackson, William H., Ford Service Station to William H. Jackson Auto Sales & Service Station.

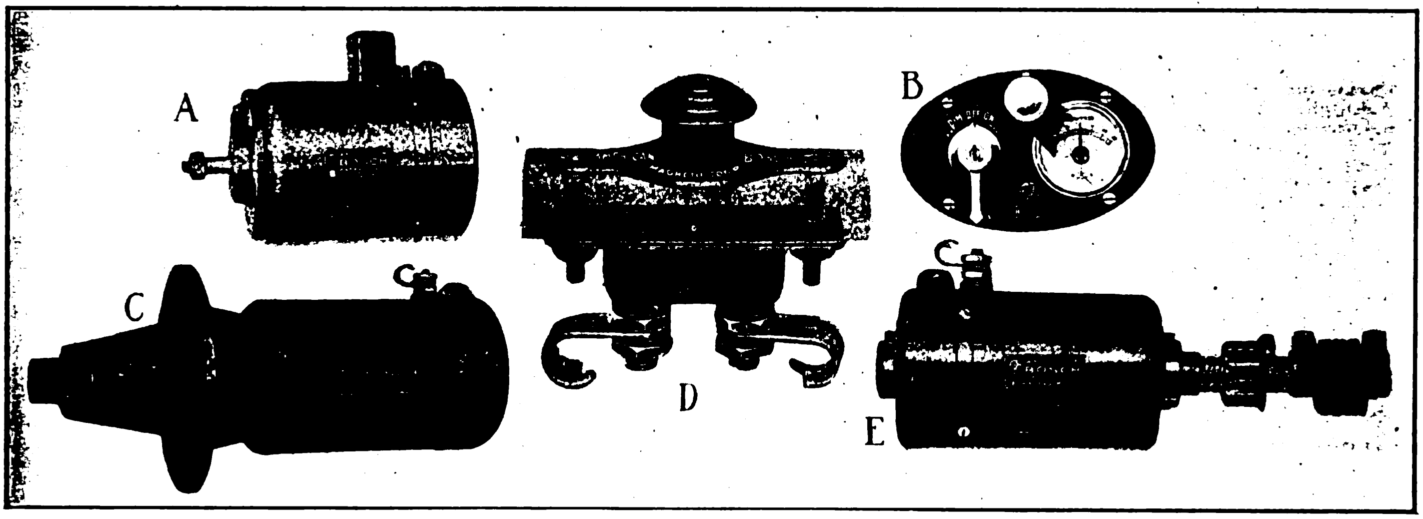
Eaton, O.; Union Motor Car Corporation to Washington Motor Co.

American Bosch Starting and Lighting System

THE American Bosch Magneto Corporation, Springfield, Mass., has recently perfected a new starting and lighting system that is creating considerable interest among automotive manufacturers and engineers. Elaborate tests and experiments carried out by the manufacturer have proved that the units are unusually efficient.

The generators and starting motors manufactured by the American Bosch Magneto Corporation are products of the highest quality and efficiency. Their design is especially good, being the result of years of experience in the manufacture of this type of automotive equipment, improved by special knowledge gained as a result of elaborate experiments and tests made in the company's laboratories during the past year. None but the finest materials are used in the manufacture of these instruments and they are made in a thoroughly modern plant by workmen who are experts in their respective lines.

The exceptional production facilities of the American Bosch Magneto Corporation make it possible to sell the generators and starting motors at remarkably low prices, considering their quality. The products cover practically all the requirements of the automotive field. The company's engineering and research laboratories are at the disposal of those manufacturers contemplating the incorporation of starting and lighting equipment on engines which they manufacture.



New American Bosch Starting and Lighting System: A, Generator Including Cut-Out Relay and Fuse Mounted on Top; B, Ignition and Lighting Switch, Including Ammeter and Dash Light; C, Starting Motor, Type 5M, Large Size; D, Starting Switch Placed on Floor of Car; E, Starting Motor, Small, Size, Type 4M.

Starting Motors.

The starting motors are made in two sizes. The outside diameter of the larger is five inches and it is designated as type 5M; the outside diameter of the smaller is four inches and it is designated as type 4M. Both motors may be furnished for operation with either six or 12-volt systems.

The stalling torque of these motors is exceptionaly high and the design such that power for starting is obtained with minimum output from the battery. Careful tests have proved that, although small in size, these starting motors develop sufficient power with the proper factor of safety for starting any of the standard automotive engines manufactured today.

The field coils and armatures are carefully wound with high grade wire and impregnated to insure perfect insulation and mechanical strength. All starting motors are equipped with Bendix drive, oilless, self-lubricating bearings, and are furnished for either inboard or outboard operation. They can be supplied for either cradle or flange mountings in accordance with S. A. E. dimensions. The motors with these flanges are self locating and require no support other than the flange.

These motors can readily be adapted for use on any of the standard makes of engines.

The starting switch is supplied with all starting motors. It is operated by the foot and is neat and conservative in design. The switch is sturdy in construction and made to assure minimum electrical losses.

Lighting Generators.

The lighting generators of the American Bosch Magneto Corporation are made in two sizes. The larger size has an outside diameter of five inches and is designated as type 5K; the smaller has an outside diameter of four inches and is designated as type 4K. Both generators can be furnished for either six or 12-volt operation.

Generators Are of Third Brush Type.

The generators are of the well known third brush type of regulation.

This assures a low cut-in speed, rapid rise to full output with increasing car speed, and decreased generator output with high speed driving. These generators are extremely simple and dependable. After their initial adjustment they require nothing in the way of outside control or attention.

Both sizes of the generators are of the four-pole type, wound with well insulated copper wire. The armature and all other windings are impregnated to insure perfect insulation.

Cut-Out Relay and Field Fuse.

The cut-out relay and field fuse are mounted on the top of the generator and are readily accessible. These two parts may well be termed the safety valve of the system—the cut-out relay protecting the battery from discharging when the generator is not running, and the field fuse protecting the generator winding in case of a broken battery connecting wire. The generators are equipped with the best ball bearings obtainable, drop forge pole shoes of liberal cross section and pressed steel frames machined accurately so as to give the maximum amount of flux with minimum field current.

The generators may be had equipped with all types of flanges and shaft extensions, details of which are given in the S. A. E. hand books. These generators are not adapted for systems not using a battery.

Lighting and Ignition Switch.

The lighting and ignition switch is of a plain, substantial design, and is mounted on an oval frame with the ammeter and dash light. The finish is black enamel with nickel trimmings. The switch controls the ignition and lighting systems and is provided with a key for locking. The ammeter is a standard Weston instrument and indicates accurately at all times the rate of charge and discharge of the battery. The light for illuminating the panel is operated by a self-contained switch and may be used as desired.

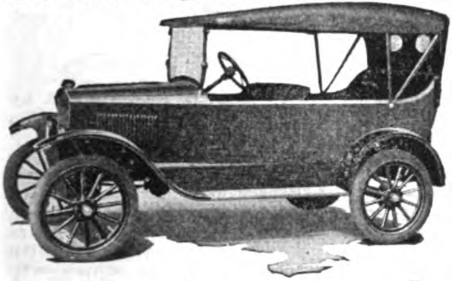
THE OIL GAUGE.

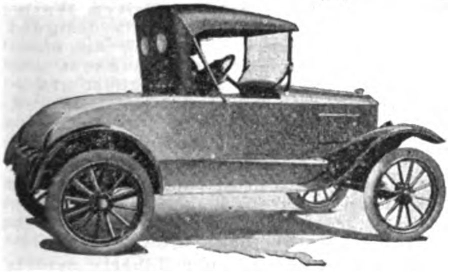
The oil pressure gauge furnishes an accurate means of determining the condition of the engine bearings. As the bearings wear the oil circulates more freely and the pressure naturally drops. If the oil gauge persistently shows low pressure it is reasonable to assume engine bearing wear providing the regulator is properly set.

ACCESSORIES, EQUIPMENT AND TOOLS FOR THE GARAGE AND REPAIR SHOP

The Dayton Classi-Body and Equipment for Fords has been developed to meet the demand for a specially built body of neat design which embodies features found in bodies of higher priced cars.

The bodies, as the trade name signifies, have been designed along classy lines, which make them very attractive. Special equipment is also included, such as a vacuum tank, ventilated windshield, one-man top, special radiator shell, extra tire carrier at the rear, apron across the front which ties the fenders, preventing them from rattling or working loose. Many other extras are included which makes this type of body very desirable.

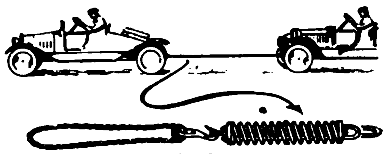




Classi-Bodies are made of the best of materials throughout and by skilled workmen, while the painting is stated to be on a par with higher priced bodies.

Manufactured by the Dayton Metal Body Co., Dayton, O. Prices and literature on request.

The Towline Shock Absorber for the use of service stations, garages and motorists in general embodies a new principle in tow line construction. Instead of a rigid rope or chain being used for the tow line, a spring is introduced between the towing car and the end of the tow rope, so that all strains are taken by the spring, relieving both the towing car and the car being towed from unnecessary strains.

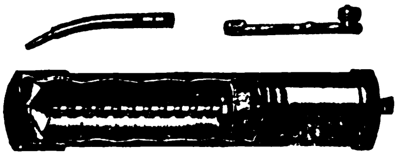


The spring and its parts are constructed especially for this class of work and are made from the best of tempered steel, while high grade malleable iron castings are used for the other parts.

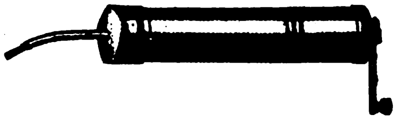
It is stated that the Towline shock absorber can be used equally as well for towing trucks or passenger cars, as the device is made unusually heavy.

Manufactured by Zimmerman Manufacturing Co., Valparaiso, Ind. Price and literature on request.

The Horton Positive Self-Filling Grease Gun fills a long felt want for a positive filling gun that can be filled without soiling the hands and that will force the grease into the mechanical parts of the chassis with assurance that the grease will reach the part for which it was intended.



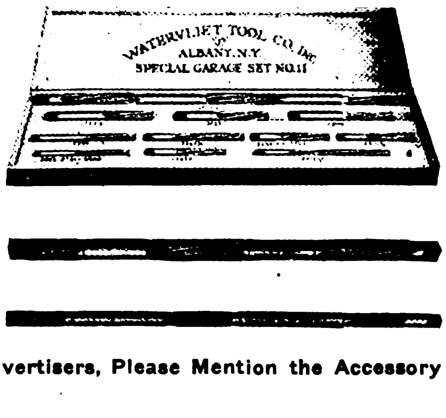
The Horton grease gun differs from the conventional form in the way that the grease is sucked in or expelled from the gun barrel. A coarse threaded rod runs the length of the barrel, having a bearing provided in the cap. A handle to operate the rod fits the upper end, fitting squarely on the rod. A plunger travels on the thread from the top to the bottom of the barrel, actuated by the handle, while a three-bladed fan is fitted at the lower end of the rod, which either draws in the grease or expels it as the operator desires.



The barrel is made of seamless tubing, 10½ by two inches, is finished in brass and holds nearly one pound of grease.

Manufactured by Kent E. Lyman, 813 American Trust building, Cleveland, O. Prices on request.

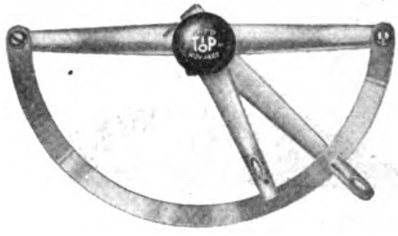
Watervliet Spiral Reamers for Fords are highly finished from the highest grade of tool steel and carefully machined with special equipment. They are scientifically heat treated in furnaces fired with manufactured gas, which runs uniformly, while each furnace is equipped with a Brown pyrometer. In grinding the reamers are held to size, every one which varies more than one-half thousandth of an inch being discarded. These reamers can be purchased singly or in sets and represent the latest development in reamers for the Ford car.



Manufactured by the Watervliet Tool Co., Inc., Albany, N. Y. Prices and literature on request.

The Benjamin Tip Top Buttons have been developed principally for the manufacturer of automobiles, but can also be purchased and used by the motorist when the horn button on his car fails.

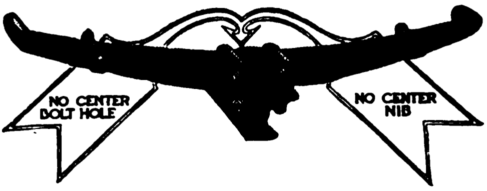
Tip Top buttons fit the top of the steering post in the center of the spark and throttle levers and operate the horn through electrical connections. Various styles of buttons are manufactured, so that they may be placed in different locations on the car and operate the horn from the most convenient location.



Tip Top buttons are claimed to be proof against water, dirt, grease and the shock of use. If the contacts become tarnished a downward press and twist will clean them and they cannot be dismantled or tampered with unless deliberately broken, the manufacturer states.

Manufactured by the Benjamin Electric Manufacturing Co., Chicago, Ill. Prices and literature on request.

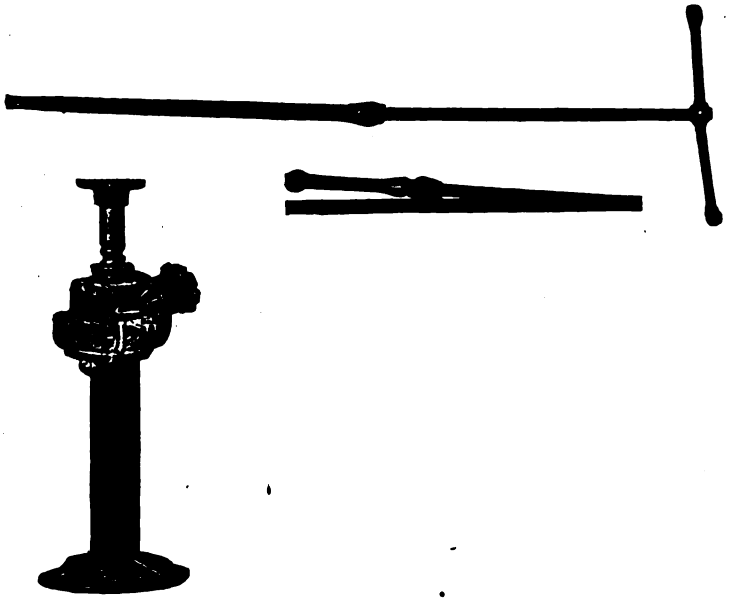
Titanic Semi-Elliptic Springs offer for replacement purposes many features not usually found in automobile springs. Chief among these is the arch, which answers two purposes, that of keeping the leaves in place on the axle and strengthening the leaves at their weakest point. The arch, it is stated, eliminates the necessity for boring holes in the leaves, and does away with the use of a bolt fastening.



The Titanic spring is made of the best of steel obtainable for the purpose and is guaranteed to be 100 per cent. strong from end to end. The springs are ready to fit when received and are a definite assurance against future trouble, it is claimed.

Manufactured by the Tuthill Spring Co., 760 Polk Avenue, Chicago, Ill. Prices and literature on request.

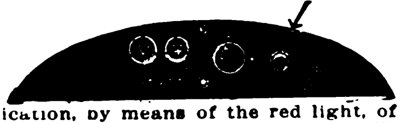
The "Reliable" Jack is manufactured especially for the motorists who wishes a jack that is built unusually strong, that is simple in operation and that occupies but little space in the car when it is folded.

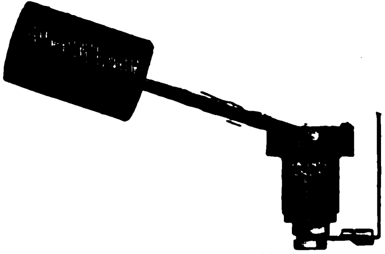


The Reliable jack operates on the screw principle, actuated by a turning motion of the jack handle, transmitting the power of the operator through bevel gears to the screw. The handle is collapsible and folds into small space, yet is very strong and is claimed to lift the heaviest car with ease. A full line of these jacks is made, each adapted to a special use, varying from light to heavy passenger cars, trucks and tractors.

Manufactured by the Elite Manufacturing Co., Ashland, O. Prices and literature on request.

The Dunn Electric Gasoline Signal is a new device that should prove of interest to motorists from the fact that it shows on the dash, by means of a red electric light, when the gasoline supply falls to two gallons or below. A small push button is located on the dash within easy reach of the operator, which gives an indication, by means of the red light, of the condition of the gasoline supply, while the unit which operates the light is located in the main gasoline tank and consists of a cork float fastened to a rod which is attached to the unit. Electrical connection is made in the unit, when the cork float reaches a level equivalent to two gallons remaining in the tank, causing the light on the dash to indicate the fact, when the button is pushed up.



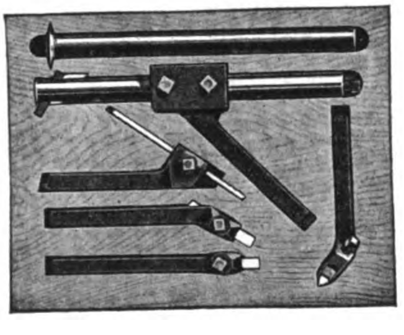


The device is easily installed by any garage repairer and once in place is claimed to eliminate the danger of running out of gasoline while driving.

Manufactured by the Dunn Motor Device Co., Indianapolis, Ind. Price, complete, $7.

The Red-E-Style "G" Set has been especially designed for the average garage and small machine shop where only one or two lathes are in use, and contains a complete set of tools for all lathe work. The outfit consists of a straight and left-hand off-set turning tool with an off-set cutting-off and threading tool giving the necessary implements required for outside work, while the boring bar and holder, with internal threading bar to be used in the same holder, gives complete equipment for all inside turning and threading.

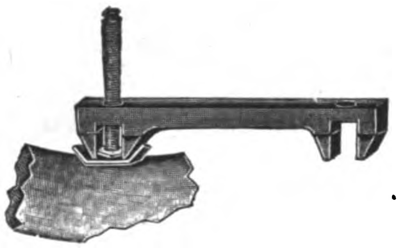
The set will prove very handy to the mechanic as the tools are fastened to one container board, which can be kept near the lathe ready for instant use while, if a tool has been taken off and become mislaid, its absence is immediately noticed and the tool can be looked up at once and replaced.



The set includes five tools and the container board. The sizes of tools vary from ½ inch to one inch inclusive. The cutters are made from high speed steel, with the exception of the threading cutters, which are made from carbon steel.

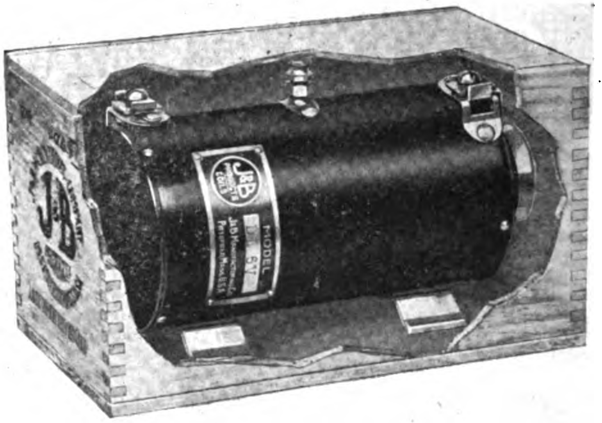
Manufactured by the Ready Tool Co., Bridgeport, Conn. Prices and literature on request.

The Perfect Valve Wrench is especially designed to tighten the nuts which fasten the valve stem to pneumatic inner tubes. Two ends are provided, each a different size, to accommodate the two sizes of nuts in common use on inner tubes. It is made of metal and in such a manner that the wrench slips over the valve stem, assuring a firm hold for the jaws.



Manufactured by the Lewsen Manufacturing Co., Portland, Me. Price, $1.35.

J & B Replacement Coils are designed especially for the garage and service station trade wishing to carry as small a stock of coils as possible and still be in a position to fit new coils to any make of car equipped with battery, coil and distributor systems.



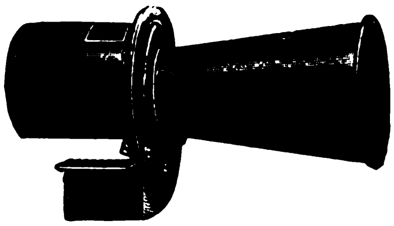
Special brackets have been supplied by the manufacturer which will adapt this coil to any car, and all that is necessary for the dealer to carry in stock is a line of the brackets and a few coils. Each coil is tested before leaving the factory and is shipped in a strong wooden box, which protects it from damage. Jobbers throughout the country are supplied with coils and a stock of brackets which will fit any car.

Manufactured by J & B Manufacturing Co., Pittsfield, Mass. Prices through nearest jobber.

The Model EA Electrical Driven Warning Signals have been especially designed to withstand hard service. They are made of the best of materials throughout and the workmanship is of the highest grade, while a wide variety of signals is offered, making it possible for the motorist to choose the one best adapted to his particular needs.

The signals are of attractive design and every horn is carefully made and assembled and tested under expert supervision and all parts are made interchangeable.

It is stated that the new Liberty models recently added to the line are particularly serviceable for trucks or heavy cars where continual pounding of the chassis is experienced, as they have been designed to operate under the most exacting conditions.



The E. A. warning signals are tested under conditions more strenuous than will ever be experienced in actual service. The manufacturer absolutely guarantees materials, construction and workmanship, and if, upon examination, any defect due to faulty workmanship is found, the horn may be returned properly packed to the manufacturer by parcel post and the fault will be corrected free of charge.

Manufactured by the Automobile Supply Manufacturing Co., Myrtle Avenue and Spencer Street, Brooklyn, N. Y. Prices and literature on request.

Peters' Metallic Filler is a brass compound which becomes plastic at 300 degrees Fahrenheit and at this low temperature entirely eliminates, it is claimed, the possibilities of warping or distorting the casting. After the filler is applied it has all the qualities of brass, it is stated, including its hardness, density and appearance, while it can be machined and, in scored cylinder repairs, will sustain any piston speed.

The method of applying is simple as the crack is widened by chipping as in welding, and is then filled with the metallic filler, using a spatula or hack saw blade to work the metal into the crack while in a plastic state. Heat from a blow torch is necessary to keep the metal plastic while it is being worked into the crack. After the crack is filled any filler adhering to the sides is scraped off, while the patch is rolled down solid, with a small roller, till the crack shows an unbroken appearance. After the filler has cooled for about five minutes the patch may be dressed off with a file.

Peters' metallic filler can be used with equally good results in scores in the cylinders, being applied in a similar manner as for filling cracks in the outer casting, after which it is rolled with a special roller, which fits the walls of the cylinder, applying a firm, even pressure to the filler, seating it firmly in the score.

PETERS' METALLIC FILLER

It is stated that Peters' metallic filler meets a long felt want in garages and service stations, enabling the repair work to be done in a much shorter time than formerly required, and that the job when finished has the appearance of high class workmanship.

Manufactured by the Aluminum Brazing Solder Co., 1303 Widener building, Philadelphia, Pa. Price, large size, repair man's package, $5.50; consumer's package, $3. Sold through jobbers and dealers.

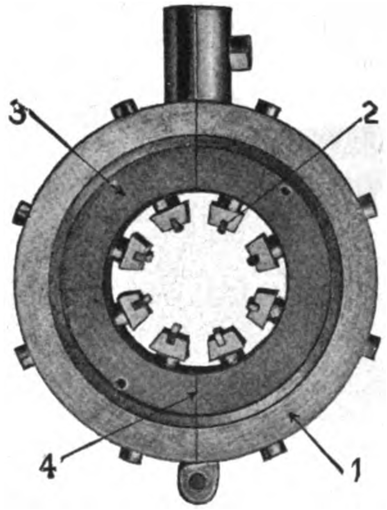
The Peters' Crankshaft Grinder is claimed to possess all the qualities which an expensive machine, specially built for the purpose, cannot surpass.

The difficulty of truing up a crankshaft lies in centering the crankshaft pins, which are eccentric to the main bearing pins. The shape of a crankshaft is such that spring action is unavoidable, say up to a quarter of a thousandth of an inch.

This newly invented crankshaft grinder is stated to eliminate all this trouble and enables anyone, without mechanical knowledge, to perform a first class job in a few minutes.

The tool consists of a chuck-like housing, made of aluminum, 1¼ inches wide, to go between any size bearing now used in the motors of automobiles or motor boats. The housing is split and hinged to allow the tool to go around the pin, thereby eliminating any centering. The tool has eight high-speed steel cutters which work toward the center and which are operated by means of a screw plate which moves all of the cutters to and from the center universally. The cutters extend far enough to prevent the chips from clogging, which would scratch the surface of the pin.

To operate, open the tool and place it around the pin; turn the screw plate with the spanner wrench until the cutters start to cut. A few complete turns of the tool will remove the high spots, leaving a perfectly round, smooth surface. The entire operation takes but one-fifth the time ordinarily required on a lathe, it is stated.

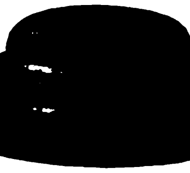


Peters' Crankshaft Grander eliminates rebabbitting of bushings because of its sensitive adjustment. Eccentric or egg-shaped bearings can be trued without taking off an excess of metal, as is the usual occurrence when regrinding by the old method. This tool can be adjusted to 1/5000 of an inch.

Peters' Crankshaft Grinder is unreservedly guaranteed by the manufacturer against all physical defects for a period of one year.

Manufactured by the Aluminum Brazing Solder Co., 1303 Widener building, Philadelphia, Pa. List price, $75.

The Universal Push Button is adapted to all types of electric operated horns and can be located in any convenient place about the car. The button is well made of high grade material, while its connections to the electrical system of the car are easily made in a few minutes time. The button connector is simple in construction, is spring actuated and gives a positive connection between the ends of the circuit when the button is depressed either at the sides or in the center. The cover of the button is made of metal, while the button itself is composed of a composition which will resist moisture and will, it is stated, stand hard usage.



The insulated portion of the button, to which the wires are attached, is composed of fiber, which completely insulates the wire ends, preventing the horn from blowing except when the button is depressed.

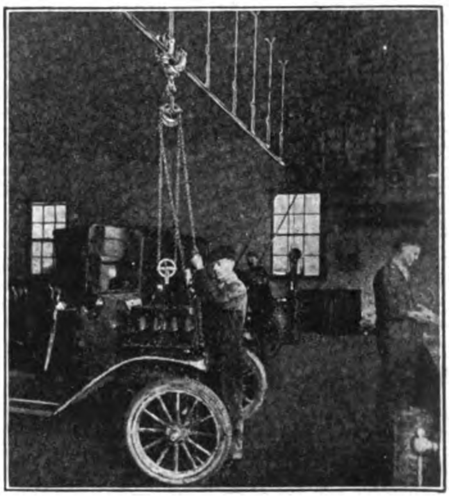
Manufactured by the General Phonograph Manufacturing Co., Elyria, O. Price, 30 cents each.

The Buckeye Standard Bumpers have been developed after many years of experimenting to fit all makes of cars. Special equipment is required in order that bumpers may be fitted to certain makes of cars, and these fittings are also supplied by the manufacturer of Buckeye Standard bumpers. All bumpers and fittings are of the highest grade steel and iron and made by workmen skilled in this special branch. In ordering bumpers the purchaser should mention the name of his car and the year and model number, as many cars require special fittings on account of the splash pan, which is located between the side frame at the front. A new catalogue, No. 15, has just been issued by this company, which shows the line in detail.

"BUCKEYE" STANDARD
PAT.
Mfg. By The C.B.&F.Co. Springfield, O.

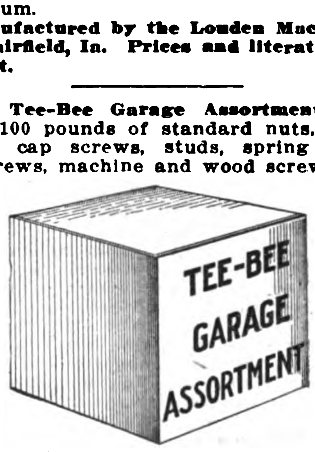
Manufactured by the Central Brass & Fixture Co., Springfield, O. Prices and literature on request.

The Louden Garage Equipment Carrier is particularly practical for all around service in any department of the garage or service station. It is especially adapted for hoisting an engine from the car frame and transferring it to the work bench or anywhere within the scope of its trackage. With this equipment it is stated that it is possible to lift either end of a car or truck, in case of necessity, to make repairs. The carrying capacity of this carrier is specified at 500 pounds, although in actual performance considerably greater loads have been handled, it is stated. A 500-pound lift fulfills the needs of the average service station, although equipment can be had with a much higher capacity. The track is made of high grade carbon steel. The shape is such that that all unnecessary friction is eliminated, while the rolls operate on roller bearings, which reduce friction to a minimum.



Manufactured by the Louden Machinery Co., Fairfield, Ia. Prices and literature on request.

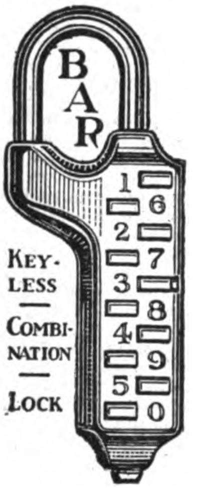
The Tee-Bee Garage Assortment contains 100 pounds of standard nuts, bolts, rivets, cap screws, studs, spring bolts, set screws, machine and wood screws and other articles necessary in the daily conduct of the successful garage.



Service stations and garages will find this assortment very useful, as it contains just the desired assortment, sizes and quantities of each that are desirable in average service station work.

Manufactured by T. B. Moore, 376 Grand River Avenue, Detroit, Mich. Price, $7.50 f. o. b.

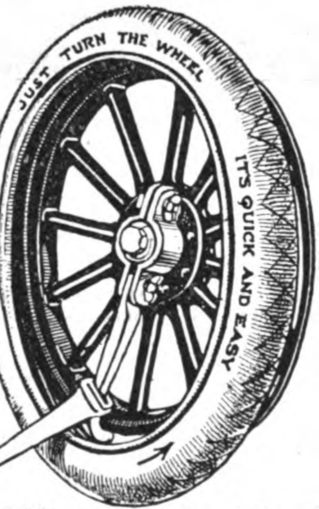
The B-A-R Combination Lock for locking automobiles, spare tires, motorcycles, etc., is claimed to be made of non-rusting material, very hard and tough, and is cast in a water cooled die under a pressure of 350 pounds, thus insuring a smooth, solid block free from mechanical imperfections.



The shackle is made of 5/16-inch steel, case hardened and made rust proof by a process that makes steel impervious to the elements. The 10 bars of the lock are cast in a die, similar to the body of the lock, are all uniform in size and are interchangeable, it is stated.

Manufactured by the Iowa Lock & Manufacturing Co., Burlington, Ia. Price, $2.25 each; per dozen, $27.

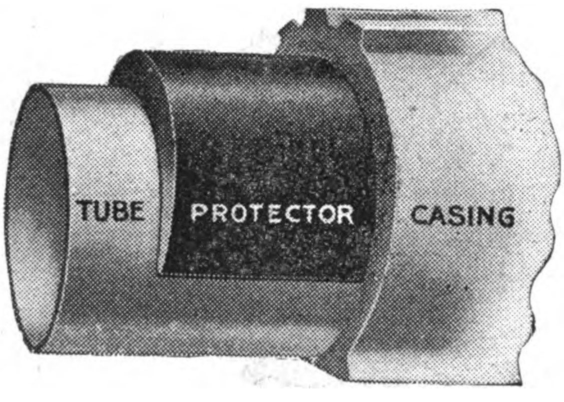
The Case Tire Tool for Clincher Tires is claimed to be the quickest device known for removing and replacing clincher tires on a rim. The device consists of a special tool which fits the edge of the rim and is provided with a turned edge, which fits in back of the bead of the tire. One end of the tool has an adjustable socket, fitting over the hub of the wheel, and adustable to the radius of the wheel. After the tool is positioned the second tool of arm is slipped over the first at a point near the tire and acts as a lever to roll the tire from the rim. The handle is also used to pry the tire from the rim in order that the tire remover or tool may be inserted. The device is made throughout of the best of material and will, the manufacturer states, last indefinitely.



Manufactured by the Handy Manufacturing Co., Cincinnati, O., and St. Paul, Minn. Price, $4.25.

The Coffield Tire Protector is constructed entirely of firm and elastic rubber, wrapped around a steel core. The device is placed in a tire between the tube and tire, protecting the tube from punctures and prolonging the life of the tire. The manufacturer states that punctures are eliminated and that stone bruises are prevented by the use of these tire protectors.

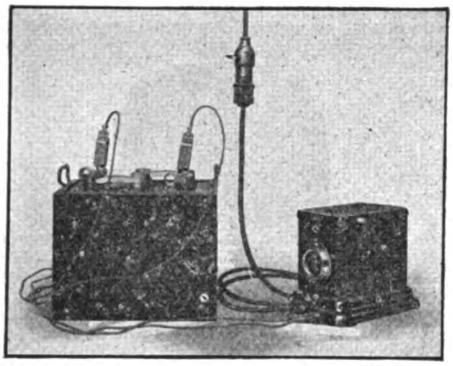
The Coffield tire protector is covered by United States patents and aside from preventing punctures, etc., is claimed to support and protect the fabric of the tire, keeping it from becoming weak and eventually blowing out.



Manufactured by the Coffield Tire Protector Co., 117 West Court Street, Dayton, O. Prices on request.

The King Battery Charger. A number of attempts have been made, from time to time, to produce a satisfactory electrical device for changing alternating current to direct, to be used for charging batteries. The King battery charger, it is claimed, complies with all requirements.

This instrument is of the mechanical type and is designed for taking a 60-cycle alternating current from an ordinary lighting lamp socket and transforming it into direct current. When the battery is completely down the charger will throw the current into the battery at eight to 10 amperes, and as the battery becomes charged the number of amperes will be correspondingly reduced, making the device self-adjusting, and should the battery charger be left running for 12 hours or longer, after the battery is fully charged, no damage will be done.

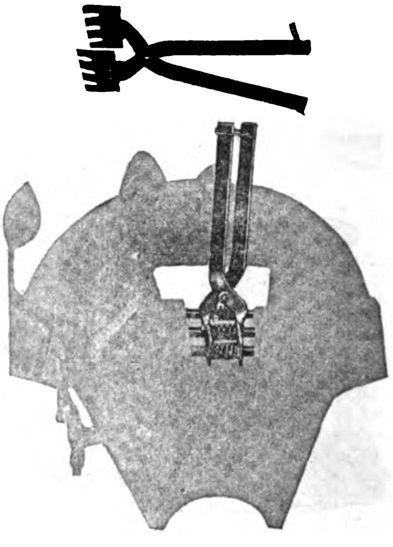


By the use of this battery charger batteries can be charged at any time and the life of the battery will then be extended, as in the case where the automobile user leaves his battery until it is no longer possible to start the engine with it. By keeping the battery fully charged there will be a considerable saving in fuel, due to the fact that it insures a hot spark at all times. It is unnecessary to remove the battery from the car, as sufficient electrical cord is supplied to place the charger on the running board and connect it to the battery and from the charger to the electric light socket. It is impossible to charge a battery in reverse. In the event of the current going off while the battery is being charged, during the period it is not operating, the battery will not be discharged. It is immaterial how the clips are attached to the terminals, so any inexperienced person may charge his own battery without danger of injury. By the use of the individual battery charger the battery can be charged from time to time, even though not in use, particularly in the winter, as a fully charged battery will not freeze at 50 degrees below zero. With this device a battery can be charged at a cost of from five to six cents.

In this type of battery charger there are no expensive parts to break or wear out, no chemicals or electrodes to renew. Renewals of carbon can be purchased at the factory at 30 cents each. The current consumed in charging a battery 10 hours amounts to from five cents to eight cents.

Manufactured by the King Electric Manufacturing Co., Inc., 20-26 North Niagara Street, Tonawanda, N. Y. Prices and literature on request.

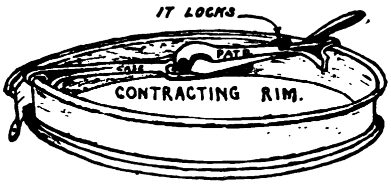
The Roberge Ford Transmission Band Spring Compressor is designed to facilitate the removal or replacement of the bands in the Ford transmission. The device consists of two compressors, joined to two handles and fastened by a rivet at one end. Slots are provided in the compressors which allow them to fit over the studs to which the bands are fastened, while a link is supplied at the top, which enables the operator to hold the hand in the compressed position while the adjusting nuts are being loosened.



The device is made of high-grade material throughout and will prove a very handy tool for the service stations catering to Ford trade.

Manufactured by Harry Knight Co., 805 Southwestern Life building, Dallas, Tex. Price, $3.

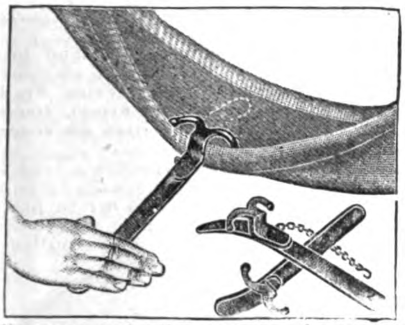
The Case Rim Tool for Demountable Rims consists of suitable arms provided with hooked ends, which fit over the edge of the rim. One of the arms is provided with an adjustment at the inner end, while the second has a pin to which a lever is fastened. An extension is placed on the pin which fits into the adjustment of the first arm at the center, allowing the arms to contract the rim and hold it in this position while the tire is being removed or placed on the rim. By placing the tool across the rim with the split in the center, the tool can be used to expand the rim.



The device is made of the best of material throughout and is claimed to do the work in quick time and in a satisfactory manner.

Manufactured by the Handy Manufacturing Co., Cincinnati, O., and St. Paul, Minn. Price, $4.25.

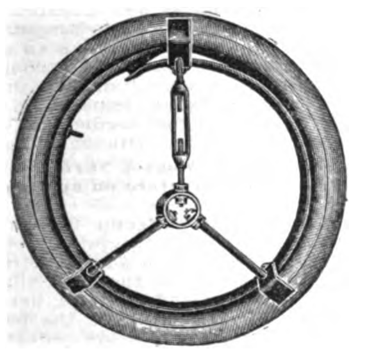
The Lewsen Tire Spreader and Tire Iron No. 1-S combines a tire iron with a tire spreader which can be used by the motorist to good advantage when inspecting the inner surface of the tire for stone bruises, nails, cuts and other causes of punctures. With this device one bead is spread open at a time, giving ample room for inspecting the inner portion of the tire. It is small in size, still is powerful enough to open the stiffest bead, the manufacturer states.



Manufactured by the Lewsen Manufacturing Co., Portland, Me. Price, $2.

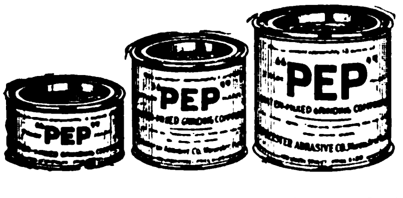
The Lewsen Quick Rim Spreader is designed to facilitate the quick removal or replacement of tires on demountable rims. The device consists of three arms, two of which are fastened to the center ring.

The ends of the arms terminate in clamps which fit over the rim, giving a firm purchase for the arms when contracting the spring rim. The turnbuckle arm is attached to the rim at the split portion and turning the turnbuckle opens or closes the rim as desired. The device is construucted of metal throughout and is guaranteed to give satisfaction.



Manufactured by the Lewsen Manufacturing Co., Portland, Me. Price, $7.50.

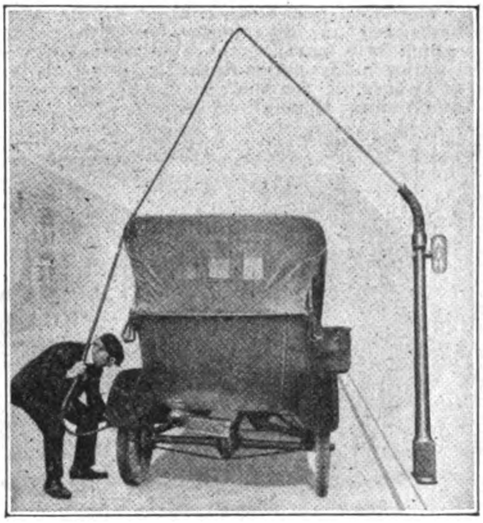
"Pep" Water-Mixed Grinding Compounds have been developed to meet the demand for a more perfect abrasive to be used in garages, service stations and machine shops where a large amount of grinding work is handled. Pep, as its name implies, is claimed to be an unusually rapid grinding compound, which is capable of finishing a bearing surface or a valve to a perfect seat in a fraction of the time ordinarily consumed. Water is used instead of oil as a solvent, the advantage claimed being that water works better with this special abrasive than does oil, and that the abrasive is prevented from entering the pores of the iron or steel. Three sizes of containers are used in shipping, each size adapted to the needs of the station purchasing the abrasive.



Manufactured by the Worcester Abrasive Co., 1662 Broadway, New York City. Prices and literature on request.

The Double-Service Air Hose Stand is designed for serving motorists with the two requisites so necessary to the successful operation of the motor vehicle, namely, air and water.

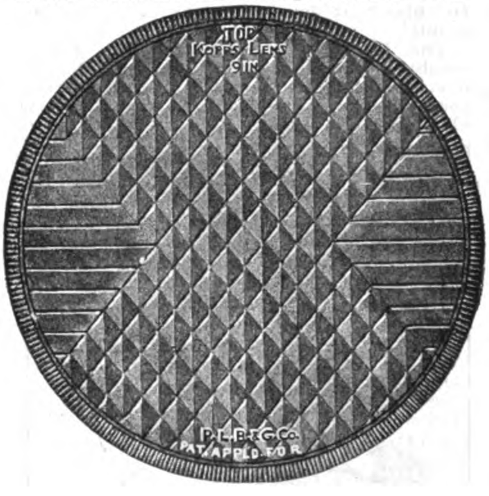
The outfit occupies a small amount of space at the curb and by means of the extension pipe at the top of stand and the length of rubber hose attached, a wide range of use is gained. The column is artistically formed from cast iron and is provided with a cast iron door at the bottom for attaching the hose and service pipe, also the water pipe connection.



The outfit can be fitted with an electric light globe, bulb and cord at nominal expense, adapting the outfit to night as well as day service.

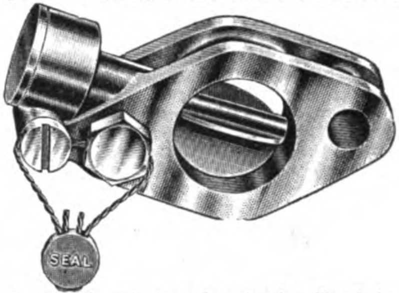
Manufactured by the Devices Industry, Oshkosh, Wis. Prices and literature on request.

The "Kopp" Lens is a new head light glass which is claimed to be a decided improvement over previous devices of this nature, and is said to eliminate the excessive glare of the head lights while driving at night and to provide a light which is free from the disagreeable features found when driving in fog or mist. It is stated that the light is kept down to the ground, and that the predominating colors are green, yellow and orange, which have proved less harmful to the eyes and are the colors that show strongest; while red and blue rays are practically eliminated. Kopp lenses are said to comply with the law as defined in many states, as the light is kept below a 42-inch level, throwing the light 75 feet in front of the car and illuminating the road to a width of 25 feet.



Manufactured by the Pittsburgh Lamp, Brass & Glass Co., Pittsburgh, Pa. Prices and literature on request.

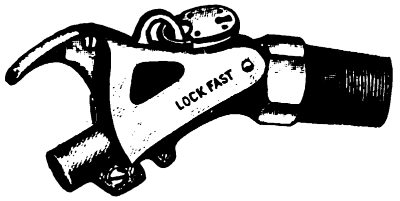
The Dell Governor is a practical device which may be attached to the engine of the Ford truck; it can be set at any desired speed, and will, its maker claims, stay set at that speed until changed. The device is of small size, can be fitted by anyone with slight mechanical knowledge, and once located and set, the Ford truck can be operated no faster than the governor will allow. The device is fitted between the flanges of the intake manifold between the carburetor and the manifold and, after setting, is sealed so that the driver cannot tamper with it without detection.



The Dell governor comes packed in a neat box containing full instructions for attaching, a few minutes' time being all that is required to fit it to the engine.

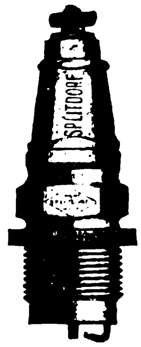
Manufactured by Dell & Co., Majestic building, Detroit, Mich. Price, $15.

The Stearns "Lock Fast" Oil Gates are especially designed to fill a long felt want both in public and private garages and service stations where quantities of light and heavy oil are stored in either steel or wooden barrels. The device consists of a cast iron spout, fitted with a suitable shut-off, which is claimed to stop the flow of oil without dripping and has the added feature that it can be locked with a padlock when in the closed position. It is stated that one of these gates will quickly pay for itself in the possible saving of oil.



Manufactured by E. C. Stearns & Co., Syracuse, N. Y. Prices and literature on request.

The Splitdorf Spark Plug P-163 is designed principally for use with the Splitdorf Aero magnetos in four and six-cylinder engines, but may be employed with equally good satisfaction with any ignition outfit. The insulator of the plug is made from stone, while the shell and center electrode are of high-grade steel, which will withstand the high temperatures in the combustion chambers of internal combustion engines. It is stated that the plug is a high-grade article, and that nothing but the best of material enters into its construction.

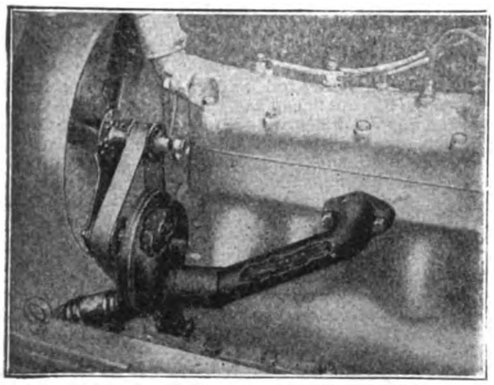


Manufactured by the Splitdorf Electrical Co., 98 Warren Street, Newark, N. J. Prices and literature on request.

The Centrifugal Water Circulator for Ford Cars consists of a centrifugal water pump, which is fitted to the intake water pipe between the radiator and the side of the engine, driven by a pulley attached to the pump shaft by a belt connected to the crankshaft of the engine and also driving the fan.

The pump is made of the best of materials and is fitted with a compression grease cup which supplies lubrication to the pump shaft bushings. The pump is of ample size and will, it is stated, keep the Ford engine cool in the hottest summer weather.

Water circulators of this type are used on Fords equipped for racing purposes only and the manufacturer of these cars reports that they can recommend them very highly as to their efficiency and simplicity of installation.



The device may be easily installed by any mechanic in a few hours time and the manufacturer states that troubles due to overheating, carbon accumulation, etc., are practically eliminated.

Manufactured by the Standard Auto Accessories Co., 127 South Green Street, Chicago, Ill. Prices and literature on request.

The Baseline Autowline has been developed after many years of careful experimenting on the part of the manufacturer, and is claimed to be the best article of its kind for cars that cannot be operated on their own power, for pulling stalled cars out of the mud and for many other purposes for which a strongly made tow line may be used.

The Baseline Autowline consists of a 20-foot yellow strand wire rope, equipped with a patented snaffle hook at each end, and two Manila slings. These slings are to be used around the rear axle of the towing car and around the front axle of the towed car, so as not to mar the paint. The patented snaffle hook fastens to the loops of the Manila rope at each end, holding the Autowline in place with no chance of the hook slipping off.

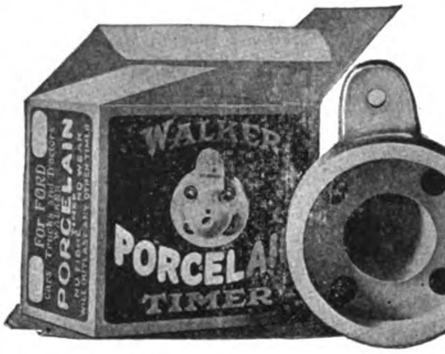
BASLINE AUTOWLINE
REG. U.S. PAT. OFF.

The Autowline is strongly made of the highest grade of steel wire and is guaranteed to handle with ease either passenger cars or trucks under the most adverse circumstances.

Manufactured by Broderick & Bascom Rope Co., St. Louis, Mo. Prices and literature on request.

The Walker Porcelain Timer is designed and built to give utmost satisfaction to the Ford car owner. The shell is made of the highest grade porcelain, which is the best known insulating material. The timer is not affected, it is claimed, by either oil, water, heat or cold, thus eliminating all possibility of short circuiting the current. It is stated that due to the rugged construction of the timer it will give unlimited use.

The hardened steel contact points are embedded in a smooth porcelain race, which is a part of the shell, thus overcoming many commutator troubles, as it is impossible for the race to become soft and bumpy through wear.

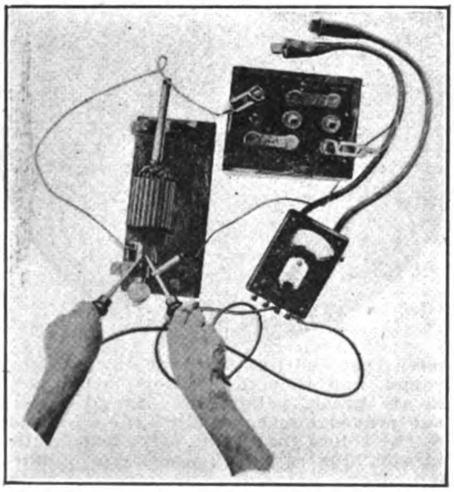


The rotator assembly is made of the finest grade steel and is of the brush or magneto type, being sufficiently strong to give long service. Due to improved design it gives a light, but well balanced assembly. Contact is made by the hardened steel brush wiping contact points, embedded in the porcelain race and produces a clean, hot spark which guarantees a quick start, so essential to the Ford engine.

Manufactured by the Walker Accessories, Inc., 1991 Broadway, New York City. Price, $1.75. Dealer and jobbing trade solicited.

The Hydrate Electro Trouble Detector has been developed for the garage and electric service station repairer who wishes to make quick tests of electrical troubles that develop in the modern automobile.

The Hydrate Electro Trouble Tester combines five instruments in one. It is so designed that a series of simple tests, readily made and requiring no special electrical training, will enable anyone, the manufacturer states, with this instrument to discover the cause of any defect or failure in the generator, starting motor, lights, horn, switches, wiring, battery or ignition apparatus.



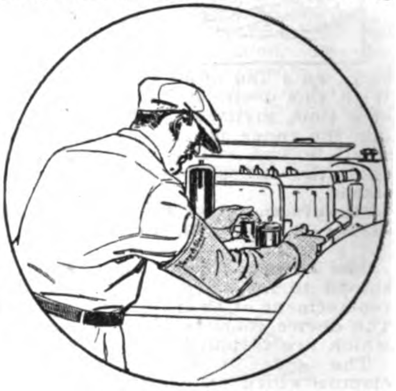
With this detector is furnished the most complete and easily understood instruction book, which has proved an excellent text book for wiring, electrical troubles, etc.

The instrument is a combined voltmeter and ammeter, with three-volt and two-ampere scales for accurately testing electrical pressure or flow of current found in automobile equipment.

With the detector are furnished leads, prods, clips and cadmium test electrode.

Manufactured by the Service Station Supply Co., 30 East Larned Street, Detroit, Mich. Prices and information on request.

The Save-A-Sleeve Glove fills a long felt want among motorists who wish to do the work necessary to keep the car in perfect condition. The glove is made with a long, protecting sleeve, which can be pulled up and over the shirt or coat sleeve, thoroughly protecting it from contact with parts of the engine that may be oil coated.

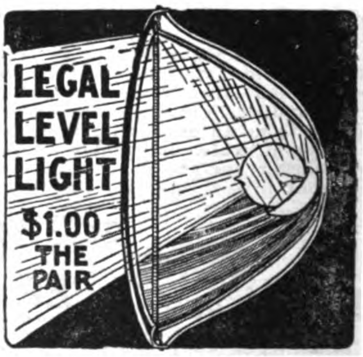


Save-A-Sleeve Gloves are claimed to be as easily put on and taken off as an ordinary glove; they are made of a strong and durable khaki-colored duck, double-stitched for firmness, are impervious to oil and grease, are cut full to the size of the hand and stay in place without slipping.

Manufactured by Moss & Naylor, Marion, Ind. Prices and literature on application.

The Legal Light Deflector is stated to be the most efficient non-glare device on the market. The reason advanced is that more light is given on the road than by the plain reflector and that its use does not prevent the utilization of the balance of the light's rays, which are reflected at each side of the car, thoroughly lighting the sides as well as the front, and eliminating the glare feature so common in the ordinary head light.

The device consists of a small reflector which is located under the light bulb, the duty of this reflector being to throw the light upwards against the larger reflector of the head light. This action of the small reflector cuts off the rays of light which would ordinarily strike the lower part of the head light reflector and shine in the eyes of oncoming drivers. It is claimed to eliminate this glaring feature and makes a safe light at small expense for night driving. Full instructions for attaching and focussing the lights are packed with each set.



Distributed by the Monroe Auto Specialty Co., 203 State Street, Rochester, N. Y. Price, $1 a pair.

The Sattler Recorder is designed especially for use on motor trucks and consists of an instrument containing a movable paper dial divided into 24 hours which keeps an accurate record of the speed, stops and mileage made by the truck during the 24-hour period. The dial record is made by a suitable driving mechanism connected to the driving part of the car, and by a clock-like device which turns the dial through the 24-hour period. Two lines on the dial are made by the connection to the moving part of the car, while the third line, which is a check on the first two records, is actuated by the side sway of the vehicle and protects the device from being tampered with. It is stated that although the driving mechanism may be tampered with by the operator of the truck, the third record will invariably give a complete record of the doings of the truck during the length of time that it is in use.

The Sattler Recorder
HANS SATTLER

The records are changed by the owner of the truck or one of his representatives, and he is thus able to inform himself at a glance just what the car has been doing.

The Sattler recorder is substantially built and, it is stated, will last for years. It is fully guaranteed for one year against defective material and workmanship and to work correctly.

Manufactured by Hans Sattler, Sheboygan, Wis. Price, f. o. b., $75, complete with 50 charts.

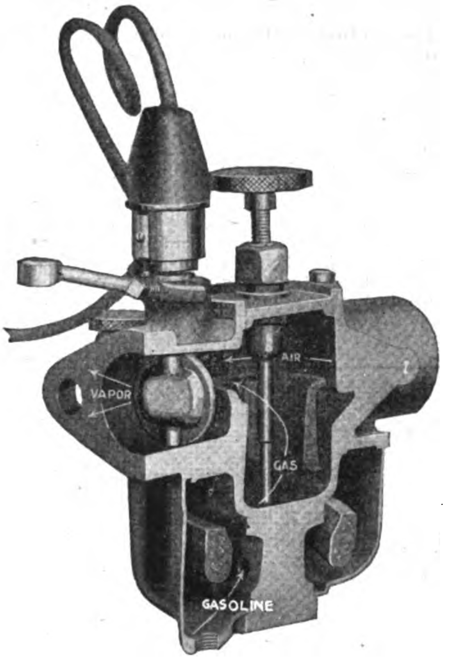
Duraco Compressed Asbestos Sheet Packing is manufactured especially for the automotive trade and for the internal combustion engine where heat has to be taken into consideration.

The packing may be used with satisfaction for making intake, exhaust, valve cap and carburetion gaskets, and is claimed to be heat and oil resisting. The ease with which the packing can be cut appeals to the repairer, and the absence of wire assures an even edged finished gasket. Gaskets cut from the sheet have an advantage; it is not necessary to carry a large stock of varying sizes, as gaskets to fit any need can be easily cut.

Other articles manufactured are graphited asbestos rope packing for centrifugal water pumps and Duraco in tube packages for the convenience of the jobber when selling less than full sheets.

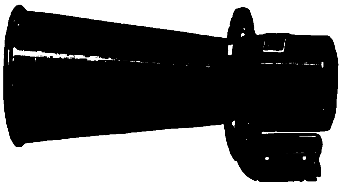
Manufactured by the United Asbestos Packing Co., Chicago, Ill. Prices and literature on request.

The Electrical Heated Throttle Valve offers a unique method of heating the gas mixture before it reaches the combustion chamber of the internal combustion engine. It is stated that the device may be easily attached to any make of carburetor in a few minutes time by simply removing the old throttle and substituting the electrically heated valve in its place. The device consists of the regulation throttle valve, to which is attached a heating unit. enclosed in such a manner that the moisture of the vapor will not affect it. It is connected to the storage battery by means of a wire and switch suitably located. It is stated that only 30 minutes time is required to make the installation. In ordering state size and make of carburetor.

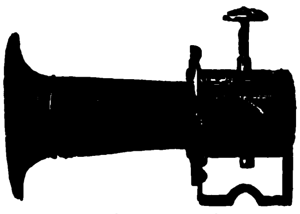


Manufactured by the Instant Starter Co., Inc., Kokomo, Ind. List price $9 complete with wire and switch.

The E. A. Model 9 Driven Horn for Ford Cars consists of a direct current motor driven signal device that may be attached to the engine of the Ford car in place of the regular buzzer horn. Removing the bolt on the left side of the third cylinder allows the horn to be securely fastened, while the only other change in installing is the moving of the connection of the horn button wire from the first to the second wire on the terminal block on the dash.



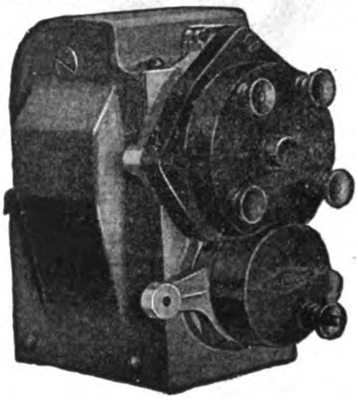
The horn is made throughout of the best of material and shows a high degree of workmanship, all metal parts being finished in black enamel. Adjustment of the horn is made by a small screw at the end of the armature; a lock nut is also provided, making the adjustment positive.



Manufactured by the Automobile Supply Manufacturing Co., Myrtle Avenue and Spencer Street, Brooklyn, N. Y. Prices and literature on request.

The Splitdorf Four-Cylinder, Five-Spark Magneto answers the heavy fuel problem for automotive vehicles, as engineers have developed several fuel heating devices for obtaining better fuel vaporization. In some cases these are built into the carburetor. In others, an auxiliary device is attached to or surrounds the intake manifold. But in either case an extra ignition spark in the heating chamber is required to start and maintain the partial combustion of the fuel.

When these devices first appeared it was common practise to use a series spark plug in the heating device, leading the spark from this plug to another in one of the cylinders. Thus one spark was required to do double duty. In theory this worked well, but in practise it was difficult to find a series type of spark plug which could be relied on.



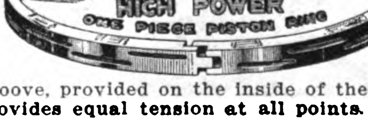
Splitdorf engineers were asked to produce a magneto which would furnish hot, correctly timed sparks for the cylinder ignition and also sparks for the fuel heating chamber. Since in the Splitdorf-Aero magnetos only the negative sparks are utilized for cylinder ignition, it was a simple matter to modify the standard four-cylinder aero magneto to produce four sparks per revolution instead of but two, and to lead the four extra positive sparks through a fifth distributor terminal to the extra spark plug in the heating chamber.

This magneto, known as the Splitdorf-Aero model 480, has been given extensive field as well as laboratory and breakdown tests and is now in production and ready for delivery. It may be furnished with or without the Splitdorf enclosed automatic impulse starter and is therefore

Manufactured by the Splitdorf Electrical Co., Newark, N. J. Literature on request.

The Harward One-Piece Piston Ring consists of a single ring having patented features which the manufacturer states eliminate many engine troubles which are found in the gasoline engine. Pockets are provided in the face of the ring which retain oil, providing positive lubrication to the cylinder walls, while the joint between the ends of the ring is interlocking and underlapped across the entire surface of the joint, preventing the gases or oil from leaking past.

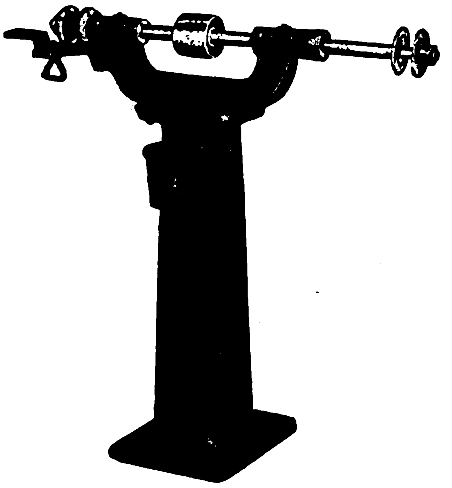
The ring is concentric in form and fits the walls of the cylinder with a uniform pressure at all points, while an eccentric groove, provided on the inside of the ring, provides equal tension at all points. The rings are made from three to six inches in diameter and for all makes of engines. When ordering give diameter of cylinder and width of groove.



Manufactured by the Harward Manufacturing Co., 3939 Magnolia Avenue, St. Louis, Mo. Prices and literature on request.

The No. 17 Polishing and Buffing Lathe has been but recently placed on the market to meet the demands of the vulcanizer and the tire repair man for a moderately priced buffer, which at the same time was well built and in every way practical for the work. Many garages use them, as they will do the work of a regular grinder and at the same time it equips them for tire repair work if in the future they want to do it.

Both the stand and the frame are heavy, the frame being reinforced by a double rib which gives it added strength and the whole machine steadiness in running. The bearings are 5½ inches long, which not only gives a large wearing surface, but also tends to keep the spindle running true. Each bearing is adjusted by four nuts, which allow taking up wear.



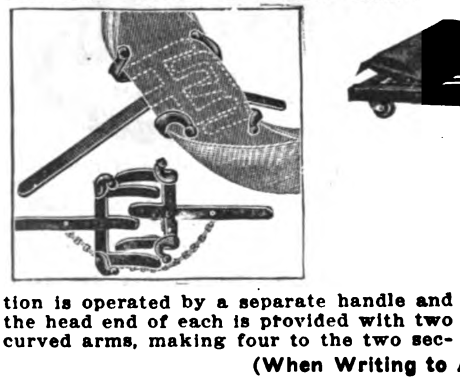
The left side of the spindle is generally used for the rasp, during which operation the arm and rest can be entirely removed. On this end may also be placed an ordinary emery wheel, as large as 2 by 10 being used for general grinding and tool sharpening. The right end of the spindle has a 7½-inch extension, which gives sufficient clearance for handling any size of automobile tire.

The height from the floor will be found to be such as to put the least strain on the operator in handling any size of tire both in buffing as well as in using wire brushes. As an added convenience when sharpening tools a small water pot is fastened to the stand. The emery wheel can be supplied with a guard and the spindle may be equipped with either single pulley, or tight and loose pulley. When furnished with a single pulley one of the No. 1½ countershafts should be included.

Manufactured by the Columbia Manufacturing Co., Belleville, Ill., which is the manufacturer of a complete line of grinders and buffers; machines which have stood the test of time, Crescent grinders having been in use for 36 years. Prices and circulars on request.

The Lewsen Quick Tire Spreader No. 3-D is designed especially for tire repair service stations where it is often necessary to turn a tire inside out to effect the repair.

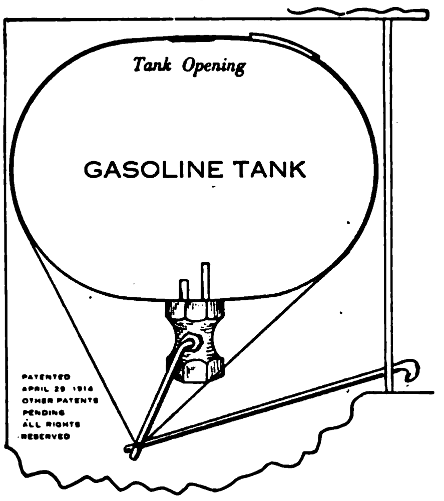
The device is in two sections, which fit over each other at the center. Each section is operated by a separate handle and the head end of each is provided with two curved arms, making four to the two sections, which fit over the bead of the tire, two at either side. When the handles or levers are opened outward, the arms fitting over the beads, open the tire, turning it inside out, so that repairs can be made to the inside. The levers in the open position support the tire on the floor while repairs are under way.



Manufactured by the Lewsen Manufacturing Co., Portland, Me. Price, $7.50.

The McIntyre Hi-Lo Gasoline Valve for Ford Cars fills a long felt want among motorists who many times find their gasoline tank empty miles from a source of supply. The device consists of a triple valve which fits the gasoline tank at its lowest opening and takes the place of the regular well, the fuel pipe and strainer being fitted similarly as when the well is used.

Two tubes pass upward into the gas tank, one tube being somewhat shorter than the other and fastened at the lower end to the valve housing. The valve rod extends out at one side of the housing and is connected to a second rod passing forward to the edge of the seat, allowing the driver to open the emergency valve when the gasoline in the tank has reached the lever of the longer tube.



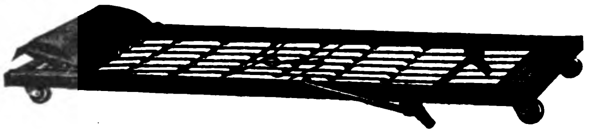
APPLIED TO A FORD

It is claimed the length of the shorter tube is correct and will allow the driver ample time to reach a source of gasoline supply under ordinary conditions.

The device is easily attached in a few minutes time by anyone handy with tools and once attached the danger of running out of gasoline on the road is reduced to a minimum.

Manufactured by A. C. Clark & Co., 1035 East 76th Street, Chicago, Ill. Price, $3.50.

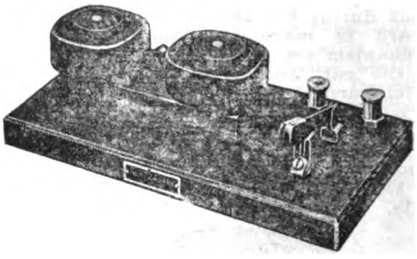
The Foster Auto Repair Creeper has been designed especially for garages and service stations and as it is made throughout of metal, which is practically indestructible, it will stand hard usage. The bed of the creeper consists of a link spring, which affords some degree of comfort to the user. Ball bearing casters are provided which facilitate moving of the creeper about the garage, while an anchoring device is attached to the frame, which prevents the creeper from moving after it has been placed in position under the car.



Manufactured by Foster Brothers Co., Utica, N. Y. Price, $5.

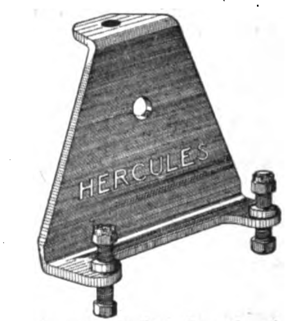
The Phillips No. 101 Magnetizer or Magnet Charger consists of two magnets and a single-throw switch mounted on a wooden base. The base is also provided with two binding posts for connection to a storage battery or dry cells for current supply.

Magnets that have become weak through long continued use may be revived with this instrument, it is claimed, and made to develop their full amount of energy. The recharging process is simple and full instructions accompany each instrument, explaining how weak magnets are remagnetized.



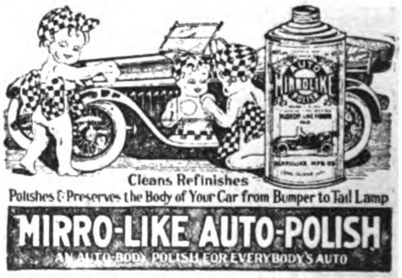
Sold by H. E. Phillips & Co., Union City, Ind. Price, $7.50.

The Hercules Master Repair Arm for Ford Cars is designed for emergency use in repairing the Ford crankcase arm in case of accident or breakage. The repair arm is constructed of the highest grade frame steel obtainable and is guaranteed to fit all model Fords up to and including 1920 models. Nuts and bolts are provided, so that the repairer is not obliged to hunt special nuts and bolts for the job. It is stated that a repairer can easily attach the arms to a Ford crankcase in less than an hour's time and that, once in place, the repair arm is much stronger than the original. The Hercules repair arm is guaranteed forever by the manufacturer against breakage from any cause.



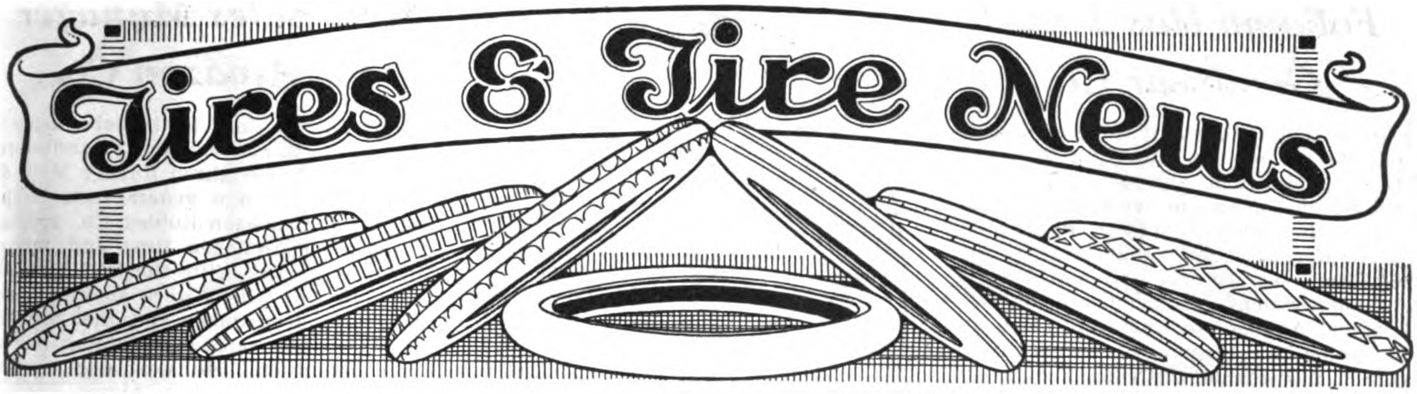
Manufactured by the Lake Erie Accessories Co., Cleveland, O. Price, $1.25, except in Canada.

Mirro-Like Auto-Polish is stated to be a correct combination of ingredients noted throughout the motor world for their beneficial qualities, which will preserve the brilliancy of the finish of the car. Mirrolike Auto Polish can also be applied to the leather upholstery of the car with good success, it is stated ,and not only restores the finish of the cushions, top, etc., but prolongs the life of the leather material, making it flexible. Clothing, it is claimed, is not injured or stained by coming in contact with cushions that have been cleaned with Mirrolike, as the polish, when rubbed, becomes absolutely dry, without leaving a greasy or oily surface.



AUTO
MIRROLIKE
POLISH
Cleans Refinishes
Polishes & Preserves the Body of Your Car from Bumper to Tail Lamp
MIRRO-LIKE AUTO-POLISH
AN AUTO-BODY POLISH FOR EVERYBODY'S AUTO

Manufactured by the Mirrolike Manufacturing Co., Inc., Long Island City, N. Y. Prices and literature on request.



Stability of Rubber Tire Industry

There is no better indication of the stability of the rubber tire industry and the continued growth and prosperity of the rubber manufacturing concerns in Akron, O., which produce 66 per cent. of the world's total output of tires, than recent announcements by nearly all rubber companies in Akron to the effect that sales are maintaining high levels and are greatly in excess of the 1919 figures.

In a bulletin just issued by the Akron Chamber of Commerce, seven past presidents of that body, including President F. A. Seiberling of the Goodyear Tire & Rubber Co., and E. E. Workman, vice president of the National Real Estate board, give interviews in which they express optimism and the opinion that the present lull in business is merely transitory. All coincide in the view that Akron, the rubber center of the United States, will suffer comparatively little from the effects of the curtailment of credits.

Mr. Seiberling, in the Chamber of Commerce bulletin, says: "Six years ago the Kaiser put a match to the bomb that rocked civilization and incidentally catapulted prices to the highest plane ever known. The dust and debris reached its zenith within the past year and is now, through the influence of natural forces, steadily settling back to normal.

"The existing plane of values is certain to be lowered until it reaches proper balance, and this will not be finally accomplished in a month, or a year, but will take many years. So far as Akron is concerned we have reached the bottom in the production of tires. Abnormal stocks over the country are being steadily absorbed and the curve of production within a few months will be steadily upward."

F. A. Seiberling, President Goodyear Tire & Rubber Co., Akron, O.

Mr. Seiberling also reports that gross sales of Goodyear products for July were $17,185,113.06, which shows a substantial increase over the same month last year, when sales totaled $15,989,349.08. Further indication that sales for 1920 will top those of last year, is shown in the company's sales for the nine months of the 1920 fiscal year, amounting to $162,202,467.21. Inasmuch as Goodyear sales for all last year were $168,914,982.83, it can be seen that the company up to Aug. 1 had done but $6,712,515.62 less business in nine months than they did for all of 1919. Officials estimate that even if sales for the next three months are put conservatively at $15,000,000 monthly—below last year's figures—Goodyear sales for 1920 will be in excess of $200,000,000. These figures bear out Mr. Seiberling's assertion that within a few months the extreme pressure of restricted credit will be removed, that the curve of production soon will be upward and that now is the time for sensible optimism toward the rubber industry, whic is unsurpassed in bright prospects.

CONVENTION OF TIRE EXPERTS.

The truck tire experts of the United States Tire Co. recently held a three-day conference, opening at Hotel Astor, New York city, in the afternoon, followed by a banquet and theater party in the evening. The company then proceeded to Providence, R. I., where the truck tire manufacturing activities of the company are centered.

The first day at Providence was devoted to a study of solid tire subjects, under the chairmanship of C. K. Whidden, manager of the solid tire department. The next day's programme constituted an equally intensive discussion of pneumatic truck tires, with W. V. Logan, manager of the pneumatic truck tire department acting as chairman.

The members of the conference who were assembled from every state east of the Rockies, spent considerable time in inspecting the company's new Colt plant, equipped with the most modern truck tire machinery, and built with a view to rapid expansion to meet the needs created by the rapid growth of the motor truck industry.

Group of Truck Tire Experts of the United States Tire Co. Taken at Their Recent Conference at Providence, R. I.

Foljamb Has Joined Goodyear Co.

E. S. Foljamb, widely known throughout the automotive industry as editor of trade publications and as an official of the Society of Automotive Engineers, has joined the Goodyear Tire & Rubber Co. of California at Los Angeles as a special representative of the motor truck tire department. A member of the Society of Automotive Engineers since its inception, he became a vice president and a member of the council of 10 in 1916. He also holds many honorary memberships in various automobile and trade associations. Being well versed in all angles of the automotive industry he will make a valuable addition to the California Goodyear organization, taking part in educational "motorize the farm" campaigns, and will also engage in special sales promotional work.

Because of its increased business in the aeronautic field, and the need of special increased supervision in this line of work, the Goodyear Tire & Rubber Co. of California has established an aeronautic department with P. K. Coe as manager. A government sales department has also been established simultaneously and will likewise be under Mr. Coe's supervision. The new manager of Goodyear's Pacific coast aeronautic activities has had wide experience along similar lines with the Akron organization. In addition he was in the navy aviation service during the war and holds a pilot's certificate from the Aero Club of America. Since his arrival in Los Angeles in April he has staged many unique exhibition flights and has greatly stimulated aviation along the Pacific coast.

E. S. Foljamb, Truck Tire Department, Goodyear Co. of California.

"THE GOODRICH DEALER," A NEW HOUSE ORGAN.

"The Goodrich Dealer," a house organ of the B. F. Goodrich Rubber Co., Akron O., is one of the latest publications to enter the automotive field. It is an eight-page, seven-column newspaper, which will be published semi-monthly. It contains interesting features pertaining to the tire business, news of the automotive industry, write-ups of successful dealers, etc. All Goodrich dealers are on the mailing list of the new publication, which is edited by D. A. Donovan.

The publication's division of the Goodrich advertising department also puts out the Circle, a weekly magazine for the employees of the company, and the Goodrich Druggist, a monthly magazine published in the interests of the concerns who handle the Goodrich line of drug sundries.

NEW BRANCH MANAGERS FOR THE UNITED STATES TIRE CO.

E. F. Kidder, New England sales manager of the United States Tire Co., has announced a number of important changes in the personnel of the company's selling forces in his territory. J. P. Haney, formerly branch manager at Boston, has been promoted to the position of district manager at Boston. A. C. Crocker, formerly branch manager at Providence, R. I., will succeed Mr. Haney at Boston; E. T. Richardson, formerly branch manager at Portland, Me., will go to Providence as branch manager, and F. J. Nute, salesman at Portland, succeeds Mr. Richardson as branch manager in that city.

DENMAN-MYERS CORD TIRE CO.

The Denman-Myers Cord Tire Co., a $2,500,000 corporation with a new plant at Warren, O., has filed a certificate of the change of its name from D. & M. Cord Tire Co. It has also been conducting a contest for a prize of $50 for a trade slogan or phrase to be used in marketing Denman cord tires.

A. H. Leavitt, New General Sales Manager, Amazon Rubber Co., Akron, O.

New Sales Manager for Amazon Co.

A. H. Leavitt, long in the sales department of the B. F. Goodrich Co., and more recently with the Akron Rubber Mold & Machine Co., is now general sales manager for the Amazon Rubber Co., Akron, O., maker of Amazon tires and tubes. Mr. Leavitt was with Goodrich for 11 years, two of which were spent in the production department and the remaining nine in the sales organization in various capacities. He was also in the sales department of the Akron Rubber Mold & Machine Co., and is thus well qualified to assume the duties of his new position with the Amazon Co.

NEW DISTRIBUTORS FOR STANDARD FOUR TIRE.

Under its new and more extensive sales policy, announced some time ago, the Standard Four Tire Co., Keokuk, Ia., is rapidly establishing new distribution points throughout the country. Following close on the statement of the appointment of several new connections in the South comes news of five important distribution allotments in the East, as follows:

McGraw Tire Sales Co., with headquarters in Buffalo, N. Y.; Wagner-Tracy Auto Supply Co., Inc., 222 Central, Albany, N. Y.; Hauck Brothers, Mechanicsburg, Pa.; Dawson Tire & Supply Co., Newark, N. J.; Combination Ladder Co., wholesale automobile supplies, Providence, R. I.

F. R. Eyer, general sales manager, announces that the company will continue opening up new territory in direct proportion to its increased production facilities. The Standard Four Tire Co. is now, Mr. Eyer says, producing more tires per day than ever before in its history.

LAMBERT STORE IN BOSTON.

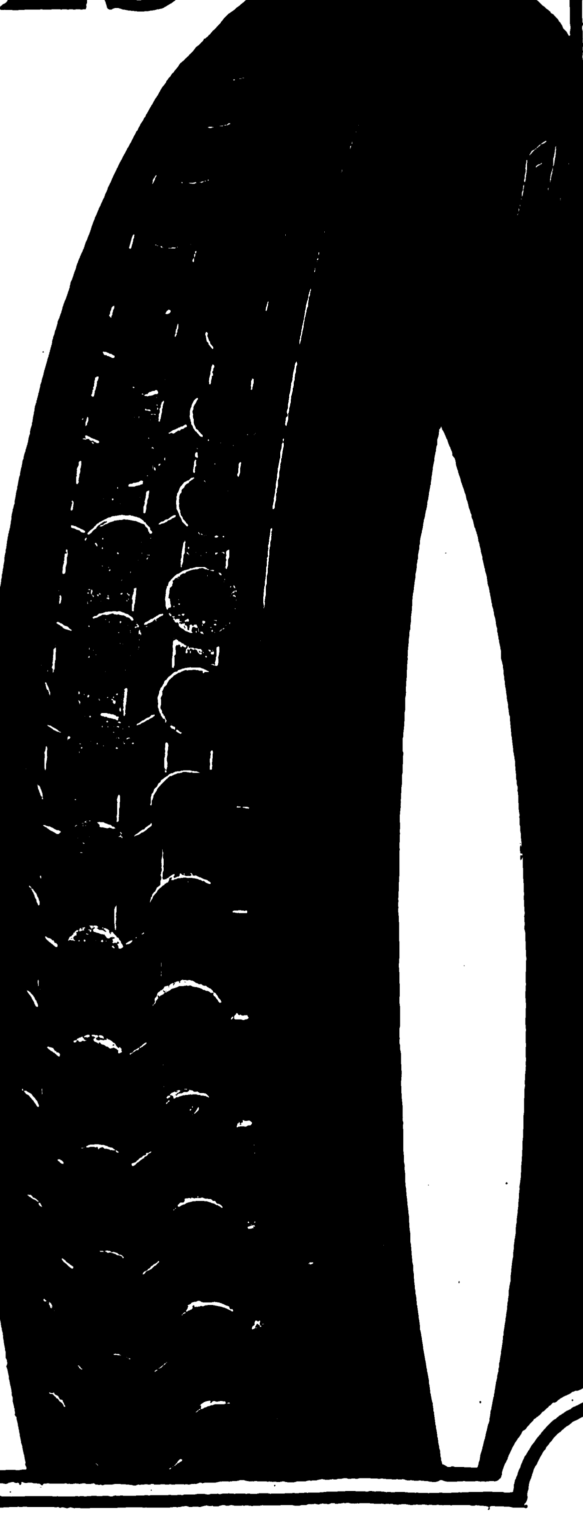
The Lambert "Trublpruf" Tire Co. recently opened a store at Boston, at 823 Boylston street, in charge of A. J. Millward, James J. O'Brien and L. H. Plummer, its territory comprising practically all of the New England district. The Lambert "Trublpruf" cord tire is manufactured by the Lambert Tire & Rubber Co., Akron, O., and this rapidly growing concern already has large wholesale and retail stores in Brooklyn, Washington, D. C.; Denver, Peoria, Dallas, Minneapolis, Atlanta, Vancouver and other cities.

McGINNES JOINS INDIA TIRE CO.

J. E. McGinnes, widely known in the tire field, has been placed in charge of sales promotion work for the India Tire & Rubber Co., Akron, O. He was formerly branch manager for the Firestone Tire & Rubber Co. in Milwaukee, and also established a wide acquaintance with the trade as manager of tire sales for the General Tire & Rubber Co., Akron.

Fisk Rubber sales, first six months, 1920, were in excess of $27,000,000.

FISK TIRES



The Fisk Message is told everywhere

ON highways through the land —in publications of largest national circulation — in many newspapers — you will find the Fisk message of dependable tires.

It's an honest message and you can profit by it to the fullest extent because it is in no way exaggerated.

The message is based upon the Fisk Ideal, "To be the best concern in the world to work for and the squarest concern in existence to do business with."

And in every Fisk ad there appears "Next time—BUY FISK from your dealer."

Goodrich Sells Stock to Employees

The B. F. Goodrich Rubber Co., Akron, O., has afforded an opportunity to its employees to share in its profits by becoming holders of common stock. This will be sold to employees for $65 a share on weekly payments of 25 cents, each employee being allowed to buy one share for each $300 of his annual earnings. Stock will be sold in this way only to employees who have been with the company three months or longer. The period of payments will be three years and 24 weeks, the payments totalling only $44.98 a share, accumulated stock dividends and service credits making up the difference between this amount and the stock purchase price plus interest.

Every time the company pays a dividend on its common stock it will credit a like amount toward the payment of each share of stock on which employees are making payment. At the present dividend rate, such dividends will amount to $21 per share during the payment period.

The employee will receive through the service credit plan an additional credit of $6 on the payment of each share purchased. This service plan provides $1 credit on each share a year from date of first payment, $2 at the end of the second year, and $3 at the end of the third year. The service credits will be given even after the stock is paid for. At the end of the fourth year, $4 cash will be given on each share held and at the end of the fifth year, $5 cash. This will reduce the net amount cash paid for the stock of $35.98 per share.

AUTOMOBILE TRAFFIC CENSUS.

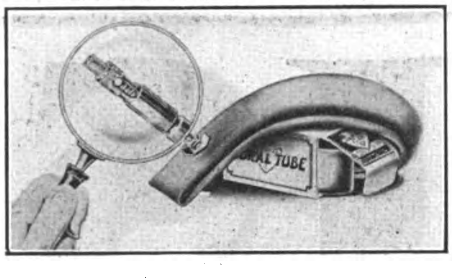
The Travel and Transport bureau of the B. F. Goodrich Rubber Co. recently took a 24-hour traffic census on the Akron-Cleveland road at Stow Corners, 10 miles north of Akron. This showed that during the past two years truck transportation increased 171 per cent., passenger car traffic showed a gain, during the same period, of 27 per cent., while horse drawn traffic decreased 52.5 per cent. Traffic of all kinds increased 45 per cent. During the 24 hours under observation, 2891 vehicles passed, including 2033 passenger cars, 798 motor trucks, 15 motor buses. This compares with 1599 passenger cars in 1918, 295 motor trucks and 97 horse-drawn vehicles. More than 100 of the passenger cars observed this year were new machines being driven home from factories by distributors.

McGRAW PREFERRED DIVIDEND.

The McGraw Tire & Rubber Co., East Palestine, O., has declared a quarterly dividend of 1¾ per cent. on the outstanding preferred stock of the company.

QUALITY TIRE FACTORY SITE.

The Missouri Quality Tire Co. is reported as having purchased 20 acres of land in Smelter Hill, Nev., for a site for its new automobile tire factory.



Whistler, the Automatic Pressure Regulator, is Standard Equipment on Dural Tubes.

DURAL TUBES TO BE EQUIPPED WITH WHISTLERS.

An agreement has been made between the Dural Rubber Corporation and the Automatic Safety Tire Valve Corporation whereby Whistlers, the automatic pressure regulators manufactured by the Automatic Safety Tire Valve Corporation, will be included as the regular equipment with all Dural tubes. This device will add only 35 cents to the cost of each tire, whereas they cost $1 each when bought separately.

This new arrangement is appreciated by dealers and jobbers, as the demand for Whistlers, which has grown since they were put on the market three years ago, combined with the success of Dural tubes, makes the Dural Whistler combination attractive for motorists.

GOODYEAR TIRE & RUBBER SALES FOR HALF YEAR.

The sales of the Goodyear Tire & Rubber Co., Akron, O., for the first half of the current year show an increase of about 60 per cent. over those for the corresponding period of 1919. The total gross sales in 1919 amounted to $169,000,000 as compared with less than $10,000,000 in 1910, an increase of $159,000,000 in 10 years.

G. M. Stadleman, vice president, states that the production of tires and other rubber articles in this country consumes more than 45,000,000 pounds of cotton fabric and 108,000,000 pounds of crude rubber annually.

ECONOMY OF PNEUMATICS.

The Goodyear Tire & Rubber Co., Akron, O., calls attention to a recent motor truck trip from York, Pa., to Detroit, Mich., as expressive of the economy of fuel and oil due to the use of pneumatic tires. The truck in question was a 2½-ton Standard stripped chassis, equipped with Goodyear cord tires. The run of over 600 miles was made on 50 gallons of gasoline and 1¼ quarts of oil.

STEPHENS TAKES OVER KANSAS CITY PLANT.

The A. J. Stephens Rubber Co., which plans a total output this year of goods valued at about $3,000,000, has taken over the plant of the Kansas City Tire & Rubber Co., Fourth street and Kansas avenue, where, it is reported, the manufacture of Stephens tires and inner tubes will be concentrated.

Marvelous Record of Oldfield Tires

It is stated that the use of Oldfield tires has helped make possible the victory of every speedway winner so far the present season and, in addition, that many of the other money-winning positions have been held by cars similarly equipped with this product developed by the well known "Old Master," Barney Oldfield, and manufactured by the Oldfield Tire Co. of Cleveland, O., of which he is the active head.

Gaston Chevrolet's victory at Indianapolis was won on Oldfields without a tire stop, the first time the feat has ever been performed. In that event, Oldfields also won second, third, sixth and eighth places.

Milton's wins at Uniontown and Tacoma furnished two more stars for the Oldfield banner. The Tacoma returns are still further notable in the fact that of the 16 Oldfields on the first four cars to finish, but one tire had been replaced during the race, and this because of a puncture.

On account of the excellent test opportunity afforded by such events, President Oldfield has been giving personal attention to the tires used in these races. "Naturally I'm pleased at the result of our speedway tests," he admits. "And they mean something, too, for every Oldfield tire used in racing carried our stock red tube, in a strictly stock carcass.

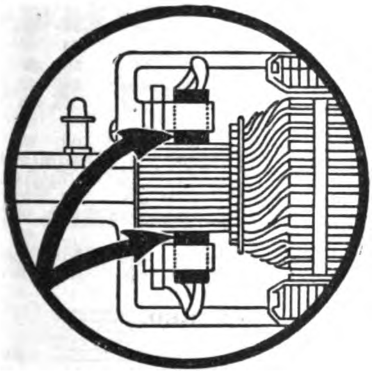
"I'm glad, too, that these have been competitive victories, with other tires liberally represented. A limited number of the starters in any race is all we have ever wanted."

McGRAW'S NEW SALES MANAGER.

Announcement has been made of the appointment of C. E. Pumphrey, formerly assistant sales manager of the McGraw Tire & Rubber Co., Cleveland, O., to be general sales manager of that company in the place of H. M. Bacon, resigned. Mr. Pumphrey has been associated with the company for the past seven years.

Coincident with this announcement comes word of a number of other appointments in the company's sales personnel. W. H. Hurley, manager of the New York branch, is made assistant sales manager with headquarters at Cleveland, and W. A. Brady, who has been connected with the New York branch, assumes the management of that territory. G. E. Bovis, manager at Cleveland, goes to Chicago to fill the vacancy caused by the transfer of H. G. Couturier to the general office headquarters in the capacity of sales promotion manager, a newly created department. R. I. Winterringer of Boston takes charge of the Cleveland territory, while W. P. McGlynn will assume the Boston post.

It is stated that during the first six months of the present year the business of the McGraw Tire & Rubber Co. has shown a very substantial growth and the outlook for the remainder of the year, according to President Morgan, is most promising.



Reliable Starting and Lighting depend on correct Brushes

EXPERT ADVICE

Begets Confidence and Increases Profits

NEARLY every car needs at least two new replacement brushes annually. You can get the profits from this easily.

Columbia

PYRAMID BRUSHES

are made for any and all automobile starting and lighting equipment. The correct brushes for every system are specified in the Columbia Brush Blue Book, which we furnish to each dealer.

Columbia Pyramid Brushes for starting and lighting equipment are designed, made, and recommended with the same care as the brushes we supply for the largest electric motors, generators, and converters.

Take advantage of this opportunity to increase your profits through expert advice and the furnishing of "exact" brushes.

STOCK DIVIDEND FIGURES.

Following are the dividends declared by some New England corporations since the decision of the Supreme court making stock dividends non-taxable under the old income tax:

Hood Rubber Co., 66.6 per cent., on $2,000,000 capital.

Autocar Co., 40 per cent., $1,200,000 on $3,000,000 capital.

Columbia Motors Co., 70 per cent., $3,500,000 on $5,000,000 capital.

Continental Oil Co., 200 per cent., on $3,000,000 capital.

Crucible Steel, 50 per cent., $12,500,000 on $25,000,000 capital.

Federal Motor Truck Co., 100 per cent. on $1,000,000 capital.

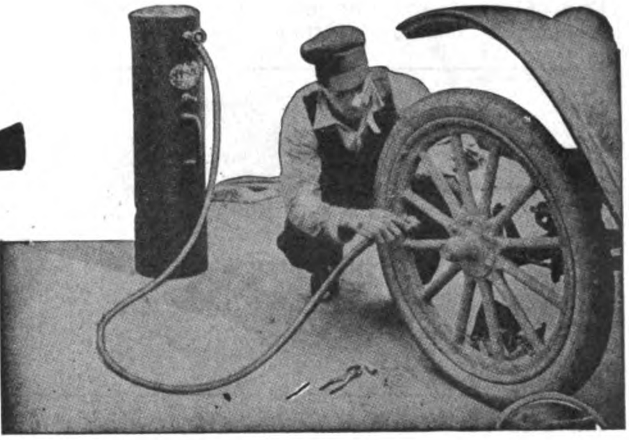
Stutz Motor Co. issued 80,000 new shares on 120,000 shares capitalization, and the stock recently sold for more than $700 a share.

FAILURES IN UNITED STATES IN JULY.

According to reports of R. G. Dun & Co., there were more commercial failures in this country during the month of July than in any other month since December, 1918. July also showed the heaviest indebtedness, except for June of this year, of all months back to January, 1916. There were 681 failures in all in July, 1920, carrying total liabilities of $21,906,412. In July, 1919, there were 452 insolvencies, involving a total sum of $5,500,000. A distinctive feature of the July statement is the marked increase in large failures, those for $100,000 or more in each case numbering 48 and aggregating [illegible]1,937. Most of the large insolvencies were in manufacturing industries.

KEEP COOL

-you'll save time & labor too, if you use



ATSCO

Reduce Your Labor

PORTABLE AIR TANKS

Increase Your Profits

You wouldn't fill a gas tank with a quart measure. Then why bother with an ordinary hand pump to inflate a tire when it can be done the Atsco way?

For outside emergency calls, just throw the Atsco in the car. In the garage an Atsco is ever useful. No time wasted, no unnecessary labor—simply open the valve and—all done. Easily refilled from any compressor system.

The initial cost is moderate and soon forgotten in the increased revenue secured, and this income is continuous. Every Atsco tank will give this service for years.

Atsco tanks are 36 inches long by 10 inches in diameter, making a light, easily handled labor-saving unit. Built of steel with copper brazed seams and joints, tested for 500 pounds, and giving a working pressure of 250 pounds.

Completely equipped with standard tire filling valve, the best pressure gauge made, protection valve cap for filling at compressor system and eight feet of hose. The tank is easily carried by the side handle. Any one can operate it.

List Price $40.00 F. O. B. Pittsburgh, Pa.

Producing garage pressure tanks is our specialty, and we carry in stock or build to order tanks of any size and pressure requirement. Most producers of compressors and air storage systems use Atsco tanks. They know.

The genuine copper brazed construction makes seams and joints far stronger than the stock metal. They will not crystallize or crack and are guaranteed air-tight.

We make pumps and pressure tanks for all purposes

AIR TIGHT STEEL TANK COMPANY

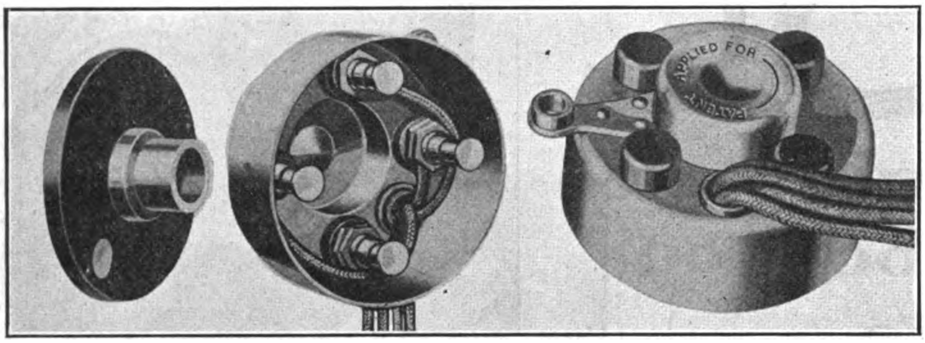
OFFICE AND WORKS

PITTSBURGH, PENNSYLVANIA

TANK MAKERS FOR NEARLY THIRTY YEARS

Features of the Schofield Timer

The Schofield Manufacturing Co., 1919 East 61st street, Cleveland, O., has brought out an improved timer for Ford cars, the "Schofield," a distinguishing feature of which is the fact that all the electrical connections are inside, none of the terminals being exposed, thus eliminating, it is stated, any danger of short circuits by reason of accumulated oil and dirt, and removing the possibility of the terminal connections working loose from vibration. The terminal binding posts are of rigid and substantial construction and are provided with springs which keep the terminal in close contact with the rotating member. In fact, it is stated that this timer provides for an end play of a quarter of an inch in the camshaft and an eighth of an inch side play.



Improved Schofield Timer for Ford Cars: At Left, the Rotating Member; at Center, the Interior, and at Right, the Outer Shell of Timer.

The rotating member carries an oversize hardened steel contact which is set into a fiber disc and by this construction it is claimed that the effect of centrifugal force is avoided and the wear reduced to a minimum as the contact area wipes across the heads of the posts with only sufficient pressure to insure a perfect electrical contact. It is stated that the presence of oil in no way affects its operation, although provision is made for draining off excess oil that may accumulate.

Attention is called to the fact that every detail of the construction of this device conforms to the standard employed in high grade magnetos. It is easily and quickly installed. No special fittings are required and as the wiring is furnished already connected, it is only necessary to bolt the rotator to the camshaft and attach the timer shell in the usual way.

It is sold complete with wires at $4 retail with the usual liberal discount to the trade.

PERFECTION HEATER CO.'S EXTENSIVE PUBLICITY CAMPAIGN.

The Perfection Heater & Manufacturing Co., 6545 Carnegie avenue, Cleveland, O., is to inaugurate an extensive publicity campaign which will undoubtedly greatly stimulate the demand for its product the coming season. A selected group of magazines with a nation wide circulation will be used, through the medium of which at least 11,565,000 people will be reached this year.

A very attractive "broadside" has been prepared for this company by the Akron Advertising Agency Co., Akron, O., in which the covers of the prominent publications to be used in this advertising campaign are featured in their distinctive colors, among them being Accessory & Garage Journal and the Motor Truck.

Throughout the entire series of advertisements which have been prepared emphasis will be given to the value of warmth and comfort to automobile owners and to create a desire to have such installation in their cars. The slogan is to be "The Heat Is There—Why Not Use It?"

STILES ROLLSEMOUT FENDER STRAIGHTENER.

Stiles "Rollsemout Fender Straightener" is a tool recently perfected and now sold generally by jobbers and direct, which is designed for repair shop and service station use. Claim is made that any intelligent worker can with this tool restore the original contour of any form of sheet metal used in power vehicle construction, this including flat and curved surfaces, beading, rims, flanges, etc., and curves and angles.

The tool will do work uniformly and completely, which is not possible with rolling or hammering, and equal to press pressure. With it dented or bent or twisted metal of bodies, cowls, doors, hoods, aprons, shields, pans, guards can be restored quickly and without damaging the paint or enamel.

The tool is in effect a clamp, consisting of two arms hinged at one end to form a U. The arms are slotted longitudinally and the lower is notched on the outside. A rod with a short tee head and a rack end extends through the slots, with a block carrying a shaft and small pinion that meshes with the rack. The shaft is actuated by a long lever.

Rolls of different widths and blocks of different forms are placed in sockets in the ends of the arms and pressure is exerted by turning the pinion on the rack with the hand lever. By movement of the arms and the tools and with varying pressure the metal can be shaped as desired.

Restoration of sheet metal is very important work in any shop or station and with this tool can be specialized and made very profitable. The tool is manufactured by the Stiles Manufacturing Co., St. Louis, Mo.

Peerless Fenders for Fordson

The lives of tractor operators are often endangered by the possibility of their becoming entangled in the mechanism if accidentally thrown from the seat while the machine is in service. The Corcoran Manufacturing Co., Cincinnati, O., is producing fenders, which are listed as No. 8 Peerless Guaranteed Fenders for Fordson Tractors, and which are designed for the protection of the driver in such a contingency.

These Peerless Fordson tractor fenders are built of 20-gauge automobile sheet steel throughout and are finished in two coats of lustrous black enamel, baked on, giving them a durable and handsome appearance. The entire base of the fender is reinforced with angle iron, making a strong, solid construction, able to withstand long, hard service. Steel braces, ⅜ by 1¼ inches are furnished with all fenders, which assures rigid attachment to the tractor. The complete equipment includes all necessary bolts, nuts, etc., insuring easy and quick installation on any Fordson tractor.

An inquiry to Department F will bring a detailed description of the Corcoran Co.'s Peerless fenders for Fordson tractors, as well as of its other meritorious products, radiators, hoods, fenders and tool boxes for Ford cars.

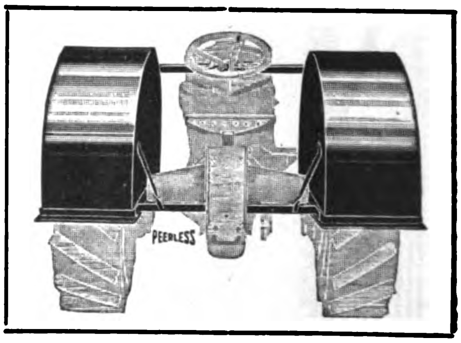
DESIRES TO REPRESENT AMERICAN MANUFACTURERS.

It is announced that A. H. Snyder, 10 Place St. Denis, Liege, Belgium, desires to represent American manufacturers of automobile accesories in Belgium. Mr. Snyder would like connections with manufacturers of tires, spark plugs, motorcycles, fire extinguishers, etc. It is stated that he is responsible and can give good banking references.

EXIDE BATTERY GARAGE.

The Exide Battery Depots, Inc., has bought a lot, 115 by 122, at Spring and Clark streets, New York city, as a site for a two-story garage to cost $225,000.

Persons engaged in motor car and truck plants number 300,000, the annual pay roll being $374,933,856; including those engaged in making parts and accessories, the number is 651,450, and the pay roll $813,731,856.



Peerless Fenders for Fordson Tractors, Made by Corcoran Manufacturing Co.

The ACCESSORY and GARAGE JOURNAL

VOL. X. PAWTUCKET, R. I., SEPTEMBER, 1920 No. 5

Increasing Utility and Popularity of Motor Vehicles

Ninety Per Cent. of All Passenger Cars Now Used for Business Purposes—Efficiency Increased 57 Per Cent.

AN INDEX of the increasing utility and popularity of the motor car in the United States is afforded by a conservative estimate of the total cost of their upkeep for 1920, which is placed at approximately $6,020,000,000, a sum nearly equal, if not exceeding, the total amount which, it is figured, will be expended this year for railroad transportation throughout the country.

The total registration of motor vehicles in use in the United States on July 1, 1920, is placed at 7,904,271, representing an increase of more than 1,500,000, or nearly 25 per cent., over July 1, 1919. These figures will give a motor vehicle for every 13.52 persons, or one for every 2½ families. The total value of these 7,904,271 cars, considered conservatively at $1200 each, would be $9,485,125,200, and 20 per cent. depreciation would be $1,897,025,040. Interest at six per cent. would aggregate $389,107,512. Among the estimated figures for cost of upkeep in round numbers are the following: Gasoline, $1,550,000,000 lubricating oil, $729,000,000; tires, $1,000,000,000; accessories and new parts, $621,730,000; license fees, $70,000,000; insurance premiums on 60 per cent. of the cars, $329,340,000; garaging, storage and service, $1.372,240,000; cost of labor on repairs, etc., $310,190,000.

A large proportion of this vast expense for upkeep and operation can be justly charged to business purposes, as has been demonstrated by estimates based on answers to thousands of questionnaires recently directed to passenger car users of the United States by the National Automobile Chamber of Commerce. The replies received indicate that of all the passenger cars represented, about 90 per cent. are used generally for business, while of the few owners whose chief purpose in the purchase of a machine was recreation, half use their cars instead of the trolley car, while 50 per cent. of the remainder state that the passenger car has solved their housing problem by permitting them to take homes farther away from the business district where they are employed.

Multiplication of Man Power.

Of the actual mileage of cars on which figures were obtained, about 60 per cent. was for strictly business purposes, not including the use of cars in the place of trolley or steam cars or for shopping. The average increase in business productivity due to motor cars was 56.7 per cent. Translated into working capacity, as is pointed out by President Charles Clifton of the National Chamber, this means that the cars in daily use in America add every day the equivalent of over 3,800,000 workers to the nation's productive forces. This is equal to nearly a sixth of all the wage earners in America. Thus it will be seen that the automobile industry has increased the man power of the United States by one-sixth at a time when man power is the world's most serious problem.

To carry this line of reasoning a step further, since the number of men employed in the sale and manufacture of passenger cars, including the making of parts and accessories, is about 800,000, the industry can fairly claim to have contributed to the nation four times as much as it has cost in man power. That this ratio is approximately correct is shown by also arriving at it from another angle: The number of passenger cars produced last year was 1,650,000, or the equivalent in working capacity of more than 935,550 workers. The number of persons engaged in making them was 232,000. Again the ratio is four to one.

If one were to add the productive efficiency of the 750,000 motor trucks now in use, a still greater gain would be shown. The largest gain in productivity has been in farm life.

FACTS IN REGARD TO USE OF AUTOMOBILE.

(Compiled by National Automobile Chamber of Commerce from Answers to Questionnaires.)

Ninety per cent. of all cars are used more or less for business.

Sixty per cent. of the average car mileage and 78 per cent. of farmer car mileage is for business.

Thirty-four per cent. of average mileage is from use of cars in place of trolley or railroad, or where there is no other means of communication.

Living conditions of 37 per cent. of car owners are improved because of the automobile.

The average car owner adds 57 per cent. to his output through use of the motor car; the farmer adds 68 per cent. to his efficiency.

There are 2,367,000 farmers owning cars, and the answers to the Chamber of Commerce questionnaires from them revealed a 68 per cent. increase in productivity of the owners, or an addition equivalent to 1,600,000 hired men. Perhaps no other industry can show such a tremendous dividend in productive force as this. Only the most advanced production methods of American genius make it possible.

Increase in Nation's Wealth.

"As for the direct value of the passenger car to the nation in dollars and cents," continues Mr. Clifton, "any estimates which may reasonably be made reach into figures of a size which only a world accustomed to war finance could understand. More than $1,000,000 is devoted to the manufacture of vehicles alone. The capital invested in the manufacture of parts, accessories and tires will total about twice as much. Since the nation's wealth is some $250.000.000,000, the automobile investment itself is less than two per cent., but it is in the effect which the use of the car has wrought that its real part in the economic and banking fabric of the country is disclosed.

MOTOR CAR REGISTRATIONS.

*Decrease.

"The great steel furnaces find a new market for their product in the production of the motor vehicle, which now uses four per cent. of the country's output. Other raw materials, such as rubber, lumber, leather, cotton, and a score more, are used in like amount, the percentage in each case being an inconsiderable part of the total, but in the aggregate adding immeasurably to the industrial activity of the nation. The automobile industry has been a great aid in the development of our natural resources, such as oil and gasoline. The heavy market which it has created is enabling oil companies to introduce improved refining methods which will in many cases double the amount of gasoline which can now be obtained from oil. Great oil explorations are being carried on in South America and other undeveloped countries. Attention is also being given to the great supplies of shale rock in our western states, which can be converted to fuel if the needs of the automobile industry should demand it.

"Another major national resource which has been developed by the growth of the automobile industry is crude rubber. Its output has grown from 70,500 tons in 1910 to 290,000 tons in 1919. Sixty per cent. of the total rubber output is used for the manufacture of tires for motor vehicles. The price of raw rubber, as a result of this great output, has fallen from over $3 in 1912 to about 30 cents in the summer of 1920. There has been a steady reduction in price in the past six or eight years, due largely to the huge production of plantation rubber."

Other Benefits Due to Use of Motor Car.

Among the other benefits cited, that are due more or less directly to the increasing use of the motor car, may be mentioned briefly the following:

It has opened to the banking institutions of the country a new line of business which has been uniformly profitable. More than 100,000 passenger cars are used daily by physicians and surgeons whose actual spheres of labor are thus immeasurably increased.

Conditions of farm life are greatly ameliorated. According to the Farm Journal 2,366,475 passenger cars, or about one-third of all the motor vehicles in the United States, in June, 1919, were owned and operated by farmers. More important is the fact that nearly two-thirds of all the new cars made are sold in the rural districts. These cars nearly double the farmer's productive force. Contentment on the part of the farmer's family and his laborers follows in the wake of the motor car in the country. Community, school and religious life are all stimulated by the greatly increased radius of accessibility afforded.

Thousands of salesmen now use cars and the territory covered by each is greatly increased and in like measure the cost of distribution is cut down. The banker, the big business man, the professional man find their value to themselves and others increasing because of the saving in the costly element of time. Engineers engaged in highway work, reclamation surveys and sanitary operations have saved literally millions of dollars to taxpayers through the motor vehicle, and its use constantly increasing.

Housing Problem Solved and Crime Checked.

The ultimate solution of the great housing problem of the modern city may be found to lie in the passenger car, and the slums will ultimately disappear before the blast of the automobile horn. The community posse no longer depends upon the horse, and the use of the passenger car in pursuit of criminals has been of tremendous value. Indirectly the effect in promoting education and breaking down isolation is gradually eliminating the individual, inherently honest, but whose loneliness has brought about morbidity, followed by actual insanity and crime.

From the standpoint of recreation the passenger car has done more than any other modern agency to promote healthful outdoor life. By carrying the worker to outlying districts it has caused him to become interested in gardening and farming. It has given him the opportunity to take up various sports, such as golf and tennis, and other pursuits calculated to promote health.

NOTES OF TRADE AND INDUSTRY

Fairbanks to Handle Marvel Products

The Marvel Machinery Co., Minneapolis., of which George S. Loudon is the sales manager, has entered into an arrangement with the Fairbanks Co. of New York City for the exclusive sale and distribution of its principal product, the Marvel cylinder reboring machine, in the United States and all foreign countries. Mr. Louden states that the Marvel reboring machine is more than an accessory; that it is rather an absolute essential in any machine shop where any attempt is made to work on gas engine cylinders. With this machine, backed by a distributing organization such as the Fairbanks Co., he points out the fact that every live repair man in the world can now enjoy the big profits which are to be made from the reboring of gas engine cylinders.

The Marvel Machinery Co. also manufactures the Marco finished and semifinished replacement pistons, and, in order to give prompt service to repair men, the company has decided to enlarge this branch of its business, and also to engage in the manufacture of pistons on a production scale. With this purpose in mind the company has recently purchased several acres of land in the manufacturing district of Minneapolis, and plans are being drawn for a standard and practical factory building in which the executive offices of the company will also be located. New machinery has been ordered and, as soon as the building is completed, the output of Marvel cylinder reboring machines and Marco pistons will be materially increased.

"BETTER" BUMPER SHIPMENTS ABROAD.

The New Era Spring & Specialty Co., Grand Rapids, Mich., has just made an unusual shipment of "Better" spring bumpers in a car load for foreign customers located in 10 different ports, as follows:

Algoa Bay, Gold Coast and Africa: Durban, Africa; Sydney, Australia; Port Elizabeth, Africa; Buenos Aires, Argentina, South America; Manila, Philippine Islands; Batavia, Oceania; Tauranga, New Zealand; Bogota, Colombia, South America; Nicaragua, Central America.

HARE'S MOTORS ISSUES BOOKLET.

Hare's Motors, Inc., New York City, has issued an attractive booklet explaining the organization, plans and ideals of that concern. The history of the amalgamation of the Mercer, Locomobile and Simplex interests in one efficient organization is briefly outlined. The purpose is stated to be to provide a complete assortment of the highest grade of passenger and freight transportation units, and to increase materially and immediately the output of all the plants under its control. The motto "We Shall Keep Faith," which has been adopted by Hare's Motors, Inc., briefly expresses its policy, of which quality is the keynote.

Hare's Motors, Inc., 16 West 61st street, New York City, will gladly send copies of this brochure to anyone interested.

THE INDUSTRIAL REPUBLIC.

Paul W. Litchfield, vice president and factory manager of the Goodyear Tire & Rubber Co., Akron, O., is the author of a little work on "The Industrial Republic; a Study in Industrial Economies," just brought out by the Houghton Mifflin Co., Boston and New York; list price, $1.

The industrial republic plan has been in force at the big plant of the Goodyear Tire & Rubber Co., Akron, since the spring of 1919, and Mr. Litchfield has thus had opportunity to supplement in the actual working out of the system there the knowledge gained of his subject by exhaustive research. An idea of the scope of the treatment may be gained from a citation of the table of contents, as follows: Expansion of Political Democracy; the Labor-Capital Opposition—Genesis and Growth; Present Status of the Labor-Capital Opposition; Clues to the Solution; Rights Involve Duties; the Industrial Republic: Industrial Citizenship; the Goodyear Representation Plan.

George S. Loudon, Sales Manager, Marvel Machinery Co., Minneapolis.

Magnitude of the Nash Plant

An indication of the area covered by the main factory of the Nash Motors Co. at Kenosha, Wis., is given by a contract recently signed for washing the windows and skylights at a cost of $6000. Most of the buildings of the Nash plant are of saw-tooth construction with glass roofing and a heavy coating of carbon deposited by smoke, dust, etc.. accumulates in time, considerably decreasing the quantity of light admitted, and it is this deposit that it is desired to have removed. It is estimated that the total area of glass is approximately 300,000 square feet, there being over 34,000 square feet of glass roofing in the foundry alone.

ART METAL CATALOGUE.

Shepard Art Metal Automobile Hardware Co., Detroit, Mich., issues a very neat catalogue, showing a few of many articles which it manufactures for the closed and open car trade. Among the articles shown are dome and reading lights of heavy bevelled plate glass, set in a silver mounting, regulator handles for raising and lowering the glass in the doors and windows, rotary lever lock handles, switch plates of different designs, both single and double, lever locks for the side windows, robe rails and lever lock escutcheon plates and fancy and cut glass dome light glasses. Ladies' toilet cases and gentlemen's smoking sets are also shown, made of silver and contained in a neat leather covered case which fastens to the door or back of the front seat of the car. All of the articles are of the highest grade and exceptionally well finished. A copy of this catalogue can be obtained by addressing the manufacturer, who will also be pleased to quote prices.

UTILITY TIRE-MAKING MACHINERY.

The Utility Tire Machinery Co., Fourth and Pennsylvania streets, Joplin, Mo., which is engaged in the manufacture of machinery for the making of automobile tires, is reported as adding to its equipment so that it will be enabled to turn out complete tire making installations of various sizes for tire supply houses, garages, repair shops, etc.

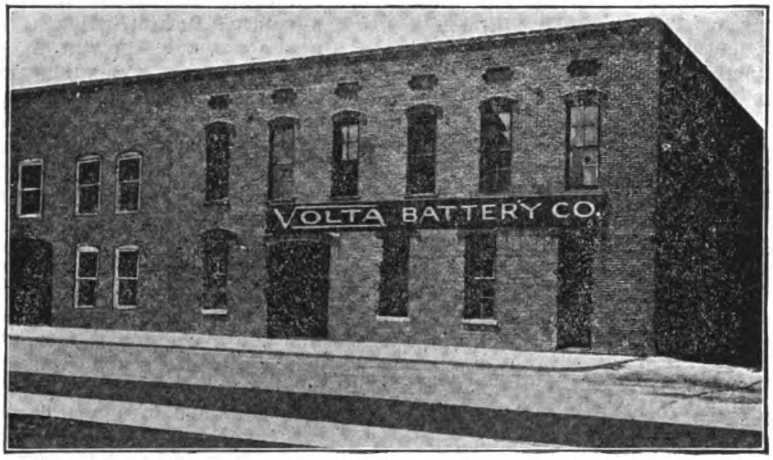
WOLKE LEAD BATTERIES CO.

The Wolke Lead Batteries Co., Louisville, Ky., which is probably one of the largest battery manufacturers in the South, now has a capacity of about 400 batteries a day and uses about 500 car loads of pig lead a year. The Wolke Co. has been very successful in placing its product in the principal cities throughout the United States.

NEW FACTORY FOR VOLTA BATTERY CO.

To take care of its rapidly increasing business, the Volta Battery Co. has acquired about 2½ acres of land, with the factory buildings thereon, on the line of the Pennsylvania railroad at Martinsville, Ind. These enlarged manufacturing facilities will admit of a daily production of about 500 automobile storage batteries.

The Volta Battery Co. also intends to enter the farm light battery field, large orders for which have been offered the company. The Volta battery has been made for the past four years in a limited way in Indianapolis, during which time they have proved their reliability for service.



New Factory, Volta Battery Co., Martinsville, Ind.

OUTLINE OF NEW KLAXON SERVICE PLAN.

In order to reduce charges for repairs made by its authorized service representatives, the Klaxon Co., Newark, N. J., has inaugurated a service plan which calls for fixed minimum charges for such minor repairs as cleaning, adjusting and replacing diaphragms on its products. Should electrical or mechanical repairs be necessary internal work will not be done but, instead, the motor, or in other words, the entire signal is replaced with the exception of the projector, diaphragm and back shell. The motors supplied in exchange are assembled and inspected at the Klaxon factory; thus every authorized service representative maintains Klaxon factory standards, delays are eliminated and charges reduced to a minimum. In every case predetermined charges are made so that accurate quotations can be given before the work is begun.

If service is required within 90 days after delivery of the Klaxon warning signal to the original purchaser and if the car on which it was placed as factory equipment has not been operated more than 3000 miles, the authorized service representative will make the necessary repairs without charge for either labor or material.

United Motors Service, Inc., with home offices in Detroit, is the service division of the Klaxon Co.

Motor Main Bearing Replacement

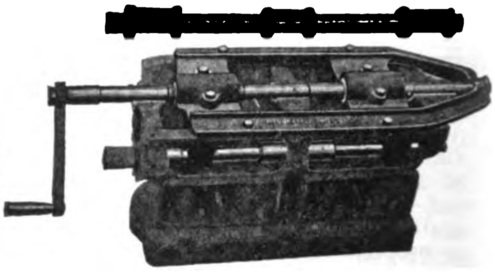
THE condition and alignment of the main bearings of the automobile motor are often not given the attention they deserve. There is a tendency to neglect this important branch of work due, no doubt, to the fact that many repair shops are not properly equipped to handle it as it should be and, in some cases, to the impression that the bearing caps receive all the strain from the explosion and, therefore, all the wear. While it is true that the caps wear the most, the variation of the crankshaft in the bearings in some types of motors, due to the starting and stopping of the pistons at the end of their travel and also to the uneven throw of the flywheel and transmission, cause an uneven wear on these bearings and pounds them out of round. Furthermore, the three bearings are not of the same size and are not subjected to the same stresses.

Experience shows that the center bearing is affected the most and, when the bearings run hot, the heated metal from the caps is forced out and is often carried over to the opposite or upper side, building this up and throwing the bearings out of true alignment. To tighten the bearings when in this condition will cause the crankshaft to spring at each revolution, resulting in crystallization and ultimate breakage or at least in a permanent bend. Bearings so tightened also cause uneven friction and wear and do not stand up.

Scraping In Is Impracticable.

Scraping in is hardly practical for these bearings, first, because it takes too long a time, and, second, when they need attention they should be built up rather than scraped down, as scraping changes the position of the shaft and causes the camshaft to run noisily, it not being in proper mesh.

No matter how much pains are taken with other work, if this important part is not properly taken care of, the motor will not run satisfactorily and the repair will be efficacious for only a short time.



Storm Main Bearing Babbitting and Boring Tool for Ford Engines.

There is illustrated, herewith, the Storm main bearing replacement tool, made by the Storm Manufacturing Co., 406 Sixth avenue, south, Minneapolis, Minn., which is stated to be a simple and practical device for this class of work. It consists of a main jig, heavily and substantially made, which is used for holding both the babbitting and boring bars. It obtains its alignment from the camshaft holes by means of a ground camshaft aligning arbor. The babbitting arbor is made smaller than the crankshaft and is provided with specially constructed pouring troughs, giving ample space for the free flow and proper filling of the metal.

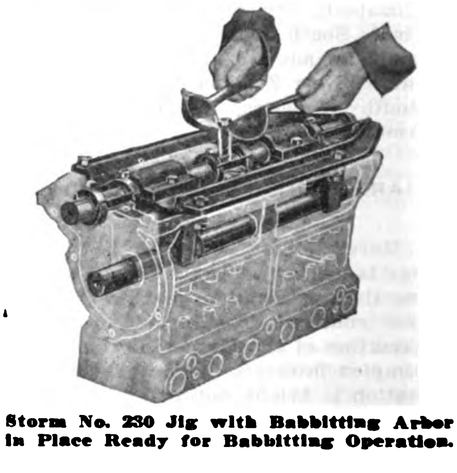
The boring bar is of ground chrome steel and is provided with three double-face and double-end cutters, which bore all three bearings at one operation. It is claimed that, by the use of this tool, new main bearings can be produced in from 20 to 30 minutes and that they will be exactly the same as the original bearings, perfectly aligned and in the exact original position.

The Storm main bearing replacement tool is made in two sizes, one for Ford cars and the other for Fordson tractor.

FOUR-WHEEL DRIVE DEALERS.

The Four-Wheel Drive Auto Co., Clintonville, Wis., has established five new dealers within the past month to handle FWD trucks in various sections of the country, as follows:

Lambert-Jones Motor Co., Oklahoma City, Okla., Oklahoma and a part of Texas; Ballard Tait Sales Co., Brunswick, Ga., the greater part of that state; Rennoc Sales & Service Co., Philadelphia, Pa., Delaware and portions of New Jersey and Pennsylvania; Talbot-Miller Motor Co., Baltimore, Md.; entire state of Maryland with the exception of three counties; Manbeck & Suloff, distributor at Mifflin, Pa.



Storm No. 230 Jig with Babbitting Arbor in Place Ready for Babbitting Operation.

Rolls-Em-Out Fender Straightener

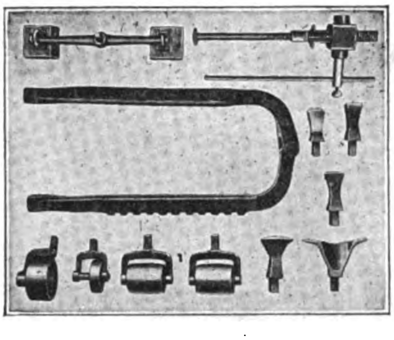
The Stiles Manufacturing Co., St. Louis, Mo., is marketing a unique equipment for the garage, repair shop and service station in the Rolls-Em-Out fender straightener, which is especially designed for the quick repairing of bent or damaged automobile fenders and other similar parts. The work can be done without the removal of the fender from the car and it will not mar the enamel or finish. It does away completely with the old laborious and unsatisfactory process of hand peening and bumping. It is claimed that it will distribute the metal uniformly and shape the fender quickly and perfectly.

It is stated that no ability or experience is required to successfully use this device, as the detailed and illustrated instructions with each set are easily understood and followed and will make an expert in this kind of work out of any repair man. It offers a new source of profit for garage owners, repair men and service stations.

The accompanying illustration shows the Stiles Rolls-Em-Out fender straightener and its various parts and attachments disassembled. To get the device ready for use, first, assemble the pressure arbor shown in the right hand upper corner of the cut, on the frame, shown in the center, by removing the small plate from the top of the rack and withdrawing the rack from the bottom of the rider. Then place the rider in the slot in the top of the upper arm of the frame and turn so that the hook engages the under side of the upper arm of the frame. Next insert the T bolt end of the rack in the slot of the lower arm of the frame, slide the upper end of the rack back into the rider and replace the small plate on the top of the rack. The machine is now ready for use.

Changing the attachments requires very little time and is easily done as the various parts are all interchangeable. When making the changes care should be taken to see that the parts are lined up before applying pressure. All moving parts should be frequently lubricated. The upper and lower surfaces of the fender to be straightened should be thoroughly cleaned and a little oil should be rubbed over it in order to assist in getting a well finished job.

With a little practise and study the repair man will soon be able to adapt the various attachments and rollers for the work in hand.



Stiles Rolls-Em-Out Fender Straightener Outfit.

CALIFORNIA TOP AND ITS CONSTRUCTION.

So many automobile manufacturers, automobile trimmers and finishers have solicited from the Du Pont Fabrikoid Co., Wilmington, Del., explicit instructions for making the popular permanent California top, that it has issued a booklet entitled "The 'California' Top and Its Construction," to supply this demand.

The booklet contains numerous scale drawings showning details of construction of every minute part; also many reproductions of photographs depicting cars equipped with the various styles, some of the illustrations being in colors.

It is stated that the edition of these booklets is limited so that it will be impossible to supply individual owners of cars, but one will be sent, on request, to any automobile manufacturer, automobile trimmer or finisher, it being in the nature of a technical course of instruction.

This type of top equipment originated in California, hence its name, and is recommended by its lines of beauty, stability, durability and the ease and speed with which it may be converted from the wide open to the storm proof attachment.

MOTOR VEHICLES IN TELEPHONE WORK.

According to a survey recently made by the National Automobile Chamber of Commerce, every telephone company in the country has its passenger vehicles for supervising work, which are usually roadsters or runabouts frequently equipped with tool boxes so that minor repairing can be handled on the spot, while trucks are used extensively for heavy repair work and new construction.

The New York Telephone Co., as might be expected, is the leader in the number of vehicles used, having a fleet totalling 925. The various types of motor vehicles are divided as follows:

Runabouts, 627; delivery cars, 51; touring cars, 11; roadsters, 8; ¾-ton trucks, 68; one-ton trucks, 31; 1½-ton trucks, 1; 2½-ton trucks, 56; 3-ton trucks, 32; 3½-ton trucks, 14; 5-ton trucks, 18; 10-ton trailers, 2.

Other large users of motor equipment are as follows:

Bell Telephone Co. of Pennsylvania, 514; Pacific Telephone & Telegraph Co., 204; Chicago Telephone Co., 170; Southern New England Telephone Co., 157, 46 of which are trucks; Iowa Telephone Co., 120; Southwestern Bell Telephone Co. of Missouri, 96; Wisconsin Telephone Co., 89; Nebraska Telephone Co., 51.

Make-Your-Gas Torch Equipment

The Make-Your-Gas Co., 439 Massachusetts avenue, Indianapolis, Ind., is marketing a portable torch, one notable feature of which is that it requires no air compressor for its operation. It is stated that it will throw a perfect combustion flame from 14 to 30 inches in length, to meet the demands of any particular piece of work, being regulated by a valve connected with the device. It is pointed out that by concentrating the flame of this torch into a cavity of fire brick a heat of 2200 degrees may be obtained. There are many uses to which this equipment can be applied, such as straightening bent automobile frames and axles, preheating large pieces of metal for welding, heating rivets and small steam and hot water boilers.

The torch is made entirely of steel and is so constructed that carbon does not appear in the torch itself and very infrequently in the valve where a special clean-out screw is provided for cleaning purposes. A stand to hold and elevate the flame and a base trench pan to generate it is also provided if there is no other means at hand. This torch consumes, at full blast, only one gallon of kerosene an hour.

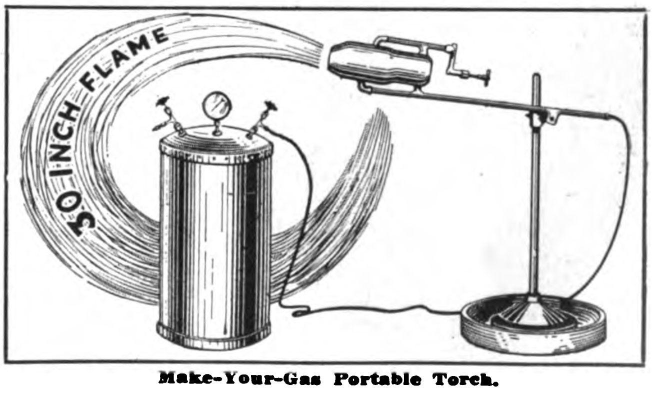
The company will supply prices and literature on application.

NEW FACTORY OF INDIANAPOLIS AIR PUMP CO.

The Indianapolis Air Pump Co., Indianapolis, Ind., has moved into its new factory building at 1625 Bellefountaine street, which is equipped with every modern appointment and convenience for economical production. This new unit will be operated in addition to the former plant and will enable the company to better supply the increased demand for its products.

NEW PLANT OF AUTOMOTIVE PARTS CO.

The Automotive Parts Co., Indianapolis, Ind., manufacturer of Hy-Duty cooling fans, has completed a new factory in that city, 125 by 200 feet, which will give much needed additional production facilities.



Make-Your-Gas Portable Torch.

Personal News of Industry and Trade

Graham with Pierce-Arrow Co.

George M. Graham, general sales manager of the Pierce-Arow Motor Car Co., Buffalo, N. Y., has been promoted to be vice president, succeeding W. J. Foss, resigned. Mr. Graham joined the Pierce-Arrow Co. four years ago as assistant commercial manager and has rapidly advanced since that time. He was formerly engaged in newspaper work in Philadelphia. Mr. Foss, who joined the Pierce Co. in 1915 as commercial manager, was formerly connected with the Foss-Hughes Co., Philadelphia Pierce-Arrow distributor. He will take an extended vacation before making another business connection.

Joseph Tallmadge has resigned the position of assistant sales manager of the east central division of the Willys-Overland Co. to become sales manager of the Handley-Knight Co., Kalamazoo, Mich. Mr. Tallmadge is well known in the industry and entered the sales department of the Franklin Co. in 1909. After a number of years in this connection he was made treasurer of the Atlantic Boat Co. and joined the Willys-Overland Co. in 1915 as assistant to H. B. Harper, who was then sales manager. Two years ago he was made assistant division manager, which position he has held ever since.

T. J. Hockins was recently appointed assistant sales manager of the J. I. Case Plow Works Co., Racine, Wis. He was in turn a salesman in the St. Louis territory, trade manager at Colorado, assistant manager at Kansas City and branch manager at Omaha. He is succeeded at Omaha by C. J. Evans, who has been assistant manager.

Charles P. Hennessy has been appointed sales manager and **Carl H. Page** director of sales and advertising of the Saxon Motor Car Corporation.

T. J. Hockins, Assistant Sales Manager, J. I. Case Plow Works Co.

George M. Graham, General Sales Manager, Elected Vice President of Pierce-Arrow Motor Car Co.

J. Elden Shaw, formerly sales manager of the Savage Tire Sales Co., Des Moines, Ia., has been appointed district manager of the Standard Four Tire Co.'s Pacific Coast business with direct charge of the Los Angeles branch. Mr. Shaw has been closely connected with the tire trade on the Coast for over 10 years, starting with the L. A. Vulcanizing Co. of Los Angeles. Four years later he was appointed credit man in the Los Angeles branch of the Savage Co., later being transferred to the factory as credit manager; then promoted to travelling auditor and soon to special salesman In 1919 he was made sales manager for the Savage Co., with headquarters at Des Moines, which position he has just resigned.

W. A. Olen, president of the Four Wheel Drive Auto Co., Clintonville, Wis., with D. J. Rohrer and C. F. Folkman, members of the board of directors, have sailed for England, where they will make a study of the truck situation with a view to improving the present facilities of their company for handling its increasing export trade. They will be joined on arrival by Senator Anton Kuokuk, also a director in the Four Wheel Drive Co.

Frederick M. Davenport, New York state senator from the 36th district, has been connected with Franklin Automobile Co., Syracuse, N. Y., for the summer, in the Industrial Relations department. Senator Davenport is professor of law and civic policy at Hamilton college. In the Senate he is chairman of the committee on taxation and retrenchment.

C. H. McCarter has been appointed general superintendent and **H. C. Aument** manager of the parts department of the Locomobile Co.'s plant at Bridgeport, Conn., by **E. L. Larson**, works manager. Other promotions include **J. R. Stine** to the position of car superintendent and **J. Burns** to be machine superintendent.

Crebbins Is Stoughton General Manager

Fred Crebbins, Jr., a well known executive in the automotive industry, has become general manager of the truck division of the Stoughton Wagon Co., Stoughton, Wis. Mr. Crebbins is a pioneer in the industry, having begun his business career with the Packard Motor Car Co. in Detroit, with which he served for several years as head of various departments. In 1908 he joined the Thomas Motor Car Co. of New York. and after three years there became general sales manager of the S-G-V Co. He was also with the Hurlburt Motor Truck Co. in New York City for seven years before going to Chicago in the spring of 1919 as factory manager of the Master Truck Co.

A. F. Bassett has been made sales engineer for the motor bearings division of the Hyatt Roller Bearing Co. in Detroit and surrounding territory. Mr. Bassett has been with the Hyatt Roller Bearing Co. for several years, serving in various capacities in the sales and engineering departments. He is a graduate engineer of Yale university and previous to his connection with the Hyatt Roller Bearing Co. spent five years in the western mining country, during which time he was engineer for the Timber Butte Milling Co. and assistant mill superintendent of the Consolidated Arizona Smelting Co.

W. J. Jones, works manager of the J. I. Case Plow Works Co., Racine, Wis., has been elected a vice president of that company in charge of production. Mr. Jones came to the Case Co. about a year ago and had previously had long experience in the production departments of some of the largest farm machinery manufacturing plants in the country, which well equipped him to head the work of increased factory production contemplated by the J. I. Case Plow Works Co.

Fred Crebbins, Jr., General Manager Truck Division, Stoughton Wagon Co.

New Officials of Hamilton Motors

A. L. Martin has been appointed general sales manager and **H. A. Oswald** chief engineer of the Hamilton Motors Co., Grand Haven, Mich., manufacturer of Apex trucks. Mr. Martin has been in the automotive industry for 16 years. Associated with his brother, W. C. Martin, he was the first metropolitan distributor in New York of Cadillac cars. They also introduced the Rolls-Royce car to this country. When the Cadillac company became a part of the General Motors organization, A. L. Martin joined the General Tire & Rubber Co., Akron, O., as sales manager. He comes to the Hamilton Motors Co. from the Four-Wheel Drive Co., Clintonville, Wis., where he was manager of the dealers' department. Mr. Oswald's engineering experience dates back to his connection with the Ford Motor Co. in the days of the old model Y and six-cylinder 999. Later he was connected in an executive capacity with the Lozier Motor Car Co. and with the manufacturer of the Grabowski truck. He was also, at one time, with the Fiat Co. in Milan, Italy, and during the world war was general superintendent of the Naval Aircraft factory, engaged in making sea planes for the United States navy. He relinquished the position of chief engineer of the Quaker City corporation to accept the place of chief engineer with the maker of Apex trucks.

William Elliott Phelps has become associated with the Haynes Automobile Co., Kokomo, Ind., in the capacity of district sales manager. He is a graduate of Princeton university and comes to the Hayes company with a long record of successful automobile salesmanship. He has been a prominent figure in the sales organization of the Chicago branch of the Winton company, and previous to that was district sales manager of the Haynes Motor Car Co. of Chicago. At one time he was also general sales manager of the All American Truck Co. He is state automobile investigator for Illinois and is a member of a number of the prominent motoring clubs in Chicago and vicinity.

W. E. Kalaman has been placed in charge of the Kansas City zone of the Hamilton Motors Co., Grand Haven, Mich., maker of Apex trucks. He was, for four years, associated with the Harley-Davidson Co., and also with several automobile distributors in the capacity of sales manager and special representative. With headquarters in Kansas City, Mo., Mr. Kalaman will have charge of Hamilton Motors Co. sales in Kansas, Oklahoma, Arkansas, Iowa and Nebraska.

D. C. McIntire has been appointed district sales manager for the Pacific coast territory for the Hamilton Motors Co., Grand Haven, Mich., maker of Apex trucks. His headquarters will be in San Francisco. He was formerly in the transportation engineering department of the Four Wheel Drive Auto Co., Clintonville, Wis.

Millard S. Binney, Advertising Manager, Traffic Motor Co.

R. L. DeVoe has been appointed manager of the Chicago branch of the Madison Tire & Rubber Co., Inc., 20 West 60th street, New York City. He has had 18 years' experience in the tire industry, having traveled from one end of the country to the other, calling on dealers, jobbers and distributors, and has an enviable service record.

Dean Flitch, the 12-year-old son of Karl Flitch, a prominent oil man of Kansas City, Mo., accompanied by his mother, has just driven a Mitchell model F car over a trans-continental trip to California, including a total mileage of over 2800.

E. O. Bodkin, formerly for four years with the Packard Motor Car Co., has joined the sales force of the Sewell Cushion Wheel Co., Detroit, maker of Sewell wheels, as a transportation engineer.

E. O. Bodkin, Transportation Engineer, Sewell Cushion Wheel Co.

Vice President of Bartlett-Hayward Co.

Chester F. Hockley, formerly vice president and general manager of the American Hammered Piston Ring Co., has been elected vice president of the Bartlett-Hayward Co., Baltimore, Md. It will be remembered that control of the American Hammered Piston Ring Co. was taken over by the Bartlett-Hayward company about a year ago and the business was removed from Newark, N. J., to Baltimore. Under Mr. Hockley's efficient administration the company has prospered and today ranks as one of the largest and best known makers of this type of product in the United States, turning out upwards of 10,000 rings a day. Mr. Hockley has had a wide and valuable experience in the industrial field. He was an operating official of the Bethlehem Steel Corporation for nine years, and has been associated with the Pittsburgh office of the Westinghouse corporation. It is understood that he will continue to give special attention to the Bartlett-Hayward subsidiary, the American Hammered Piston Ring. Co.

James V. Lyons, formerly central western representative of the American-La France Fire Apparatus Co., Elmira, N. Y., has been chosen as supervisor of the national account division recently established by the Sewell Cushion Wheel Co., Detroit, Mich. Mr. Lyons has opened offices in Chicago. The recent factory expansion of the Sewell Cushion Wheel Co. included 20,000 square feet of additional floor space in the rear of the present quarters, and 10 acres of land was also purchased adjoining the Detroit Terminal railroad and plans immediately made for a new, modern, completely equipped factory and administration building. Work on this new plant has progressed so rapidly that the first unit has been completed and is in operation.

Fred H. Miller has been appointed general sales manager of Hare's Motors of New England. He has been a special representative of the company and has recently spent some time in the southern states. When R. J. Gilmore, president of Hare's Motors of New England, was president of the Packard Motor Car Co. at New York, Mr. Miller was metropolitan district manager of the same company, so when Mr. Gilbert needed a man to head his sales organization he prevailed on the parent Hare's Motors Co. to release Mr. Miller in order that he might become a regular member of the New England organization.

Don K. Wilson, son of Frank B. Wilson, publicity director of the Climax Rubber Co., Columbus, O., is undoubtedly one of the youngest stock salesmen in the country. He was 17 years old Aug. 1 and is selling stock for the Climax Compression inner tube. His sales for the past few weeks have ranked well up with those of the older salesmen in the organization. He resides with his parents at 1952 West Fifth avenue, Upper Arlington, Columbus, O.

English Engineer Visits Shaler Co.

W. H. Miles, the English engineer and inventor, recently made a visit to this country for a conference with the C. A. Shaler Co., Waupun, Wis., in connection with the marketing of his devices in this country. Among Mr. Miles' best known inventions is the solid fuel type of vulcanizer, patents on which have recently been sustained by the United States Court of Appeals and under which the Shaler company holds the exclusive license to manufacture vulcanizers of the Five-Minute type. The direct purpose of Mr. Miles' visit to this country is to complete plans for the distribution of Shaler vulcanizers and road lighters throughout Europe from the factory which the Shaler company recently established in England and for the rigorous prosecution of infringers on the patents. Mr. Miles reports an unprecedented demand abroad for American accessories of all kinds, especially of equipment for repair shops and articles designed to enable car owners to make their own minor repairs and adjustments.

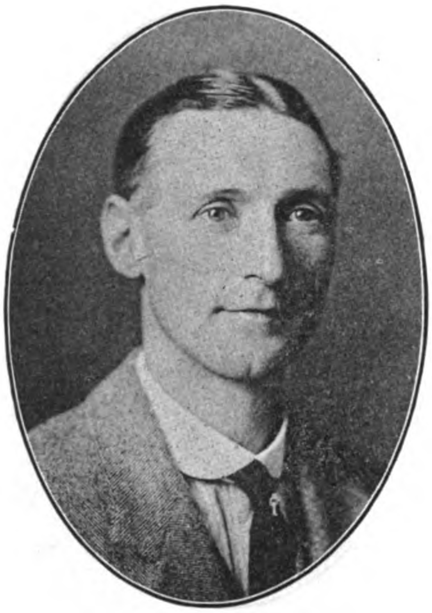
John S. Johnson, known in the old days of cycling as "Johnnie" Johnson, is traveling today through the Minneapolis and North and South Dakota territory in the interests of the Napoleon truck, for which the Whitcomb Automobile Co. of Minneapolis is the distributor, he being a member of the Whitcomb company. After the close of his sensational career as a cycle racing star, he entered the automobile business and for many years was branch manager for the Winton Motor Car Co. at Minneapolis.

R. L. Wilkinson, who has been sales manager of the wholesale division of the Klaxon Co., Newark, N. J., has been placed in charge of the recently consolidated industrial and wholesale divisions of that concern. He will be assisted in the wholesale division by C. E. Vaughan, who has been service manager of the Klaxon Co. for the past three years. Mr. Vaughan will continue his service work in addition to his new duties.

Colonel H. W. Alden, past president of the Society of Automotive Engineers, has been designated to serve as a member of the Federal Highway Council Transportation committee and also on the committee of sub-grade in its relation to road surfacing. Colonel Alden is vice president of the Timken-Detroit Axle Co., Detroit.

A. M. Merrifield, factory representative of the American Hammered Piston Ring Co. for the states of Colorado, Utah and Wyoming, has been transferred to take charge of special sales work in the central and eastern states. This promotion is a fitting recognition for his remarkably successful sales record in the Rocky Mountain district.

W. G. Shultz, sales manager for the Sandow Motor Truck Co., Chicago, Ill., is abroad for an extended business trip through England, Scotland, Norway, Sweden, Denmark, Holland and Switzerland.



W. H. Miles, English Engineer and Inventor, Connected with C. A. Shaler Co.

C. J. Larsen, production manager of the Mac-Lar Battery Co., Inc., Detroit, states that an advertising idea has been a big factor in the rapid growth of the sales of that company throughout the United States. This is the somewhat spectacular spike test of the power and endurance of the Mac-Lar Master storage battery. "To most car owners," says Mr. Larsen, "the little black box is a mystery, and we have never attempted to discuss the technical side of the results of our several years' experiment and trials. Instead we have devised a way to show the unusual strength and endurance of the Mac-Lar most strikingly. We take two-penny spikes and short-circuit the terminals of the Mac-Lar battery. In a fraction of a minute the spikes are fused—the molten metal drops hissing to the floor. After this test has been made time and time again, an examination of the plates will not reveal any injury."

C. J. Larsen, Production Manager Mac-Lar Battery Co., Detroit.

New Officials of Handley-Knight Co.

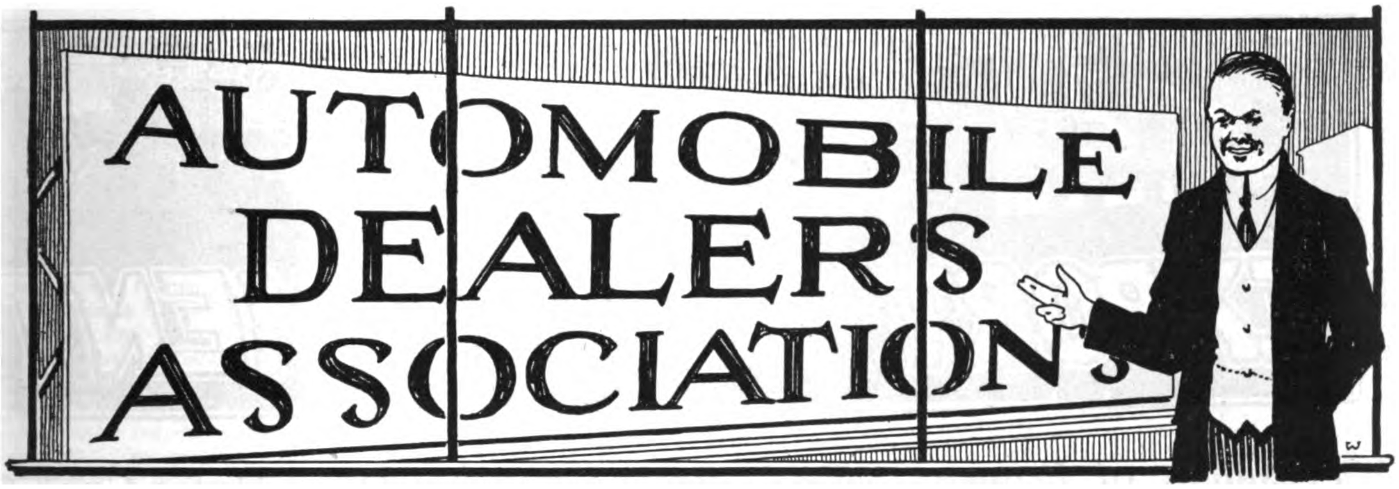
D. B. Williams has been appointed advertising manager of the Handley-Knight Motors Co., Kalamazoo, Mich. In 1909 he went to Dayton, O., as assistant advertising manager of the Stoddard-Dayton Co. A year later he joined J. I. Handley, who is now president of the Handley-Knight Co. at Indianapolis. Mr. Handley being at that time at the head of the American Motors Co. Mr. Williams was in the position of advertising and assistant sales manager. After several years there he went to Jackson, Mich., as sales and advertising manager of the Mutual Motors Co. Later he joined the staff of the Chevrolet Motors Co., first in the capacity of assistant sales manager at Flint, Mich., and then working out of the New York office of the company in charge of the commercial car division of the general sales department. From New York Mr. Williams went to New Orleans as branch manager for the Chevrolet, leaving there again to join Mr. Handley in the Handley-Knight Motors.

F. L. Mowder has recently been made comptroller of the Handley-Knight Co., Kalamazoo, Mich. He brings to this new position valuable experience gained in the financial end of many important enterprises. Ten years ago he began his business career as financial representative for one of the largest investment companies on the Pacific coast. From 1914 to 1917 he became a certified accountant with offices at Los Angeles. During 1917-1918, the period of the war, he was accountant in charge of the financial division on cantonment construction. Following this he served as financial representative of the Air Nitrates Corporation, Toledo, O., building nitrate plants at Mussel Shoals, Ala., Toledo and Cincinnati. Early in 1919 he joined the Toledo Scale Co. as comptroller, which position he left to accept a similar connection with the Handley-Knight Co.

Alexander Matheson, who was formerly connected with the Boston branch of the Motor Parts Co. of Philadelphia, has just been discharged from government service and returns to Boston as vice president and manager of the Boston branch of the Motor Parts Co., 106 Brookline avenue. Mr. Matheson served as an instructor of student officers and officers of the regular army in motor ignition and carburetion, first at the Massachusetts Institute of Technology and later at Camp Holabird in the South.

Charles A. Kingsley recently became manager of the Locomobile San Francisco branch of Hare's Motors, Inc., succeeding I. J. Morse, resigned, G. L. Catlin of Hare's Motors staff having acted as manager in the interim. Mr. Kingsley is a former Locomobile man and has had extensive experience in both the wholesale and retail departments.

Hoover Holton, Chicago branch manager of the Kelly-Springfield Motor Co., recently moved into new quarters at 25th and Michigan avenue, that city.



New Hampshire Dealers Organize

Motor vehicle dealers in New Hampshire are organizing a state association and have taken steps to affiliate with the National Automobile Dealers' association. The New Hampshire Automobile Dealers' association was organized at Manchester with P. M. McKinney, formerly of Boston, as president. The special guests were A. J. Shorey, vice president of the National Automobile Dealers' association for Massachusetts, and James T. Sullivan of the Bay State Automobile association.

DEALERS' AUTO-MOTIVE ASSOCIATION OF MARYLAND.

The Dealers' Auto-motive association of Montgomery county was recently organized at Rockville, Md., with 30 members and the following board of officers:

President, Edgar Reed, Rockville; vice president, William A. Waters, Gaithersburg; secretary-treasurer, Cuyler Meeds, Rockville; membership committee, E. R. Brosius, James O. King, Samuel M. Montgomery, C. W. Brown.

EQUIPMENT SECTION ORGANIZED.

At a recent meeting of the tire and accessory dealers' division of the Automotive association of Cleveland, O., a new division, known as the Equipment section, was organized. One of the first plans outlined is a campaign for better merchandising, and prizes are also to be offered for the best window displays.

P. F. Valentine, distributor of Lee tires, was chosen as chairman of this division, and Arthur Mechanic vice chairman.

HANSON COUNTY DEALERS.

The Hanson County Auto Dealers and Garagemen's association has been formed at Alexandria, S. D., by the dealers and garage proprietors and operators of that section for the purpose of the betterment of business conditions and the standardization of methods.

CLAIM CHECK AND RECORD DEVISED BY PORTLAND ASSOCIATION.

Below is a reproduction of a combination claim check, police and work record devised by the Garage & Repair Men's association of Portland, Ore. This has been sanctioned by the police department of that city and is available to all garages at a cost of about $2 a thousand, the city standing one-half the expense.

Washington Association's Outing

The annual excursion of the Washington, D. C., Automotive Trade association to Marshall Hall, Md., was a pronounced success, the festivities including an extra fine programme of athletic events, etc., and a fried chicken dinner. The committee of arrangements was headed by Rudolph Jose, president of the association; S. Sidney Forst, secretary, and Si Grogan, acting secretary.

WILL EXHIBIT AT FAIRS.

The newly organized Automotive Equipment Manufacturers' & Distributors' association of Portland, Ore., has voted to make exhibits at the fall fairs at Salem and Gresham, Ore. A committee of the association has secured space adjoining the automobile show headquarters at the Salem fair grounds on which a big tent will be erected to house the equipment exhibits, while Machinery hall at Gresham will be the scene of the display at that fair.

J. E. Harley of the United States Manufacturers' Sales Co. is president of the Automotive Equipment Manufacturers' & Distributors' association.

NEW PORTLAND ASSOCIATION MEMBERS.

The following have been elected to membership in the Portland Garage & Repair Men's association:

Automotive Service Co., F. C. Burrell, manager, 430 Belmont street; Hall Engineering Co., J. B. Hall and Thomas Vatnsdal, owners, 1392 Milwaukie avenue; Milwaukie Garage, I. H. Jones, owner, Milwaukie, Ore.; Pacific Auto Repair, Slayman & Weeks, owner, 288 11th street; Sellwood Garage, J. A. Dressler, owner, 1614 East 17th street; East Glisan Garage, East 81st and Glisan streets, J. G. Thayer and A. J. Geidle, owners; Hughson, R. S. Hollingsworth Co., Eighth and Davis streets, R. S. Hughson, owner; Laurel Rose Garage, 834 East Burnside street, H. Weishar and L. West, owners; Peninsular Motor Sales Co., 212 South Jersey street, F. S. Belcher, proprietor; United States Sales Co., 412 Stark street, C. B. Dowling, manager.

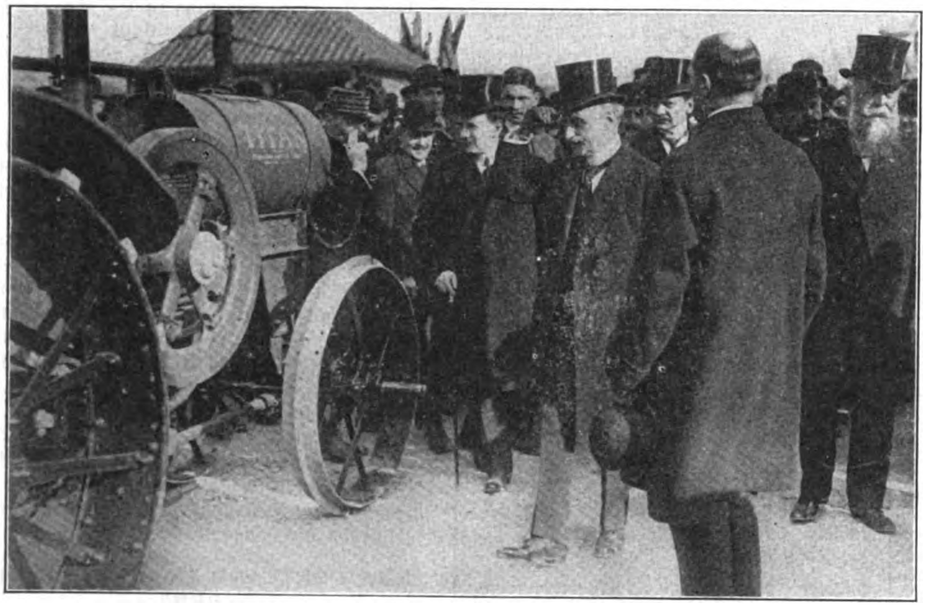
President of France Views American Tractors

Three of the leading factors in increasing the wheat crop in France to such a scale that this European country hopes that there will be no necessity in 1920 for importing wheat for bread were recently photgraphed in one group.



President Deschanel of France Examining a Titan Tractor at the Agricultural Implement Exhibition at the Tuileries Garden.

One of these is President Deschanel of France, another J. H. Ricard, French minister of agriculture, and the other an American made Titan tractor, the product of the International Harvester Co. of America, Inc., Chicago.

President Deschanel and Minister Ricard are shown at spring wheat plowing exhibition at the Tuileries Gardens.

THE NEW AUSTRALIAN TARIFF.

The long-expected revision of the Australian tariff has entered the legislative stage and is in effect provisionally pending its discussion in Parliament. The new schedule on automobile bodies is £40 to £75 each, general, and £30 to £65 preferential, as compared with the old rate of £17 to £42 general and £15 to £36 preferential. The rate on chassis is 17½ or 20% ad valorem, general, and 7½ or 10% preferential. the old rates being 10% general and free preferential.

Other items are as follows: Automobile parts: New—General, 55%; preferential, 40%. Old—General, 45%; preferential, 35%.

Bicycles, tricycles, motorcycles, etc.: New—General, 40%; preferential, 30%. Old—General, 30%; preferential, 25%.

Magnetos, spark plugs, etc.: New—General, 40%; preferential, 27½%. Old—General, 40%; preferential, 25%. Motors: New—General, 40%; preferential, 27½%. Old—General, 30%; preferential, 25%. Lubricating grease: New—General, 20 to 25%; preferential, 10 to 15%. Old—General, 15%; preferential, 10%. Tires for automobiles: New—General, 40%; preferential, 25%. Old—General, 35%; preferential, 25%.

Mineral oils. Fuel and gas—New, free; old, general, ½d. per gallon; preferential, ¼d. Lubricating—New, general, 3½d; preferential, 3d; old, general, 3½d.; preferential, 3d. Gasoline—New, general, 1d.; preferential, ½d.; old, general, 1d.; preferential, ½d. All other distilled oils—New, general, 1d.; preferential, ½d.; old, general, 1d.; preferential, ½d.

Many Motor Cars Are Owned in Switzerland

It is estimated that there are now owned in Switzerland between 10,000 and 12,000 automobiles, 1500 to 2000 motor trucks and 5000 to 6000 motorcycles. According to statistics the number in 1917 was 9425, 5076 automobiles, 1216 trucks and 3133 motorcycles. Seven of the trucks and 305 of the passenger cars were of American make. The other principal makes are Picpic and Martini of Swiss manufacture; Fiat, Bianchi and Scat, Italians; Benz and Mercedes, German, and Clement-Bayord, Reynaud Panhard and Levassor, French.

The prices of European cars in this market range from $2316 to $5211. The 1919 Martini seven-passenger touring car is priced at $5211, but is not equipped with self-starter, lamps and other electric equipment furnished with a first-class American car.

The principal makes of motor trucks are the Sauer and Berna, both Swiss.

HONGKONG'S AUTOMOBILE TRADE.

The import and export records for Hongkong, China, show that, in 1919 motor cars were imported into the colony to the value of $493,574, of which a value of $429,480 came direct from the United States. Of the balance a considerable amount also came from this country by the way of the Philippines and North China, and the remainder represents the casual movement of cars into the colony from various parts of the world as brought by their owners. During the year the colony exported cars to the value of $171,996, of which $64,064 went to Canton, $ 45,972 to Indo-China, and the rest to the East Indies, Straits Settlements, and in the casual movement of cars about the world by their owners.

Since the beginning of the year the movement of cars to Canton has been accelerated and agencies of American cars there are becoming of some importance. No new cars have come in from Europe since the war began.

A motor car exhibit will be held at the commercial fair at Bandoeng, Java, next year.

Motor Taxes Based on Value of Car

A new scale of motor taxation comes into force in Holland this year under which the value of the car is made the basis. Cars valued less than 2000 francs are taxed two francs (38.6 cts.) for every 100 francs value; for cars valued between 2000 and 4000 francs are taxed a fixed amount of 100 francs for each 100 francs exceeding 2000 francs; 4000 to 7000 francs, a fixed sum of 85 francs, plus 2.50 francs for every 100 francs exceeding 4000; 7000 to 10,000 francs, 160 francs, plus 2.75 francs for each 100 francs exceeding 7000 francs; over 10,000 francs, 2425 francs, plus three francs for each 100 francs exceeding 10,000 francs.

LICENSING OF CHAUFFEURS IN JAPAN.

According to Everard Thompson, representative of the Firestone Tire & Rubber Co. of Akron, O., in the Far East, the Japanese police, which have authority in such matters there, issue two kinds of licenses to chauffeurs. A sort of half or preliminary permit allows the driver to proceed in a straight-ahead direction only and after he becomes more expert he may take his examinations for full chauffeurship. The candidate must show himself thoroughly familiar with the reverse gear and be able to back long distances without hitting a tree or a tram car.

Mr. Thompson says that the Japanese make fairly good drivers, but do not seem to quickly grasp the idea of speed and distance. They drive too much on the brake. The pay of a first class Japanese chauffeur is from 15 to 20 yen a week, which is equivalent to approximately $7.50 to $10 in United States gold. Speeds are not high, the police holding motor cars down to about 20 miles an hour except in the open country, where 25 to 30 miles is permitted. But if you ride over a Japanese road at 30 miles an hour, Mr. Thompson states that you surely know you have been riding.

GASOLINE SUBSTITUTE PRODUCED IN HAWAII.

In view of the increasing demand for and rising price of gasoline, the progress reported as being made in Hawaii in the development of the manufacture of a substitute motor fuel alcohol is of special interest. The raw material is waste molasses and the refuse from pineapple canneries. It is stated that approximately 135,000 tons of waste molasses is produced yearly in Hawaii, which could be converted into about 9,000,000 gallons of motor fuel by the Foster process recently patented.

MOTOR OMNIBUS SERVICE IN ITALY.

Owing to the fact that Italy to a considerable extent is a mountainous country, railway lines can only be built at much cost and labor. About 10 years ago public automobile services as feeders to the railways were inaugurated at certain points and proved so successful that today it is believed that Italy ranks first in the use of this auxiliary traffic medium. The total length of roads over which motor lines are run on fixed time tables is 8700 miles, there being 400 regular lines.

The Fiat Corporation of Turin took the initiative in augurating this service and, at the present time, 350 of the 400 motor lines operate Fiat cars exclusively.

Swedish Motor Cars to South America

Swedish motor car manufacturers seem to consider South America as the most promising field for future business. The export of cars from that country, which was interrupted by the war, has been resumed and it is said that orders are now being received from Argentina, Chili, Brazil, Peru and Venezuela. The Swedish motor industry reached its greatest development during the war, particularly during the years 1917 and 1918. The production increased from $4,111,120 in 1913 to $10,076,800 in 1917, and lack of tonnage and blockade measures undoubtedly prevented a much greater production. There was a noticeable decrease in 1918 on account of the loss of the Russian market.

Exports of motor cars to the United States from Sweden in 1916 were valued at $822,760; $854,920 in 1917 and $85,760 in 1918.

MOTOR OPERATIONS OF RED CROSS ABROAD.

The American Red Cross has about 900 motor vehicles of all kinds operating in France, Rumania, Poland, Western and Southern Russia, Constantinople, Vienna and other places where its relief work is still going on.

Within six months the Red Cross has moved over half a million tons of supplies by motor to and from trains and steamships, and often across country.

A train of 13 cars—10 of which were trucks, recently left with 134 cases of spare parts, 75 barrels of oil and 10 barrels of grease for the Polish commission.

FOREIGN TRADE OPPORTUNITIES

(Information in regard to names and addresses may be obtained from the United States Bureau of Foreign and Domestic Commerce, Department of Commerce, Washington, D. C., or its district and cooperative offices, upon written request, mentioning the opportunity number.)

33,334—Dealers in machinery in Italy desire to secure an agency for the sale of lubricating oils of all kinds. Correspondence may be in English, but Italian is preferred. References.

33,341—A commercial agent from Mexico is in the United States for a short time and desires to secure an agency for the sale of gas and crude oil engines of three and four horsepower to 500 horsepower and agricultural implements. Catalogues and prices are requested. References.

33,343—A company in England desires to purchase metal fittings for automobile bodies, such as locks, hinges, knobs, handles, windshields and frames, and window fittings; also wood and metal fittings for household and office furniture of all kinds. Quotations should be given c. i. f. Liverpool. Reference.

33,358—A merchant firm in Spain desires to purchase and secure agencies for chemical products, cotton, automobile accessories and steel. Quotations should be given c. i. f. Spanish port. Correspondence may be in English. Reference.

33,359—A commercial agent in Switzerland desires to purchase and secure an agency for the sale of light automobiles (touring cars) from firms that are able to deliver quickly and give a guaranty for manufacture. Quotations should be given c. i. f. Antwerp. Payment to be in cash or bankers' guaranty. Correspondence should be in German or French. References.

33,361—Automobile importers in the Dutch East Indies desire to secure an agency for the sale of a high grade motor car and also a low priced motor car. References.

33,368—A manufacturers' representative in South Africa desires to secure an agency for the sale of light automobiles. References.

33,391—A commission agent in Poland desires to secure an agency for the sale of machinery, automobiles, agricultural implements, heating plants, plumbing supplies, cast iron articles, railroad equipment, cement, commercial glass ware, typewriters, sewing machines and rubber goods. References.

33,404—A commercial agent in Italy desires to secure the representation of manufacturers of automobiles and agricultural machinery and accessories. Correspondence may be in English. Reference.

33,421—A firm of mechanical and electrical engineers in India desires to receive quotations from manufacturers on a large number of motors and generating sets, specifications of which were forwarded. Prices to include effective packing for shipment and delivery f. o. b. American port. A list of firms represented by this company was forwarded.

33,423—A commercial agent in Cuba desires to represent manufacturers on a commission basis for the sale of paints, varnishes, lubricating oils, greases, imitation leather, hosiery, shoes, automobiles and trucks, tires, adding and calculating machines and disinfectants.

33,429—The partner of a firm in Chile is in the United States and wishes to purchase a complete line of hardware, including automobile accessories, cutlery, silverware, and also to secure an agency for a medium priced automobile.

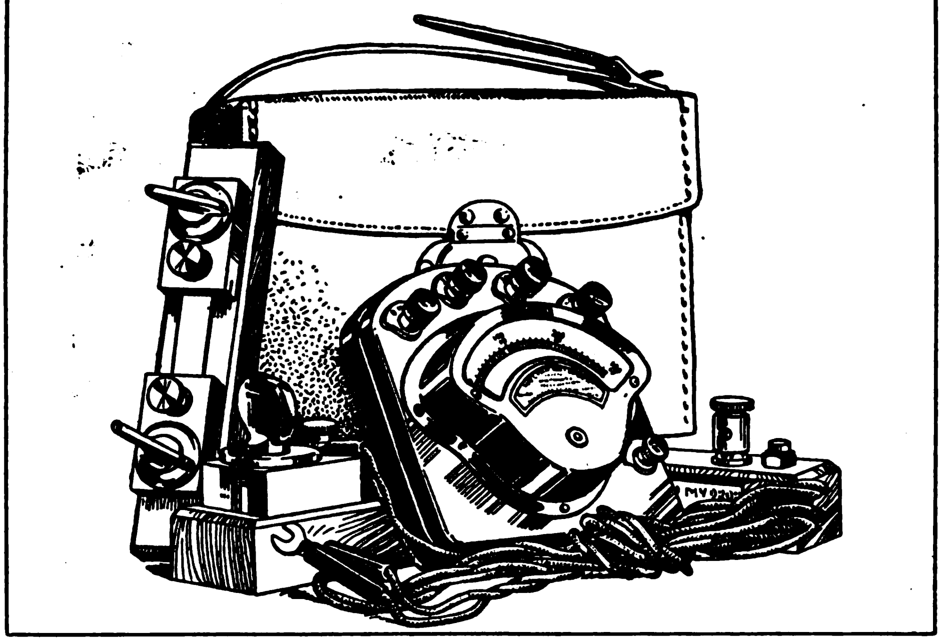
33,430—An importing company in Denmark desires to purchase and secure an agency for the sale of japanned leather, colored hides for upholstery of motor cars and carriages. Reference.

33,434—A commercial agent in Spain desires to secure agencies for the sale of high class automobiles, carpenters' and locksmiths' tools, flour and olive oil mill machinery, lubricating oils, cotton and woolen piece goods, crockery and glass ware, enameled kitchen ware and all kinds of machinery used in connection with the sugar refining industry. Quotations should be given c. i. f. Spanish ports. Correspondence may be in English. References.

33,447—A commercial agency firm in Honduras desires to secure the representation of manufacturers and exporters for the sale of medium and high priced automobiles and motor trucks, one-half ton and up, suitable for hilly country. Quotations should be given f. o. b. American ports or c. i. f. Amapala. References.

How to Test for Defects in Electrical System

THE past few years have been marked by great development in electrical appliances on automobiles so, at the present time, with a few exceptions, all cars are supplied by the manufacturers with electric starting, lighting and ignition systems as standard equipment. These systems require attention from time to time when it may be necessary to make repairs and adjustments. Just as the mechanical adjustments on the passenger car require special tools and gauges, so the testing and adjusting of the electrical apparatus necessitate the use of electrical measuring instruments. Today, therefore, no garage or service station can claim to be properly equipped to care for modern motor cars, including the electrical apparatus, unless it is supplied with one or more reliable voltmeters, an ammeter and a hydrometer. It is the purpose of this article to describe such instruments and to give the proper method of use, particularly as applied to the Delco system



Combination Volt-Ammeter Complete with Carrying Case.

One of the instruments most suitable for the purpose is known as a combination volt-ammeter. This consists of a voltmeter provided with a 0 to 30, 0 to 3 and 0 to 1/10 volt scales for making voltmeter measurements, together with three shunts having a capacity of 0 to 300, 0 to 3 amperes respectively, which are used in connection with the 1/10-volt scale for taking current measurements. A set of special calibrated leads for use with these shunts is also provided.

When the instrument is used as a voltmeter it is necessary to select the proper scale for the circuit, and, if there is any doubt, it is well to start at the 30-volt scale. If the deflection on this scale indicates less than three volts the three-volt scale can be safely used. The 1/10-volt scale is only used in connection with the shunts previously mentioned, and also for special armature testing.

When measuring the voltage of the storage battery, terminal voltage of generators, etc., the 30-volt scale should be used and the proper method of connecting it into the circuit is shown in the diagrams.

In connecting the volt-ammeter, care should be taken that the terminals are properly connected across the circuit, according to the accompanying illustrations. It is necessary to connect the positive terminal of the meter to the positive side of the circuit and the other terminal to the negative side.

If the polarity of the circuit is not shown, a trial reading can be taken. If the pointer move to the right, the meter is properly connected. If it moves to the left it will be necessary to reverse the connections of the meter, and this should be done at the circuit—not at the meter—to avoid any accidental short circuits.

On the Delco systems the polarity is governed by the storage battery and for this reason it never changes.

The principal use of the three-volt scale is to test the terminal voltage of the different cells of the storage battery and it should be connected as in diagram D, Fig. 1. It is also used when testing for short-circuited fields in the motor generator.

Used as an Ammeter.

When used as an ammeter it is necessary to first select the proper shunts and if the value of the current to be measured is not known, it is well to start with the 300-ampere shunt and then come to the 30-ampere shunt if the reading on the 300-ampere shunt shows current of a value less than 30 amperes. These shunts are connected in the manner illustrated in diagram E, Fig. 1, and as seen from this diagram, all shunts are connected in the circuit in a similar manner so that it simply requires a substitution of the different shunts. The connections are always the same. If the polarity is wrong, it is only necessary to reverse the connections from the ammeter to the shunt, which should be done at the shunts. It is unnecessary to reverse the connection to the shunt itself.

As a rule a 300-ampere shunt will be used for measuring starting currents, a 30-ampere shunt for measuring charging current, and the three-ampere shunt for very small currents, such as shunt field current, current taken from the individual lights and when making an adjustment of the ignition relay.

The accurate testing of armatures for the various defects that may develop involves the use of test points and of a voltmeter. The general function of these devices has already been explained, but their particular application to armature testing will be taken up in detail under the following divisions. It is unnecessary to remove the motor generator from the car to make these tests. Where there are grounds on the armature windings, or shorts between them, simply raise all the brushes off the commutator, and insulate them from the commutator with pieces of card board. This applies as well to testing for short circuits between generator and motor armature windings.

A grounded generator coil on one-wire systems of the single-unit type will result in slow cranking and materially reduce the charging rate. To test for this, refer to A, Fig. 2. Place one of the test points on the frame or shaft of the armature, all of which are grounded, and the other point on the generator commutator. If the lamp lights it will indicate a ground on the commutator.

A grounded motor coil will cause an excessive current to be drawn from the storage battery while cranking, or it will prevent cranking entirely. This is tested by a similar method to that used in the preceding paragraph, except that the test point is placed on the motor commutator, instead of the generator commutator. See B Fig. 2.

Short circuits between the motor and generator armature coils in most cases will decrease the speed of cranking and also cause the armature to continue to run after the engine has been shut down. This defect is tested by placing one of the test points in the generator commutator, the other on the motor commutator. If the lamp lights it will indicate a short circuit between the motor and generator windings, C, Fig. 2.

When testing for open or short-circuited generator armature coils, the generator brushes should be left in contact with the commutator, but the storage battery should be disconnected from the system. Then disconnect the shunt field from the brushes and connect up a dry cell and an ammeter, having about a 30-ampere scale, to the brushes, as shown at D, Fig. 2. Then turn the armature over slowly by hand. If the commutator is in good shape, and the brushes are making good contact, a very noticeable change in the ammeter reading will indicate an open or short-circuited armature coil. To see whether the coil is open-circuited, or short-circuited, the following tests should be made:

Open-circuited coil: Connect the brushes to the terminal of a dry cell so that current of about 10 amperes is flowing through the brushes. The field should be entirely disconnected. Then with a special pair of points connected to the three-volt scale of the voltmeter, measure the voltage across each two adjacent commutator bars. If there is an open-circuited coil, the voltage reading will increase materially. D, Fig. 2.

If there are no open-circuited coils and the preceding tests show that there is some armature trouble, the armature should next be tested for short-circuited coils. (This should only be done after the preceding tests have been made, as an open-circuited coil might cause the 0.1-volt scale of the voltmeter to be burned out if this test were made first.) The armature is connected as described in the paragraph for open-circuited coils, but for this test the 1/10-volt scale is used instead of the three-volt. F, Fig. 2.

The voltage drop between each two adjacent commutator bars is then measured by slowly turning the commutator by hand. The readings should all be approximately the same. If any of them drop nearly to zero, it will indicate that one or more of the armature coils are short-circuited. In taking these readings care should be used to keep the points on adjacent bars, otherwise the voltage drop may be sufficient to injure the voltmeter.

If any of these tests show trouble it will be advisable to install a new armature, or to send the armature to the factory to be repaired. Unless the fault is visible to the eye, it is inadvisable to attempt to have such armatures repaired except at the factories manufacturing them, where special equipment for this class of work is available.

The armature in the Delco motor-generator differs from the usual form of construction in that it is double-wound, having two separate windings and commutators, one winding for the motor, and the other for the generator. The brushes are so arranged on the two commutators that, when the starting pedal is pushed down and the motor-generator is being used to crank the engine, both of the motor brushes make contact with the motor commutator while, at the same time, one of the generator brushes is lifted off. However, when the starting pedal is released, one of the starting brushes is automatically raised and the lifted generator brush dropped to make contact with its commutator, thus permitting the machine to operate as a generator. The generator output is regulated by the third-brush principle.

The system has no cut-out, as is usually found, the closing and opening of the charging circuit being taken care of by the turning on and off of the ignition button.

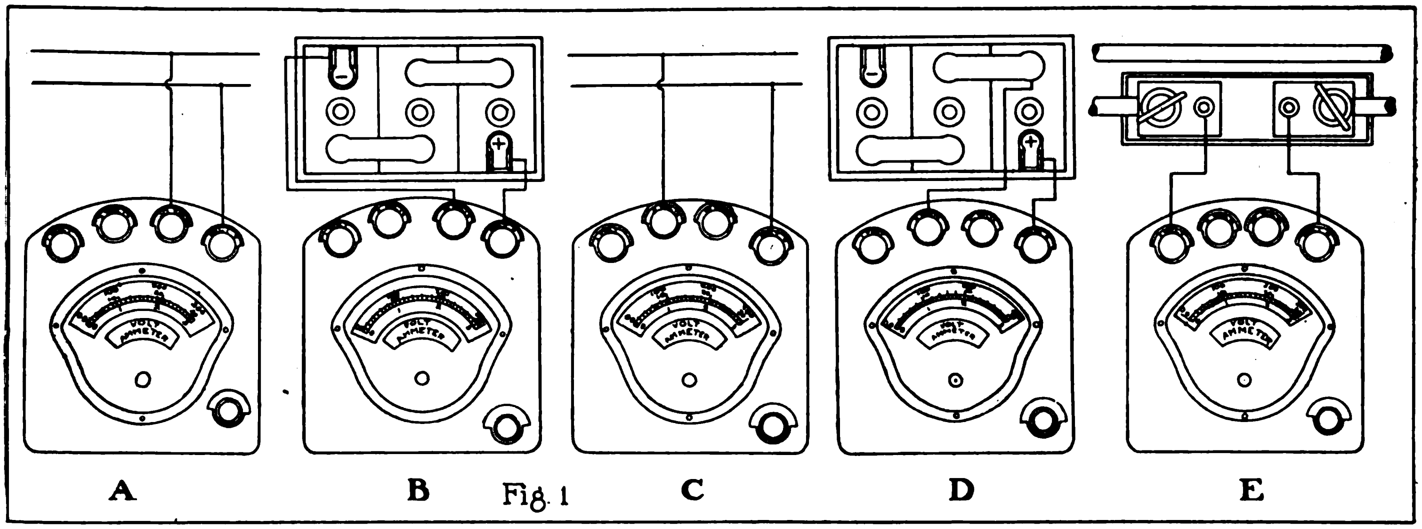


Fig. 1

The Remy Two-Unit System.

Troubles in the electrical system of an automobile are generally those which prevent the current from traveling in its proper paths and doing the work that is expected of it. Almost all electrical troubles can be placed under one of four heads: Open circuit, circuit having abnormally high resistance, short circuit, the modification of the short circuit called a "ground."

An open circuit occurs when a wire becomes detached from one of its terminals or breaks, or when a connection is dirty or improperly made, so that the current carrying surfaces do not make proper contact with each other, thereby preventing the current from flowing because of the lack of a complete path or circuit.

High resistance may result from poorly made or dirty connections, wires that are partially broken through, wires that are too small for the work they must do, or dirty, pitted and corroded contacts in the dynamo, cut-out or regulating parts. A high resistance in a circuit will be indicated by a low generator output and a high generator voltage. A loose connection will cause a variable output, low when poor contact is made and high when good contact is made at the connection. A high resistance connection frequently occurs at the battery when battery terminals become corroded. Frequent cleaning of the storage battery terminals is recommended and coating with vaseline to prevent corrosion.

A short circuit is established whenever an accidental current carrying path occurs in a circuit at a point that allows a flow of current where there should be no flow, or that permits the current from the generator or battery to return without passing through the lamps or other devices that are designed for using current. This may be caused by two wires being crossed and making electrical contact, or by the insulation being worn off so that an electrical contact is made with the metal of the car. The metal then completes the short-circuit path for the current.

The success of any electrical installation depends upon the flow of current being kept within the conductors designed to carry it, and should the insulation fail or exposed parts come into contact so that a flow of current is allowed where it should not be, the result will be a drain on the battery, failure of generator, failure of starting motor or of almost any of the electrical units, depending on the point at which the short circuit occurs.

A ground is a form of short circuit established through the metal parts of the car. On a grounded (one-wire) system, that is, a wiring system using the metal parts of the car to carry the return current, a ground occurs when a current-carrying conductor comes in contact with a metal part of the car. It can readily be seen that if the ground occurs between the battery and any part of the equipment, the result will be a short circuit, the current returning to the battery through the metal of the car instead of first going through the current-using devices, then returning to the battery. On an insulated (two-wire) system, it is necessary that both wires make contact with the metal of the car before a short circuit can result.

The test lamp is a very convenient means of indicating, by means of a flow of current, whether a circuit is complete through a certain path or not. If one side of an ordinary drop cord, as used for shop and garage lighting, is opened, the lamp can be used as a test lamp. Cutting one wire will open the circuit and prevent the lamp from lighting as long as the two ends are separated, but when the ends are brought together the circuit will be complete, as will be indicated by the lamp lighting. The lamp may be used as a tester by touching the two free ends to any points between which it is desired to make a test. If the conduction path is not complete the lamp will not light, indicating an open circuit. D, Fig. 2.

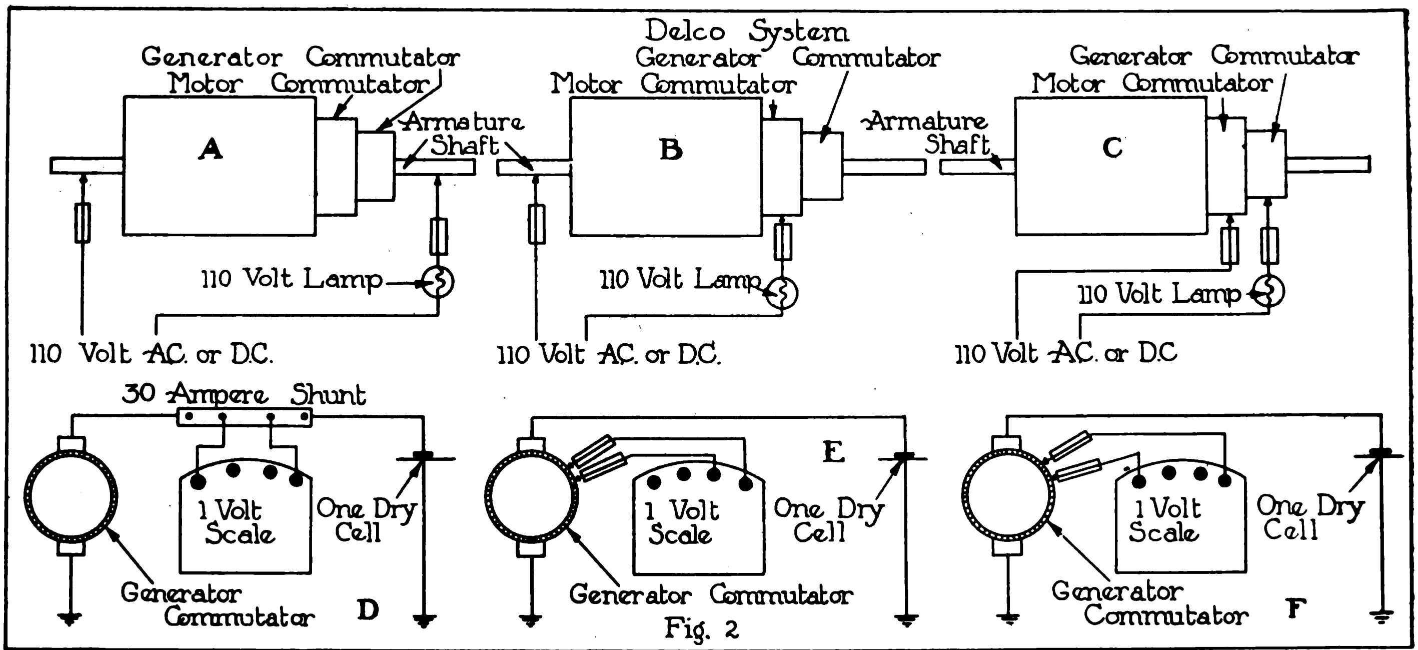

Fig. 2

A low voltage test lamp is a very convenient article for locating trouble, and is made in the same manner as the set just explained, except that a small socket is used which will take a six-volt automobile lamp. An ordinary automobile trouble lamp makes a good test lamp. This low voltage lamp can be used for many tests where a high voltage lamp cannot be used. The leads from this lamp can be connected to the terminals of the generator to see if it is generating; the lamp can be connected across a battery, an ignition coil primary, switch terminal or any place where it is desired to ascertain whether a voltage exists or not. The approximate voltage can be determined with the test lamp; for instance, if a six-volt lamp is placed across the terminals of a six-volt generator or battery and the lamp burns with full brilliancy, the battery or generator must be producing in the neighborhood of six volts, while if the lamp burns only half bright the voltage must be low or in the neighborhood of three volts. The low-test lamp can also be used to test for grounds, short circuits, open circuits, etc., by connecting a storage battery or dry cells in series with it. E, Fig. 2.

Testing Generators.

To test the field, connect battery across the field with an armature in series. A field drawing excessive current indicates a short-circuited field winding, field connected wrong or, in single-wire systems, field grounded to frame of car. An open field will be indicated by the ammeter indicating zero.

Testing the armature, when the generator is operating and the armature is drawing an excessive and fluctuating current, indicates a short-circuited armature or, on single-wire systems, a grounded armature will be indicated by a very pronounced firing at brushes, and the commutator bars which are connected to open coil or coils, will be badly pitted and burned. The generator refusing to motor may indicate a wrongly connected field, open circuit at two or more places on opposite sides of armature, a very dirty or badly burned commutator, brushes sticking in holders, or open circuit in the field winding, field leads or armature leads.

Making proper connections for motoring generator and testing field-grounded system: With one terminal of battery grounded and generator frame grounded, connect the other battery terminal to generator terminal on relay regulator next to fuse or the fuse terminals. See that it is intact and that the regular points make good contact. Generator should motor with these connections made.

When testing the field winding, using the connections just mentioned, raise the insulated brush on generator and the field will be connected across the battery direct.

On insulated two-wire systems, connect one battery terminal to the brush which connects directly to the field, and the second battery terminal to one of the stationary points of regulator, or the leads connecting the regulator, making sure that the regulator points are making good contact. The generator should then run as a motor.

When testing the field winding on this system, use the above connections, raise the field brush—that is, the brush to which the battery lead is connected—clear of the commutator, and the field will be directly across the battery.

Third Brush Grounded System.

In case of a generator such as model 234 A on which third brush regulation is used, ground one side of the battery and the generator frame. Then if the ungrounded lead of the battery is applied to insulated terminal on generator frame the generator should run as a motor.

In testing the field winding, connect one battery lead to insulated terminal on generator and the second to the third brush with third brush raised from the commutator. The battery will then be connected across the field.

Third Brush Insulated System (Two-Wire.)

For insulated systems, third-brush, two-pole generators, such as models O B and 165, connect battery across generator terminals and the generator should motor on pressing down relay armature.

When testing the field winding use the above connections, raising the main brush, which is farthest from the third brush, from the commutator and the field will be connected across the battery.

Armature Test, Generator Running as a Generator.

A high cut in, that is, the relay cutting in at too high speed, may indicate that the relay is out of adjustment, a reversed or wrongly connected field, the armature short circuited, a dirty or burned commutator, bad brushes or brushes sticking in holders or, on a grounded system, a grounded armature.

Low generator output with normal or low voltage, may indicate that the regulator is out of adjustment, that is, that the spring holding the contacts in closed position may need adjusting to hold them closed longer, dirty or burned regulator contacts, armature short circuited, badly discharged battery, field coils connected wrong or partly shorted out or, on third-brush regulation, the third brush may need adjusting.

Low output with high voltage indicates loose connections in battery circuit or battery circuit open.

High generator output may be caused by only one regulator point making contact, thereby cutting only half of regulating resistance into field circuit, or the regulator contacts may need adjusting so that spring does not hold them closed too long, or may be sticking closed. If third-brush regulation is used, third brush may need adjusting.

The failure of the generator to charge the battery may be caused by dirty or badly burned relay contacts, an open circuit in wiring or connections, fuse out, battery very badly discharged or badly sulphated.

The failure of the generator to function may indicate an open field, a field with two adjacent poles reversed, an open circuit in wiring or connections, or armature open at opposite sides.

Open or Short-Circuited Generator Armature Coils.

When testing for open or short-circuited generator armature coils, the generator brushes should be left in contact with the commutator, but the storage battery should be disconnected from the system. Then disconnect the shunt field from the brushes, and connect two or three dry cells and an ammeter, having about a 30-ampere scale, to the brushes as shown at A, Fig. 3. Then turn the armature over slowly by hand. If the commutator is in good shape and the brushes are making good contact a very noticeable change in the ammeter readings will indicate an open or short-circuited armature coil. To see whether the coil is open-circuited or short-circuited, the following tests should be made:

For open-circuited coil, connect the brushes to the terminal of a dry cell so that current of about 10 amperes is flowing through the brushes. The field winding should be entirely disconnected. Then, with a special pair of points connected to the three-volt scale of a voltmeter, as shown at B, Fig. 3, measure the voltage across each two adjacent commutator bars. If there is an open-circuited coil the voltage reading will increase materially.

To test for short-circuited coil, if there are no open-circuited coils found, and the preceding tests show that there is some armature trouble present, the armature should next be tested for short-circuited coils. (This should only be done after the preceding tests have been made, as an open-circuited coil might cause the 0.1-volt coil of the voltmeter to be burned out if this test were made first.) The armature is connected as described in the preceding paragraph for open-circuited coils, but for this test the 0.1-volt scale is used instead of the three-volt. The voltage drop between each two adjacent commutator bars is then measured by slowly turning the commutator by hand. The readings should be approximately the same. If any of them drop nearly to zero, it will indicate that one or more of the armature coils are short circuited. Connections for this test are shown at C, Fig. 3.

In taking these readings, care should be used to keep the points on adjacent bars, otherwise the voltage drop may be sufficient to injure the voltmeter.

If any of these tests show defects it will be advisable to order and install a new armature, or to send the armature to the factory to be repaired. Unless the fault is visible to the eye it is inadvisable to attempt to repair such an armature outside of the factory manufacturing it, which is especially equipped for such work.

Setting Brushes on Generators.

All generator brushes should be set in the position of least sparking when carrying full load, which position will be a short distance ahead (in direction of rotation) from the neutral plane. The brushes are in the neutral plane when at the point where the current is reversing in the winding and, therefore, at the position where the highest voltage is obtained between brushes of opposite polarity. This position can be located by connecting a voltmeter between the brushes and moving the rocker ring until the point of highest voltage is reached. The voltage will decrease as the brushes are moved away from the neutral plane.

Setting Brushes on Motors.

Motor brushes should be set at the position of least sparking when machine is carrying full load. This will be a short distance back (in the direction opposite to rotation) from the neutral plane. To set motor brushes in the correct position, place machine on block test and apply a load approximately equal to that which it is normally required to carry. (This load will be about 40 pounds on a pulley of six-inch diameter, or 10 foot pounds for starting motors.) The speed of a motor is greatest when the brushes are at the neutral plane and decreases as they are moved away from that position. The voltage of a generator and speed of a motor can be changed considerably by moving the brushes providing the machine is not too heavily loaded so that it will spark badly.

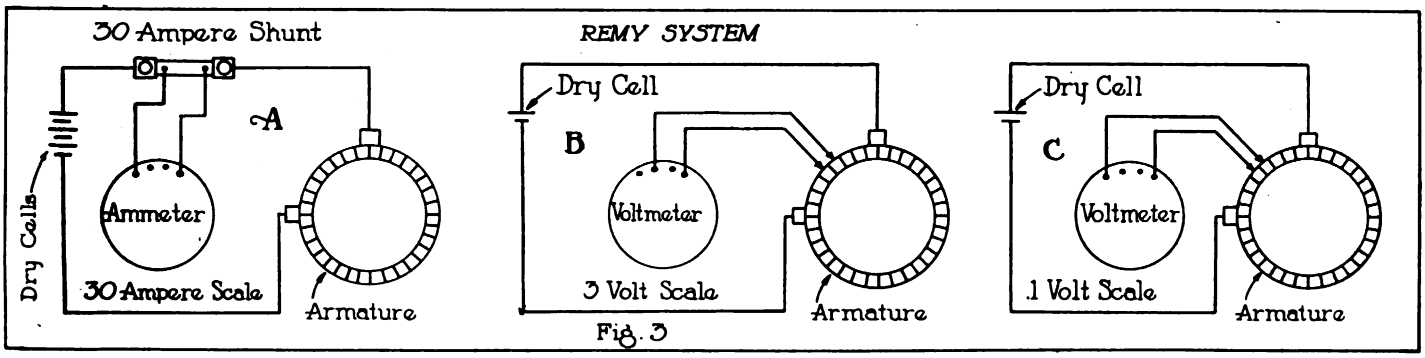

Fig. 3

Reversed Field Coils.

Field coils are not liable to be connected wrong when the machine leaves the factory, and cannot possibly become reversed when in operation. This trouble, therefore, is very unlikely to be encountered unless the machine has been disconnected for repairs and then connected up wrong.

To locate a reversed field coil, with the field excited and armature out of circuit, approach each field pole with a compass, taking them in succession. If connected properly, each pole will attract the opposite end of the compass needle to that which the preceding or following pole attracts. Care should be exercised in making this test, to approach each pole with care, and not slide from one pole to the next without taking the compass well away from the machine, as the polarity of the compass needle is very liable to be reversed and incorrect results obtained. To locate a ground on an insulated (two-wire) system, disconnect the battery from the system and ground one battery terminal. Attach one voltmeter lead to ungrounded lead of battery and apply the second voltmeter lead to the system. If a reading is obtained on the voltmeter, the system is grounded. An ordinary test lamp, consisting of a socket with flexible leads and a 110-volt lamp, can be used for this test. Apply leads from a 110-volt alternating or direct current lighting circuit, with test lamp in series, to the apparatus just as the battery was applied. That is, apply one lead to ground and the other to the equipment in any place where it is required to test for grounds. If the lamp lights, it indicates a ground on the system. Armatures and fields may be tested for grounds in the same manner, applying one lead to field winding and the other to the frame or, in case of testing armatures, one lead on commutator and the other on the shaft.

One ground will cause no trouble on an insulated system, but it should be cleared if possible, as upon the occurrence of an opposing ground, part of the apparatus is liable to be short circuited.

Testing the Motor.

A motor drawing excessive and fluctuating current may indicate a short-circuited armature or, in a single-wire system, a grounded armature. An open armature will be indicated by very pronounced firing at the brushes and the commutator bars, connected to the open coil or coils, will be badly pitted and burned.

A motor that will not operate may

have a badly shorted armature, open circuit at two or more places on opposite sides of armature, field coils connected wrong, open-circuited field, field leads or armature leads disconnected, brushes sticking, or a very dirty or burned commutator.

Testing Distributor Segments, Caps, Etc.

Connect up any good ignition coil in the usual manner with the breaker in the primary circuit and the base of coil grounded. Connect the terminal of the high-tension winding of the coil to the metal on one side of segment and ground the metal on the other side of the segment. If the spark jumps across the safety gap the segment is all right. If it does not, but jumps through the bakelite, the segment is broken down. To make this test with segment in place on car, remove distributor cap from distributor and disconnect high-tension lead from cap. Test spark by holding high-tension lead close to metal part of car. Then hold high-tension lead against contact spring on segment. If spark jumps safety gap, segment is all right, if not, it is broken down. Use starting motor to turn engine when making this test.

In testing the distributor cap, test as above for distributor segments, making contact with high-tension lead and grounded lead across from one terminal to another, etc.

Condenser Tests.

Condenser troubles will usually be indicated by severe arcing at the breaker points. When testing for a shorted condenser, disconnect condenser or, if condenser is inside of coil, disconnect coil. Connect terminals leading to condenser, across 110-volt alternating or direct current with a lamp in series. If lamp lights the condenser is short-circuited or broken down between layers. On systems using grounded ignition, that is, grounded primary winding in ignition coils, such as Studebaker coil model 171 A, connect to post to which lead from breaker is attached, marked "timer," and to base of coil, for this test.

(Note—If primary winding has become grounded in the above type of coil, the lamp in this test will be lighted the same as if condenser is shorted. However, if breaker points arc badly and are burned, it can be assumed to be condenser trouble.)

On systems using insulated ignition (primary winding not grounded) such as Velie, coil model 172 A, connect to center post marked "timer switch" and to outside post which has not the resistance unit connected to it.

Open Condenser.

An open condenser may be one which is disconnected inside of box or coil tube, or which has opened up between the layers so that its capacity is very low. With an open condenser or one which has no capacity from any cause, very severe arcing will occur at contacts as stated.

Capacity Test.

In case 110-volt direct current is available, a capacity test can be made by connecting across condenser with a lamp in series as shown in diagram, Fig. 4, then disconnecting and bringing the condenser terminals together. If a good spark is obtained, the condenser is all right. An alternating current is not as dependable for this test as direct, although with proper care fair results can be obtained. In using alternating current, a good spark will not be obtained every time the condenser leads are touched together, but only occasionally.

Testing Ignition Coil.

A good ignition coil should produce a spark that will jump at least a ¼ inch gap. Put the coil on test and if it produces a good spark and does not miss after a three or four hours' run, that is, after it is well heated up, it may be considered fit for service.

Emergencies—What They Are

Motorists are often confronted with the word "emergency," and it might be well to know just what the word means. According to the lexicons it means a situation or unexpected happening or occasion of action, caused by a perplexing contingency or complication of circumstances. Motorists in every day life may not recollect this exact definition, but the actual stress of the emergency becomes especially noticeable when pedestrians or persons in vehicles find themselves in a perilous position in consequence of the failure of themselves or others to fulfill their legal and moral obligations. It is seen when pedestrians become confused at the approach of a machine, take the wrong course, run in front of automobiles, or hesitate and seesaw until injury seems inevitable.

The law that has come down to us, from the English courts is that if a person places another in such a situation that he must adopt a perilous alternative, the former is responsible for the consequences. On the other hand, if an injured person's act resulted from the rash apprehension of danger which did not exist, and the injury which he sustained is to be attributed to rashness and imprudence, such a person is not entitled to recover in damages.

Duty of Motorist in Emergency.

Now what is the duty of the motorist in an emergency? This is what one authorized has to say upon the law governing the drivers of motor vehicles:

"The law as to drivers of motor vehicles is no different from that which governs other persons. The standard required is that of a reasonable prudent person under all circumstances. If some unforeseen emergency occurs, which naturally would overpower the judgment of the ordinarily careful driver of a motor vehicle, so that momentarily or for a time he is not capable of intelligent action, and as a result injury is inflicted upon a third person, the driver is not negligent." The law does not require supernatural poise or self-control. But no one can safely drive motor vehicles amid the distractions and dangers likely to be encountered on the modern highway and street who is not reasonably steady of nerve, quick in forming an opinion and calm in executing a design.

Driver Should Always Use Forethought.

It is the duty of the driver to always exercise forethought, wisdom and caution.

It is his duty to anticipate that pedestrians and others in perilous positions might be filled with and overcome by fear and act unreasonably.

It is manifestly his duty to prefer the safety of human beings to that of animals, and to hit an animal rather than a human being, if the emergency demands such action.

It is his duty not to lose his head and to at all times operate his vehicle, not on the assumption that everyone shall look out for him, but rather that he shall look out for them, as more of a burden is placed upon him, because of the character of the vehicle he operates, than upon those not similarly situated.

SKIDS CAN EASILY BE AVOIDED BY CAREFUL DRIVING.

It is just as easy to drive when it is wet as when the roads are dry, comparatively speaking. The only difference is one of speed and using judgment. If you drive carefully and do not try to speed on slippery roads or streets, you will have no trouble.

When streets and roads are first wet, just after a rain has started, the surface is covered with a slime, composed of road oil, dust, etc., that is feared more by motorists, than later when the street or road has become thoroughly wet and the dirt and dust has been washed away to the gutters. Skidding is very easy at this time, and the careful driver is on his guard. If the car is driven rapidly over a greasy street and the brakes applied suddenly, the result is very liable to be a bad skid. It is a great deal better to drive slowly and avoid the chance of skidding. Do not try to turn suddenly, or there is certain to be a skid. In fact, if everything is done deliberately both car and driver will last a great deal longer.

It is easy to stop a car when it is slippery if the brakes are applied gradually, but if the brakes are applied abruptly and the wheels are locked the rear end will swing around.

When you turn, give the man behind you a chance to get out of the way by warning him with your hand or arm, or if you have a closed car use a signal.

When you stop, let some one else besides yourself know about it. Do not stop in the middle of the road, a habit too many people have. This is a dangerous practise, especially if you do it suddenly. When you start from the curb, if you have your car parked on a down town street, take a look around and note if any one is coming. Do not swerve out and then curse if some one else nearly rams you.

BRAKE RATCHETS.

The brake ratchets attached to the emergency brake levers are called upon for very strenuous service on some occasions and they sometimes break. It is a good plan to carry an extra ratchet in the tool box against this emergency.

PLATE XXXIV.

SALES AND SERVICE STATION

A Two-Story Fire Proof Structure, 60 by 120 Feet, with Large Truck Department and Provision for Storage and Work Shop Facilities.

THE accompanying design shows a two-story structure, of fireproof construction, size 60 by 120 feet. The first floor is for motor trucks, with repair and storage departments. This floor also contains an office, with staircase leading from it to the second floor. Opposite to the office and divided by an entrance from the main street will be found a space that can be used either for a show room or a sales room for automobile parts and accessories. In event it is used for a show room a large door should be provided to permit placing of cars into the space, as shown.

The storage and general repair department for the trucks take up two-thirds of the entire floor area, thus allowing the management to handle a large number of trucks. A large door on the side street or court adds to the ease in handling the trucks, from a storage standpoint.

At the rear of the first floor a repair shop and a machine shop are located, also an elevator for hoisting passenger cars to the second floor, which is devoted exclusively to them. The repair and machine shops are adequate to handle work almost of any nature that a station of this type might be expected to do. In many cases a specialization on one particular car is adhered to, as this naturally develops efficiency and increases the quality of workmanship. It also permits the company to install machinery especially suited to its needs.

The second floor, assigned to passenger cars, is given over to their repair and storage. This floor is reached by two staircases and one elevator for cars. In the front end, directly over the show room and office, will be found a women's room and toilet. Adjoining this is a large stock room, where parts can be kept on hand.

At the rear of the second floor there is a toilet and a wash room, being ample in size for a force necessary to operate a station of this size. Lockers will be found just outside of the wash room.

The question of construction is a very important one. Owing to the great variance of building laws of different states and cities, and numerous fire ordinances that govern the erection of a building of this type, the best that can be done here is to analyze in a general way what the building is made of, or rather what is proposed regarding it.

The sub-structure or foundation, as in all good buildings, should be of concrete of the very best quality. This being a detail that many do not well consider, allowing only about half the volume of good material necessary for a first class job.

A glance at the elevation shows one the principle of the foundation line, this being shown in a broken line effect, having a spread footing. Owing to excessive loads that arise in this type of a structure, and the amount of live load placed therein, something more rigid is required than under ordinary circumstances. The method shown insures against settlement of an unequal nature. The size of such a footing is governed by the load placed on it, and the bearing pressure of the soil on which it is built.

A mixture that will be found extremely satisfactory for mass concrete work under most any condition is one part Portland cement, three parts clean coarse sand and five parts crushed stone. For other conditions a 1-2-4 mixture may be used.

The floor construction is of reinforced concrete, also the columns, the standard formula being used in connection with this construction. City building laws must also be taken into consideration. All walls are of brick except the outside walls, which are of terra cotta, backed with brick.

The concrete foundation is allowed to project above the ground to form the base course of the building. This is finished off to resemble concrete stone. The windows have steel sash, cut into small panes so that windows when broken may be easily and economically replaced.

The general equipment, of a fireproof nature, complying with the laws of the city property board or the building inspector.

A large sliding door, automatically operated, leads from the side street, while the door in front is of the swinging type, made of wood unless otherwise demanded, while the sliding door is just a plain, simple door, covered with metal to make it fire resisting.

Heating is by steam, or as the owner desires. The boiler room is located underneath the repair shop, with stairs leading from the same down to the boiler room.

This sketch has been finished with a view of giving prospective builders of such a service station ideas that he might desire to incorporate in his structure, and any further information desired relative to the cost of this structure or any special feature will be gladly furnished upon application to the Architectural Department of this publication.

Regarding the cost of the structure the estimate is approximately $30,000. This amount would be sufficient in most cities, while in some places the cost might be less.

NEW CONCERNS RECENTLY INCORPORATED

Monthly Record of New Business Houses for Which Charters Have Been Issued in the Various States and Classified According to Nature of Business.

DEALERS IN AUTOMOBILES, TRUCKS, TRACTORS, ETC.

Montgomery, Ala.; Packard Birmingham Motor Co.; $100,000.

Montgomery, Ala.; Southeastern Motor Co.; $100,000.

Bridgeport, Conn.; Liberty Auto & Electrical Co., to deal in automobiles; $50,000.

New Haven, Conn.; Alling & Rockwell Auto Sales Corporation.

Dover, Del.; All-American Motor Truck Co.; $6,000,000; T. L. Croteau, M. A. Bruce, S. E. Dill, Wilmington.

Dover, Del.; Meteor Motors Corporation; $5,000,000; S. B. Howard, Robert K. Thistle, A. Roy Myers, New York, N. Y.

Dover, Del.; Narmo Motor Corporation; $32,000,000; Samuel B. Howard, Robert K. Thistle, A. Roy Myers, New York, N. Y.

Dover, Del.; Scientific Auto Corporation; $3,000,000; M. M. Lucey, M. Butler, M. A. Davis, Wilmington.

Dover, Del.; United States Motor Car Co.; $32,000; A. J. Kingsbury, L. B. Phillips, D. D. Wharton.

Wilmington, Del.; Chyrsler Motor Co., dealing in automobiles; $50,000; C. H. Blaske, M. A. Bruce, S. E. Dill.

Wilmington, Del.; Economy Motor Sales Co.; $375,000; Walter N. Reed, Letitia M. Reed, Dushane C. Potter.

Wilmington, Del.; Lafayette-Philadelphia Co., sale of automobiles, etc.; $150,000.

Wilmington, Del.; Porto Rico Blue Line. Inc., dealing in automobiles and to conduct a sight seeing and touring business; $100,000.

Indianapolis, Ind.; Monroe Motors Corporation, to deal in automobiles; $100,000; R. O. Malott, W. G. Todd, Floyd P. Ferguson.

Boston, Mass.; Bowman, J. M., Co., Inc., to deal in automobiles; $150,000; Thomas A. Mullen, Albert Garceau, Rogers Dow.

Cambridge, Mass.; Taylor Manufacturing Co., to deal in automobiles; $500,000; George A. Taylor, Harold G. Goepper, Allen J. Topholme.

Medford, Mass.; South Medford Garage, Inc., motor vehicles; $50,000; Edward G. Daly, Medford; Daniel L. Brown, Cambridge; Olive L. Sawyer, Foxboro.

Byron Center, Mich.; Holleman DeWeerd Auto Co.; $140,000; Peter Holleman, R. O. DeWeerd, Harry DeWeerd, J. H. Holleman.

Excelsior Springs, Mo.; Sam Fell Motor Co.; $5000.

Kansas City, Mo.; Bayless Motor Co., retail and wholesale automobile business; J. D. Bayless, W. J. Evans, Karl Fricke.

Kansas City, Mo.; Johnston Motor Co.; $5000; J. F. Goshern, attorney, Republic building.

St. Joseph, Mo.; Boyd Motors Co.; $10,000; Groves & Watkins, attorney.

St. Louis, Mo.; Banner Automobile Co.; $500,000; R. L. McLaran, attorney, Merchants-Laclede building.

St. Louis, Mo.; Biedermann Motor Car Co.; $50,000; Charles A. Newman, attorney, International Life building.

St. Louis, Mo.; Cole & Howell Automobile Co.; $2100; Judson, Green & Henry, attorney, Boatmen's Bank building.

St. Louis. Mo.; Reden Motor Sales Co.; $5000; Marion C. Early, attorney, Wainwright building.

St. Louis, Mo.; West Side Buick Auto Co.; $25,000; care of W. S. Roberts, Vesper-Buick Auto Co., Grand avenue and Lindell street.

Garfield. N. J.; Belmont Park Garage Co., 224 River road, general automobile and garage business; $100,000.

Newark, N. J.; Albey-Smith, Inc., 35 Marcy avenue, East Orange, to deal in automobiles and trucks; $100,000; Willard T. Albey, Frank K. Smith, Victor Frisbie.

Newark, N. J.; Marone Auto Bus Co., dealer; $25,000; G. F. Seymour, Jr., South Orange; S. D. Smith, Newark; Abraham Rudensky, Montclair.

Newark, N. J.; Nash Newark Co., to deal in trucks, etc.; W. J. Hilton, H. A. Black, J. R. Turner.

Newark, N. J.; Pecht & Armstrong, Inc., 209 Clinton avenue, general automobile and garage business; $125,000.

Pleasantville, N. J.; Ruopp & Steinhauser, Inc.; general automobile and garage business; $125,000.

Union, N. J.; Lawrence Motor Car Co.; $100,000; J. A. Lawrence, H. E. MacIlwain. West New York; A. O. Wittreich, West Hoboken.

Albany, N. Y.; Albany Scripps-Booth Co., automobile sales agency; $10,000; H. F. Callan, F. L. Carrington, T. Southworth.

Brooklyn, N. Y.; Big 3 Auto Service Co., automobile business; $5000; A. Horowitz, A. H. Kesterbaum, J. Levine, 217 Flatbush avenue.

Brooklyn, N. Y.; B. & P. Carburetor Co., Inc., automobile business; $100.000; Abram S. Bergen, 348 Jefferson avenue.

Brooklyn, N. Y.; Collins, E. J., Co., motor vehicles; $5000; E. J. Collins, W. H. Bechmer, H. J. Fogarty, 22 Onderdonk avenue.

Brooklyn, N. Y.; Elm Auto Co.; $7500; E. Haas, E. E. Mears, S. S. Levy, 1089 Prospect place.

Buffalo, N. Y.; Unit Parts Corporation, automobile business; $75,000; F. A. Kamrath, E. A. Egner, A. Dutcher.

Campbell, Steuben County, N. Y.; Wood & Harrison, farm products and automobiles; $10,000; W. P. and W. H. Wood, A. J. Harrison.

Corning, N. Y.; Tew Motor Sales & Service Co., automobiles; $50,000; R. M. and W. H. Tew, C. C. Wilcox, Woodhull, N. Y.

Glens Falls, N. Y.; Braydon & Chapman, to deal in automobiles; $50,000; R. J. Braydon, A. J. Braydon, F. B. Chapman.

Gloyersville, N. Y.; Wilmo Co., automobile business; $15,000; C. F. Moul. F. J. Ferguson, U. G. Patterson, Jr.

Jamaica, N. Y.; Barry Motor Sales Co.; $7500; M. Klinger, M. Cold, W. J. Barry, Far Rockaway.

Jamaica, N. Y.; Long Island Vehicle Corporation, to deal in automobiles; $25,000; F. and L. Kengster, G. J. Story, Hempstead.

Lockport, N. Y.; Eames Motor Corporation; $75,000; W. C. Newcomb, I. L. Fisk, D. D. Eames, Buffalo.

Newburgh, N. Y.; Johnson, Howard E., Sales Co., automobile business; $5000; H. E. Johnson, H. D. Chapin, C. M. Dillman, 692 Decatur street, Brooklyn.

New York, N. Y.; A. & H. Co., Manhattan borough; automobile agents; $10.000; T. F. Husa, V. B. Alling, R. H. Harding, 3d, 50 Church street.

New York, N. Y.; All Weather Top Corporation, Bronx borough, to deal in automobiles; $25,000; F. G. and J. Rettinger, P. H. Voyce, Mt. Vernon.

New York, N. Y.; Ambassador Garage, Manhattan borough, automobile business; $10,000; M. H. Eisenberg, P. W. Winters, E. Haas, 889 Fresh Pond road, Brooklyn.

New York, N. Y.; Arrigoni-Pfeiffer Motors, Bronx borough, to deal in automobile trucks; $50,000; E. Leindorf, A. Arrigoni, A. Pfeiffer. 152 East 92nd street.

New York, N. Y.; Automotive Securities Corporation, Manhattan borough, automobiles and securities; $10,000; A. J. Fulman, G. M. Levy, J. A. Behan, 302 Broadway.

New York. N. Y.; Hodes, Richter & Co., Manhattan borough, automobile business; $10,500; O. Vallaverda, E. A. Richter, R. M. Hodes. 1834 Broadway.

New York, N. Y.; Hollander Motors Corporation; $1,000,000; Samuel R. Howard, Robert K. Thistle, Harry C. Hand.

New York, N. Y.; Leindrof Motor Sales Co.; $100,000; Charles Warner, Edward M. Bernstein, Joseph E. Mantner.

New York, N. Y.; Mogenson, George, Inc., Manhattan borough, general commission merchant, manufacturers' hardware, stoves, automobiles, textiles, etc.; $100,000; T. F. Van Dorn, 325 West 97th street.

New York, N. Y.; Muller, Cowles & Schaefer, Manhattan borough, to deal in automobiles; $15,000; A. Muller, E. E. Cowles, A. G. Schaefer, 16 Union square.

New York, N. Y.; Progressive Motor Car Exchange, Manhattan borough; $5000; F. and P. and D. Schor, 1505 Eighth avenue.

Rochester, N. Y.; Packard Rochester Motors, automobiles; $200,000; H. E. Stowell, G. A. Fonda, O. E. Brown.

Rochester, N. Y.; United Motor Premiums, automobile business and profit sharing coupons; $50,000; D. H. Kuder, M. C. Merriman, O. F. Alaric.

Silver Creek, N. Y.; Blessing Motor Corporation, automobiles and parts; $50,000; R. H. MacGregor, E. M. Dale, L. H. Vogel, Buffalo.

Hickory, N. C.; Abernathy Motor Co., Inc.; $150,000.

Cleveland, O.; Dupont-Cleveland Motor Co.; $100,000; C. B. Bayly, M. C. Haugh.

Dayton, O.; New Morr Sales Co.; $10,000; A. F. House, E. W. Stelter.

Oklahoma City, Okla.; Bemis Oldsmobile Co.; $26,000; Harry V. Bemis, J. W. Taylor, George R. Tighe.

Purcell, Okla.; Slead Motor Co.; $25,000; Howard Roberts, K. Roberts, Oklahoma City.

Grafton, Pa.; Reynolds Motor Co.; $100,000; E. G. Welch, H. J. Hoban, Carnegie; W. E. Pfaller, Grafton.

Philadelphia, Pa.; Erie Avenue Auto Supply Co., to buy, sell and deal in automobiles and automobile supplies, equipment and accessories; Albert J. Blum, William J. Eastwood, Frederick Taylor. Welsh & Bluett, solicitor.

Rusk, Tex.; Walker Motor Co.; $5000; W. R. Walker, T. H. Cobble, J. I. Perkins, Jr.

San Angelo, Tex.; Shepperson Automobile Co.; $25,000; J. G. Shepperson, L. C. Ferguson, Tom Cody.

San Antonio, Tex.; South Texas Willys Light Co.; $25,000; L. Ward, Jr., H. F. Shaper, H. A. Kelton.

Olympia, Wash.; Olympian Motors Co.; $1500; R. M. Shaver, E. T. Keene, J. A. Wakefield.

Puyallup, Wash.; Valley Auto Corporation, Inc.; $12,000; A. S. Read, L. C. House, A. C. Brown.

Milwaukee, Wis.; Milwaukee Oakland Co., to deal in automobiles; $50,000.

Waukesha, Wis.; Waukesha Motors Co.; $1,000,000.

MANUFACTURERS OF CARS, TRUCKS, TRACTORS, ETC.

Los Angeles, Cal.; Victor Garden & Orchard Tractor Co.; $250,000.

Dover, Del.; Reynolds Motor Co., Inc., manufacturer and sale of automobiles: $200,000.

Wimington, Del.; American Motor Body Co., manufacture of automobiles, etc.; $25,000,000.

Wilmington, Del.; Gibson Lens Co., Inc., manufacture of motor vehicles, lenses, devices, etc.; $750,000.

Wilmington, Del.; Globe Motors manufacture and sale of automobiles, etc.; $15,000,000.

Wilmington, Del.; Guaranteed Service Corporation, manufacture of automobiles, etc.; $8,100,000.

Wilmington, Del.; Morgan Manufacturing Corporation, manufacture and sale of automobiles, etc.; $3,000,000.

Wilmington, Del.; People's Filling Station Co., manufacture of automobiles, etc.; $500,000.

Wilmington, Del.; Protexometer Manufacturing Co., manufacture of trucks, automobiles, etc.; $1,000,000.

Wilmington, Del.; Rowe Motor Manufacturing Co., manufacture of automobiles, etc.; $500,000.

Wilmington, Del.; Wills, C. H. & Co., manufacture and sale of motor vehicles, etc.; $40,000,000.

East Orange, N. J.; Protecto Battery Filler Co., 3 South Walnut street, to manufacture, buy and sell automobiles and parts; $600,000; Louis M. Sanders, Louis M. Sander, Jr., Mrs. H. L. Lund.

Buffalo, N. Y.; Saturn Motor Co., to make automobiles; $100,000; M. C. Emsinger, M. L. Woodford, E. E. Finck.

New Rochelle, N. Y.; Neeham Motor Co., to make motors, automobiles and air planes; $10,000; J. A. Farrell, G. L. Sill, B. F. F. Needham.

MANUFACTURERS OF PARTS, EQUIPMENT, ETC.

San Francisco, Cal.; U Want Tire & Rubber Co.; $250,000.

Denver, Col.; Steam Bag Corporation, 1545-1547 Broadway, to manufacture a vulcanizer for rubber, especially rubber tires; $150,000; E. W. Ohls, president and treasurer; C. F. Miller, vice president and general manager; W. L. Heining, secretary; T. E. Stephenson, assistant secretary; M. A. Johnson, service and factory manager.

Dover, Del.; American Motor Body Co.; $25,000,000; M. L. Rogers, L. A. Irwin, W. G. Singer, Wilmington.

Dover, Del.; Crandall Lock & Auto Hardware Corporation; $250,000; Emery P. Crandall, Harry K. Hickey, Washington, D. C.; John Dickson, New York, N. Y.

Dover, Del.; Crude Oil Carburetor Co. of America; $6,000,000; T. L. Croteau, S. E. Dill, A. M. Hooven, Wilmington.

Dover, Del.; Dividend Auto Rim Co.; $1,000,000; William F. O'Keefe, George G. Steigler, E. E. Aberle, Wilmington.

Dover, Del.; Dual Auto Visor Shield Co.; $50,000; F. R. Hansell, J. Vernon Pimm, E. M. MacFarland.

Dover, Del.; Kelly Tire & Rubber Corporation; $5,000,000; M. L. Rogers, L. A. Irwin, W. G. Singer, Wilmington.

Dover, Del.; Libby Auto Accessories; $150,000; D. K. Einfurer, E. Seidman, Brooklyn, N. Y.; G. E. Montgomery, Forest Hills, N. Y.

Dover, Del.; Meteor Motors Corporation, to manufacture and sell various kinds of motors, engines, machines, etc.; $5,000,000.

Dover, Del.; Service Spring Co.; $750,000; C. H. Blaske, M. A. Bruce, S. E. Dill, Wilmington.

Dover, Del.; Universal Body Co. of Wilmington; $150,000; W. Ingraham, Homer R. Soenee, A. Robert Elmer, Washington.

Wilmington, Del.; American Auto Axle Corporation, to manufacture axles of all kinds; $10,000,000; C. H. Blaske, M. A. Bruce, S. E. Dill.

Wilmington, Del.; American Compressed Air Motor Co.; $100,000; M. M. Lucey, M. A. Davis, V. P. Lacey.

Wilmington, Del.; Dorman Governor Co., Inc.; to manufacture governors and parts for automobiles; $1,250,000.

Wilmington, Del.; Odeal Tire & Rubber Corporation, to manufacture tires, tubes, casings, etc., for automobiles; $50,000,000; C. H. Blaske, M. A. Bruce, S. E. Dill.

Wilmington, Del.; Imperial Caster Co., casters for heavy trucks, autombiles, etc.; $100,000; T. L. Croteau, M. A. Bruce, A. M. Hooven.

Wilmington, Del.; Jellicose Covered Tire Corporation; $1,500,000; M. M. Lucey, M. Butler, M. A. Davis.

Wilmington, Del.; Leindrof Motor Sales Corporation, to manufacture motors, etc.; $100,000.

Wilmington, Del.; Lion Motor Corporation, to manufacture motors, engines, etc.; $1,000,000; Charles Warner, Joseph E Mautner, Ed. N. Bernstein, New York, N. Y.

Wilmington, Del.; Pioneer Tire & Rubber Co., Inc.; $2,000,000; M. L. Rogers, T. A. Irwin, W. G. Singer.

Wilmington, Del.; Simplex Gear Shift Corporation; $300,000; M. L. Rogers, L. A. Irwin, W. G. Singer.

Atlanta, Ga.; Atlanta Auto Top & Trimming Co., Inc.; $150,000.

Lafayette, Ind.; Automobile & Truck Steering Gear Co.; $100.000: Elmer Ruegemer, Forrest W. Jackson, Clarence Ruegemer.

Lexington, Ky.; Mercury Body Co., Inc.; automobile bodies; $100,000.

Boston, Mass.; Stahle Felx-Hub Wheel Co., wheels and tires for motor vehicles; $100,000; William K. Beardsley, Joseph F. Moloney, Boston; Patrick J. Fitzpatrick, Revere.

Springfield, Mass.; B-M-W Body Co., automobile bodies and motors; $50,000; George A. Morin, Watertown; Charles H. Bailey, Frank T. Walsh, Springfield.

Joplin, Mo.; Joplin Auto Puller Co.; $100,000; J. D. Wolverton, attorney.

Kansas City, Mo.; Acme Auto Radiator & Sheet Metal Co.; $3000; Glen E. Whitlaw, American Bank building.

Kansas City, Mo.; Bliss Non-Skid Manufacturing Co.; $300,000; G. A. Stultz attorney, 415 Republic building.

Kansas City, Mo.; Campbell Engineering Corporation, 3803 Woodland street manufacturing molds for storage batteries, battery parts and battery service station equipment; E. W. Campbell, president; M. W. Ramsey, secretary-treasurer.

Kansas City, Mo.; Quality Electrical Products Co., 907 East 15th street; Butler J. Haskins, Carl Studna, Reuben Finkelstein.

Kansas City, Mo.; Superior Tube Co.; $300,000.

St. Louis, Mo.; Long, E. F., Auto Parts Manufacturing Co.; $400,000; Barker & Britton, Boatmen's Bank building.

Camden, N. J.; American Strombos Co., Inc., 501 Market street, manufacturing railroad and automobile supplies, safety apparatus, etc.; $125,000.

Elizabeth, N. J.; Quality Tire Co., automobile tires, etc.; $50,000; J. J. Cooley, Elizabeth; Edward Feename, Trenton; L. M. Ettinger, Newark.

Newark, N. J.; Asher Machinery Corporation, manufacturing machines, motors, etc.; $125,000.

Newark, N. J.; Strain & Gentile Co., manufacturing motor devices; $125,000.

Albany, N. Y.; M. and S. Radiator Co., automobile, tractor and aeroplane radiators; $5000; G. E. and A. N. Sperry.

Binghamton, N. Y.; Kaplan-Gregory Battery Co.; $15,000; E. Kaplan, J. B. and W. F. Gregory.

Brooklyn, N. Y.; American Coil Corporation, to make automobiles and accessories; $10,000; F. M. and J. Greenhut, 107 Taylor street.

Brooklyn, N. Y.; Curran Detroit Motor Radiator Co. of New York; $10,000; J. W. and Z. L. Stevens, W. Buchanan, 1577 Atlantic avenue.

Brooklyn, N. Y.; Guaranteed Tire Filler Corporation; $50,000; J. and M. Stander, A. M. Chamow, 1092 President street.

Brooklyn, N. Y.; Maurer, O., Co., to make motors and air ships; $50,000; P. W. Wolf, O. Maurer, E. Scroedler, 306 Tompkins avenue.

Brooklyn, N. Y.; Mead Rubber Co., manufacturing tires and general rubber business; $100,000; John F. Mead.

Brooklyn, N Y.; No Air Auto Tire Co.; $100,000; I. Trautman, G. S. and C. P. Carlucci, 239 Union street.

Buffalo, N. Y.; Buffalo Artcraft Top Co., to make automobile tops; $50,000; C. P. and F. C. Scott, E. H. Verden.

Buffalo, N. Y.; Bush Auto Tool Co.; $100,000; J. W. Wolf, E. J. Barth, C. J. Bush.

Buffalo, N. Y.; F. and W. Tire Distributing Co., Inc., manufacturing automobile tires and equipment; $100,000; Albertus D. Ferrell.

Buffalo, N. Y.; Hydro-Speedway Tire Corporation; $25,000; W. Stahlka, A. Burkard, H. Seitz.

Cleveland, O.; Noderer, J., 3931 Woburn avenue; one-story garage and sales room, 30x48, at 4459 Pearl road, for Ideal Motor Car Co., 4427 Pearl road; $8500.

Cleveland, O.; Pohner, A. W., 14,018 Woodworth road; one-story brick garage, 50x140, for Greenwald & Specker; $10,000.

Clevelnad, O.; Thompson, W. J. Co., 5103 Euclid avenue; one-story brick garage, 50x130, for Cleveland Railroad Co., 724 Leader-News building; $30,000.

Cincinnati, O.; Cook, J. E. & Co., 1564 Elm street; one-story brick and stone trim garage, 148x113, at Warsaw and Woodlawn avenues; $40,000.

Dover, O.; Wentz Lumber Co.; one-story garage, 50x90, at Fourth and Wooster avenue, for Fort Garage Co.; $10,000.

Kenton, O.; Concrete Steel Construction Co., Mitchell building, Springfield, O.; two-story garage, 50x50, for J. N. Pfeiffer; $40,000.

Toledo, O.; Koptke, Gettins, Nasby building; one-story garge, 90x100, for Hammond Building Co.; $31,000.

Brownsvile, Pa.; Brownsville Construction Co.; two-story commercial garage, 65x180, at Fifth and Marget streets, for C. C. Garlett; $60,000.

Easton, Pa.; Bechtel & Bechtel, Northampton Bank building; two-story public garage, 66x113, for E. A. St. Greaves, 30 North Warren street; $35,000.

Easton, Pa.; Sears & Bowers, Bank and Church streets; one-story public garage, 27x75; $12,000.

Gettysburg, Pa.; Weikert, James; one-story public garage, 60x180, for Peckman & Ott.

Hazleton, Pa.; Wettstein, John, 27 West Maple street; one-story public garage, 44x100, at Chestnut and Laurel streets, for Cook Yeager.

Philadelphia, Pa.; Dougherty, William R.; two-story garage, 50x108, at 250 South Camac street, for Morris Geiger; $60,000.

Philadelphia, Pa.; English, Frank G.; one-story garage, 38x81, west side Front street, below Girard avenue, for William P. M. Irwin; $8000.

Philadelphia, Pa.; Fisher, J. D., 5426 Thompson street, alterations on garage, 232 Market street, for Jose P. Pettit, 6242 Market street; $6500.

Philadelphia, Pa.; Fisher, J. D.; one-story brick garage, 34x16 and 18x50, at 6225-6227 Catharine street, for W. J. Baylis; $3000.

Philadelphia, Pa.; Gruhler, William J. & Co.; one-story stone garage, 21x23, rear 6806 Lawton avenue, for W. J. Fry; $4000.

Philadelphia, Pa.; Hanlstick, C. S., 845 North 19th street, alterations on warehouse and garage, for Michell Co., 518 Market street; $3000.

Philadelphia, Pa.; Hartman, A.; two-story garage, 51x37, at 1316-1320 Poplar street, for W. R. Parker; $25,000.

Philadelphia, Pa.; Kister, Alfred E.; one-story brick garage at southwest corner American and Green streets, for American Stores Co.; $15,000.

Philadelphia, Pa.; Reilly, T. F.; two-story garage, 35x24, west side Bryn Mawr avenue, north Woodbine avenue; $2500.

Philadelphia, Pa.; Smith-Hardican Co.; two-story brick garage, 33x81, at 1622-1624 Spring Garden street, for Thomas R. Humphrey; $16,000.

Philadelphia, Pa.; Steele, William, Sons Co.; one-story concrete factory building, south side Rising Sun lane, east Adams road, for Electric Storage Battery Co.; $20,000.

Philadelphia, Pa.; Steele, William & Sons Co., 1600 Arch street, buildings, Third and Hunting Park avenue, for Commercial Truck Co., 27th and Brown streets; $42,600.

Pittsburgh, Pa.; Fiat Motor Car Co., Union arcade; two or three-story garage and sales room, 75x100, at Cypress and Aspen streets.

Pittsburgh, Pa.; Lauer, J., & Son, 810 Portland street; one-story garage for Booth & Flinn; $12,000.

Providence, R. I.; Interstate Construction Co., 29 Weybosset street; one-story public garage at Pratt and Olney streets, for Harris Weber, 27 Halsey street; $18,000.

Chattanooga, Tenn.; Gude & Co.; four-story garage, 75x200, for Hardwick Brick Co., 1526 Market street; $150,000.

San Antonio, Tex.; Coleman & Jenkins, Gunther building; one-story reinforced concrete garage, 40x100; tile floors, fireproof; for Taylor & Holder; $22,000.

San Antonio, Tex.; Flores, E. B., 112 East Mistletoe street; three-story reinforced concrete garage; concrete and tile floors; $75,000.

San Antonio, Tex.; Rand, Edwin, 515 Belknap street; one-story fireproof garage, 50x120; reinforced concrete floors; $37,100.

Richmond, Va.; Bass, E. L. & Brothers, 708 Bainbridge street; 1½-story garage, 120x140, at Lodge and Broad streets, for E. L. Feist and S. T. Beveridge, 1318 East Cary street; $65,000.

Milwaukee, Wis.; Laztnski, Walter, 1107 Humboldt avenue; one and two-story garage, 28x20, at 460 Cass street, for J. Gentilli; $12,000.

Coming Events

Sept. 17-18—Syracuse, N. Y., Dirt Track Races. Horace P. Murphy, Manager.

Sept. 16-17—Cleveland, O., Credit Convention, Motor & Accessory Manufacturers' Association.

Sept. 19-25—Springfield, Mass., Eastern States Exposition.

Sept. 20-26—Los Angeles, Cal., National Tractor and Implement Show, auspices Tractor & Implement Dealers' Association.

Sept. 24-25—Greensboro, N. C., Second Annual Convention, North and South Carolina Automotive Trades Association.

Sept. 25—Allentown, Pa., Dirt Track Races. Horace P. Murphy, Manager.

Sept. 27-Oct. 2—France, Gordon Bennett Aviation Cup Race.

October—London, England, Commercial Vehicle Exposition, Olympia.

Oct. 1-2—Trenton, N. J., Dirt Track Races. Horace P. Murphy, Manager.

Oct. 6-7—Gulfport, Miss., Meeting Louisiana-Missisippi Automotive Trade Association.

Oct. 6-8—Northampton, Mass., Annual Automobile Show, H. F. & H. Agricultural Society, Three County Fair Grounds. A. J. Morse, secretary.

Oct. 6-16—New York, N. Y., Electrical Show, Grand Central Palace. George F. Parker, manager.

Oct. 8-9—Danbury, Conn., Dirt Track Races. Horace P. Murphy, Manager.

Oct. 12-14—Chicago, Ill., National Federation of Implement Dealers' Associations, Sherman Hotel. H. J. Hodge, secretary, Abilene, Kan.

Oct. 20-22—Atlantic City, N. J., Convention National Implement & Vehicle Association. E. W. McCollough, Secretary, 72 West Adams Street, Chicago, Ill.

November—London, England, Passenger Car Show, Olympia.

November—New York, N. Y., Annual Meeting American Road Builders' Association. E. L. Powers, Secretary, 150 Nassau Street, New York.

Nov. 14-21—New York City, Automobile Salon, Hotel Commodore.

Nov. 15-20—Jersey City, N. J., Annual Automobile Show, Hudson County Automobile Dealers' Association, Fourth Regiment Armory.

Nov. 15-20—Chicago, Ill., Automotive Equipment Show, auspices Automotive Equipment Association, Coliseum, A. B. Kaufman, Manager.

Nov. 30-Dec. 3—St. Louis, Mo., Third Annual Meeting and Exhibition, Accessories Branch, National Hardware Association of the United States, Coliseum.

Dec. 8-10—Cincinnati, O., Convention, Ohio Automotive Trade Association. E. J. Shover, Secretary, 404 Central National Bank building, Columbus, O.

Dec. 10-18—New York, N. Y., Motor Boat Show, Grand Central Palace.

January, 1921—Little Rock, Ark., Annual Meeting, Arkansas Good Roads & Drainage Association. Robert O. Schaefer, Secretary, Masonic Temple, Little Rock.

Jan. 8-15—New York City, National Passenger Car Show, Grand Central Palace.

Jan. 8-15—New York City, Truck Show, Auspices Automobile Dealers' Association, Inc., Harry T. Gardner, Manager.

Jan. 11-13—Minneapolis, Minn., Annual Convention, Minnesota Implement Dealers' Association, West Hotel. C. I. Buxton, secretary, Owatonna, Minn.

Jan. 16-22—Schenectady, N. Y., Show, Company E, F and Machine Gun Company, State Armory. J. J. Callahan, Manager, Box 1186, Pittsfield, Mass.

Jan. 29-Feb. 4—Chicago, Ill., National Passenger Car Show.

February—Danzig, Germany, Spring fair.

March—Buenos Aires, Argentina, Exhibition of American Products.

March 15—Fort Worth, Tex., 24th Annual Southwestern Exposition and Fat Stock Show. Passenger Cars, Trucks and Tractors. M. Sasson, Jr., secretary.

March 20-26—Torrington, Conn., Show, Company M, State Armory. J. J. Callahan, Manager, Box 1186, Pittsfield, Mass.

Need of System in the Service Station

THE successful and far-sighted repair or service station man is the one who keeps track of and performs the various jobs of repair, adjustment and replacement on cars intrusted to him in accordance with a thoroughly efficient system from the time the car is left until it is ready to go into commission again. One of the best methods of procedure to follow is to have a card or tag prepared, printed on one side with the names of the various units of the car and their components under a suitable head, with a space on either side, one for checking the parts needing attention and the other for filling in the time spent in performing the work.

Final O. K.________

Sample of Repair Card Sold by the Automobile Journal Publishing Co. and Used by Service Stations and Garages. Printed on Both Sides, as Shown, with Name and Address of Station or Owner, Etc. Actual Size, 7½ Inches Wide, Nine Inches in Length, Suitable for Filing.

When a car is driven up for attention the manager of the service station or repair shop takes one of these master cards and checks off the parts which the owner desires to have inspected, repaired or replaced and, after getting the owner's signature as an authorization for performing the work, attaches the card to the wheel or some other convenient part of the machine. This card may be made still more serviceable if, on the reverse side, space is given for a description of the car such as the type, whether roadster, touring car or enclosed model, the registry number, owner's address and telephone number, speedometer reading, the time the car is promised to be ready for delivery, etc.

This will show a complete record of the work and, after the job is completed, is in a convenient form to be placed in the files for future reference.

In many service stations of considerable size the different parts of the work are divided among men who make a specialty of a certain branch and do nothing else. For instance, one expert will handle nothing but radiator repair and sheet metal work; another electrical expert attends to testing, locating and remedying troubles of the electric starting, lighting and ignition system. A carburetor adjuster and repairer may devote his attention to defects in this component, while the ordinary work of grinding valves, adjusting bearings, repairing the chassis, etc., is looked after by the men in charge of the mechanical work in connection with the chassis and its components Painters, experienced in their work, attend to the finishing of the car, while still others, specializing in top and upholstery repairs, attend to that part of the job.

It is, of course, well understood that the repairer must have had several years experience in his line of work in order that the finished job will stand final inspection by the inspector or foreman.

The following article is for the benefit of the many repairers who may have recently entered the field and deals in an elementary manner, with the units and their functions.

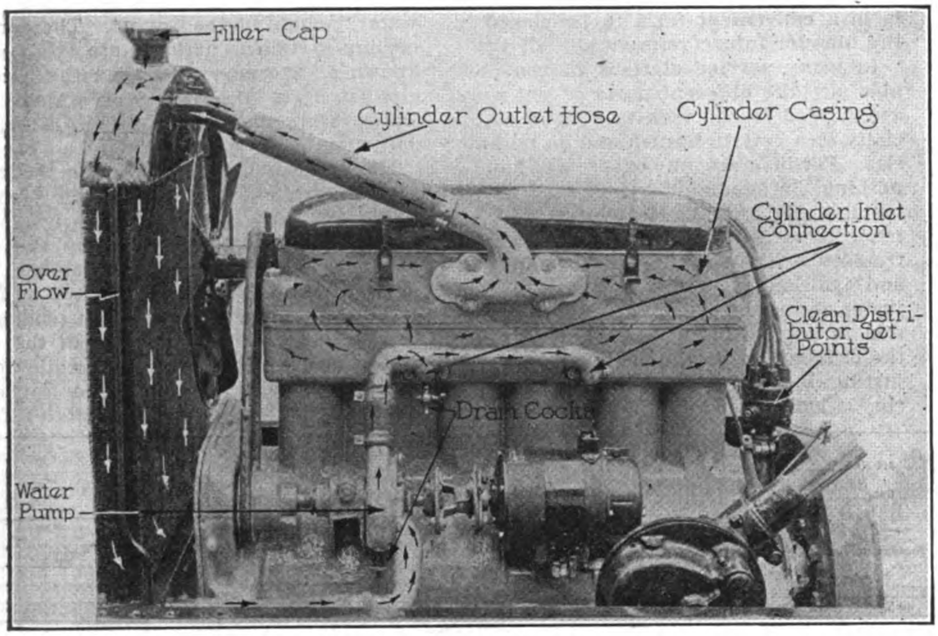
Cooling System.

The cooling system includes the radiator, the fan, fan belt, connections to the engine, water pump (if used) and the water jackets of the engine. The water cooling system is divided into two types known as thermo-syphon and the pump-circulated, in the latter of which the water is circulated by a driven centrifugal pump.

Many of the low priced cars employ the thermo-syphon system, in which a comparatively large body of water is circulated by the heat generated by the explosions in the combustion chambers of the engine. This heat is absorbed by the water and as warm water has a tendency to rise, it passes into the top of the radiator through the inlet pipe, while cold water follows up through the jackets from the bottom of the radiator. The warm water passes down through the sections of the radiator, being cooled as it passes, by the action of the fan, and reaches the bottom in a comparatively cool condition, varying with the size of the radiator and the amount of water carried.

The pump system employs a driven centrifugal pump which causes a positive circulation of the water whenever the engine is operating, the heated water cooling in the same manner as in the thermo-syphon system, but circulating faster. Smaller connecting pipes may be used to convey the water in this system than in the thermo-syphon, as the circulation is more rapid.

The repairs necessary on the cooling system are usually confined to the radiator, such as this unit becoming loose on the frame, leaks in the sections which require soldering, etc. This is work for the radiator repair man and in shops of sufficient size are attended to by him only. Many times radiator and cooling system will be found filled with rust and sediment. Washing with solution composed of sal soda or lye, half a pound dissolved in five gallons of hot water, will loosen this sediment and will be flushed out readily. Running the engine for a time with this solution in the system will make the job more complete, afterwards flushing out well with clean water.



Centrifugal Type Water Cooling System. Circulation Shown by Arrows. Components Requiring Attention Clearly Indicated.

The gaskets fitting between the water connections and the engine require renewing if they are old and brittle and allow the water to seep through. They can be cut from sheet packing and fitted to the manifolds one at a time, each manifold being tightened securely after the gasket has been placed. Water pump bushings will leak, especially if the packing has not been renewed for some time. The gland nuts should be backed off, the old packing picked out and new packing oiled and fitted, tightening the gland nuts just sufficient to prevent the water from seeping through.

Hose connections will soften on the inside, restricting the flow of water and causing some of the rubber to get into the water passage. Pinching the rubber connections at the inlet and outlet of the radiator between the thumb and forefinger will quickly locate the soft tubes. They should be removed and new fitted in their place.

The fan should be examined and adjusted, if loose, while the fan belt should be made tight enough so that the belt does not slip, but drives the fan at its normal speed. Broken balls in the ball races of the fan bearings are easily detected by a grinding sound as the faces of the broken balls rub against the smooth surface of the unbroken balls. Remove the broken balls, examine the races and if found chipped or worn refit with new races.

Overheating of the engine is often caused by either the cooling system becoming clogged with sediment or rust, or by some component not functioning properly. During the cold months of the year, if the water is not drained out of the pump in a pump cooled system, it will freeze in the lower part of the pump case, causing the impellor to stick and twisting off the pin or key which fastens it to the impellor shaft when the engine is again started. In this case the action of the water will be retarded and overheating will result. Disassembling the water pump will allow the trouble to be located and fitting a new pin or key will remedy it.

Power Plant.

Power plant repairing requires more or less expert knowledge of the grinding of valves, taking up bearings, adjusting the different components of the engine, fitting pistons and rings to the cylinders, etc.

Grinding valves is probably one of the first jobs given to the new man, for it is considered that he cannot go far wrong on this job. Considerable time may be necessary in the work, especially if it is performed by the hand method of using a screw driver to rotate the valve against its seat. If a mechanical device is used the time taken will, of course, be materially shortened. Refacing the valve seat and smoothing off the valve face before grinding will shorten the actual working time and make the valve seat more quickly. The valve should be ground till a ring is shown 1/32-inch wide around the face and seat.

Tightening the crankshaft bearings while not requiring a great amount of skill, still the experience gained in watching a repairer do this work will help the amateur.

Adjusting the push rods is a job that often falls to the lot of the new repair man and, while experience helps, still it is not essential to a perfect adjustment. Valves should only be adjusted when the engine is thoroughly warm, for if done when the engine is cold the metal in the push rods and valves will expand when the engine is heated, causing the valves to hold open and give the effect of a skipping engine.

Adjusting them hot puts the valves in the same relative position as when the engine is running and causes them to open and close properly. The adjustment varies on different engines, but a convenient rule to follow is to have the clearance about the thickness of an ordinary visiting card or about the thickness of the paper used in this book. This clearance will cause the valve to open properly to the distance for which it was designed, and to completely close when the valve tappet is released.

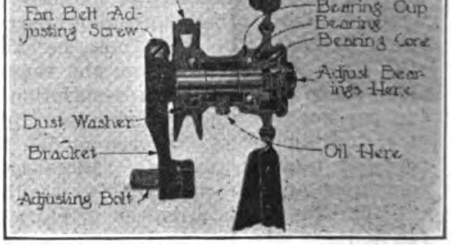
Manifold Gaskets.

Examine manifold gaskets to note whether or not they leak. If so those on the intake pipe will draw in air and dilute the gas mixture in the combustion chamber, causing the engine to fire irregularly, while leaks around the exhaust manifold are indicated by a hissing sound as the gas is blown out by the exhaust. Worn or damaged gaskets should be renewed to stop irregular action of the engine and to prevent the hissing sound. A good grade of packing should be secured which will stand heat, and the gaskets cut as needed from the sheet. Drawing the nuts tightly against the new packing will prevent further leaks.

Adjusting Carburetor.

Carburetor adjusting is considered a science in itself and it is stated that but few mechanics are eminently successful in setting a carburetor accurately. With the advent of new types of carburetors, equipped with single, double and, in some cases, many spray nozzles for the admission of the gasoline into the intake manifold, the work of adjusting a carburetor becomes still more complicated. If this work is given to a novice it is well for him to obtain competent instructions from an experienced workman and to follow them very carefully when setting the carburetor, and even under these conditions successful results are difficult to attain.

The air adjustment on many carburetors is more or less automatic and rarely needs attention. Many older types, however, and some of the newer carburetors are provided with an air adjustment and instructions for setting are included in the carburetor instruction sheet found in the car. Make it an invariable rule to adjust the carburetor only as the last re-



Components of Fan Needing Attention.

sort for, nine out of 10 times, the defect will be found somewhere in the ignition system and not in the carburetor. If the engine runs irregularly trace the ignition through carefully first. Possibly a loose wire at some connection may be causing the trouble or the timer points are too low, in which case the engine will run satisfactorily up to about 20 miles an hour, hitting all cylinders perfectly, but above this, going to pieces and missing first on one cylinder and then another. A worn point will cause this and although the points look all right, still they may be worn down so far as not to make contact at the higher speeds, resulting in a skipping engine that has all of the ear marks of carburetor trouble. Renewing the points will remedy the trouble.

Ignition.

Ignition defects are usually hard to locate by the new repair man for, as a rule, his knowledge of electricity is limited, and its method of utilization for this work seems more or less of a mystery. It is really simple when the principle is understood. One has only to bear in mind the way that water flows through pipe connections to the various parts of the system to quickly see the analogy of the method by which electricity is used for starting, lighting and ignition.

Ignition repairs may be made by the regular repair man, but such work as testing the generator and motor components for short circuits, open circuits, etc., had best be carried out by an experienced electrician who thoroughly understands the subject.

Very few repair shops make any attempt to repair storage batteries, nearly all of this work being done by battery service stations which make a specialty of this class of work. Such stations are equipped with the necessary devices and charging generators to handle the work and usually the proprietor and workmen have expert knowledge, which enables them to quickly diagnose a defect in a battery and repair it in the best possible manner. There is a wide difference in the construction of batteries, one manufacturer making a certain patented plate, grid type, while still another uses another type. Wood separators are largely used for dividing the plates in a cell. However, one manufacturer believes that rubber is best for the purpose; still another manufacturer employs a manufactured separator for which he makes many claims, but it is stated that the majority of manufacturers use the wood separator and find it very satisfactory.

Clutch, Cone and Disc Types.

The ordinary service station repairer finds that work in connection with the different types of clutches used offers no particular difficulties, provided that he familiarizes himself with the principle involved in their construction and is willing to follow the instructions plainly given in the instruction books which accompany cars using the various types.

Such work as is required on the gearset, rear axles, differential, steering gear and other components of the chassis, may be performed by the average garage mechanic, no special knowledge being required beyond the ability to disassemble and assemble the parts in their regular order, and supply sufficient lubrication after they have been correctly adjusted.

Tires and Top Repairing.

Tires are usually repaired by experts in that line. Many stations combine this branch with their regular car repairing and are very successful with it. Usually an experienced man is put in charge and the success of the department depends upon his ability. The stock and fixtures necessary to carry on the work require quite an investment, and many stations do not handle it for this reason, but where it is combined with ordinary repairing, and an experienced man is employed, an attractive revenue is added to the business.

Top and body work should each be handled by specialists. The former especially requires a certain amount of first hand knowledge of styles, material and harmony, and should not be intrusted to inexperienced workmen, unless a competent foreman supervises the work.

Painting, while often considered within the field of the service station, is more usually handled by an outside concern, which specializes in the painting of automobiles and other vehicles. Where a paint department is operated in connection with a service station, an expert foreman painter should be put in charge, and competent journeymen employed. Where the work is done outside the service station manager may find it to his advantage to get a special rate from the

Satisfactory and Unsatisfactory Work.

A great deal of the unsatisfactory repair work sometimes turned out is due to the failure of the men to understand just what they are doing and their not using care in repairing and finishing the job. Nuts that are not tightened and cotter pinned properly may cause the motorist serious trouble later. Attention to minor details means everything to the motorist who is paying his money for a job carefully done. Service stations who are willing to stand upon the merit of the grade of work turned out will find that motorists will be pleased, will recommend them to their friends and will return their cars for future work.

The service station which intends to turn out careful and satisfactory work has an inspection system through which all work is scrutinized while being performed, and again after the job has been completed and the car is ready for the road. More time will naturally be taken in this manner, but the station which puts such a system into working order will find that the extra time is well spent. Satisfied customers mean everything to the service station, as they do in other lines of trade, while repeat business means a continuation of friendly and profitable relations with customers.

SPRING COMPRESSOR.

While in a service station recently, attention was called to a difficulty which the repairer was having in refitting clutch springs to the adjusting bolts of a disc clutch housing. The housing had been removed for repairs and as he did not wish to pull the assembly apart more than was necessary to reach the part under repair, he had simply removed the short shaft between the clutch and the gearset and the parts that fitted it.

The bolts fitted the holes of the clutch housing loosely and as there was a small space between the housing and the discs, the bolts would slip back against the disc as soon as any attempt was made to slide the spring over them. To meet this condition the repairer pulled them forward as far as he could with his fingers, causing the squared shoulder of the bolt to fit the squared opening for the bolt in the housing. But to compress the spring so that it could be slipped over the bolt and the nut caught seemed to be an impossibility.

The way the repair man overcame the difficulty was to first compress the spring between the jaws of a vise; after this a fastener, made by bending a wire at the ends, was slipped over end coils of the spring, one at each side. This fastening held the spring compressed after it was removed from the vise, the repairer placing the spring over the bolt. He found that with the spring in place there was just about room to start the nut on the threads. This he did and tried to fit the second spring in the same manner, but found he could not catch the nut on the thread of the second bolt. To overcome this difficulty he obtained two C clamps, fastening one at each side of the clutch housing so as to press the housing tightly to the balance wheel.

The repair man found that now he could easily fit the remaining springs and nuts to the bolts by compressing each spring and after pulling the bolt forward into place the spring was easily positioned and the nut screwed on to the bolt and tightened. Adjusting the nuts to put the proper tension on the discs was the work of a moment and he proceeded to assemble the remaining parts of the shaft.

LOOSE STUD BOLT.

It sometimes happens that in taking off the valve cover plate one of the studs may slip out and the loss will not be discovered for some time. This leaves an opening into the intake passage and the leak will prevent the suction through the carburetor needed to draw the fuel into the cylinders.

DRY BEARINGS.

One cause of insufficient lubrication in the bearings is found in obstructions in the grooves of the bearing holder. Sediment often collects in these grooves so that they cannot carry the oil to the bearing surfaces. An excess of graphite, if that be used with the oil, sometimes produces this condition.

POLISHING NICKEL FITTINGS.

Apply regular silver polish to brighten up the nickel parts of the car. Rub the polish on and off with soft cloths and note the result.

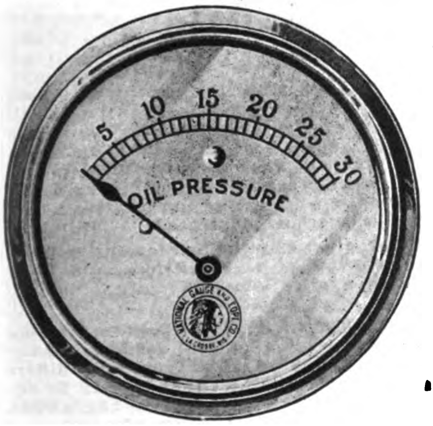
ACCESSORIES, EQUIPMENT AND TOOLS FOR THE GARAGE AND REPAIR SHOP

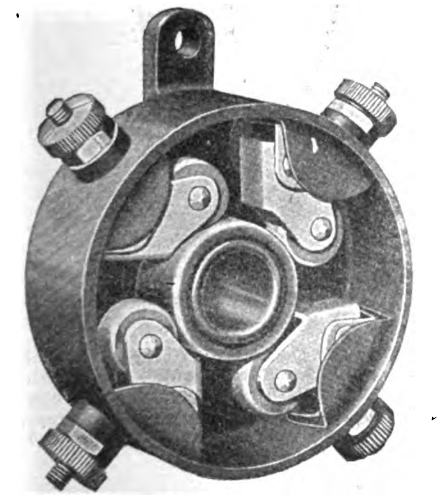
Oil Pressure Gauge Standard Bracket Type No. 185 A. is an all-metal gauge, which is fitted to the cowl of the dash and shows the pressure of the oil in the oiling system at all times. The finish of the instrument matches that of the electrical instruments usually found on the dash. Pounds pressure are indicated from zero to 30 pounds, while a special stop feature is provided which prevents damage due to excessive pressure.

The company manufacturing this instrument also makes a complete line of oil and heat registering gauges of all descriptions for the automobile, air plane and motor boat, including welding apparatus, etc. The line is shown in a new catalogue just issued, which gives a complete description of each instrument and the specifications. This catalogue will be sent to the trade on request.



Manufactured by the National Gauge and Equipment Co., La Crosse, Wis. Prices and literature on request.

The 1921 Duntley Four-Unit Timer for Ford Cars, Trucks and Fordson Tractors has been especially designed to meet the high speed of the Ford and Fordson engine in truck and tractor use. It is adapted to fulfill the requirements of the Fordson tractor and the Ford truck which, it is stated, are geared 18 to one and 12 to one respectively, as actual tests have demonstrated, while its use on the Ford passenger car is assured, as it is geared 3.7 to one.

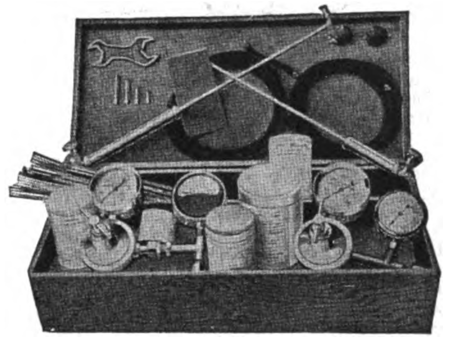


It is claimed that timer misfires are practically impossible with this new timer, as absolute assurance is given of equal spark duration in all four cylinders, thus guaranteeing perfect combustion. Guaranteed for one year regardless of mileage or service.

Manufactured by J. W. Duntley, Chicago, Ill. Price on request.

The Admiral Welding Equipment includes a full outfit for all classes of work requiring welding, except the oxygen and acetylene gas tanks.

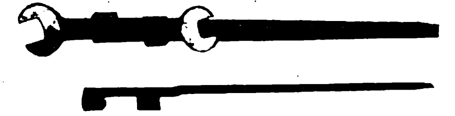
The Admiral equipment has, it is stated, passed the experimental state, as it has been in use for a number of years.



If tanks are desired they can be purchased when ordering the equipment; otherwise, the kind of oxygen and acetylene gas to be used should be stated so that proper connections can be furnished with the equipment.

Manufactured by the Admiral Welding Machine Co., Kansas City, Mo. Price of equipment, $75.

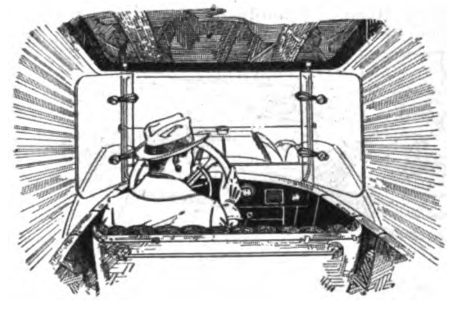
Lownsbery Extension Handle consists of a drop forged hook on an extension handle for use with single and double-head flat and S wrenches. It is designed to give increased leverage and power without undue strain on the wrench and bolt heads, has a hardened screw driver end and is a very handy and efficient tool for both the automobile tool kit and the garage.



Manufactured by the Gardener Specialty Co., Scranton, Pa. The price with unfinished handle is 75 cents and with nickel plated handle 90 cents.

Star Wings are simple in construction and easily attached to any car. It is claimed for them that they stop draughts on the back of the neck, deflect the wind and dust in summer and obviate the necessity for curtains in winter; that they not only add comfort, but instantly catch the admiring eye of the public.

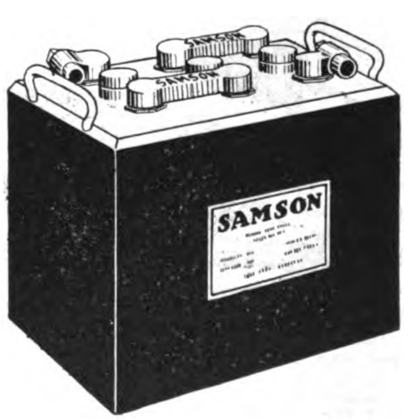
They can be instantly shifted to any angle by simply pushing them around to the desired position. If more air is wanted they may be turned to a forward angle.



Star Wings have no holes in the glass to weaken it and cannot rattle, as the glass is thoroughly protected with rubber bushings. The glass comes in regular lengths, 18 and 20 inches, and other lengths are supplied as required.

Manufactured by the Star Wing Co., 170 West Randolph Street, Chicago, Ill. Price, $22.50 per pair.

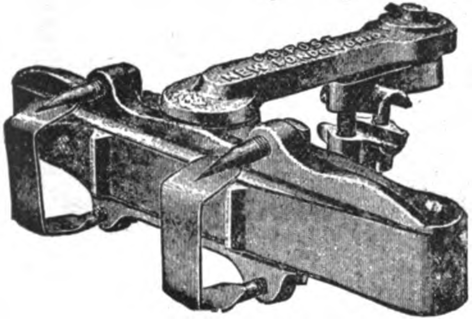
Samson Storage Batteries are manufactured for replacement purposes on passenger cars and trucks for starting, lighting and ignition and also for isolated farm lighting plants. The manufacturer states that the Samson battery has been brought up to its present high standard after long and exhaustive tests; and that it is notable for its wonderful power delivery and quick action. The slogan of the manufacturer consists of three words, "Standardized, Strength and Stability," which is stated to be amply borne out by the battery in use.



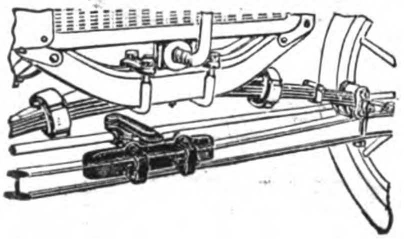
Manufactured by the Fort Wayne Battery Co., 230-300 East Fourth Street, Fort Wayne, Ind. Prices and literature on application.

The Steer Relief for the Ford Car consists of a device which is fastened to the front axle of the car and tie rod and is claimed to prevent the front wheels from running sideways on the road. The device is also claimed to make the steering of the car much easier for the driver, as a car equipped with a Steer Relief will travel in a straight line unless turned in a different direction by the driver at the steering wheel.

The device does not depend upon coiled springs to hold the front wheels in a straight line, but uses two flat springs instead, one at each side, which is stated to give greater strength to the device and make it more durable.

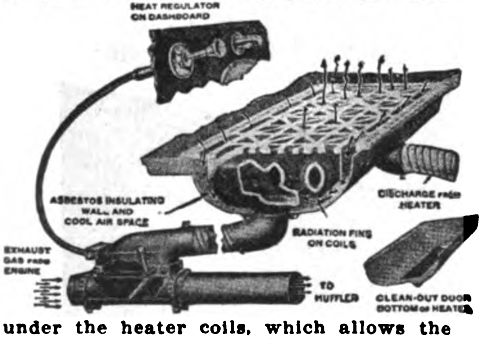


Steer Relief is made of the best of material obtainable and once correctly adjusted, it is claimed, will prove a valuable accessory for the Ford car. It may be installed in a few minutes time by the average motorist who is able to use a wrench.



Manufactured by the Burr Manufacturing Co., 1011-51 Power Avenue, Cleveland, O. Price, $7.50.

The Temme Automobile Exhaust Heater for All Passenger Cars embodies several new features not usually found in heaters of this type. The heater is placed in the floor of the car, the frame setting flush with the floor boards, and becomes a part of the floor. Below the frame is the heater proper, consisting of three coils in a single unit and connected to the exhaust pipe valve by means of flexible tubing. The used gas from the heater passes through a second flexible pipe to the atmosphere. Valve regulation is accomplished by means of a dash control working in a flexible tube and connected to the valve. A clean-out pan is provided under the heater coils, which allows the dust and lint which collects around the heater to be cleaned out at intervals.



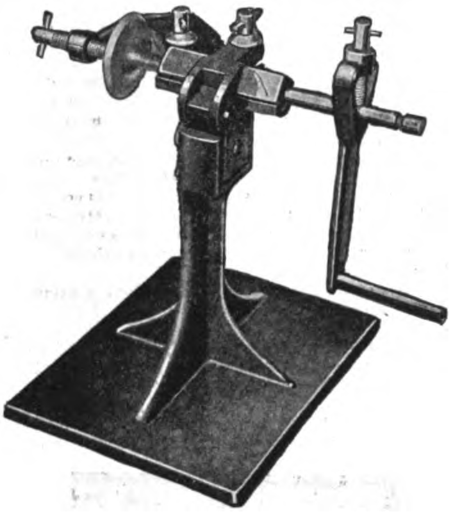
HEAT REGULATOR ON DASHBOARD
ASBESTOS INSULATING WALL AND COOL AIR SPACE
DISCHARGE FROM HEATER
RADIATION FINS ON COILS
EXHAUST GAS FROM ENGINE
TO MUFFLER
CLEAN-OUT DOOR BOTTOM OF HEATER

It is stated that the heater has a capacity of 384 square inches, large enough to satisfactorily heat the largest twin-six car. By means of the dash control it is possible to regulate the heat for early fall or winter driving, increasing or diminishing at will. It is stated that this form of construction eliminates the possibility of gas fumes getting into the car, or of the car catching fire

Owners of trucks equipped with cabs fitted for all-season driving or long-distance work should find a heater of this type a good investment, as it enables the driver to keep warm regardless of outside weather conditions.

Manufactured by the Triple Action Spring Co., 2810-12 South Michigan Avenue, Chicago, Ill. Price, with full instructions for installing, $30; extra fitting for cars having two exhaust pipes, $10 additional.

The Universal Valve Refacer consists of a machine operated by hand which, it is claimed, will reface any valve of any degree of hardness and of any size. The machine, it is stated, will take successfully valve stems from ¼ to ½ inch and heads from one inch to 3½ inches in diameter. The V channel type bearings, anchored in the center, will hold any valve made, it is claimed, including motorcycle valve stems that are smaller at the bottom than at the top.



It is stated that it is possible with this machine to reface a valve in two minutes time and it is this feature that permits using the refacer for roughening out badly pitted valves before grinding, thus saving from one to two hours' time in grinding.

The Universal Valve Refacer is guaranteed to successfully reface tungsten valves.

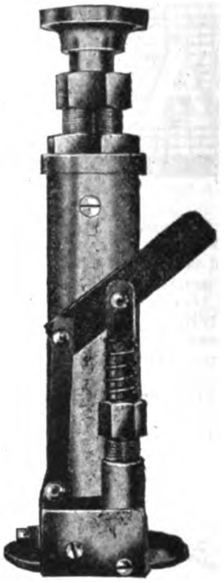
Sold by the Fairbanks Co., Broome and Lafayette Streets, New York City. Prices on request.

MP Cables for Ignition, Starting and Lighting. All MP cables are built according to accepted standards and are guaranteed to perform efficiently the uses prescribed for each wire. There are two grades of plain rubber and braided cables, indicated by the prefixes MP and MPS. All MP types carry an insulation of 30 per cent. pure rubber, while the MPS types have a 20 per cent. special compound rubber covering. It is stated that all braided cables with the prefix MP are essentially quality wires, carrying either an extra [redacted] braid or a wrapping of cambric cloth. MP cables are thoroughly tested to withstand the ill effects of oil, heat and grease; the starting cables are further protected from acids and water. All braided cables bear a durable seal brown or cherry red finish and are saturated with varnish.

These goods are packed in convenient dust proof packages containing 100-foot coils; lamp cords in 250-foot coils. Ford assemblies and spark plug wires are packed in bundles of 100.

Manufactured by the Motor Parts Co., 15th and Mt. Vernon Streets, Philadelphia, Pa., Prices and literature on request.

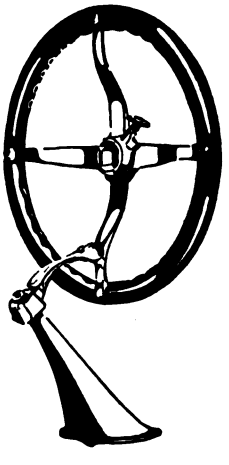
The Jaxall Automobile Jack embodies a new idea in jack construction not heretofore used on automobile and truck jacks. The hydraulic principal is employed in its operation, oil being used for the lifting agent. This fluid is carried in a small container in the base and is pumped, by a single-cylinder pump attached to the side, into the lower part of the plunger, raising the car with ease to the height desired. A few strokes of the pump is all that is required to lift the heaviest car or truck, while provision is made for lowering the car with equal speed and accuracy. The Jaxall is small in size, is easily carried in the car and is ready for use at all times, the manufacturer states. The manufacturer claims that Jaxall is a quality product throughout, and that it is meeting with a ready sale wherever demonstrated.



Manufactured by the Sunderman Corporation, Newburg, N. Y. Prices and literature on application.

Gemco Full Tilt Detachable Steering Wheel follows the general design of many of the wheels of this type, but differs from others in the fact that it may be entirely removed and carried by the owner. This feature is being taken advantage of by many motorists as a means of foiling the automobile thief.

When placed in the normal position the wheel locks automatically and the manufacturer states that there is absolutely no chance of its getting out of order while driving.

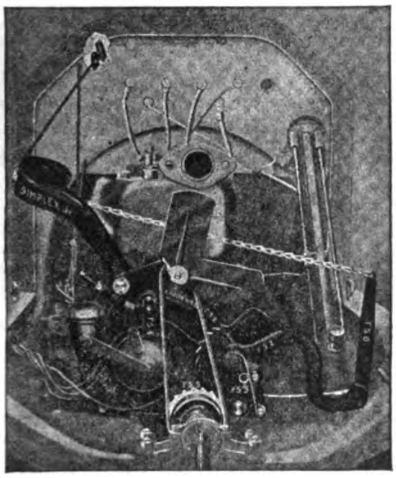


The Full Tilt Detachable Steering Wheel is adapted to the Ford, Dodge, Chevrolet, Overland Four, Briscoe and Maxwell cars.

Manufactured by the Gemco Manufacturing Co., Milwaukee, Wis. Prices and literature on request.

The Simplex Starter for Fords is a newly designed starting device for the Ford engine, and may be attached to any Ford engine in a few minutes' time, as there are but two bolts used. The device is shipped, assembled, with the necessary bolts and fittings, and, it is stated, anyone handy with tools can properly install it.

The castings from which the starter is made are malleable iron, which has been given a test for strength at the factory of 50,000 pounds to the square inch, much more than it probably will ever be called upon to stand in actual work.



A ratchet gear is fastened to the crankshaft, which meshes with the half gear on the starter arm when the starter is being used. As soon as the engine starts this gear is released, allowing the crankshaft to turn free. A safety device is also included in the outfit, which prevents the engine from backfiring when it is being started.

Manufactured by the American Starter Co., Anderson, Ind. Price, $15.

Steam Bag for Tire Vulcanizers is a rubber bag fitted with steam connections which is placed in the interior of a tire during vulcanizing operations, and supplies the necessary heat, at the same time filling out the tire to its proper shape. The intense heat held in the rubber bag cures the rubber of the patch at a uniform temperature both inside and out.

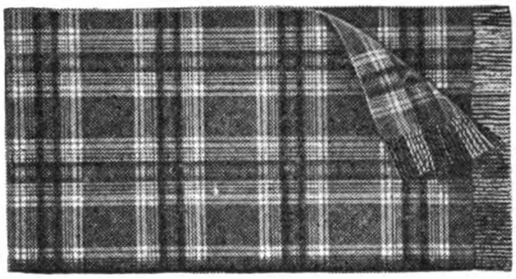
The steam curing bag has been on the market, the manufacturer states, for over three years and during that period has proved its value in vulcanizing work. Recently the company has perfected a steam curing bag of sufficient size to handle six, seven and eight-inch pneumatic truck tires.

The company states that it holds the basic patents for the manufacture of the steam curing bag, and that many of the largest tire companies are large users of them. The patents cover the United States, Canada, Great Britain, France and Germany.

Manufactured by the Steam Bag Corporation, 1545-47 Broadway, Denver, Col. Prices and literature on request.

Woolware Robes and Shawls for the Motorist comprise a very complete line of wool robes and shawls of different designs shown in a well illustrated catalogue which is issued by the manufacturer, whose motto is "Always the Best."

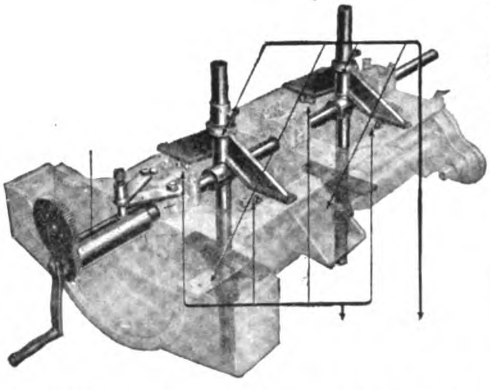
All robes and shawls are thoroughly scoured and shrunk before leaving the factory, while the warp is of cotton and the woof or filling is 80 per cent. high-grade wool stock. Robes and shawls are shown in varying colors and styles, including plaids, plain, grays, browns, etc. All robes and shawls are guaranteed by the manufacturer to be as represented.



Manufactured by the Beckman Co., Northern Ohio Blanket Mills, Fulton road and Paris avenue, Cleveland, O. Jobber and dealer trade solicited.

The Peters' Universal Bearing Reamer, including a combination boring and babbitting tool for main and connecting rod bearings, is stated to be a tool that will prove of great value to service stations and public garages. The outfit, aside from providing a ready means of reaming and babbitting the main and connecting rod bearings, also provides all the adjustments necessary, including lateral and vertical, which are very essential to obtain perfect bearings similar to those made at the factory, used when the engine is first assembled.

It is stated that this device is adapted to either four, six or eight-cylinder engines, and that it will successfully handle engines equipped with from three to eight bearings with a positive assurance of perfect alignment.



The Peters' Universal Bearing Reamer, it is claimed, reduces the time required fo reaming main and connecting rod bearings to four or five hours as compared to three to 10 days by the old hand-scraping method, while the results secured, it is stated, are equal to the manufacturer's original product.

Manufactured by the Aluminum Brazing Solder Co., Widener building, Philadelphia, Pa. Price, $190; West of the Rockies, $200.

The Trex Air-Operated Valve Spring Compressor is a tool that will appeal to service station and garage repairers who have a large amount of valve grinding to do and are equipped with power operated air compressor outfits.

Air is lead to the tool through a rubber tubing from a wall fixture and is turned on as needed by a special three-way cock on the upper section of the cylinder of the tool. The operation of the device is simple—it is simply placed in position with the lower fork around the valve stem above the push rod, and the center pin on the top of valve. The petcock is opened and the air passes into the cylinder, forcing the piston down and compressing the spring. Removing the fastening pin in the valve stem and opening the valve allows the air to escape and the tool may be removed. The valve stem, spring and spring cap can then be removed also.

Trex Air Operated Valve
Spring Compressor.

For Garages, Service Stations and Repair Shops.

The tool is made throughout of steel and is stated to be strong, light and durable, and is claimed to be one of the most practical and efficient valve lifters made.

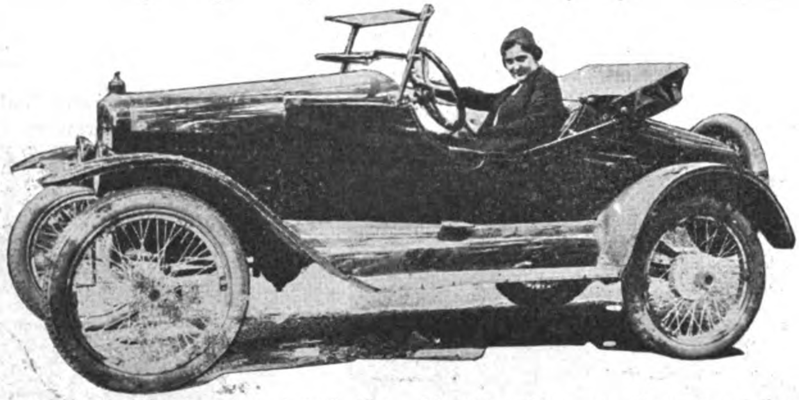
Manufactured by the Trexler Co., 1418 Walnut Street, Philadelphia, Pa. Price, $15; West of the Rockies, $16.

Kozy Windshield Wings consist of two wings of heavy beveled plate glass, which are fastened by special supports and fasteners to the side bars of the windshield and protect the passengers of the car from drafts around the edge of the shield, as well as keeping out dust and rain, it is stated.

A feature of Kozy wings is the special patented arm which holds the glass. This arm is so designed and applied that there is no strain on the glass, and vibration and sudden jerks do not make it liable to breakage. These wings the manufacturer states, add tone to the most luxurious car, yet are practical and are being used on cars of the higher priced type as well as the medium priced.

Manufactured by the Thomas-Bray Co., Cincinnati, O. Prices and literature on request. Dealers and jobbers should send for literature and special proposition.

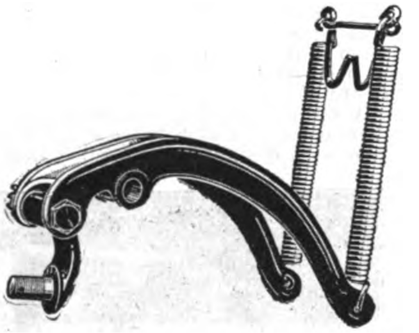
The Lamco Line of High Grade Bodies for Ford Cars comprises four styles: Sporting model F 50, racing model "23," touring model F 99 and the Lamco De Luxe model five-passenger body. The Lamco sport model roadster is of the semi-racing type, having straight, low-cut lines, slanting windshield, one-man top and French plaited upholstery. The outfit comes complete with high grade top and windshield, crown fenders, linoleum covered running boards, side shields, radiator shell and hood, large gas tank and spare tire carrier.



All wood work is finished in walnut, while the body is painted Stutz blue, red, Mercer yellow, or Brewster green. The fender and hood are finished in black only.

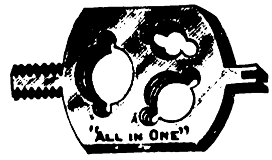
Manufactured by the Lehman Manufacturing Co., Cannelton, Ind. Prices and literature on request.

The H. & D. Patented Shock Absorbers for Ford Cars consist of a special alloy, drop forged steel perch, equipped with high carbon steel bolts fitted with castellated nuts and cotter pins, and a high grade malleable iron arm to which are attached two large coiled springs made of Premier steel wire, .50-.65 carbon, heat treated after rolling and securely attached to the arm. Rear hooks and front clips are provided for attaching the springs to the car and it is stated that the absorbers are easily fitted and that it is unnecessary to bore new holes when attaching. It is claimed that the riding qualities of the car are greatly improved after the absorbers are installed, and that the operator need not fear traveling over rough roads. The absorbers are sold on a 30-day trial and, if not as represented, may be returned to the dealer, the dealer receiving a new set from the manufacturer and compensation for his labor in removing them.



Manufactured by the H. & D. Co., Crawfordsville, Ind. Prices and literature on request.

The "All In One" Valve Tool is in reality five tools in one and is claimed to possess all the advantages of other tools of this type, besides being made from flat cold rolled steel, case hardened, and can be conveniently carried in the vest pocket.



It is claimed that this little tool will do the work that higher priced tools are designed to do and retails for much less.

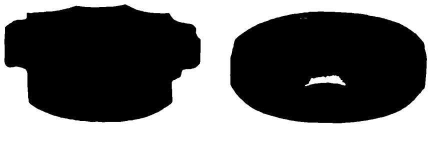
Manufactured by the E. G. Manufacturing Co., 250 West 54th Street, New York City. Price, 25 cents each.

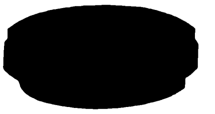
Endura Sheet Packing is made of vegetable fiber, chemically treated, and is stated to be unlike any other packing on the market. Though black in appearance, it contains neither rubber nor asbestos. Endura sheet packing is claimed to be as tough as rawhide and extremely light, is easily cut to make perfect joints and gives unusual service in thin sheets.

Where it is desired to use a packing that is liable to come in contact with water, gasoline, oil, etc., Endura packing is guaranteed to fill the bill, with the exception of parts subjected to intense heat and, for this purpose, a copper asbestos gasket is recommended.

Manufactured by the Endura Manufacturing Co., Philadelphia, Pa. Prices on request.

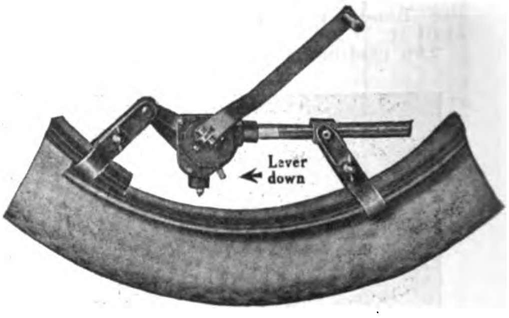
Molded Radiator Caps are made of a cold molded composition having an asbestos base with a cement binder. The manufacturer states that this composition is molded under 30 to 50 tons hydraulic pressure on to brass, male and female threaded inserts. The caps are guaranteed not to be affected by any temperature fluctuations which will be experienced in service or, as a matter of fact, by any temperature, from zero to 600 degrees Fahrenheit, nor by alcohol or the fumes from any other non-freezing mixture.





Manufactured by the American Insulator Co., New Freedom, Pa. Prices on application.

The Jamcap Rim Tool has recently been developed for removing or replacing tires on demountable rims of passenger cars, and is claimed to be the best of all rim tools. The device consists of two clamps which are firmly fastened to the rim, one at either side of the brake; the ends of the clamps are joined by the operating mechanism and a threaded worm. To operate the tool after it has been fitted to the rim, the handle is turned to the right, which action causes a small threaded pin to turn downward on the underside, coming in contact with the rim, and raising one end of it at the break. Still further turning of the handle to the right causes the connecting worm to turn, contracting the ends of the rim and passing the free end over the fixed end, allowing the tire to be slipped off the rim. To replace a tire the operation is reversed.



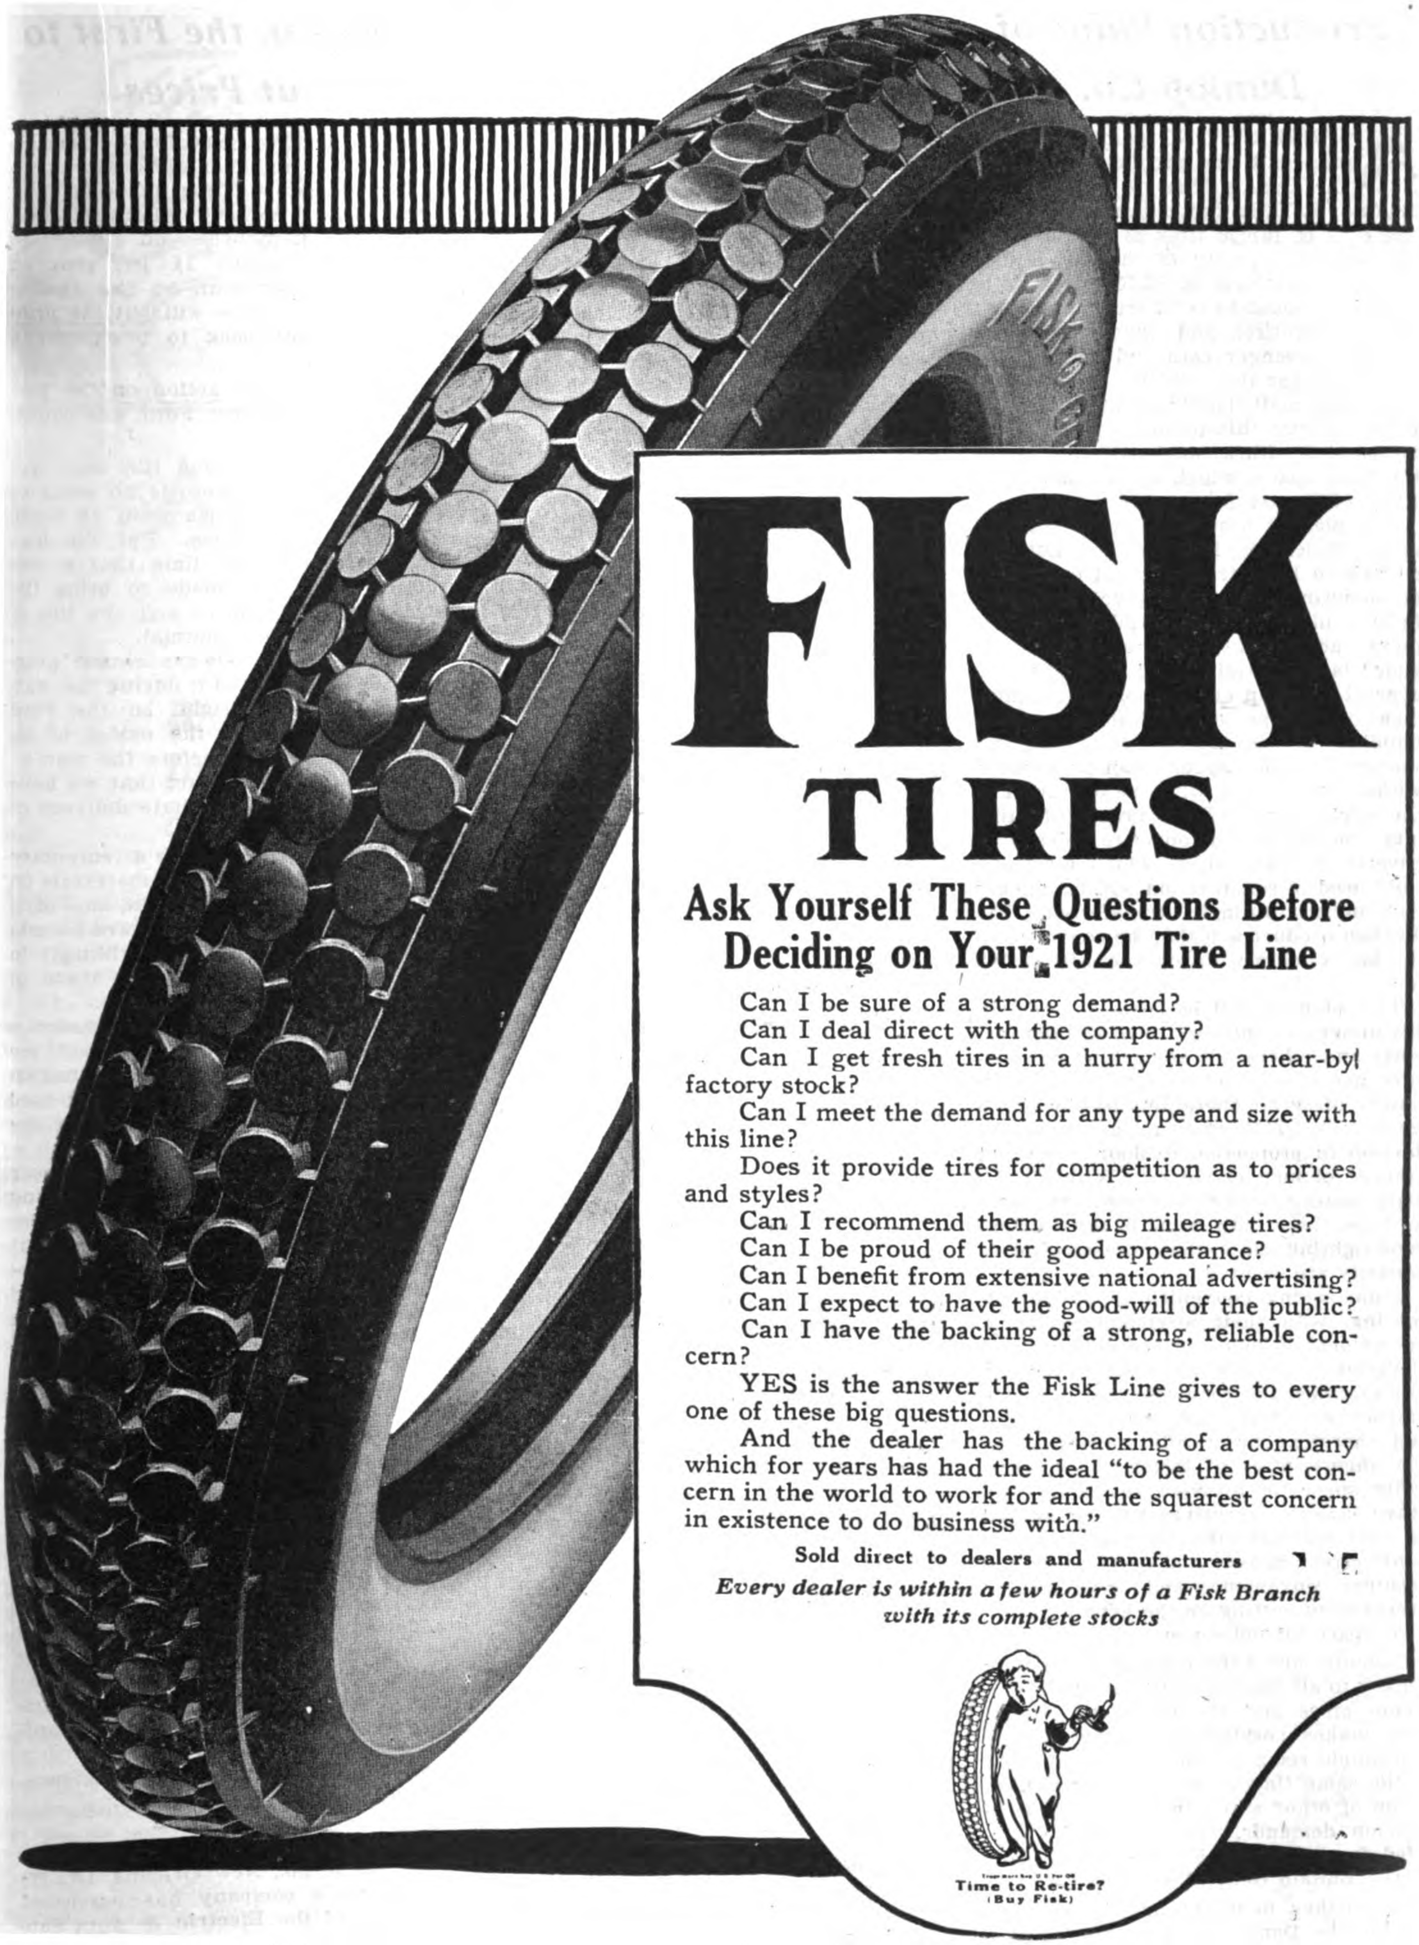
It is stated that pinching of the fingers or of the inner tube is reduced to a minimum, and that no other tools are required to remove a tire no matter how badly it may be rusted to the rim.

Manufactured by Jamcap Rim Tool Co., Caplan Brothers, sole agents, 77 Bedford Street, Boston, Mass. Price, $7.50 list.

Stone Shock Absorbers for Dodge Cars and others using a three-quarter or scroll end, elliptic type spring, is designed to add to the easy riding qualities of the car and prevent road shocks from reaching the occupants of the car. It is stated that Stone shock absorbers relieve the severe back-throw or rebound of stiff springs, in this manner saving the life of the spring.

The shock absorber is made in a cylindrical shape and is fitted at the end of three-quarter elliptic springs. It is composed of two springs, one inside of the other, which fit against an adjustment block at the top and the cylinder at the bottom. Adjustment is made by turning the long bolt which passes through the center of the springs and draws down the adjustment block, supplying more tension to the spring. Compression grease cups are fitted to the suspension bolts which pass through the spring ends, supplying sufficient lubrication to the bushings within the spring ends. Felt retainers are also supplied, which hold the oil precisely on the bearings which are to be lubricated. Stone shock absorbers are fully guaranteed against defects in material or workmanship for a period of one year from date of purchase.

Manufactured by the Stone Manufacturing Co., 1502 South Michigan Avenue, Chicago, Ill. Price, f. o. b. Chicago, $10 per pair for rear springs, war tax paid.



FISK
TIRES

Ask Yourself These Questions Before Deciding on Your 1921 Tire Line

Can I be sure of a strong demand?
Can I deal direct with the company?
Can I get fresh tires in a hurry from a near-by factory stock?
Can I meet the demand for any type and size with this line?
Does it provide tires for competition as to prices and styles?
Can I recommend them as big mileage tires?
Can I be proud of their good appearance?
Can I benefit from extensive national advertising?
Can I expect to have the good-will of the public?
Can I have the backing of a strong, reliable concern?

YES is the answer the Fisk Line gives to every one of these big questions.

And the dealer has the backing of a company which for years has had the ideal "to be the best concern in the world to work for and the squarest concern in existence to do business with."

Sold direct to dealers and manufacturers

Every dealer is within a few hours of a Fisk Branch with its complete stocks

Production Plans of Dunlop Co.

AN INTERESTING point in connection with the production plans of the Dunlop Tire & Rubber Co., Buffalo, N. Y., is that at present the manufacture of fabric tires is not included. The entire capacity of the big Buffalo factory, estimated at 12,500 tires daily, will be devoted to solid truck and pneumatic cord tires and inner tubes for trucks, passenger cars and motorcycles. Passenger car tires will be made in both large and small sizes, including Fords. It is stated that this production can easily be doubled without materially increasing the floor space, which now totals about 1,250,000 square feet.

The plan of production, while surprisingly efficient is, it is claimed, not new enough to be untried nor old enough to be shopworn. It simply involves a carefully studied plan of building arrangement, accessibility and a construction which is both original and interesting. In general the plan consists of the arrangement in groups, each of three parallel buildings, 560 by 120 feet, so located and spaced that the capacity can be doubled without interfering with the operation of the original units. These groups of buildings are located on opposite sides of a covered roadway upon which all materials used in construction will be quickly and uninterruptingly transferred. The finished product will then be conveyed to the big four-story warehouse, 546 by 162 feet.

This plan, it will be seen, has certain advantages of interest to production experts and others. It assures proper convergence of parallel operations and continuity of serial operations by the shortest routes. This, in turn, increases production in proportion to floor space and number of men employed. With all the main factory buildings of one-story monitor type, the rapid routing of the product, good lighting and easier increase of plant capacity are secured.

Time saving conveniences and direct routing, with their attendant economy, are evident in many of the detailed construction features of the Dunlop factory. For example, the roadways, for both employees and materials, will be covered and therefore practically immune from the uncertainties of inclement weather. Office space for foremen, inspectors and other factory executives will be located on this roadway, thus giving the occupants direct ingress and egress with the greatest convenience and obviating the necessity of cutting up the actual factory floor space for office use.

Conduits and subways will be used to convey to all the buildings the water and steam pipes and the electrical system. This makes possible great accessibility and ample room for the repair man and at the same time gives space for the addition of other wires and pipes when expansion demands. Power will be supplied from Niagara Falls and the plant of the Buffalo General Electric Co.

To further facilitate and insure production the Dunlop Co. has purchased a textile mill at Utica, N. Y. The date of the formal opening of the plant has not yet been announced, but it is expected that production will be fairly under way early in 1921.

Perry D. Saylor, vice president and general manager of the Dunlop Tire & Rubber Co. of America, Buffalo, N. Y., announces the following appointments on the staff organization of that company: Factory manager, George R. Johnson; engineering manager, John Flower; production manager, C. R. Redfield; sales manager, C. L. Landon; director of industrial relations, C. P. Berner. Messrs. Flower and Landon are former Goodyear executives.

SYRACUSE CO. INSTALLS CURING APPARATUS.

The Syracuse Rubber Co., Inc., Syracuse, N. Y., manufacturer of the Syra-Cord tires and tubes, has purchased a new curing device known as the automatic time and temperature controller that is proclaimed by tire experts to be the most accurate and efficient device in use today for its purposes. It is claimed to do away with the possibility of over or under-curing the tires as the steam and air pressure, by which this process is done, is shut off when it should be automatically and accurate temperature, which is so important in curing, is a certainty and loss of time, waste of steam and spoilage are all avoided. One operator can take charge of a number of vulcanizers and secure perfect results on them all.

Superintendent K. D. Smith states that although the initial cost of this automatic controller is high, in the end it will be a great economy, and it strictly complies with the company's policy of using only the most modern machinery in turning out as good a cord tire as there is on the market.

MILLER SELLS DIPPED GOODS DEPARTMENT.

Increased automobile tire business is stated as the reason of the sale by the Miller Rubber Co., Akron, O., of its dipped goods department to the Seamless Rubber Co., New Haven, Conn. The disposal of this department does not affect the balance of the Miller miscellaneous line of rubber goods, being confined only to dipped goods such as household, surgeons' and acid gloves, finger cots, bathing caps, drainage gauze covers, dilator covers, balloons, etc.

REORGANIZATION OF FURBER CO.

The Furber Manufacturing Co., manufacturer of automotive products, 614 Washington street, Lynn, Mass., has been reorganized with Horatio Gilbert as president, succeeding Mr. Furber, and the name of the concern has been changed to 100 Per Cent. Manufacturing Co.

The Automobile Tire Co., Inc., of New York, has opened a branch at 2446 Fifth avenue, Troy, N. Y., in charge of F Whitehouse.

Ford Co. the First to Cut Prices

One of the most sensational announcements in the automobile industry for a number of years was that made on Sept. 21 by the Ford Motor Co., Detroit, Mich., of a reduction in prices on all models, ranging from about 14 per cent. on trucks to 31 per cent. on the smaller passenger cars. This will put the price of this machine back to practically a pre-war basis.

In explaining this action on the part of his company, Henry Ford was quoted as follows:

"The war is over and it's time war prices were over. There is no sense or wisdom in trying to maintain an artificial standard of values. For the best interests of all it is time that a real practical effort was made to bring the business of the country and the life of the country down to normal.

"Inflated prices always retard progress. We had to stand it during the war, although it wasn't right, so the Ford Motor Co. will make the prices of its products the same as before the war.

"This in face of the fact that we have unfilled orders for immediate delivery of 146,065 cars and tractors.

"We must, of course, take a temporary loss because of the stock of materials on hand, bought at inflated prices, and until we use that stock up we will have to submit to a loss, but we take it willingly in order to bring about a going state of business throughout the country.

"Our country is rich beyond measure in natural resources. Rich in all the material things that go to make a nation great, and yet its progress is being held practically at a standstill because of the greed of the profiteers.

"Now is the time to call a halt on war methods, war prices, war profiteering and war greed. It may be necessary for everybody to stand a little sacrifice, but it will be most profitable after all, because the sooner we get the business of the country back to a pre-war condition and the lives of our people become more natural—progress, prosperity and contentment will occupy the attention of our people."

Edsel Ford, president of the Ford Motor Co., announced that the prices will be as follows:

Stripped chassis from $525 to $360; runabout from $550 to $395; with starter, from $625 to $465; touring car from $575 to $440; with starter, from $650 to $510; truck chassis from $640 to $545, including demountable rims and pneumatic tires; coupe from $850 to $745, including starting system and demountable rims; sedan from $975 to $795, including starting system and demountable rims; Fordson tractor from $850 to $790.

These prices went into effect at once. There is no cut in wages.

Percival Stern, president of the Interstate Electric Co., New Orleans, La., reports that his company has purchased the assets of the Electric & Auto Supply Co., Birmingham, Ala.

The ACCESSORY and GARAGE JOURNAL

VOL. X. PAWTUCKET, R. I., OCTOBER, 1920 No. 6

Automotive Equipment Show Signal Event of Season

Big List of Exhibitors at Chicago Typical of Entire Industry—Comprehensive Directory of Manufacturing and Jobbing Concerns Which Will Be Represented.

THE stage is all set at the Chicago Coliseum for what will undoubtedly be the most significant event of the season in the automotive industry of the country—the annual convention and second annual exhibit of the Automotive Equipment Association, Nov. 15-20.

When last season saw the inauguration of a show for the members in connection with the annual convention of the national automotive equipment body, it was considered somewhat in the nature of an experiment, but the result proved so successful that it was unanimously voted to make it a regular feature at future conventions. It has, therefore, been anticipated for months in the industry and trade, with the consequence that the show committee has been confronted with the problem of providing adequate accommodation for the hundred of applicants, even in the increased capacity afforded by the immense Coliseum building, and many late comers have had to be content with space in the Annex, or by overflowing into the various hotels and making independent displays at their Chicago headquarters or locations as convenient as possible to the big main show.

The list of exhibitors supplied by the committee to date indicates that there will be 200 jobbers and manufacturers represented at this second annual show and the whole will form one of the most comprehensive offerings of automotive equipment imaginable, covering almost every conceivable fitting, appliance, material or part entering into the construction of the modern motor car, as well as contributing to their maintenance and repair, and for the thorough equipment and stocking of garages, repair shops, service stations, accessory and supply stores. And the displays themselves will be supplemented by a corps of competent officials and wide-awake sales representatives and, if the amount of business transacted at the initial show of 1919 can be considered any criterion, the stimulation to the industry this year should prove of sufficient volume to be most gratifying to the exhibiting members and management.

Directors' and Committee Meetings.

During the first two days of the convention meetings of the various boards of officials and committees will be held at the Congress Hotel as follows:

Board of Directors—English Room, Monday morning, Nov. 15, 10 o'clock.

Board of Governors—English Room, Tuesday afternoon, Nov. 16, 2:30 o'clock.

State Vice Presidents—Green Room, Tuesday afternoon, Nov. 16, 2:30 o'clock.

Membership Committee—Room A 6-8, Monday morning, Nov. 15, 10 o'clock.

Standardization Committee—French Room, Monday morning, Nov. 15, 10 o'clock.

Committee on Labor—Room A 22, Tuesday morning, Nov. 16, 10 o'clock.

Vigilance Committee—Room A 24, Tuesday afternoon, Nov. 16, 12:30 o'clock.

Committee on Railroad Classification — Room A 16, Tuesday morning, Nov. 16, 10 o'clock.

Committee on Good Roads and Highways—Room A 18, Tuesday morning, Nov. 16, 10 o'clock.

The first general session of the con-

R. R. Englehart, President of Automotive Equipment Association.

William W. Webster, Commissioner, Automotive Equipment Association.

vention will be held on the second floor of the Coliseum Annex and will be called to order at 10 a. m. Wednesday, Nov. 17, and continue until 12:30, when an adjournment will be made for the day, and there will also be sessions at the same time and place Thursday and Friday and Saturday also if necessary to finish up the business.

In order to make the sessions of the convention of vital interest, Commissioner Webster is going to ask every member to submit some question he would like to have taken up by the board of directors or on the convention floor.

There will not be, this year, separate afternoon sessions for jobbers and manufacturers, but the manufacturers' division will have a special meeting at the conclusion of the Wednesday morning session of the general convention to take up any matters that should properly come before that section. On Thursday afternoon, after the regular morning session, the jobbers will remain in convocation for the consideration of their particular problems.

Special Points of Information.

The registration room will be located in the Francis I room on the second floor of the Congress hotel and will be open to receive registrations and distribute credentials and official badges on Monday and Tuesday. On Wednesday the registration room will be transferred to the Coliseum.

As usual, ladies are cordially invited to attend the business sessions, and ample seating accommodations are provided in the gallery of the Annex, where the convention will be held, and no tickets nor badges will be required for admission.

A splendid musical programme will be rendered by a fine orchestra and, in addition, there will be vocal selections by well known artists from time to time in the main hall for the entertainment of the delegates and exhibitors and their guests.

An a la carte luncheon will be served in the northeast portion of the basement of the Coliseum immediately following the adjournment of the convention sessions. The afternoons will be given over to the exhibits.

The show will be open from 9:30 a. m. to 6 p. m. for the first five days of the week and will close at noon Saturday.

Cards of admission will be in the form of coupon tickets for delegates; guest cards for others desiring to attend the convention sessions; exhibitors' tickets for exhibitors and their salesmen, assistants and aids; dealers' badges and tickets, which may be sent by members to customers, which are in the form of a card of introduction that may be exchanged for a badge at the registration room; and guest tickets for the exhibit only for non member jobbers, engineers, architects and other parties who may be interested in the show or the automotive equipment line These last tickets will not admit to the convention.

The bulletin board and bureau of information will be located near the main entrance of the Coliseum.

Committees and Members of Association

Following is a complete roster of the officials, committees and membership of Automotive Equipment Association:

Board of Directors.

President, R. R. Englehart, Sieg Co., Davenport, Ia.

Vice president, R. A. Stranahan, Champion Spark Plug Co., Toledo, O.

Chairman, H. M. Dine, Dine-De Wees Co., Canton, O.

Vice Chairman, L. P. Halladay, L. P. Halladay Co., Streator, Ill.

J. S. Proctor, Minneapolis Iron Store Co., Minneapolis, Minn.

S. T. McCallum, Auto Equipment Co., Denver, Col.

F. T. Chase, Frank Mossberg Co., Attleboro, Mass.

F. A. Ferris, Ferris Dunlap Auto Supply Co., Dallas, Tex.

W. T. Walker, Walker Mfg. Co., Racine, Wis.

L. H. Van Briggle, Van Briggle Motor Device Co., Indianapolis, Ind.

G. L. Brunner, Brunner Mfg. Co., Utica, N. Y.

N. H. Oliver, Metal Specialties Mfg. Co., Chicago, Ill.

C. L. Carper, Nebraska Buick Auto Co., Lincoln, Neb.

Fred Campbell, Fred Campbell Auto Supply Co., St. Louis, Mo.

Chas. Stahl, Connecticut Tel. & Elec. Co., Meriden, Conn.

J. E. Millen, John Millen & Son, Ltd., Montreal, Quebec, Canada.

Wm. Von Elm, E. A. Laboratories, Inc., Brooklyn, N. Y.

J. Prescott, Prescott Auto Parts Co., Webster, Mass.

Ivan Goodrich, Goodrich-Lenhart Mfg. Co., Hamburg, Pa.

S. A. Fulton, The Fulton Co., Milwaukee, Wis.

Earl Reynolds, Reynolds & Reynolds, Tacoma, Wash.

Robert Weinstock, Weinstock-Nichols Co., San Francisco, Cal.

C. R. Churchill, Electric Appliance Co., New Orleans, La.

L. A. Cavanaugh, Motor Car Supply Co., Ltd., Calgary, Alta, Canada.

Commissioner—William M. Webster.
National Field Secretary—George Fritz.
Field Secretary—Charles P. Hughes.

STATE VICE PRESIDENTS.

Alabama—A. H. Johnson, Johnson Auto & Tire Co., Montgomery.

California—C. Hillis, Electric Appliance Co., San Francisco.

Colorado—J. Foster, Foster Auto Supply Co., Denver.

Connecticut—L. H. Woodruff, F. S. Mersick & Co., New Haven.

District of Columbia—Chas. Rubel, Chas. Rubel & Co., Washington.

Florida—G. N. Baughman, G. Norman Baughman Co., Tampa.

Georgia—W. E. Cody, W. E. Cody Co., Columbus.

Illinois—Theo. Bass, National Electric & Auto Supply Co., Peoria.

Indiana—C. J. Lomont, Lomont & Co., Fort Wayne.

Iowa—Geo. Hippee, Hippee-States Co., Des Moines.

Kansas—F. J. Mankoff, Motor Equipment Co., Wichita.

Kentucky—T. M. Williams, Peaslee-Gaulbert Co., Louisville.

Louisiana—W. Shuler, Shuler Auto Supply Co., New Orleans.

Maine—C. J. Bailey, James Bailey Co., Portland.

Maryland—S. D. Black, Black & Decker Mfg. Co., Baltimore.

Michigan—N. J. Clark, General Sales Co., Detroit.

Massachusetts—E. N. Tarbell, Tarbell-Waters Co., Springfield.

Minnesota—C. R. Williams, Williams Hardware Co., Minneapolis.

Missouri—J. S. McGauley, Beck & Corbitt Iron Co., St. Louis.

Montana—J. Stanley Clemence, Northwestern Auto Supply Co., Billings.

Nebraska—C. B. Knowles, Kopac Bros., Omaha.

New Jersey—N. Elin, Elin Auto Supply Co., Newark.

New York—C. S. Owen, Chapin-Owen Co., Rochester.

North Carolina—J. G. Fitzsimmons, Carolinas Auto Supply House, Charlotte.

North Dakota—J. D. Grant, J. D. Grant Co., Fargo.

Ohio—H. G. Smith, Pennsylvania R. & S. Co., Cleveland.

Oklahoma—L. C. Sammons, Ratcliff-Sanders Co., Tulsa.

Oregon—E. R. Wiggins, Wiggins Co., Inc., Portland.

Pennsylvania—C. E. Jackson, Jackson Motor Supply Co., Pittsburgh.

Rhode Island—A. E. Goodby, Goodby-Rankin Co., Providence.

South Carolina—C. B. Jenkins, Jr., General Asbestos & Rubber Co., Charleston.

South Dakota—H. F. Brownell, H. F. Brownell Co., Sioux Falls.

Tennessee—N. F. Ozburn, Ozburn-Abston Co., Memphis.

Texas—C. O. McCauley, McCauley-Ward M. S. Co., Waco.

Utah—A. D. McMullen, Motor Mercantile Co., Salt Lake City.

Virginia—R. W. Payne, Talman Auto Supply Co., Richmond.

Washington—G. G. Lemley, Ballou & Wright, Spokane.

West Virginia—R. W. Jones, Williams Hardware Co., Clarksburg.

Wisconsin—R. B. Dunlap, C. A. Shaler Co., Waupun.

Canada.

Eastern Division—Ludger Gravel, Ludger Gravel & Fils, Montreal.

Prairie Division—A. Bowman, Bowman Brothers, Saskatoon.

MEMBERSHIP COMMITTEE.

Chairman, W. E. Wissler, Herring Motor Co., Des Moines, Ia.

Vice chairman, P. Stern, Interstate Electric Co., New Orleans, La.

C. L. Stebbins, Double Fabric Tire Co., Auburn, Ind.

W. C. Hecker, Curtis Pneumatic Machinery Co., St. Louis, Mo.

L. Schwab, Stevens & Co., New York.

H. E. Patterson, Warner-Patterson Co., Chicago, Ill.

A. F. Durkee, Durkee-Atwood Co., Minneapolis, Minn.

F. H. Suter, Shadbolt & Boyd Iron Co., Milwaukee, Wis.

D. T. Talman, E. L. Taylor & Co., Inc., Richmond, Va.

H. D. McCoy, McCoy Motor Supply Co., San Francisco, Cal.

W. L. Moncur, Cutter & Foster, Toronto, Ontario, Canada.

FINANCE.

Chairman, R. R. Englehart, Sieg Co., Davenport, Ia.

J. W. Perry, H. W. Johns-Manville Co., New York.

H. H. Reinhard, Reinhard Brothers Co., Minneapolis, Minn.

FEDERAL TRADE COMMISSION.

Chairman, F. B. Caswell, Champion Spark Plug Co., Toledo, O.

W. W. Low, Electric Appliance Co., Chicago, Ill.

S. F. Beech, Motor Car Supply Co., Chicago, Ill.

RAILROAD CLASSIFICATION.

Chairman, J. W. Lawhead, Au-To Compressor Co., Wilmington, O.

G. Norman Baughman, G. Norman Baughman Co., Tampa, Fla.

T. Wildermuth, Front Market Motor Supply Co., Harrisburg, Pa.

W. S. Bellows, Walden Worcester, Inc., Worcester, Mass.

List of Exhibitors

Following is a list of the exhibitors with their space numbers:

Name	Space
Acheson Graphite Co	157
Advance Auto Accessories Corp	137
Advance Felt Spec. & Cut. Co	220
Albertson & Co	189
Allen Auto Specialty Co	64
Alvord Reamer & Tool Co	168½
American Bureau of Eng., Inc	46
American Chain Co	48, 49
American Ever Ready Works	166
American Grinder Mfg. Co	190, 191
American Hammered Piston Ring Co.	88½, 89 & 89½
American Metal Parts Co	57
Anderson Co	209
Anderson Elec. & Eqpt. Co	83, 84
Apco Mfg. Co	109
Apex Electric Mfg. Co	63
Arrow Grip Mfg. Co	156
Ashland Products Co	165½
Atlas Specialty Mfg. Co	166½
Au-To Compressor Co	25
Auto Leather Mfg. Co	169½
Automatic Safety Tire Valve Corp	135
Automobile Journal Pub. Co	171½
B. & W. Mfg. Co	214
Badger Mfg. Corp	109½, 110
Barcalo Mfg. Co	198
Beneke & Kropf Mfg. Co	188
Bethlehem Spark Plug Co	19, 20
Black & Decker Mfg. Co	42, 43
Bonney Vise & Tool Works, Inc	95, 96
Boyle Mfg. Co	61, 62
Bridgeport Brass Co	125
Brown Mfg. Co., Arthur S	157½
Brunner Mfg. Co	38, 39, 40
Burd High Compression Ring Co	175
Bussman Mfg. Co	151
Canedy-Otto Mfg. Co.	149, 149½, 150, 150½
Carborundum Co	35
Carswell Hammond Mfg. Co	103
Casey-Hudson Co	108
Central Brass & Fixture Co	178
Champion Ignition Co	129
Champion Spark Plug Co	76, 77
Champion Spark Plug Co. of Canada	222
Chicago Fuse Mfg. Co	127
Chilton Co	230
Cincinnati Auto Specialty Co	115
Class Journal Co	179
Clover Mfg. Co	90½, 91
Coe-Stapley Mfg. Co	28
Columbus Varnish Co	24
Conant & Donelson Co	167½
Connecticut Tel. & Elec. Co	59
Continental Auto Parts Co	93, 94
Continental Piston Ring Co	73
Cooper Mfg. Co	56
Corcoran Lamp Co., Thos. J	219

OTHER SHOW NOTES.

RECORDS IN EXHIBITS AND ATTENDANCE BROKEN AT PITTSBURGH.

At the annual automobile show in the Motor Square Garden at Pittsburgh, Pa., the week of Oct. 16, all records for number of exhibits and attendance were broken. The displays included the products of 84 manufacturers and there were 72 accessory exhibits.

The affair was held under the auspices of the Automobile Association, Inc., of Pittsburgh, arrangements being in the hands of its officers and directors, as follows: President, Frank D. Saupp; general manager and assistant secretary, John J. Bell; first vice president, E. J. Thompson; second vice president, L. C. Myers; treasurer, W. W. Bennett; secretary, E. H. Kiser; directors, E. C. Bald, E. E. Wilbar, H. H. May and S. G. Anderson.

CLEVELAND PLANS FOR A BIGGER SHOW.

The extensions made to the Wigmore Coliseum at Cleveland, O., during the past year will make more than 100,000 feet on a single floor available to the 20th annual automobile show of the Cleveland Automobile Manufacturers and Dealers' association, Jan. 22-29. The usual policy of restricting exhibits to passenger cars and accessories will be followed this season.

The officers and directors of the Cleveland Automobile Manufacturers and Dealers association are: President, R. J. Schmunk; first vice president, G. G. Peckham; second vice president, F. E Stuyvesant; secretary and manager, Fred H. Caley; treasurer, M. B. McLaughlin; directors, A. R. Davis, C. A. Forster, T. H. Towell, C. S. Carris, A. L. Englander, H. L. Lance and H. O. Secrest.

MONTREAL'S ANNUAL EVENT.

The annual motor car show, under the auspices of the Montreal Automobile Trade Association, Ltd., will be held in the Motordrome building, in that city, Jan. 22-29. It will be modeled after the successful event of last season, but will be staged on a somewhat larger scale. Dealers throughout that section of the Dominion are anticipating a general sales impetus.

Directory of Automotive Concerns, Representatives and Location at Chicago During Show.

Advance Automobile Accessories Corporation, 1603 South Michigan Boulevard, Chicago, Ill.—H. Cory, President; O. D. Gray, Vice President; C. B. Johnson, Manager of Eastern Sales; W. A. Richards, Manager of Western Sales; R. M. Sheridan, Assistant Sales Manager; Space 137.

Advance Felt & Cutting Co., 320 South Jefferson St., Chicago, Ill.—S. W. Sidney, General Manager; Space 220.

American Auto Supply Co., Inc., 527-529 Linden St., Scranton, Pa.—Josef A. Tannenbaum, General Manager; Hotel Morrison or New Era Spring & Specialty Co.'s Booth.

American Bureau of Engineering, Inc., 1601-1603 South Michigan Ave., Chicago, Ill.—C. J. Buckwalter, President and General Manager; H. Edsall Olson, Vice President and Sales Manager; R. W. Merchant, Sales Engineer; C. J. Stout. Sales Engineer; Booth 46, or Congress Hotel.

American Distributing Co., Woodward and Warren Ave., Detroit, Mich.—N. A. Crawford, Jr., Manager; Congress Hotel.

American Grinder Manufacturing Co., Milwaukee, Wis.—C. N. and F. W. Jonas, Booths 190 and 191.

American Hammered Piston Ring Co., Bush and Hamburg Sts., Baltimore, Md.—Albert C. Bruce, Vice President; W. P. Coghlan, Sales Manager; Joseph S Jacobs, Advertising Manager; Hotel Blackstone, Chicago.

American Metals Corporation, 1022 East Michigan St., Indianapolis, Ind.—J. F. Worman, President; Jack B. Vos, Auditorium Hotel.

Zinke Co., Inc., 1324-1325 Michigan Ave., Chicago, Ill.—L. P. Zinke, F. W. Kohl, George Woelfel, Jr., J. A. Kohl, David Jenkins, P. L. Ross, P. J. Werner; Booths 103-107, or at Offices.

NOTES OF TRADE AND INDUSTRY

The Colonial a New England Industry

One of the latest motor car manufacturing enterprises to be announced proposes to occupy a unique position in the industry in that it emphasizes the fact that it is a New England industry and its policy, temporarily at least, will be to limit the sale of its product to the New England states, appealing to the high-class conservative clientele in that section. This is the Colonial Motors Corporation, with executive offices at 1108 Boylston street, and engineering plant at 926 Commonwealth avenue, Boston. Its product is known as the Colonial Six, and it is stated to be a car which typifies the character, strength and fortitude of the Colonial era, at the same time affording the grace, power, speed and luxury demanded of the modern automobile. It is designed to combine the riding qualities and flexibility of the heavy car with the economy of operation and maintenance of the light weight model.

The Colonial Six is offered in four body types and is constructed to the following major specifications:

Motor, Colonial special six-cylinder, overhead valves, 3½-inch bore and 5¼-inch stroke; Bijur starting and lighting; Warner transmission; multiple-disc clutch; Thermoid universal joints; full-floating rear axle, spiral gear; wheelbase, 130 inches; complete equipment.

The Colonial Motors Corporation is directed and managed by executives of experience in all phases of the industry. Among the officers and members of the executive board are Gen. John H. Sherbourne and Melvin F. Hill, Brookline, Mass.; James W. Milne, Newton, Mass.; Earl E. Beveridge, Springfield, Mass.; James J. Donahue, Lynn, Mass.; Hugh H. Lally, Braintree, Mass. Heading the advisory board are V. A. Charles, Harry A. Eisner and Judge George H. Bruce.

The company proposes to soon start work on the erection of a large, modern, completely equipped plant, pending the construction of which the Colonial Six is being assembled at the corporation's engineering plant at 926 Commonwealth avenue, in the heart of Boston's automobile district, production at the rate of 500 cars a year now being established pending the construction of the factory.

By concentrating distribution of the Colonial Six in New England the Boston factory dominates its sales territory and this means 100 per cent. service, a saving in freight charges, immediate deliveries and a low sales cost. Colonial service stations are being established all over New England. A limited number of cars are also available for export.

T. B. Funk, Appointed Chief Engineer of the Utilitor Division of the Midwest Engine Co.

The Texas Motor Car association, Fort Worth, Tex., has reinforced its organization by the addition of four new departmental heads, as follows: H. C. Comey, general manager of factory; H. D. Garsner, purchasing agent; E. M. Pfauser, chief engineer; E. A. Davenport, sales manager.

Funk Becomes Utilitor Chief Engineer

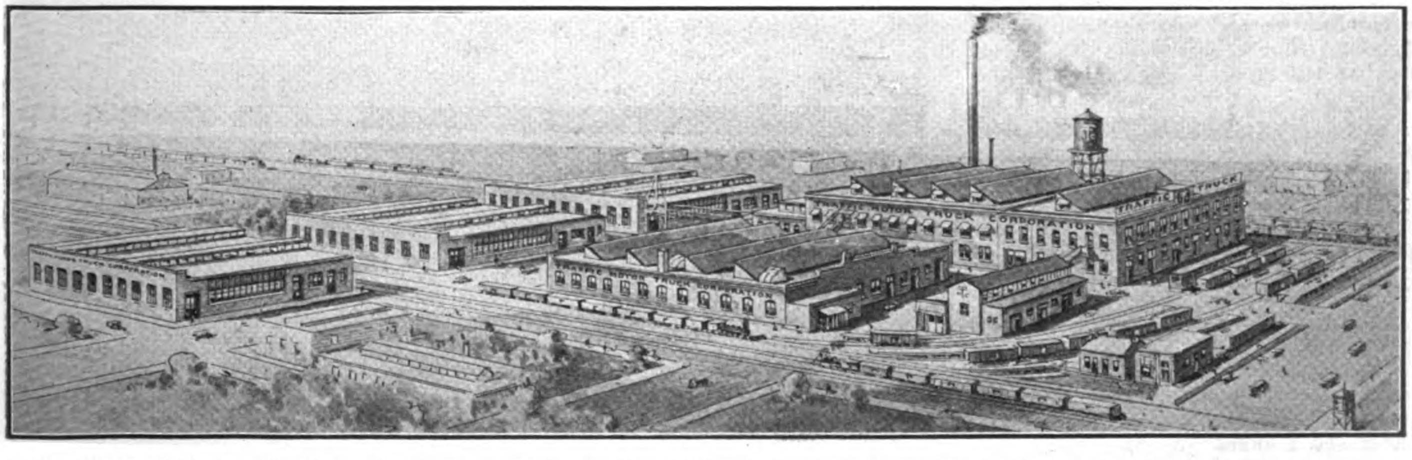
Announcement is made by the Midwest Engine Co. of Indianapolis, Ind., of the appointment of T. B. Funk as chief engineer of the Utilitor division of the Midwest Co. It is stated that perhaps no other man has spent so much time and energy in the development of the smaller sized tractors as has Mr. Funk, who began work on a small cultivating type in 1911. At that time it was not his intention to design a machine that would do plowing. His first efforts led to continued work on tractor designs, which resulted in the original drawings for what is now the Moline tractor, but he later continued to study the possibilities of the one-horse type of machine capable of plowing as well as cultivating. He spent several years as chief engineer of the Moline Co. and then founded the Engineering Development Co.

PEERLESS GASKET SHELLAC.

The latest addition to the well known Quality line of Peerless automobile specialties, manufactured by the Columbus Varnish Co., Columbus, O., is the Peerless Gasket Shellac.

The field of the use of gasket shellac is almost unlimited. Every time a motor is overhauled, a gasket removed or a motor assembled, shellac is needed to make a tight seal. Many times motors have been assembled without the use of gasket shellac owing to the inability of mechanics to obtain the right product, which should be heavy bodied, preferably an orange color, and made of alcohol so that it will go in tack quickly. The heavy body will cover up all defects in worn gaskets as well as imperfections in the new ones. It must not dry out hard or brittle to blow out or cause leaks. It must remain gummy for months.

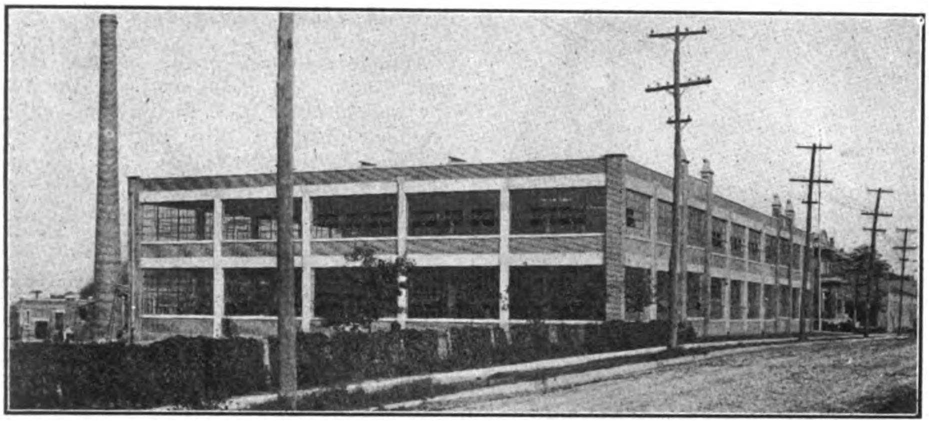
All these points were carefully studied in the experimental stages of Peerless Gasket Shellac.



The Plant of the Traffic Motor Truck Corp., St. Louis, Mo., Which Is Devoted to the Production of Standardized Two-Ton Vehicles, Illustrating the Remarkable Growth of the Industry.

NEW FACTORY FOR BEARINGS CO.

The accompanying illustration shows the new concrete and steel building recently completed for the Bearings Co. of America at Lancaster, Pa., in which new machinery is now being installed.



New Factory of the Bearings Co. of America at Lancaster, Pa.

The addition of this unit to its group of buildings increases the capacity of the Bearings company's plant about 50 per cent. for the manufacture of its well known products, thrust ball bearings and Star ball retainers.

In the background of the illustration will also be noticed the power plant of the Bearings Co. of America, but recently completed, which is also one of the best of its class.

MARVEL SPARK INTENSIFIERS.

Marvel Spark Intensifiers, which are being manufactured by the Brosnan Co., Springfield, Mass., are stated to be not a new fad or novelty, but a proven, practical invention, as for years they have been in use by many prominent racing drivers.

The Marvel Spark so intensifies the current that it shoots through and ignites the charge, disregarding all obstructions. By its use it is claimed that plugs that under ordinary conditions produced a poor, yellowish spark, will give a blue, intense and efficient spark; that not only is perfect ignition insured, and ignition trouble positively and quickly located, but there is a tendency to eliminate carbon and spark plug trouble, and that the hotter and fatter spark obtained gives greater power with more mileage.

The list price of the Marvel Spark Intensifier is 50 cents.

KELLY-SPRINGFIELD STOCK ISSUE.

The Kelly-Springfield Tire Co., New York city, has authorized an issue of approximately 82,000 shares of common stock, par value $25, to be offered to holders of common shares of record Oct. 15 at $50 a share, payable 50 per cent. Nov. 10 and the balance Dec. 10.

Dyer Co. Completes New Plant

The Dyer Co. of Cambridge, Mass., maker of special garage equipment, and one of the largest manufacturers of pistons in the East, is completing a new and large addition to its plant in Brookline street, the erection of which was made necessary by a steady increase in business. It is planned to have the new plant equipped with the most modern machinery within a few weeks, in order to begin production for the trade of 1921.

The Dyer Co. manufactures pistons and wrist pins for replacement purposes and the output includes pistons for every type of motor on the market.

The present output of the factory is above 200,000 for the year 1920, and with the establishment of agencies throughout the United States and Canada it is estimated that business for 1921 will reach the 250,000 mark.

The Dyer Co. was also a pioneer in the manufacture of oxy-acetylene apparatus, the equipment turned out being one of the most practical ever placed in a garage or repair shop, or industrial or manufacturing plant, for welding and cutting.

This is the third addition to the plant since the company began business in 1911. Between 1915 and 1919 the business was doubled and the present rate of increase over 1919 indicates that this year's output will be at least 33 per cent. greater.

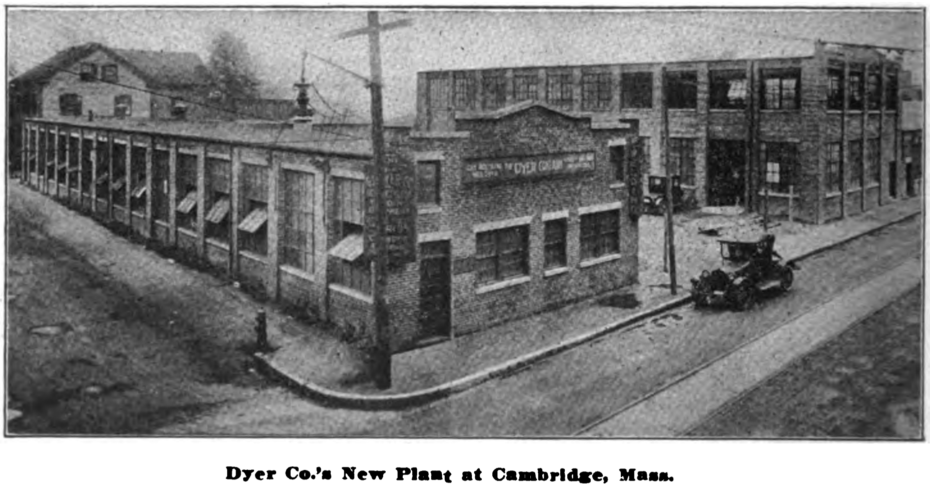
GARRISON CENTER-THREAD GREASE CUP.

The placing on the market, some two years ago, by the Garrison Co., Bridgeport, Conn., of the Garrison Center-Thread Grease Cup, has been followed by its general approval by the user and acceptance as a standard article of equipment by the jobbing trade. The ideal of a cup that is absolutely tight, does not leak grease, cannot be cross-threaded and the head of which does not rattle loose and become lost, is said to be realized in the Garrison Center-Thread.

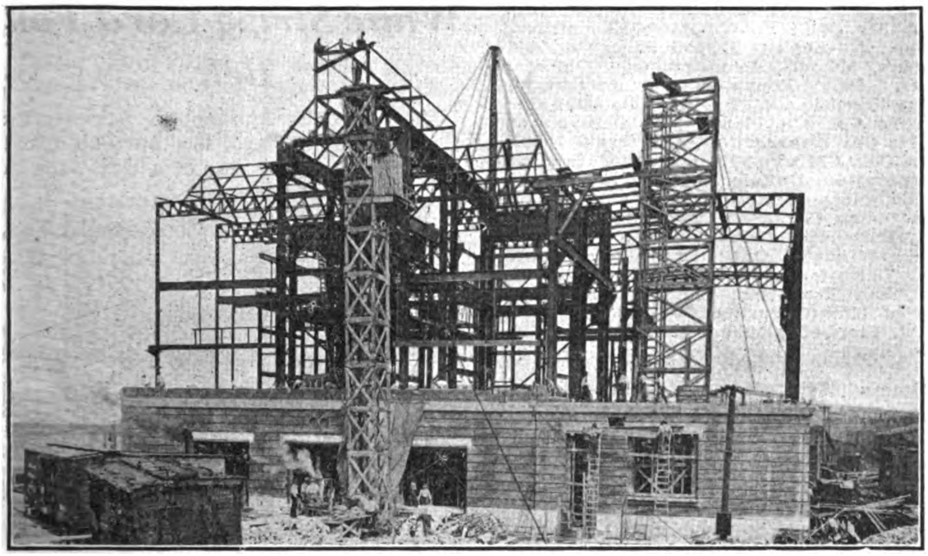
It will be noted, from the construction of the cup, that to the flanged base there is welded a screw plate with a center thread for acceptance of the standard in the cap itself. Outside of this center thread are four small holes, through which the grease is forced into the base of the cup and thence into the bearing.

A leather washer, cut hexagonally, is next applied on the base and then a steel follower, which is cramped against the leather washer and held in place by the scarfing of the hexagonal base. The standard in the cap is spot welded. The cup is now ready for use. When the cap is filled and applied to the base the first grease squeezing out over the leather washer plumps or swells this washer, giving it a continuous touch on the entire inside circumference of the cap. So it will be noted that if the washer is hugging the inside of the cap the cap is not moved by vibration nor can the grease squeeze through. As a matter of fact, in some instances these cups have been seen actually holding the water on the water pump of the car.

The H & H Motor Specialties, Inc., 755 Boylston street, Boston, Mass., is the sole distributing sales agent to the wholesale trade east of the Mississippi river on the Garrison cup, and reports that the device is now catalogued and stocked by a large percentage of jobbers in its territory.



Dyer Co.'s New Plant at Cambridge, Mass.



Big Power House Now Being Erected by the Continental Motors Corporation at Its Plant at Muskegon, Mich.

CONTINENTAL TRUCK FACTORY AT MUSKEGON.

The immense scale on which the manufacturing operations of the Continental Motors Corporation are conducted cannot be fully realized until a visit is made to the mammoth factories at Detroit and Muskegon, Mich. As large as is the Detroit plant, that at Muskegon is even bigger, where the entire output of four-cylinder truck motors is produced as well as all the foundry and drop forge work for both plants is done.

In order to take care of the greatly increased manufacturing facilities at the Muskegon works, the Continental Motors Corporation is erecting a power plant which will greatly augment its capacity and will make it independent of the local power supply, thus insuring the continuous operation of the complete equipment regardless of local conditions. This unit is being erected on land recently reclaimed from Lake Michigan and will, it is expected, be in operation by Jan. 1 1921. Reclamation will be continued to make room for future expansion.

GASOLINE SUBSTITUTE PRODUCED IN HAWAII.

In view of the increasing demand for and rising price of gasoline, the progress reported as being made in Hawaii in the development of the manufacture of a substitute motor fuel alcohol is of special interest. The raw material is waste molasses and the refuse from pineapple canneries. It is stated that approximately 135,000 tons of waste molasses is produced yearly in Hawaii, which could be converted into about 9,000,000 gallons of motor fuel by the Foster process recently patented.

WAYNE ENGINEERING CO.'S NEW OFFICE.

The Wayne Engineering Co., Honesdale, Pa., announces the opening of a New York sales office at 1400 Broadway in that city.

Edmund Hoffman, Jr., has been appointed sales manager in charge of the New York office.

Trailmobile Co's New Plant Largest

The Trailmobile Co., 2901 Robertson avenue, Oakley, Cincinnati, is now occupying its new factory, which has an area of about 130,000 square feet and is the largest plant in the world given over entirely to the manufacture of trailers for use with motor trucks and passenger cars.

The factory is modern to the last degree. It is laid out and equipped according to the most advanced practises of industrial engineering to produce a quality product in quantity. All material is routed through the plant from the receiving platform and stock room in a direct line to the shipping platform.

There is a completely equipped machine shop where parts are machined. Every part is made with jigs and templates and produced in quantity. All are interchangeable and a replacement stock is always carried at the factory.

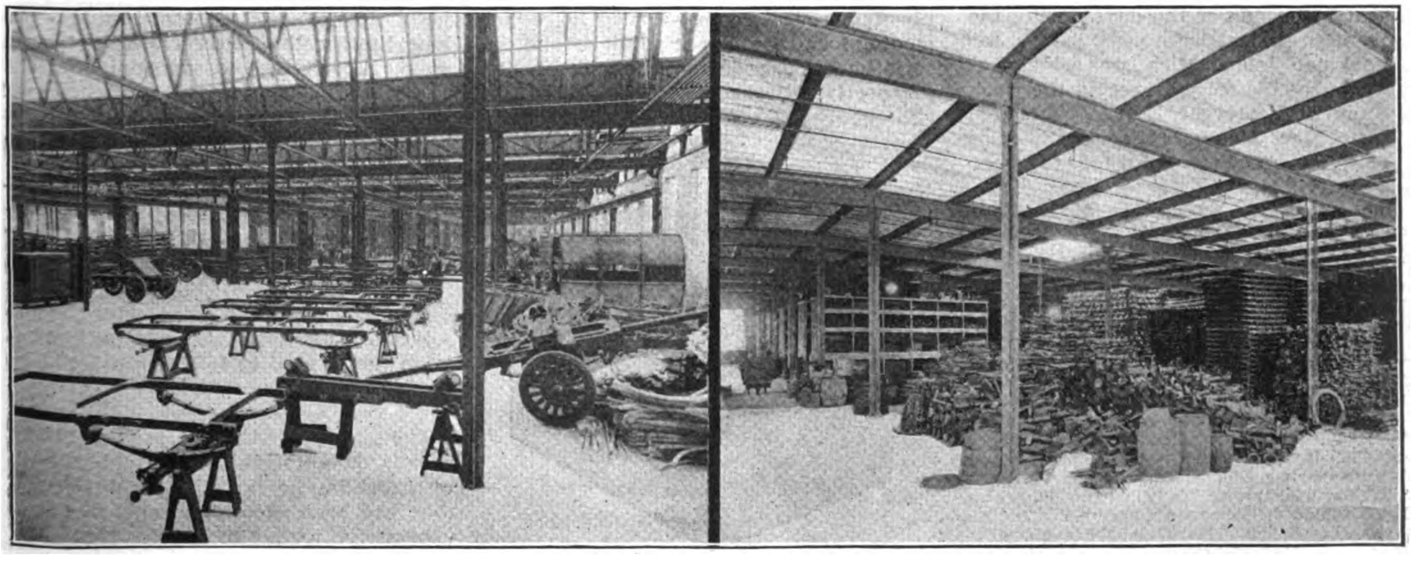
The equipment includes pneumatic riveters, power shears and planers, radial drills, drill presses, milling machines, shapers, lathes, etc., of the most modern manufacture. There is a complete woodworking equipment, air brush painting installations, etc.

Different shops are operated by individual motors distributed about the plant.

The factory buildings are of saw-tooth construction, beautifully lighted with north light and perfectly ventilated. Everything is brick and steel and concrete—as nearly fireproof as it is possible to make a building.

The plant is located on the main line of the B. & O. railroad and is provided with a long double-tracked switch for incoming and outgoing cars. The inside loading platform has a capacity for four cars, which can be loaded at one time.

The H. & D. Co., Crawfordsville, Ind., manufacturer of the H. & D. Shock Absorber, recently completed a factory building in that city, 60 by 200 feet.



Interior of the New Factory of the Trailmobile Co. at Cincinnati, O.: At Left, a Part of the Main Assembling Floor; at Right, Section of the Parts Stock Room.

Mid-Convention Meeting A. E. A.

A considerable amount of important business was transacted at the regular mid-convention meeting of the board of directors and the membership and standardization committees, including the various groups of chairmen of the Automotive Equipment association at the Congress hotel, Chicago, Sept. 10 and 11.

Various amendments to the constitution, presented at the Del Monte convention and informally concurred in, were unanimously approved by the board of directors to be referred to the annual meeting of the association in November for final action.

Resolutions were recommended to the effect that "no manufacturing member of this association will display or show goods or contribute to any local or sectional show or display not sanctioned by this association; any departure or violation of this rule will operate as a forfeiture of the right of said member to show or display in the regular Automotive Equipment shows for a period of 18 months from or after said violation.

"Resolved: No jobbing member will show, participate or contribute to any local or sectional shows that are not sanctioned by this association for the jobbing members or by the majority of the jobbers in the locality where said show or exhibit is to be held."

The standardization committee reported as their first official bulletin, in answer to the request of the Canadian auxiliary for a designation as to which is the right-hand side of a car, that the standard nomenclature has been established by the Society of Automotive Engineers that "the right-hand side of a car is that side to the right as viewed by a person sitting in one of the seats."

C. L. Coerper and Jesse Prescott were elected to the board of directors to succeed E. A. Pegau and E. R. Waterman, respectively, resigned.

It was decided to have a meeting of the state vice presidents held for a general conference and exchange of new information on one of the days during the convention or just before.

Mackinac Island, Mich., was selected as the place of the spring meeting the week of June 20, next year.

New Members Elected.

The following were elected to membership:

Jobbers—R. G. Edgecombe & Co., Ltd., London, Ont.; Fort Smith Auto Supply Co., Fort Smith, Ark.; Inland Iron Co., Fresno, Cal; J. L. Lindsay, Inc., Richmond, Va.; McLendon Hardware Co., Waco, Tex; Motor Supply Co., Phoenix, Ariz.; Nelson-Bell Co., Waco, Tex.; Reed Supply Co., Oklahoma City, Okla.; Universal Automotive Supply Co., Chicago, Ill.; Waterhouse & Lester Co., San Francisco, Cal.

Manufacturers—Acheson Graphite Co., Niagara Falls, N. Y.; Barcalo Manufacturing Co., Buffalo, N. Y.; Arthur S. Brown Manufacturing Co., Tilton, N. H.; Canedy-Otto Manufacturing Co, Chicago Heights, Ill.; Thomas J. Corcoran Lamp Co., Cincinnati, O.; J. W. Duntley, Chicago, Ill.; Hastings Manufacturing Co, Hastings, Mich.; William R. Johnson Manufacturing Co., Chicago, Ill.; LeCompte Co., Newark, N. J.; Lockwood Manufacturing Co, Kansas City, Mo.; F. W. Mann Co., Milford, Mass.; No-Leak-O Piston Ring Co., Baltimore, Md.; N. A. Petry, Inc., Philadelphia, Pa.; Pouvailsmith Corporation, Poughkeepsie, N. Y.; Reliable Manufacturing Co., Cleveland, O.; Replacement Parts Co., Kansas City, Mo.; Stahl Rectofier Co., Chicago, Ill.; Tri Co. Products Corporation, Buffalo, N. Y.

Resignations Accepted—Adamson Manufacturing Co., East Palestine, O.; Gibson Co., Indianapolis, Ind.; Kelsey Wheel Co., Ltd., Windsor, Ont.; Luthy Hydrometer Co., Detroit, Mich.; Lathan Auto Supply Co., San Francisco, Cal.; Marvel Accessories Manufacturing Co., Cleveland, O.; A. J. Stephens Rubber Co., Kansas City, Mo.

Immediately after the adjournment of the general meetings, the show committee held its meeting and allotted space for exhibits and otherwise arranged the minor details of the big November show.

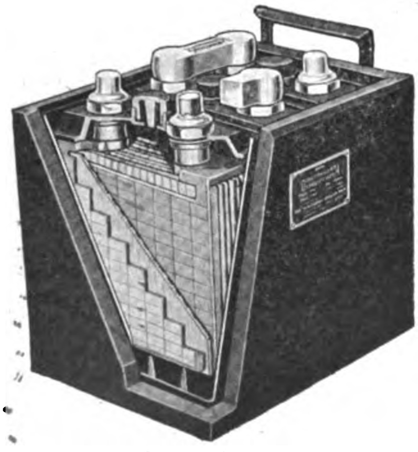
CINCINNATI CO. MAKES "DRY" BATTERIES.

The Cincinnati Storage Battery Co., Moorman avenue, Cincinnati, O., claims to have perfected a process for the manufacture and shipment of absolutely "dry" batteries. Units of this construction eliminate all danger of deterioration on the dealers' shelves and, to back up its claims, the Cincinnati Co. will exchange batteries of the dry type, which the dealer may have in stock, for sizes that he believes will have a quicker turnover.

An additional advantage of this new process and one which will be appreciated by the experienced battery man, is said to be the elimination of freezing in the separators during shipment in the winter months. In extremely cold weather, wet wooden separators will often freeze in transit and damage the battery to such an extent that it will give only a few months of service.

An extensive advertising campaign has just been started which includes space in some of the leading automotive publications.

To live-wire service men the Cincinnati company will allot generous territory, allow a generous discount, back up a 15 months' adjustment guarantee and supply numerous effective dealer helps, including local newspaper publicity and description material for distribution to prospective purchasers.



New Cincinnati "Dry" Type Battery Cut Away to Show Use of Wooden Separators.

White Stripe Cord Fan Belt

The Advance Automobile Accessories Corporation, Chicago, has perfected and demonstrated the value of a new idea in fan belt construction, after two years of experimental work. This was recently put on the market under the name of White Stripe Cord Fan Belt, and the belt itself is marked with a white stripe, the same trade mark that is used on the White Stripe transmission lining made by the same company.

White Stripe
CORD
FAN BELT
White Stripe CORD

The White Stripe Cord is in reality a belt of two distinct parts. This principle of construction is stated to make the belt distinctive from any other and, according to the manufacturer, permits it to wear at least a year on any car under any condition. The core or load carrying center of the belt is made of a very strong rim tire fabric and live rubber and is then strengthened by an endless cord that encircles the belt five times. This load carrying center will not break under 500 pounds weight. The whole center is protected by a cover, made of rim tire fabric, built slack around the core so that it will not carry any of the load. It is so processed that it has remarkable gripping power and will not slip on the pulley. The treatment is claimed not to be affected by the heat, oil, water, grit and grime to which fan belts are exposed. This means extra long life for the belt. The combination makes a belt that is extremely flexible, one that always hugs the pulley and never needs adjustment.

White Stripe Cord Fan Belts come packed one dozen in a box in a very attractive red, black and white counter display carton. In several tests run by the manufacturer the White Stripe Cord Fan Belt is reported to have given perfect service for more than 9000 miles.

The executive and sales offices of the Advance Automobile Accessories Corporation are located at 1603 South Michigan boulevard, Chicago, Ill.

The increase in the use of Disteel wheels on automobiles is graphically illustrated in the fact that in July, 1919, they had been adopted by only two manufacturers, while in March, 1920, they were specified on the product of 55 car makers.

RED BRAND STERLING SPARK PLUGS.

The "Red Brand" Sterling Spark Plugs are manufactured in various sizes and threads to meet the ever increasing demand for such products in passenger cars, trucks and tractors, and embody many features that place them in the high grade class. The porcelain core is made unusually heavy and is of large diameter, giving great strength where it is needed to withstand mechanical shock and nut compression. The center electrode is of Monel metal, a nickel alloy that is claimed to be rustless, non-corrosive and heat resisting. The core nut, which fits over the upper end of the electrode, has a concealed spring washer, which holds the shoulder of the electrode firmly inside the core, preventing, it is stated, leakage in the combustion chamber and also taking up heat expansion.

A combination terminal nut is used which is of ample size and is knurled deeply enough so that it can be turned with the fingers, thus avoiding the use of pliers and consequent possible damage to the nut. The terminal nut, it is stated, will fit the terminal wires of all wiring systems by simply reversing the nut.

Red Brand Sterling Plugs are made in the following sizes: ½ inch long for Reo, Overland, Metz, etc.; 18 m. m. metric for Packard and White trucks; ⅞-18 long for Winton, Buick, Chevrolet, etc.; ½ inch for Overland, Reo, Studebaker, Ford, etc.; ⅞-18 special for Scripps-Booth, Buick, Chevrolet, Chalmers, etc.; ⅞-18 for Dodge, Jeffery, Hudson, Maxwell, Packard, etc., and tractor sizes in ½ inch, ⅞ inch special, and ⅞-18 inch.

The Red Brand Sterling Spark Plugs are manufactured by the Lockwood-Ash Motor Co., Jackson, Mich. Prices and literature will be supplied on application and the jobber and dealer trade is solicited.

McFARLAN AUTO CO. SUCCEEDS SIX SALES CO.

The McFarlan Automobile Co., New York city, has succeeded the McFarlan Six Sales Co. in the distribution of McFarlan cars, and is now under the management of Winfield Graham, who is secretary and treasurer of the new company. He was formerly sales manager of the McFarlan Motor Co., Connersville, Ind. The New York McFarlan Co. has moved its headquarters in that city from 1655 Broadway to 69th street and Broadway.

Startit Manifold Electric Heater

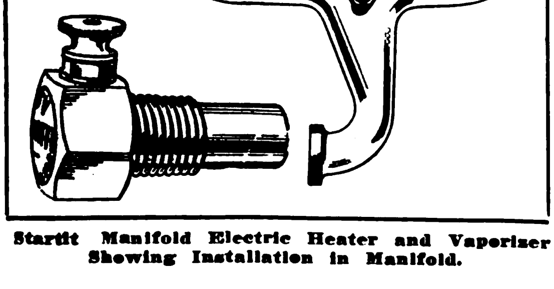
The Startit Manufacturing Co., 1523-1529 Washington street, Indianapolis, Ind., has brought out the "Startit" Manifold Electric Heater and Vaporizer, which is a particularly timely cold weather proposition for the car owner in that it is claimed that it insures quick starting of the motor no matter how cold the weather, and saves the heavy drain on the battery by reducing the use of the starter. It is stated to be designed and constructed by experts, both mechanical and electrical, follows a scientific principle, and is right not only theoretically, but gives practical proof of its utility in every day use. It is installed near the distributing point of the manifold by simply taking off the manifold and drilling a 15/16-inch hole and tapping out with a quarter-inch standard pipe tap.

A switch is placed on the cowl board or any other convenient place and a wire is run from the live side of the ammeter or battery to the switch and then from the switch to the "Startit." When the current is switched on, in from 12 seconds to a minute in extreme cold weather, the "Startit" becomes hot enough to vaporize gasoline. When the cold spray of gasoline from the carburetor strikes the hot "Startit" and mixes with the hot air directly above, it is changed into a pure, dry gas and ignition is instantaneous.

It is claimed that the device uses only from four to five amperes of energy, that the first cost is the only expense, as there is no upkeep, repair or replacement charges and that it needs no adjustment or alteration for immediate use on any car. It is made of brass and will not corrode or rust and if, at any time, it becomes necessary to remove it, it can be easily done. The very best grade of heating wire is used, absolutely guaranteed to give satisfaction for one year.

The "Startit" was invented and designed for the single purpose of aiding the automobile owner to start his car easily at all times, but it is not intended to be kept in operation after the car is running satisfactorily.

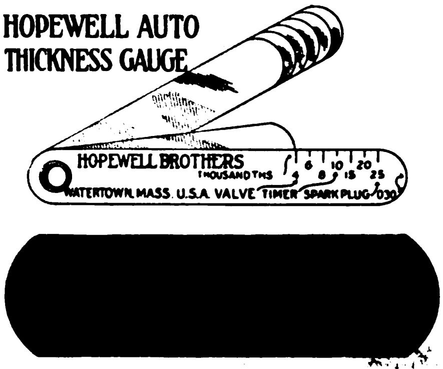
In installing the "Startit," the manufacturer states that it should not be attempted to drill and tap the manifold without removing it from the car as the chips might fall down into the carburetor and cause trouble. The caution is also made that on a car using a 12-volt lighting system the wiring should be cut across only to one of the battery connections, using only three cells, which will give six volts. If connected direct to a 12-volt battery the "Startit" will be burned out. If there is no battery on the car four dry cells will answer the purpose. In making the connection one wire is all that is needed, as the other is a ground wire.



Startit Manifold Electric Heater and Vaporizer Showing Installation in Manifold.

HOPEWELL AUTO THICKNESS GAUGE.

Hopewell Brothers, manufacturer of autombile specialties, Watertown, Mass., is bringing out the Hopewell Auto Thickness Gauge, which is designed for the accurate determination of small distances in automobile repair and general machine work, etc., such as the clearance between a valve and its tappet, or the distance between the points of a timer in a motor.



The gauge consists of a handle .030 of an inch in thickness and seven leaves of thicknesses, respectively, .004, .006, .008, .010, .015, 020 and .025 of an inch. These leaves are of variable lengths so that when drawn out of the handle they will lie against a graduated scale on the handle, thus indicating the thickness of the different leaves. By the use of several leaves in combination many additional measurements may be taken.

The gauge is made with a soft steel handle properly lettered and numbered. The leaves are imported Swedish steel, accurately tempered and polished. The gauge comes in a neat imitation lather case and the price, complete, is 75 cents each.

Auto Clearances.

The company supplies the following list of auto clearances:

Spark plugs, auto and marine motors	.025 to .018
Liberty aviation motors	.015 to .018
Valve tappets, auto and marine motors	.004 to .006
Ford motors	.022 to .028
Liberty aviation motors, inlet	.013 to .018
Liberty aviation motors, exhaust	.019 to .021
Timers, Atwater Kent, closed-circuit type	.008
Open-circuit type	.010
Delco, fiber cams	.010 to .012
Steel cams, 4 and 6-cylinder motors	.020 to .027
Eight and 12-cylinder motors	.015 to .022
Remy, old type	.020 to .025
new type	.009 to .012

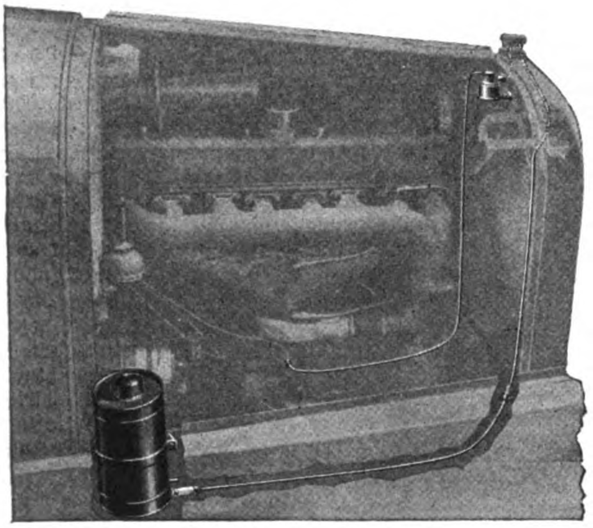
NEW FACTORY FOR STAR BATTERY.

The Star Storage Battery Co., Muncie, Ind., recently moved into its new factory, which is equipped with the latest machinery and supplied with every modern appointment and convenience for economical production. The new unit will afford considerably more floor space, increased production facilities being necessitated by the augmented demand for the Star storage battery.

Weeks "Camel" Prevents Overheating

The Weeks Manufacturing Co., 421-437 National avenue, Milwaukee, Wis., is manufacturing the Weeks "Camel,'" a somewhat unique device which, it is claimed, protects the automobile motor from the effects of overheating and causes it to function with maximum efficiency.

The Weeks "Camel" is the invention of Elling C. Weeks, a professional aviator, who was animated to start experimentation, along these lines, following several accidents due to his motor overheating through loss of water from the cooling system, culminating in a serious smash-up at Eagle Grove, Ia., Sept. 5, 1915. The "Camel" consists of a tank attached to the radiator overflow pipe, which catches, condenses and prevents the steam and water from escaping from the radiator. A float controlled valve is fitted into the top of the radiator and connects, through tubing, to the intake manifold of the motor. As the water lowers in the radiator the "Camel" valve opens, permitting the motor to suck a partial vacuum in the top of the radiator and to draw back sufficient water from the "Camel" tank to refill the radiator. As soon as the radiator is again filled the float in the "Camel" valve rises and shuts off the suction of the motor until the water again lowers in the radiator.



Marmon Motor Equipped with Weeks "Camel" Device, Made by the Weeks Manufacturing Co., Milwaukee, Wis.

The "Camel" tank carries a reserve supply of water and is fitted with a whistle which warns the driver, by sounding, when this reserve supply is exhausted, and before the motor can be damaged by overheating. The "Camel" valve is so constructed that it also feeds into the motor a very slight flow of moisture. The high temperature in the motor instantly converts this moisture into highly explosive hydrogen-oxygen gases.

The Weeks "Camel" device is stated to be now under test by several of the larger automobile manufacturers, and is also being distributed through state distributors and dealers.

HARVEY SPRING CO. OPENS CHICAGO BRANCH.

The Harvey Spring and Forging Co., Racine, Wis., maker of the Harvey Boltless automobile spring, has opened a Chicago branch at 3020 South Michigan boulevard, in charge of Edward Murphy. This branch is located in the very heart of Chicago's automobile row, and a complete assortment of Harvey springs of all sizes will be kept in stock in order to facilitate deliveries in that section.

T. H. Van Horn, sales manager of the Harvey Spring & Forging Co., says that this new Chicago office is in no sense a service station and will not compete with dealers. It is a factory branch made necessary by the greatly expanded demand for Harvey Boltless Springs, and will eliminate the necessity of shipping all individual dealer orders direct from the factory in Racine. A corps of representatives, sufficient to give adequate service to the trade, has been transferred to Chicago from the home office.

ENTERPRISE OF THE RAYBESTOS COMPANY.

The Raybestos Co., Bridgeport, Conn., has compiled for distribution among its list of 37,000 jobbers, dealers and garage owners, a pamphlet containing a selection of letters regarding the status of the industry from the heads of the largest automobile manufacturing concerns in the country, upon whom, to a large extent, depends the distribution of motor cars, trucks, tractors and accessories. These letters are conservative in tone, but not pessimistic. The introductory section of the pamphlet closes with the following pertinent advice:

"Keep your sales force on their toes. Do not let your stocks run down to where you lose orders. Keep your credits in a healthy condition. Consult your banker from time to time. Keep your collections up to the minute. Do not try to overstock your customers, but see that they have enough stock to meet their requirements. Insist that the men of your organization believe in it. Do not permit them to talk poor business."

ANTI-SKID UNIT CO. SOLD.

The Parker-Morse Co., Cincinnati, O., has succeeded the Anti-Skid Unit Co. of the same city and will take over the manufacture of anti-skid devices for motor trucks; also of automobile wrenches. Plans for an increased production are being made. The officers of the Parker-Morse Co. are as follows:

President L. Morse; secretary R. Elsinger; sales manager, L. T. Parker.

The police force of the Goodyear Co., Akron, O., numbers 200 men.

Organization of C. G. Spring Co.

The C. G. Spring Co., which was recently organized under the laws of Delaware to do business in Kalamazoo, Mich., with an authorized capital of $1,000,000 preferred stock and 10,000 shares of no par common stock, has acquired the entire stock and assets of the Kalamazoo Spring & Axle Co., and commenced to do business under the new style Sept. 1. The concern will engage in the manufacture and sale of high grade springs for motor and horse-drawn vehicles.

The officers of the C. G. Spring Co. are as follows: President, Christian Girl; vice president and treasurer, Charles Getler; secretary, Jud S. Clary. These officers, together with J. G. Utz, spring expert and consulting engineer of Detroit, constitute the board of directors.

Many improvements have been made on the plant and modern machinery installed so that the production capacity has been increased to provide a good volume of well designed, high grade springs.

ECO CO. ISSUES PICTORIAL PISTON RING HISTORY.

The Eco Manufacturing Co., 53 State street, Boston, Mass., has issued a booklet of unusual interest to the trade under the caption of "Pictorial Historial Showing Development of High Grade Piston Rings," which in text and illustrations well fulfills its design, which is to show the great advance that has been made in the production and use of this highly necessary component.

The various steps in the manufacture of the Eco Numethod rings, by the Eco Manufacturing Co., which may well be considered one of the representative makers of this class of equipment, is fully described and well illustrated. Special emphasis is laid on the selection of material, accuracy in the details of sizes, perfect coutour, etc., and economy in production made possible by specially designed machinery and skilled workmanship.

CHANGES IN PRICES OF HANSON CARS.

The Hanson Motor Co., Inc., Atlanta, Ga., maker of Hanson cars, has announced the following price changes to take effect Sept. 1:

Touring car and roadsters, $2365; sport model, $2465; sedan, $2885.

It is stated that the increases are made necessary by the adoption of the new style body and the many refinements which have been added to the Hanson Six car, the body, hood, fenders and all sheet metal parts now being constructed of heavy gauge aluminum.

MARION-HANDLEY MAKER MOVES.

The Mutual Motors Co., maker of Marion-Handley automobiles, has moved from Jackson, Mich., to North Tonawanda, N. Y.

Personal News of the Industry and Trade

Page Accepts Position with Saxon Corp.

Carl H. Page has been selected by C. A. Pfeffer, president of the Saxon Motor Car Corporation, to fill the newly created position of director of sales and advertising in the Saxon organization. Mr. Page's experience in the automobile distribution field dates back to the days of the White steamer, when he was manager of the White Co. in New York, subsequent to which, as president of the Carl H. Page & Co., he became one of the prominent distributors of the country. During his career as dealer and distributor Mr. Page has also merchandised such cars as the Jordan and Chalmers. To assist him in his new position the Saxon corporation announces the appointment of Charles P. Hennessy as sales manager and M. A. Hollinshead will continue as advertising manager.

Fred P. Scribner, who was for many years superintendent of the Raybestos plant in Bridgeport, Conn., and who, for the last 11 years has been superintendent of the F. L. Horton Manufacturing Co., Boston, Mass., has recently obtained an interest in the Staybestos Manufacturing Co., Philadelphia, and is now superintendent of the plant of that company. Mr. Scribner has been favorably known in the automotive trade for many years and is recognized as a leading manufacturing expert on the use of asbestos rings for multiple-disc clutches and specially moulded asbestos fabric unusual uses on the automobile.

Arthur E. Dixon, well known in the automotive field, has been appointed sales manager of the Torbensen Axle Co., Cleveland, O. He was associated with the late E. Ralph Estep of the Packard Motor Car Co. for five years and later was in the sales and advertising departments of the Hupp Motor Car Co. He entered the first officers' training camp at Fort Sheridan and served as a captain of infantry during the war and after being mustered out became advertising manager of the Torbensen Axle Co.

J. J. Martin has been appointed by the United States Truck Co., Cincinnati, O., as assistant to the vice president and will have charge of the special sales of that company. He has previously been with the Stewart, Federal and other truck companies, and was only recently discharged from service in the Motor Transport division of the United States army.

J. W. Beckman has been appointed advertising manager and assistant sales manager of the Armleder Co., Cincinnati, O. He was formerly with the International Motor Co., New York city, in charge of publicity.

F. L. Valiant, who was formerly with the Jones Motor Car Co., Wichita, Kan., was recently appointed eastern representative of the Arvac Manufacturing Co., Anderson, Ind.

T. P. Nickell, Special Representative with Jenkins Vulcan Spring Co., Richmond, Ind.

T. P. Nickell, for several years service and sales engineer and equipment sales representative of the Splitdorf Electric Co., recently joined the sales force of the Jenkins Vulcan Spring Co., Richmond, Ind., as special representative. Prior to his present connection with the Vulcan Co. he was New England branch manager for the Splitdorf Co., and has a particularly wide acquaintance in New England and Middle West trade circles.

E. R. Creamer has been appointed superintendent and **C. S. Ober** office manager of the George R. Carter Co., Connersville, Ind.

Herbert R. Small has been appointed manager of the export division of the Traffic Motor Truck Corporation of St Louis, Mo.

Miss Olive Beaulieu, Utilitor Tractor Demonstrator, Who Will Be Seen at Many State Fairs.

Deuster Becomes Manager Traffic Dept.

H. Deuster, who has had extensive experience in the traffic departments of prominent railroads of the country, has just been appointed manager of the new traffic department of the Motor & Accessory Manufacturers' association by M. L. Heminway, general manager. The association's traffic matters have heretofore been handled on a joint basis with the traffic department of the National Automobile Chamber of Commerce under the direction of James S. Marvin. Mr. Deuster was for 12 years with the Erie railroad and for six with the Ontario & Western. For four years he was chief clerk of the general freight department of the latter and since 1918 chief of the tariff bureau, with headquarters in New York.

John J. Bergen, formerly general sales manager of the Packard-Nashville Co., has been chosen as special representative of Hare's Motors, Inc., for Texas, Oklahoma and a part of Louisiana, while the Central West will be handled by **R. F. Riffee**, who resigned as general sales manager of the Marmon New England organization to accept that position.

Clell C. Cannon, finance officer of Akron Post 209 of the American Legion, which is one of the largest in the State of Ohio and is composed almost entirely of the employees of the Goodyear Tire & Rubber Co. who served in the World War, was elected state treasurer of the American Legion posts of Ohio at the state convention held at Youngstown.

Ernst H. Brandt, formerly western sales manager of the Ajax Tire & Rubber Co., has been made district manager for the Oldfield Tire Co., Cleveland, O., with headquarters at Chicago. His sales district includes Eastern Montana, North and South Dakota, Minnesota, Wisconsin, Northern Michigan, Iowa, Illinois and Indiana.

John L. Baci, who had been in charge of the automobile department of the Indianapolis News for six years, recently died in that city as the result of injuries received by falling down a stairway in the press stand at the Speedway during the 500-mile race May 31 of this year. He was a native of St. Louis and was 34 years old.

Hallock D. Day, district representative at Boston for Dodge Brothers since 1914, was the guest of honor at a recent dinner given at the Copley Square hotel, that city, by some 75 distributors, dealers, executives, salesmen and a few former members of the Dodge Brothers' organization in his territory.

T. S. Coleman, formerly general sales manager of the Packard Motor Car Co., Pittsburgh, Pa., has been appointed southern representative of Hare's Motors, Inc., succeeding Fred H. Miller, who recently became general sales manager for Hares' Motors of New England.

Way Joins Chain Products Company

A. B. Way, until recently secretary and general manager of the Bridgeport Chain Co., has become affiliated with the Chain Products Co., Cleveland, O., in the capacity of district sales manager for New England, with headquarters at the company's New York office, 150-152 Chambers street. For many years prior to his identification with the chain industry Mr. Way had been affiliated with various New England manufacturing enterprises, but from the advent of weldless wire chains he has been connected with this industry. During the war he was chosen chairman of the board of weldless wire chain manufacturers.

C. S. Jordan has been made advertising manager of the branch of Hare's Motors of New England at Worcester, Mass., succeeding F. D. Trapp, who has assumed the management of the Bridgeport branch for Hare's Motors of Connecticut. **A. T. Schmidt** has been appointed service manager of the Worcester branch.

C. S. Pelton, General Manager, Perfection Heater & Manufacturing Co.

N. T. Albright has been appointed general manager of the Automotive Accessories Co., Kokomo, Ind., and he will also have charge of advertising. Mr. Albright has been with the Pittsburgh Plate Glass Co., Kokomo, in the commercial department for 17 years.

Julius Janes, formerly president of the Standard Steel Castings Co., Cleveland O., recently concluded an arrangement with the Farrell-Cheek Steel Foundry Co., Sandusky, O., by which he has become the sales representative of the latter concern in Cleveland and Cuyahoga county.

Chauncey H. Murphy, vice president of the United States Mortgage & Trust Co., has been elected a director of the Locomobile, Mercer Motors and Hare's Motors companies.

D. A. Goodkind has resigned as sales manager of Lucia Mfg. Co., Hartford.

A. B. Way, New England Sales Manager for Chain Products Co.

A. A. Loeffler was recently appointed by the Doehler Die Casting Co., Court, Ninth and Huntington streets, Brooklyn, N. Y., as its Detroit representative, succeeding **F. C. Seeger,** who will now represent the company on the Pacific coast, with headquarters in San Francisco.

H. C. Comey has been made factory manager of the Texas Motor Car association, Fort Worth, Tex.

Charles E. Patterson, controller of the General Electric Co., has been elected a vice president of that company.

John H. Moore has been appointed Southern Indiana representative of the Eastern Rock Island Plow Co., Rock Island, Ill., with headquarters at Indianapolis.

W. E. Hutchison, manager of purchases for the Southern Motor Manufacturing Association, Ltd., Houston, Tex., has opened a permanent office for that concern in Detroit, Mich., at 521 Book building.

F. R. Fageol, President of the Fageol Motors Co. of Ohio, at Cleveland, O.

Hebner Purchases Los Angeles FWD Co.

H. E. Hebner, who has been identified with the automobile industry for a number of years as sales manager for Harry E. Herndon, Inc., Los Angeles, Cal., has purchased an interest in the FWD Truck Co. of that city, distributor of FWD trucks in Southern California.

Norman Cole, formerly general manager of the Akron Advertising Agency, Akron, O., is now connected with the Massengale Advertising Agency, Atlanta, Ga., and will have complete charge of automobile and automotive accounts, as well as of the merchandising and service departments. Mr. Cole's experience has been extensive in this field as, in the past, he has been connected with several of the large tire manufacturers of the country, as well as having been in charge of the publicity campaigns of many automobile tire and accessory companies.

Lon R. Smith, General Sales and Advertising Manager, Midwest Engine Co., Indianapolis, Ind.

P. B. Brown has been appointed general sales and advertising manager of the Thomart Motor Co., Kent, O., which was recently organized for the purpose of manufacturing a high quality, moderately priced commercial car. The principal members of the Thomart Co. are G. W. Thompson, president, and James L. Stewart, vice president and general manager, both men of broad experience in the commercial wagon industry, having been prominently connected for a number of years with the truck division of the International Harvester Corporation. Mr. Brown was formerly connected with the Liberty Motor Car Co., Detroit, where he was engaged on special sales work. Much of his earlier experience was gained in Europe, where he was engaged with firms of prominence in the motor car manufacturing industry.

C. L. Tolley is now a truck and tractor salesman at the Ford Garage, Pawhuska, Okla.

Authoritative Knowledge Builds Business

As in every other business, expert service makes the brush business grow.

Expert recommendations of correct brushes will increase the good will as well as the profits of your business.

Columbia Brush Dealers can always recommend the correct

Columbia
PYRAMID BRUSHES

for any make and type of automobile electric system. The correct brushes for every set are specified in the Columbia Brush Blue Book. Every Columbia Dealer has one. He can make authoritative recommendations that build business and increase profits.

Columbia Pyramid Brushes for starting and lighting are designed, made, and recommended with the same care as the brushes we supply for the largest electric motors, generators, and converters.

Mechanical Hints for Repair Shop and Garage

AUXILIARY AIR VALVE.

An auxiliary air valve for increasing the power of the engine and dcereasing the fuel consumption can be made from an ordinary grease cup, as shown in the illustration, while it is claimed that the result will equal that of a more expensive valve.

Procure a 1¼-inch compression grease cup and cut the slots "A A," allowing about 1½ threads at the bottom. The slots "B B" in the cap can be cut deeper, but in either case each pair of slots should be exactly the same depth. The connecting bar "C" is riveted to the back of cap "D" and is used for turning the cap. A hole is drilled in the intake manifold at the "Y" and threaded to take the threads of the cup. Air can be admitted or shut off to any desired point to make the engine accelerate by turning the cap with the handle.

SPARK INTENSIFIER DOES DOUBLE DUTY.

By placing a spark intensifier on the high-tension wire leading from a high-tension magneto to the distributor, it can be made to intensify the spark of all four plugs, thus saving the expense of purchasing three extra intensifiers. The same method may also be followed where the car is equipped with a starting and lighting system, by connecting the intensifier between the coil and the distributor on the high-tension wire, in this manner taking the place of three, five or seven extra intensifiers on four, six or eight cylinder engines.

DEVICE FOR REMOVING PISTON RINGS.

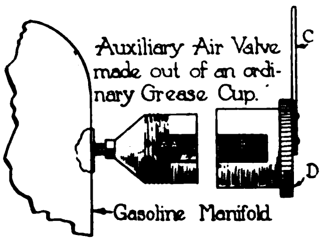
A piston ring remover is easily made from two pieces of flat stock shaped as shown in the illustration. Holes are drilled at the centers and a pin inserted and riveted. With this tool it is a simple matter to remove stubborn or stiff piston rings after the piston and rings have been taken out from the cylinder.

CLEANING VALVES BEFORE GRINDING.

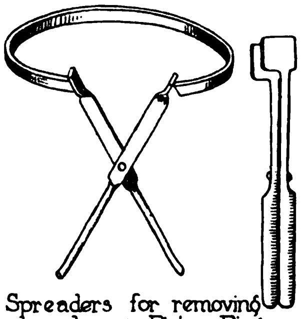
It is often found necessary to clean the face of a valve before grinding and, as the small shop is not usually equipped with the necessary tools for this work, the electric drill can be made to turn the valve at sufficient speed if the drill is held rigidly in the vise, while an upright, made of flat iron stock, is placed at the proper distance from it, and clamped to the work bench. A hole should be drilled and threaded in the upright and a set screw of sufficient length screwed into the opening. Placing the valve between the chuck of the drill and the point of the set screw allows the turning of the valve in the same manner as if it were held in a lathe chuck. The face of the valve can be smoothed off with a flat file while it is being turned by the electric drill.

TO PREVENT OIL PASSING PISTON.

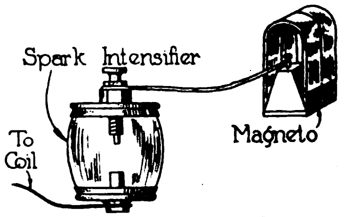
A method of preventing oil from passing by the piston is herewith presented which is stated to offer a solution of this disagreeable trouble. It consists of turning a groove under the third ring groove, leaving a narrow skirt or flange, about 1/32 inch, between the ring groove and the oil grove. A second groove is also turned in the same manner below the fourth ring groove provided that the piston is equipped with four rings; if not, advantage can be taken of the oil groove found at this point. Drill seven ⅛-inch holes through the oil grooves, slanting them slightly toward the skirt of the piston. In use it will be found that the oil will come up to this point and will then drain back through the small holes into the engine base, obviating the film of oil in the combustion chamber and also prevent fouling of the plugs. This method is considered much better than bevelling the edge of the ring groove, as in that case no chance is given for the ring to shoulder off at the beveled cage, causing the compression to be weakened.



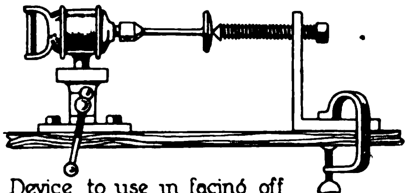
Auxiliary Air Valve made out of an ordinary Grease Cup.



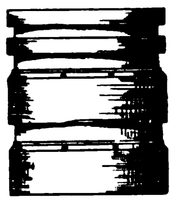
Spreaders for removing and replacing Piston Rings



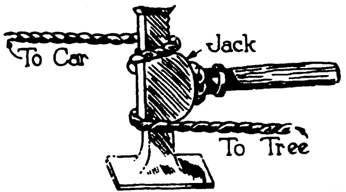
Method of making Spark more intense.



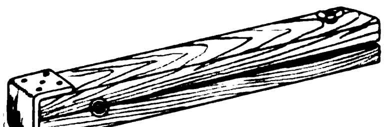
Device to use in facing off Valve Heads.



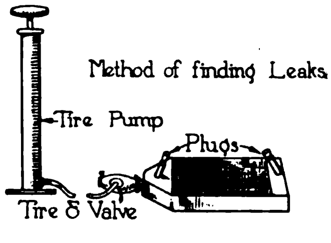
Bevel on Piston Ring Groove prevents excessive oiling.



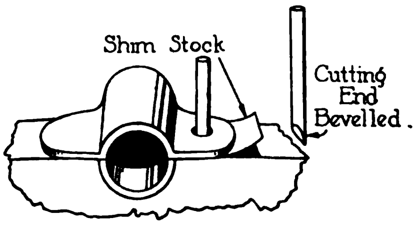
A Jack can be used effectively in this manner.



Tool to lap Crankshaft



Method of finding Leaks



TO REMOVE CAR FROM MUD OR SAND.

A novel idea that the motorist can make use of when his car becomes stuck in mud or sand is to get a length of three-quarter or one-inch rope—usually the tow rope will answer the purpose if one is carried in the car—and the jack is used to raise the car axles. Tie one end of the rope to a convenient tree and fasten the other to the axle of the car, leaving the rope slack so that the jack can be twisted into the rope as shown in the cut. Turn the jack as depicted and the car can be easily drawn out of the mud.

LAPPING CRANKSHAFT PINS.

A method of lapping crankshaft pins that is said to give good results where the pins are worn out of round, is as follows: Take two pieces of hard wood corresponding in width to the length of the crankshaft bearings and 14 inches in length. Clamp them in a vise and bore a hole one-quarter of an inch larger than the pins through the pieces of wood so that half of the hole will be in each piece. Line each half of the hole with leather one-eighth of an inch thick. Fasten a piece of leather over the end to act as a hinge and fit a piece of emery cloth inside the opening. Apply plenty of light oil and clamp around the pin. Place the crankshaft in a lathe and turn at a moderate speed. A gentle pressure on the clamp will soon cut down the high places on the pin.

TESTING RADIATOR FOR LEAKS.

A simple way to test a radiator for leaks after removing it from the car is to fit stoppers to the upper inlet, the lower outlet and the overflow pipe. To the filling spout wire a section of inner tube having a valve attached. Wire the open end of the tube and attach an air pump to the tire valve. Place the radiator in a pan of water deep enough to cover it and pump air in. Escaping air will be shown by bubbles rising to the surface of the water. With a scraper mark the spots from which the air escapes and this will be a guide when soldering.

PUNCHING SHIM STOCK.

A convenient tool for punching holes in shim stock, as the stock is held between the two halves of the bearing, consists of a punch made of cold rolled steel and beveled as shown to give a good clean cut.

WORTHLESS GREASE CUPS.

Cheap grease cups are more than likely to become worthless in a short time. It is almost impossible for the motorist to turn one of these cups down and, if he is able to do so, the operation may not send the grease where it is needed most. The only remedy for this condition is to use efficient grease cups, oil cups, etc., or install a lubrication system that puts grease into the bearings under high pressure.

Finding Flash Point of Kerosene

A very large number of fires are laid to kerosene and the danger is by no means small. The greater number of these fires are due to the overturning of lamps and oil stoves. In many of these cases the oil continues to burn fiercely after the stove or lamp has been upset. This should, however, be obviated by the use of a grade of kerosene oil which is procurable in the market, which is carefully fractionized and freed from the more volatile products. Furthermore, this oil does not cost any more than the more volatile, and is fully as economical to use.

The problem of determining whether an oil is safe for use or not is one which is eminently fitted for the amateur chemist to solve. The process is known as finding the flash point or the fire test.

The flashing point of kerosene may be approximately determined as follows: Pour a small quantity of the kerosene to be tested in a small crucible or evaporating dish. Then place the crucible upon a water bath and suspend a thermometer in the oil.

Heat the water carefully until the thermometer registers 30 degrees C (86 degrees F). At this temperature cautiously draw a lighted match across the surface of the liquid.

If the oil does not ignite repeat the match test at each rise of five degrees until it does flash. Do not permit the oil to burn, but allow it to cool to the five-degree point at which it was before it ignited. For example, at 45 degrees C a certain sample did not flash; at 50 degrees it did. The analyst allows it to cool to 45 degrees again and then very cautiously repeats his test till at say 47 degrees it flashes once more. The flashing point in this case is 47 degrees centrifugal and not 50 degrees.

Experience has shown that there is no danger with an oil possessing a flashing point of 40 degrees C. (104 degrees F.) The best grade of oil sold in the United States is known as water white and flashes at 65.5 degrees C. (150 degrees F.) However, it is understood that there are oils on the market having a flashing point of from 24 degrees to 40 degrees C., and these constitute a very great source of fire danger. No difficulty has been found in procuring an oil with a fire test of from 60 degrees to 62 degrees C. The safe limit is 40 degrees C., or 104 degrees F. In some countries this point has been fixed by law as the minimum.

TO PREVENT RUST.

The rusting of shock absorbers and springs may be easily prevented if the car owner will keep on hand a small can of fender enamel with which to touch up bare spots as soon as they make their appearance. Of course it looks better to apply a coat to the whole spring or absorber, but so far as preventing rust is concerned, covering the bare spots as they develop will answer all practical purposes.

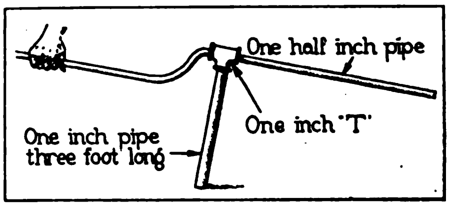
STRAIGHTENING WIRE.

Stray pieces of copper wire have many uses, but it is often necessary to straighten out wire that has already been used before it can be employed again. See that there are no sharp bends or kinks in the wire and straighten out by hand any of these which are found. Fasten one end of the wire to some firm anchorage, grip it in the vise if necessary. Loop the other end of the wire around a hammer handle or similar instrument and then pull out the length of wire. Repeat this operation as often as necessary. If the wire is of soft copper it will stretch a little, which improves it.

BENDING GAS PIPE.

A novel method of bending gas, water or conduit pipe was recently noted that is perhaps used by electricians and others, but may be of interest to the general repair man.

The device consists of a three-foot length of pipe, one inch in diameter, having a one-inch "T" screwed on at one end, as shown in the cut. The pipe to be bent is inserted in the "T," while the bending device rests on the floor as shown. A powerful leverage is obtained through the angle at which the three-foot length of pipe is placed on the floor, causing the half-inch pipe to bend easily. For the smaller sizes of pipe this method of bending should be found satisfactory.



OIL FOR OLD ENGINES.

After an engine has seen reasonably long service, so that the pistons do not fit as closely in the cylinders as they did at first, it is advisable to use a heavier grade of oil in order to take up a little of the clearance. In racing engines, where the piston to cylinder clearance is often more than twice that used in ordinary practise, the drivers use heavy oil. High viscosity lubricants such as castor oil or mixtures of castor oil and mineral oil, are favorites for racing engines.

HOLDING EMERY CLOTH.

When polishing flat surfaces with emery cloth instead of using a file it will be found more convenient to wrap the cloth around the file and to bend a piece of wire into a clip to hold the cloth to the file at the lower end. The cloth at the outer end of the file is held with the fingers so that a clip at this point is not needed.

FILLING BLOW HOLES IN CAST IRON.

One part red lead and 1½ parts red litharge. Mix with glycerine to the consistency desired.

WIZARD
GASOLINE TONIC

THE BUSINESS POSSIBILITIES

Of a Wizard Gasoline Tonic Agency are limited only by the energy and resourcefulness of the Agent.

EVERY VEHICLE OWNER MUST USE FUEL

Poor quality of average grades of gasoline and the high prices, make WIZARD TONIC a necessity, and the demand is not only constant, but is increasing.

It makes poor fuel far more combustible.

It facilitates starting, especially in low temperatures.

It promotes car comfort and satisfaction.

It sells at sight. It proves its value. It insures continuous sales.

It is a big business producer and the source of constant profits.

BUYERS KNOW
OR
DON'T KNOW

The WIZARD GUARANTEE is to satisfy buyers that WIZARD GASOLINE TONIC will

Decrease Fuel Cost
Increase Engine Power
Increase Vehicle Mileage
Minimize Carbon Deposits
Lessen Repair Expense
Afford Maximum Flexibility

Measured by Miles a Gallon the economy is from 25 to 40%.

Equally efficient with Gasoline, Kerosene or Distillate, in Car, Truck, Tractor, Power Boat or Stationary Engine.

MONEY BACK unless every quality is proven by actual service test, and the buyer is judge of results.

The buyer does not gamble—we either prove our guarantee or fail. And Wizard Gasoline Tonic contains nothing that can damage metals. One tablet to a gallon of fuel. That's all.

JOBBERS AND DEALERS.

SERVICE and GASOLINE STATION MANAGERS, agency for Wizard Gasoline Tonic can be made wonderfully productive. The demand is world wide and the business is only limited by the scope of operations.

Exclusive territorial rights are open in some sections of the country, and a request will bring details.

PLATE XXXV.

SALES, SERVICE AND STORAGE STRUCTURE

Unusual Features Are Incorporated in This European Type of Service Station, Which Has Sixteen Individual Compartments.

The accompanying type of service station is different from the ordinary; it is a type that is, perhaps, already known to many, yet seldom applied as in the plan shown.

The design is commonly called the community or neighborhood garage, having as a general rule nothing but individual compartments for storage, where no repairs or accessories may be obtained as in many garages or stations.

Having provision for both repairs and sales of accessories and supplies, as well as individual storage, this garage proposition is a worth while investment. This combination of service has been found very productive by the owners of a large automobile concern in a European country, and attractive to owners and drivers.

The company claims that in addition to selling cars it can repair and rebuild machines, as well as affording storage to a client of the private or individual garage scheme.

Many owners feel much more content when they know that their cars will be under lock and key, eliminating worry of garage hands "joy riding" with their cars when they put them up for the night.

The entire structure covers an area of 120 by 150 feet, having a large court yard flanked by the different members or units of which the building is composed. First there are 16 individual compartments, each in itself a complete garage. In size they are 12 by 25 feet, ample to house any type of passenger car and have plenty of working room as well. A truck of garage size could be accommodated in one of these compartments.

Individual Compartments.

A work bench has been shown, very handy to the man who desires to do a little repair work. Heat and electric lights are provided from a central plant. The floor is of concrete with drain, insuring at all times a dry floor. There is a large window area, providing ample light for ordinary purposes, and double doors.

In the forward end is located a large show room with a door for cars leading from the court —also two small doors for general purposes. Three large windows afford an abundance of light and these are flanked by an entrance door from the main street.

A drive separates the show room from the office, and this leads to the court yard. At the front end is located an ornamental iron gate, which enriches the design. It also affords protection from stragglers after certain hours who might endeavor to utilize the court for parking purposes.

Next are the offices, large and spacious, with a waiting area railed off, as shown. Off the office are two toilets, one for men and the other for women. These are lighted and ventilated from overhead.

Large Repair Shop.

In the rear, at the end of the court yard, is situated a large repair shop, adequate for working on six cars at one time. This is lighted by the large doors opening to the court and a huge skylight covering nearly the entire roof. To the right is located a machine shop, as shown, and this should be so equipped that it can handle any nature of work, from small repairs to the making of new parts.

On the other side of the repair shop is the tool and stock room. In this room tools may be kept without loss and parts may be stored there, these being necessary if cars are sold by the garage operator. Adjoining the stock room will be found a toilet and wash room, and from this a stairway leads to the basement, where the boiler room is located. In connection with the boiler room provision should be made for coal storage.

Construction Details.

The general form of construction is brick, with concrete foundations and floors. Plank roofs are covered with tar and gravel. The doors are of wood, with wired glass, and the skylights are of galvanized metal.

The brick for the street front of the building should be first class and of a rough texture, used in connection with a ¾-inch white mortar joint, rough struck to harmonize with the brick. All trimmings are of terra cotta or concrete stone. A geometric design in wrought iron placed in a circular opening over the main entrance to the court has been introduced.

The heating is by steam, each compartment having a separate radiator or coil, while the shops may get the best results from wall radiation of the pipe system, or radiators, if owner cares to purchase them.

There are electric lights throughout the special lighting arrangements for show room and office, and wrought iron lamps on the sides of the entrance to the court.

Regarding the cost, $15,000 would about cover what is shown.

SPINDLE CONNECTING ROD (OR TIE ROD) BENT FROM THE STRAIN OF SHOCKS AND JOLTS WHICH WEAKENS THE ENTIRE FRONT SYSTEM AND THROWS THE FRONT WHEELS OUT OF ALIGNMENT
STEERING CONNECTING ROD BUCKLED FROM STRAIN OF SHOCKS AND JOLTS AND THE DANGER OF GOING OVER CENTER TRAVEL WHICH MEANS THE LOSS OF CONTROL IN —
SPINDLE CONNECTING ROD (OR TIE ROD) RELIEVED OF THE STRAIN FROM SHOCKS AND JOLTS WITH
THE OVER-LAND GUIDE
STEERING CONNECTING ROD BUCKLING STRAIN RELIEVED AND THE DANGER OF GOING OVER CENTER TRAVEL PREVENTED BY

A Ford Controlling Itself

The Over-land-Guide
PATENTED
***Controlling* the Ford**

AVOID REPAIR BILLS—PREVENT ACCIDENTS—SAVE TIME AND MONEY WITH

THIS WONDERFUL STEERING SHOCK ABSORBER

WHICH ENABLES YOU TO CONTROL YOUR FORD AT ALL TIMES.

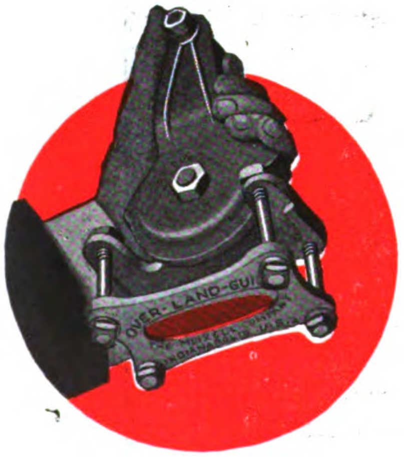
After the Over-Land Guide is installed give it a severe test and try-out. Drive the car over the roughest roads you can find and when you strike a hole six or seven inches deep, remove your hands from the steering wheel, regardless of the speed you are driving. Then you will realise how the Over-Land Guide controls the running of the car, absorbs all shocks, and eliminates the strain and vibration from the front system and steering mechanism.

The Over-Land Guide gives you the best insurance against danger of accident and destruction of your Ford car or truck through the loss of control caused by the steering connecting rod passing over center travel in short turns.

The OVER-LAND Guide will eliminate the danger of ditching and collision with the possibility of fatal results to the occupants and the destruction of the car even though the steering mechanism be broken or failed to work.

Your steering gears may get out of service, or the steering connecting rod may become locked over center travel, but the OVER-LAND Guide, with its grip on tie rod and axle, will hold your car in the middle of the road until it is brought to a safe stop, avoiding the possibility of being ditched or destroyed.

The Over-Land Guide stops the wobbling, scooting and creeping of the front wheels. It also removes the strain from the arms and shoulders of the driver. It is life-and-car-insurance of the highest order and affords a degree of security that makes it worth a hundred times the cost to any owner. It greatly reduces wear and tear on the front system and steering mechanism by eliminating vibration.



Unlike all other steering devices the spring in the Over-Land Guide acts as a steering shock absorber and is packed in hard grease and completely enclosed, which keeps it from dust and moisture and means indefinite service and no upkeep.

Pays for Itself Every Two Weeks in Reduced Wear and Tear

The Over-Land Guide is a steering shock absorber, takes up all lost motion, eliminates the shocks and vibration from all ball joints and bushings in the front system and steering mechanism, and in fact all ball joints and bushings that constitute a Ford car or truck.

The Over-Land Guide also reduces breakage and repairs of all the following parts—such as spindle connecting rod (or tie rod). Spindle body arms and bushings. Spindle body and bushings. Ball and roller bearings and hub. Steering connecting rod and ball joints. Steering gear drive pinion and steering gear pinions. Steering gear internal gear case and bushings. Also prevents the axle from bending—and may save your entire car from destruction with loss of life of occupants.

If you knew the advantages, comfort and protection to be gained by equipping your car with an Over-Land Guide, you would not drive another day without it.

THIS BROAD GUARANTEE PROTECTS USERS OF THE OVER-LAND GUIDE.

Use it 20 days, properly installed, and if at the end of that time it does not do all we claim for it, full purchase price will be refunded.

We will ship you one Parcel Post for . . . $8.50

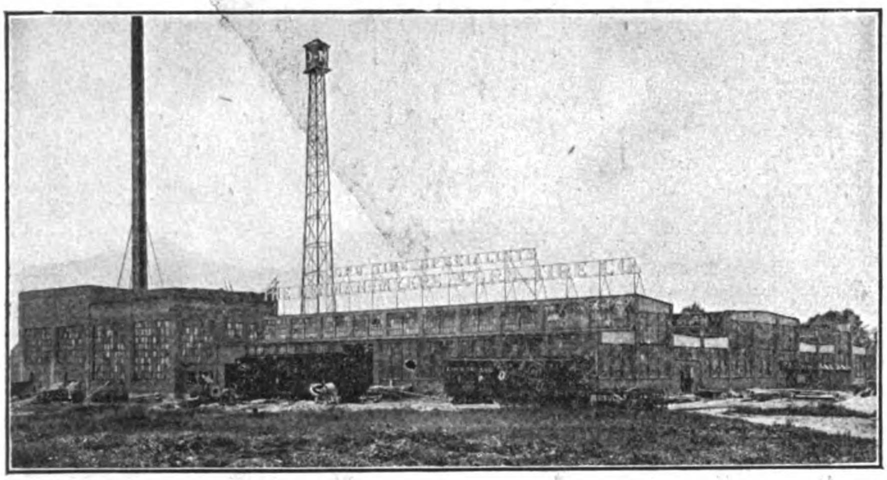
Denman Tires Being Built at Warren, O.

Sept. 15 marked the beginning of increased production of Denman cord tires, as on that date the Denman-Myers Cord Tire Co. put into production its new plant at Warren, O., which is considered one of the most modern, scientifically equipped and best planned tire manufacturing factories in the country.

The company was one of the very first to be organized for the exclusive manufacture of cord tires, and Walter R. Denman, secretary and general manager of the company, is probably one of the earliest tire authorities to foresee the increasing popularity of the cord tire as compared with fabrics. Cord tire specialists are in charge of every department of the factory and a well balanced and practical product is the result.



New Factory of Denman-Myers Cord Tire Co. at Warren, O.

The president of the company is Walter E. Myers and he states that sales connections are being established throughout the country and that indications point to a very rapid development in the distribution of Denman cord tires.

HOUSTON BRANCH FOR SEA GATE COMPANY.

A. S. Galitzka, president of the Sea Gate Tire & Rubber Co., 220 North Broadway, Oklahoma City, Okla., has opened a branch at 1205 West Main street, Houston, Tex.

EFFICIENCY OF CLIMAX COMPRESSION TUBE.

A remarkable instance of the efficiency of the Climax compression inner tube, made by the Climax Rubber Co., Columbus, O., is afforded in a recent experience by E. M. Pavey, assistant sales manager of that company. Mr. Pavey, accompanied by Mrs. Pavey and their daughter, was driving from Columbus to Canton one evening recently and, when a few miles from Canton, they were held up by automobile bandits. After the thieves had relieved Mr. Pavey of what cash he had with him, they started to let air out of one of his tires by removing the valve stem but, becoming alarmed by the lights of an approaching car they decided they would not have time to remove the valve stem and shot a hole through the tire and tube, thinking thus to put the car out of commission, so that Mr. Pavey could not follow them.

The tire did not leak air as it contained a Climax compression inner tube, and Mr. Pavey followed the robbers, but was unable to overhaul them on reaching Canton as their car was higher powered than his. The tire is on display at the Columbus office of the Climax Co. and plainly shows where the bullet entered, but the original air is still in the inner tube.

West Coast Cotton Co. of California has opened eastern selling offices at 242 Chestnut street, Philadelphia.

Polack Sells to Buckeye Rubber Co.

The Polack Tyre & Rubber Co., 1876 Broadway, New York City, with factories at Bridgeport, Conn., has been purchased by the Buckeye Rubber Products Co., Cleveland, O., and the directors and management of the latter company have assumed full charge of the manufacture and sale of Polack tires through established outlets.

The Polack tire business, which last year amounted to about $960,000, will occupy about 20 per cent. of the factory space of the Buckeye Co., and C. H. Roth, president and general manager, states that the same high quality that has always distinguished Polack tires, will be scrupulously maintained. In order that there may be no interruption in the business of the Polack Tyre & Rubber Co., it has been arranged for the Bridgeport plant to continue in operation until the Willoughby plant, of the Buckeye Co., in which Polack tires in all sizes will be made in the future, is in a position to start production.

MICHELIN CO. TO BUILD NEW STOREHOUSE.

A contract calling for the erection of a storehouse of reinforced concrete, 60 by 125 feet, and having a total floor space of 15,000 square feet, with a cubic capacity of 240,000 feet, has been let by the Michelin Tire Co., Milltown, N. J., to the John W. Ferguson Co. of Paterson, N. J.

Work is under way also on a new machine shop and turbine house, each of which will have steel frame work and brick body.

TIRES IMPORTED INTO SWITZERLAND.

The imports into Switzerland, under the classification of "tubes and pipes of caoutchouc and gutta-percha, pure or mixed, with internal layers of metals or tissues," in which automobile tires are included, for 1919, totalled 1,773,640 pounds valued at $1,986,312.77, as compared with 456,720 pounds, valued at $358,956.26, in 1918.

The United States supplied 96,140 pounds in 1919, valued at $121,919.07.

Importations of Crude Rubber

According to a bulletin of the Mid-West Manufacturers' Association, the statistics of crude rubber imports for June, 1920, show a total of 14,881 tons as against 16,319 tons for June, 1919, a decrease of 1438 to use, and a decrease of 12,338 tons from the importations for May. This record was by far the smallest for any month of 1920 so far.

The total record for the first six months of 1920 was 151,889 tons against 113,729 tons for the first half of 1919, an increase of 38,160 tons.

The outlook is that importations for 1920 will total 300,000 tons as against the 231,510 tons imported in 1919, unless the price situation should induce producers in the Far East to hold their stock.

GIGANTIC BELTS MADE BY GOODYEAR.

The Goodyear Tire & Rubber Co., Akron, O., is manufacturing two belts for conveyors, 12,000 inches in length, and each will weigh seven tons when finished. They will be 48 inches wide and will consist of seven plies each. If spliced they would stretch more than 2000 feet, or nearly half a mile. The fabric used in making these belts, if laid in a straight line, of single ply, 48 inches wide, would reach 14,700 feet, or more than 2¾ miles.

If used as a floor covering this fabric would spread over 58,800 square feet of space, or approximately five times the floor space in the largest gymnasium in the country. If used as a tent covering it would house 14,600 people standing side by side. The weight of the cover stock is about 5½ tons.

MANCHESTER PROMOTED BY UNITED STATES CO.

H. H. Hubbard, southwestern sales manager of the United States Tire Co., announces the promotion of G. W. Manchester, formerly branch manager in Kansas City, Mo., to be district manager at Dallas, Tex. Mr. Manchester is one of the veterans of the United States Tire Co.'s selling force, being located for a number of years at St. Louis, specializing on truck tires, and later he became branch manager at Oklahoma City, going from there to Kansas City.

COAST TIRE CO. INCREASES CAPITAL.

N. J. Whelan, a director of the Coast Tire & Rubber Co., recently announced that its capital would be increased to $5.000,000; also that the sale of $1,000,000 of the common stock has been completed.

Work on the new factory is nearly finished, which will have a floor space of 60,000 square feet, and have a capacity of 750 tires and 1000 tubes per day of eight hours.

GOODYEAR INDUSTRIAL ASSEMBLY TO BE CONTINUED.

After a year of successful operation the Industrial Assembly, composed of employees of the Goodyear Tire & Rubber Co., Akron, O., under whose direction industrial relations are maintained and promoted between the management and workers, is ready to choose its senators and representatives for the coming 12 months.

This body, which is modeled along the lines of the Senate and House of the United States, is composed of 20 senators and 40 representatives. It recommended adoption of permanent instead of rotating shifts, suggested the Saturday half holiday for all employees, a merit system for inspectors, recommended and assisted in the establishment of a co-operative store, cooperative tailor shop and curb market, caused the adoption of a plan to have shop foremen take courses in factory hygiene, recommended many matters of factory sanitation and obtained a branch public library for the shops.

In addition to matters of factory operation the assembly took a wide interest in civic questions, starting the "move-up" movement to educate the trolley riding public, succeeded in obtaining better trolley transportation and cooperated to arrange sufficient motor truck transportation when Akron was tied up for 12 days by a traction strike.

Sales Representatives and Managers of Federal Rubber Co. in Convention at Cudahy, Wis.

NEW DISTRIBUTORS FOR INDIA TIRES.

The India Tire & Rubber Co., Akron, O., announced two new distribution appointments as follows: Allen & Guard Tire Co., Denver, Col., a concern recently organized, whose territory includes the whole State of Colorado.

The General Auto Supply Co. will henceforth handle India tires in Richmond, Va., and vicinity.

PRUDENTIAL CO. BUYS GREAT REPUBLIC HOLDINGS.

It is reported that the Prudential Tire & Rubber Co., Chicago, Ill., has purchased holdings in the McAlester, Okla., plant of the Great Republic Tire & Rubber Co., and that the deal involved $327,000. It is further understood that the plant will be put into operation within two months.

Convention of Federal Representatives

Sales policies for 1921 and problems confronting the automobile tire and automotive industry in general were discussed at the recent annual four days' sales convention of the salesmen and warehouse managers of the Federal Rubber Co. of Cudahy, Wis. It brought together the 150 sales representatives and managers of the company and in addition to the consideration of means for the promotion of sales policies, the new advertising programme of the Federal Co. was taken up at length. The convention was pronounced one of the most beneficial meetings, from every standpoint, ever held by the Federal organization.

FIRESTONE REPRESENTATIVE AT HOUSTON.

The Firestone Tire & Rubber Co., Akron, O., has announced the appointment of the S. O. S. Tire Service, Dallas avenue and Fannin street, Houston, Tex., as its representative and service station in that city. George H. Blohm is manager of the S. O. S. Co.

FRENCH PURCHASES BUCYRUS RUBBER CO.

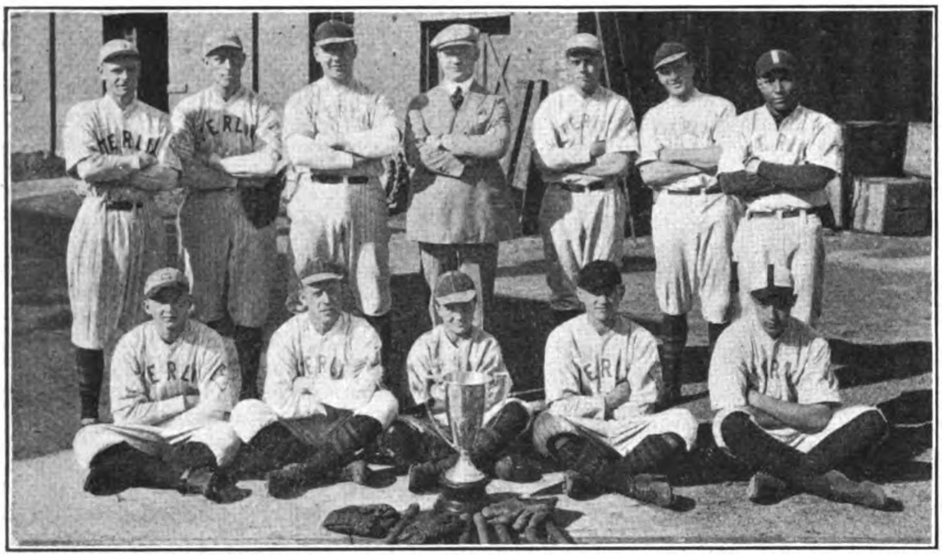
The C. M. French Rubber Co., Cleveland, O., has purchased the plant of the Bucyrus Rubber Co. in that city and will start manufacturing rubber tires. This factory has been under lease by the Henderson Tire & Rubber Co., Columbus.

TRUCK AND TIRES BURN.

An automobile truck, valued at $8000, owned by the Goodyear Tire Co. and loaded with rubber tires, was burned on the Petersham road, near Athol, Mass., while en route to Boston, Oct. 14. The loss on truck and tires was estimated at between $14,000 and $16,000.

McCLAREN'S FLORIDA DISTRIBUTOR.

The McClaren Rubber Co., Charlotte, N. C., maker of the McClaren Autocrat cord and All-road fabric tires, announces appointment of the J. D. Bowen Co., 327 Laura street, Jacksonville, also with a branch at Tampa, as Florida distributor.



Personnel of Champion Baseball Team of Sterling Tire Corporation—Standing, Left to Right: Brameld, 2b.; Davis, p.; Ronrke, 1b.; Captain and Manager, O. Basten, Vice President, Sterling Tire Corporation; Hess, 3b.; Dittrich, c.f.; Jackson, l.f. Seated, Left to Right: Marquard, o.f.; White, r.f.; Botto, Mascot; Roach, c.; Calendriello, s.s.

STERLING TEAM WINS 1920 BASEBALL PENNANT.

The Sterling Tire Baseball team has, for the second consecutive year, won the pennant in the Rubber Industries Athletic League, the standing of the clubs at the end of the season being as follows:

	Won	Lost
Sterling Tire Corporation....	14	2
United States Rubber Co......	11	4
Ajax Rubber Co..............	6	7
Goodyear Tire & Rubber Co..	2	12
Keystone Tire & Rubber Co..	2	6
Kelly-Springfield Tire Co....	1	3

This second victory is especially unusual since the Sterling Tire Corporation is probably the smallest of the organizations represented in the league. The players for the champions were all recruited from the factory at Rutherford, N. J., and none of them had played much more than the normal "open lot" games, although their pitcher, Harvey Davis, has been showing professional class in winning 34 out of the 40 games during the Rubber Industries Athletic league's two years of existence.

The cup, which is donated by the India Rubber World Publishing Co., must be won three times to become the permanent property of a club. Manager Rourke of the Sterling team announces that his aggregation will be on deck next season to clinch possession of the trophy.

The batting and fielding averages of the winning team were as follows:

Player & Position	G.	B.A.	F.A.
J. Rourke, 1b.....	14	.413	.955
T. Calandriello, ss.	14	.333	.918
A. Roache, c......	14	.311	.984
W. Jackson, l.f..	14	.310	.900
C. Hess, 3b.......	14	.283	.804
P. Dittrich, c.f....	13	.265	1.000
W. White, r.f.....	14	.237	.818
H. Davis, p.......	13	.205	.967
T. Brameld, 2b....	13	.205	.921
A. Jackson, o.f....	2	.167	1.000
G. Meany, o.f....	4	.000	1.000
W. Markowsky, i.f	1	.000	1.000

VICTOR RUBBER CO.'S ADVERTISING CAMPAIGN.

The advertising account of the Victor Rubber Co., Springfield, O., has been taken over by the Akron Advertising Agency Co., Akron, O., and it is the intention of the Victor Co. to supplement its present extensive publicity campaign by a unique plan which has never been used to any extent in the tire business, but has proved eminently successful in other lines. C. A. Swinehart, the assistant general manager and sales manager of the Victor Rubber Co., states that for business reasons the details of the new campaign cannot yet be made public, but that it will be handled in a way that will attract attention from coast to coast.

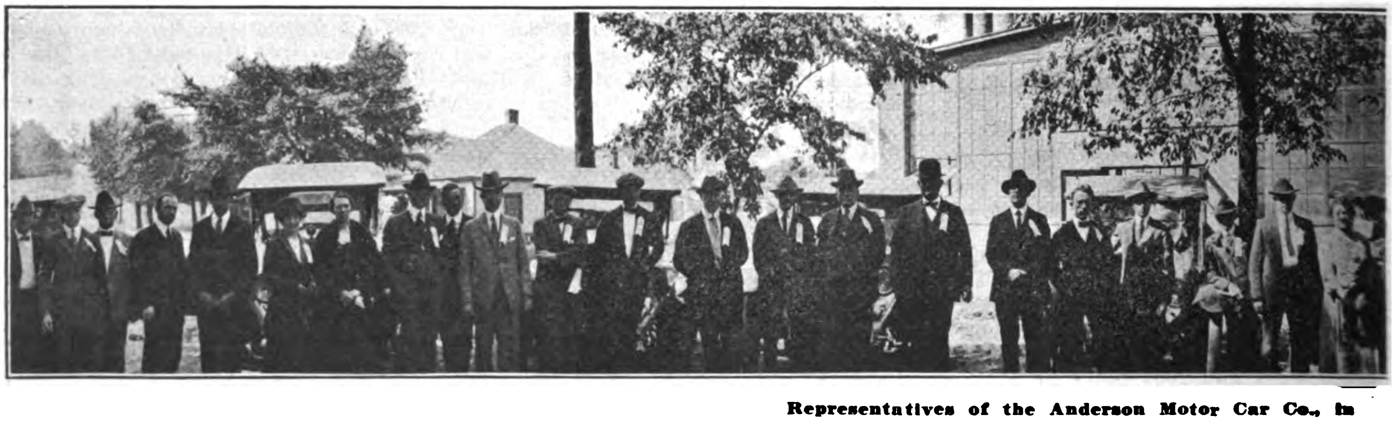
CLIMAX RUBBER CO. BUYS K. & W. PLANT IN DELAWARE, O.

The Climax Rubber Co., which has been operating a plant for some time at Huntington, W. Va., has acquired the plant, equipment, patents and established business of the K. & W. Rubber Co. at Delaware, O., and it is understood that the factory in Huntington will be dismantled and moved to Delaware, together with many of its force of employees. The Climax Co. has been specializing of late on the Climax compression inner tube and the newly acquired facilities will enable it to put into effect the desired large production schedule planned and the manufacture of the established goods of the K. & W. Co. will also be continued. Enlargements on plant will also be made as necessity demands. $5,688,082 common stock.

Guy and Ora Kirchbaum of the K. & W. Rubber Co. have acquired an interest in the Climax Co. and will continue to be actively identified with the enterprise and it is understood that the present sales, office and working force of the K. & W. Co. will be taken over by the new company.

The officers and directors of the Climax Rubber Co. are as follows: President, Irving S. Hoffman, formerly vice president and general manager of the Ohio State Life Insurance Co.; vice president, H. A. Longshore, formerly in charge of the bond department of the National City bank, New York city; secretary-treasurer, Merch E. Swanson, formerly secretary-treasurer of the Komo Cereal Co.; assistant secretary-treasurer, Clyde B. Turner; publicity director, Frank B. Wilson, Columbus, O. Directors, James W. Bannon, Jr., Portsmouth, O., secretary of the Excelsior Shoe Co. of that city; U. S. Brandt, Columbus, O., vice president and counsel of the Ohio Life Insurance Co.; James W. Armstrong, merchant, Woodsfield, O.; Roger A. Selby, a director of the Selby Shoe Co. of Portsmouth and also a director in the Security bank of that city; G. Everett Shinkle, Huntington, W. Va., state manager of insurance, and E. M. Pavey, Columbus, O.

The Kelly-Springfield Tire Co. reports for the six months ending June 30, 1920, net income, after charges, and before Federal taxes, of $2,023,104, equal after preferred dividends, to $7.43 a share.



Representatives of the Anderson Motor Car Co., in

RUBBER INDUSTRY IN GREAT BRITAIN.

The total number of rubber workers in the United Kingdom of Great Britain in January, 1920, was estimated at 71,000, 37,000 male and 34,000 female, while in April, 1919, the number of firms engaged in all branches of the manufacturing industry was 464, according to the ministry of labor.

The imports of tires and tubes for the seven months ending July 31, 1920, as compared with like periods of 1919 and 1913, were as follows: 1920, $15,061,257; 1919 (full statistics not yet published), $4,109,905; 1913, $8,444,837.

In Scotland, with the exception of bicycle and motorcycle tires, all rubber tires used in the district are received either from other districts in the United Kingdom, or are imported from other countries. The imported tires are chiefly of American origin and are estimated to comprise about one-third of the total in use at the present time. Tires are distributed through agents of the manufacturers, jobbers in accessories, garages, etc., and the usual terms of payment are five per cent. discount for payment in seven days, 2½ per cent. for monthly settlement, or 30 days net.

IMPORTS OF TIRES INTO CANADA.

The imports of solid rubber tires into Canada for the year ending March 31, 1920, were valued at $191,424, of which the United States supplied $186,225 and the United Kingdom $5199.

The value of pneumatic rubber tire casings imported for the above period totaled $1,655,118, the countries contributing being as follows: United States, $1,647,507; United Kingdom, $15,351; France, $2140; other countries, $120.

The figures for inner tubes were: Total, $168,340. United States, $163,527; United Kingdom, $2423; France, $2366; other countries, $24.

These figures may be compared with the following imports of rubber tires for vehicles of all kinds for the years ending March 31, 1919 and 1918 respectively:

1919—Total, $1,045,140. United States, $1,024,171; United Kingdom, $17,121; France, $3848.

1918—Total, $2,052,441. United States, $2,015,267; United Kingdom, $24,351; France, $12,823.

Distributors of the Andehson Motor Co., Rock Hill, S. C., at Banquet in Chamber of Commerce.

STORM CO. AT CHICAGO.

The Storm Manufacturing Co., Minneapolis, Minn., announces that as it was unable to procure exhibition space on the floor of the Coliseum during the convention and exposition of the Automotive Equipment association in Chicago, Ill., Nov. 15-20, it has secured window display and floor space directly opposite the main entrance of the Coliseum on the Wabash avenue side, with the Ex Cel Battery Co., 1502 Wabash avenue, south, where the Storm equipment may be seen in operation. The Storm vertical power boring mill will be featured.

The Firestone Tire & Rubber Co. of Oklahoma City, Okla., is moving into its new headquarters at 125 W. First street.

CONVENTION OF ANDERSON DISTRIBUTORS AND DEALERS.

The Anderson Motor Co., Rock Hill, S. C., held a three-day convention of its distributors and dealers Oct. 12, 13 and 14, which was attended by representatives of the Anderson Six car from all parts of the country, including California and Colorado on the West, Rhode Island and New York on the East, Minnesota in the North, Florida and other southern states, as well as from all the central western states. The following programme was most successfully carried out, proved interesting and helpful:

Tuesday, Oct. 12—10 a. m., inspection of plant; 2:30 p. m., conference: "The 1921 Model," J. W. Anderson, president, Anderson Motor Co.; general discussion; 5 p. m., left for Catawba river for old-fashioned southern barbecue.

Wednesday, Oct. 13—10 a. m., conference: "The Contribution of Psychology to the Problems of Salesmanship," address by Dr. Frazer Hood of Davidson college; "Sales Promotion," H. J. McCullough, manager of sales promotion department, Anderson Motor Co.; general discussion; 2:30 p. m., conference: "Sales Organization," Sidney B. Bowman, president of the Sidney B. Bowman Automobile Co. of New York; miscellaneous; 8 p. m., banquet, Chamber of Commerce hall, with President Anderson presiding as toastmaster. Toasts: "Coming Home on One Cylinder," Dr. Frazer Hood of Davidson college; "Non-Essentials," Thomas W. McDow, York; "Fire at Random," S. E. McFadden, Chester.

Thursday, Oct. 14—10 a. m., conference: "Finance," address by George E. Roberts, vice president of the National City bank of New York; "Service," address by J. C. Tedger, president of the Tedger Motor Co., Atlanta, Ga.; 2:30 p. m., conference: "Advertising," address by Harry Tipper, president of the New York Business Publishers' association; business discussion; automobile ride, including inspection of cotton ginnery, cotton seed oil mill and cotton mill.

The guests left at 6 p. m. after three days brimful of business and pleasure.

Attendance at Recent Convention at Factory, Rock Hill, Ill.

Status of Automobile Industry Reflected in Statements of Representative Manufacturers

THE accompanying statements from prominent automobile manufacturers are in reply to questionnaires sent out by the Accessory and Garage Journal to all the representative producers of passenger motor vehicles of the country, and graphically reflect all sides of the causes and effects of the present situation in the industry, as well summarize the outlook for future business.

The tabulations of changes in prices, which is also compiled from figures supplied by officials of the car-building concerns, shows that 34 other makers followed, with substantial reductions, in the prices of their products, the announcement of the cut made by the Ford Motor Co. on Sept 21, while, on the other hand, seven manufacturers have increased their prices on one or more models.

Practically all of the best known manufacturers of the United States have issued statements of some character or made guarantees as to the maintenance of present prices, etc.

The truck industry has not been affected to so great a degree and only 11 makers have announced reductions. But one or two tire manufacturers have made any cuts and the reduction in the price of accessories, material and equipment, which was expected in some quarters to follow in the wake of the break in the pleasure car market, has also not materialized as yet to any extent.

However, it seems to be the consensus of opinion that the crisis of the flurry is now passed; that the automobile industry will speedily and readily adjust itself to the new conditions; that prices will settle down to figures based on the fundamentals of actual cost of material and labor; and that it will be practically on nearly a normal footing again by spring.

While there is wisdom in the admonition of some that the situation should not be taken too seriously, there is no doubt that the general buying public will still continue to stand somewhat aloof until the feeling becomes more universal that rock bottom has been reached.

Allen Motor Car Co.—"Has not reduced the price of any of its models and does not contemplate doing so. As many others have stated, there is no fundamental reason why prices should be reduced at this time as the cost of manufacturing has not been reduced one iota. On the other hand, there have been certain advances which would make more sensible an advance instead of a reduction. We have guaranteed our price to the trade and to the consumer against a decline until March 1, 1921. We cannot help but feel that after election, and surely after the first of the year, there will be a reaction in the automobile business, but that the public will be more wary of buying and more critical as to the kind of car they will put their money in. They will want a car that will be good for more than one or two seasons on the same principle that a man buying a piece of real estate now realizes that he is paying a good price for it and that it must do him for a long time if he is to realize on the investment. We believe the cheaper type of car will not sell so readily. The well built, medium priced car will be in the greatest demand. For that reason we are very optimistic for the future of the Allen and are anticipating a return of better conditions at a nodistant date."—F. I. Lackens, assistant advertising manager.

American Motors Corporation—No further reduction before April 1. "In reference to the prospects in the automobile business at the present time, this company feels certain that the year 1921 is going to be, if not the best, at least on a par with any automobile year we have had, as the demands for cars are going to exceed the output by a large majority."—J. H. Giles, assistant sales manager.

Anderson Motor Co.—"While conditions as they exist today in the automotive industry are not the most active, yet we can see a gradual improvement, which is not confined to any one section. The outlook, both politically and financially, indicates activity and stabilization of market conditions by Feb. 1. Price levels have been reached for a sufficient time ahead to allay hesitancy on the part of those who have been withholding the placing of specifications. Emphasis of this condition is showing through our distributors' organization and their prospects, as the definite fixing of our prices to March 1, 1921, has enabled the closing of deals that have been hanging fire, and brought about a more liberal offering from our distributors."—H. J. McCullough, manager of the sales promotion department.

Apperson Brothers Automobile Co.—No reduction. Present prices guaranteed to July 1, 1921. No likelihood of any changes in price during the next calendar year.

Brewster & Co., Inc.—Unchanged. Prices guaranteed to Jan. 1, 1921. "We do not expect any decrease unless there should be an unexpected decline in labor prices. It is our opinion that the present lull in automobile sales is only temporary and that, after election, there will be a revival."—F. H. Buell, sales manager.

Briscoe Motor Corporation—Unchanged. Prices guaranteed to April 1, 1921. "Our opinion is that conditions will improve, gradually becoming stable by early spring. Buying will be slow this fall and winter."

Buick Motor Co.—Prices guaranteed for some months.

Bush Motor Co.—Reduced prices guaranteed to March 1, 1921.

Cadillac Motor Car Co.—Prices unchanged.

Chalmers and Maxwell—Walter P. Chrysler, chairman of the reorganization committee of the Maxwell and Chalmers companies, states that those companies are in excellent condition to establish new prices for the reason that under the reorganization plan inventories have already been substantially depreciated. Full confidence is expressed that the replacement of inventories can be accomplished upon a basis to justify the lower prices made.

Champion Motors Corporation—"The outlook is good for good, low priced cars. Lowered prices are stimulating the demand.

Chevrolet Motor Co.—"We are continuing our present prices for 1921."—J. H. Newmark, manager advertising division, general sales department.

Cole Will Advance If Necessary.

Cole Motor Car Co.—"In view of the agitation occasioned by the recent publication of numerous price changes, we beg to inform you there will be no reduction in Cole prices. In 1918 this company adopted a policy of constantly manufacturing a finer motor car, adding thereto from time to time such improvements and refinements as have proven to be of value to our owners. It is absolutely contrary to our basic programme to let any condition interfere with this purpose to build a car that at all times represents the highest value which it is possible for us to afford for the price it bears. Furthermore, it is not the intention of this company to let anything stand in the way of the development of our product, and we will not hesitate to advance the price of our car if by so doing we are able to add to its refinement and efficiency."—J. E. Roberts, general sales manager.

Cortland Cart & Carriage Co.—Prices guaranteed to July 1, 1921. "There is no change in the list price of the Hatfield. We might further add, in this connection, that the present list price of the Hatfield was established in December, 1919, and no advance has been made since that time. We have been reticent about making an advance in the list price with the hope that we might carry the matter along until there was a recession in the price of materials that we are consuming. Since the announcement of the cut in the Ford cars the demand for new cars has been at a standstill and we do not look for any material change along this line for a couple or three months. On the other hand, we believe that the present trying times that the automobile manufacturer is passing through will in the long run serve to stabilize the industry and to a point that from now on automobiles will be manufactured and sold upon the same sound, basic principle as that of any other standard manufactured article."—L. I. Hatfield, president.

Crow-Elkhart Motor Corporation—Prices on all models reduced to pre-war figures. The action was taken, it was stated, because of general conditions in the industry.

James Cunningham, Son & Co.—"We guarantee until July 1, 1921, that there will be no reduction in the price of our cars. At the present writing we have no idea of making a reduction at that time."—C. A. Baird.

Daniels Motor Car Co.—Prices unchanged.

Dodge Brothers' policy has ever been to give full value for price asked. There will be no reduction in the present prices of Dodge Brothers motor cars. Newspaper reports to the contrary are absolutely untrue."

Expects Usual Demand in Spring.

Dorris Motor Car Co.—"There has been no recent increase or reduction. We have guaranteed our prices until March 31, 1921, and from present indications feel sure that there will be no reduction. While business is rather slow just now, we look forward to the customary demand in the spring. We have reduced our output about 50 per cent. and do not anticipate any increase until about Jan. 1. We are not at all pessimistic regarding the outlook and feel that the readjustment of business came at a good time."—Webster Colburn, vice president and general manager.

Dort Motor Car Co.—"No change in price on any models. We guarantee against any price reduction which we may make on all 1920 models. The price of the Dort car is reasonable and fair; therefore, there will be no reduction made by this company. There has been as yet no break in material or labor costs that would warrant any price reduction on the Dort car. On the contrary, materials have been purchased by us, and by all motor car manufacturers, for 1921 production at a very considerable advance as a whole over 1920 material costs. Therefore, unless those purchase contracts are treated by the purchaser as 'Scraps of paper,' or the seller voluntarily revises contract prices downward, there can be no justification for any motor car manufacturer to reduce prices unless he has been profiteering, which means that he has been receiving an excess profit on his product. If there be any such manufacturers this is a most opportune time for them to properly adjust prices to the sound values of their products."—J. D. Dort, President.

Dupont Motors, Inc.—The price of the DuPont automobile has not been reduced. The present list prices are the same as those announced some months ago, before production started. DuPont distributors and dealers are guaranteed against reduction in prices prior to April 1, 1921.

Elgin Motor Car Corporation—Prices guaranteed to June 1, 1921.

Elkhart Carriage & Motor Car Co.—"No reductions have been made or contemplated. Our present prices are guaranteed until April 1, 1921. Our prices have not been raised through the general period of price advances, but remain the same as they were early in the year. Therefore, there can be no reductions until there is some decided change in the cost of labor and materials. Sales are doubtless going to be retarded for some time to come, but we are doing a fair volume of business, to which we have adjusted our production and feel that after the present transition period there will be a satisfactory and permanent volume of sales."—U. G. Manning, vice president.

H. H. Franklin Manufacturing Co.—"The way to readjust is to readjust. Lower prices have to come and the way to get them is to inaugurate them at once. Reductions can come only from the top down. The manufacturer has to make the first move and, as a result, the fabricator and producer of raw materials will fall in line. Necessarily the Franklin Co. will take a temporary loss on materials on hand which were purchased at figures out of line with the new price scheduled for the company's automobiles. We shall endeavor to obtain readjustments of existing contracts with vendors to meet the new conditions and to place new contracts at figures below what we have been paying. Wages at the Franklin plant will not be affected by the lowering of prices, but will remain at their present level. Our action also has in mind the responsibility of manufacturers to keep labor employed, and the only way it can be done is to set prices on a basis that will relieve congestion in trade channels regardless of any temporary sacrifice of profit."—H. H. Franklin, president.

Gardner Motor Co., Inc.—"The Gardner Light Four is not a war product and never has had an inflated price. The manufacturer for the present will be selling at cost. The Gardner Motor Co. has decided to make this reduction not because such a step is in any way justified by its present manufacturing conditions, but because it has recognized a widespread sentiment on the part of the American public for a general reduction and, in anticipation of the cooperation of its sources of supply, desires to assist in an attempt to bring this about."—Russell E. Gardner.

General Motors Corporation—"General Motors has never favored or encouraged profiteering. On the contrary, it has always given to the motor buying public splendid value, which is alone responsible for the enormous business enjoyed by the corporation."—W. C. Durant, president.

Halladay Motors Corporations—Prices guaranteed to Jan. 1, 1921. "As we have found no reduction in material, with but several minor discounts to date, and as labor remains at the same figures, we can see no reason for a reduction in the price of automobiles excepting by those who might have been in the large profit class. We see, from time to time, announcements of reductions in price of certain makes of automobiles, who frankly state in the same announcement that labor will not be affected. In order for the parts makers to reduce the price of their respective parts, it would be necessary for the reduction of labor, to lower the price of same, otherwise these parts must remain at the same figures, which necessarily would command the present price of the automobile."—Thomas E. Huth, president.

Hanson Motor Co.—Prices guaranteed to March 1, 1921.

Reduction the Maximum Possible.

Hare's Motors, Inc.—"In putting into effect the reduction in the price of Locomobile and Mercer cars of $1350 and $1000 respectively, we decided to make this reduction the maximum one possible instead of temporizing with half-way measures, even if it is necessary subsequently to revise our prices upward. It seems to us that the business difficulties which are confronting the American manufacturer today are not due to a real shortage of demand, but rather to suppressed demand occasioned by the insufficient purchasing power of the country through the deflated value of the dollar.

"What we all desire is a rapid return to normal business conditions so that merit may have the opportunity to obtain sufficient finances for development. I believe the reduction in prices by other manufacturers and ourselves, whether analyzed or not, is in reality a simple recognition of the fact that a reduction in prices is the only thing that can increase the purchasing power of the dollar to a point where there is sufficient money to properly finance the business heads of the country. If we are correct in reading the spirit of the times, then it is not only our duty, but the duty of every manufacturer, to hasten normal business conditions by taking an immediate loss, if necessary, rather than occasioning a far greater, if more protracted, loss through an endeavor to resist fundamental conditions stronger than ourselves.

"When we took over the Locomobile and Mercer companies early this year, our objective was to maintain and improve their quality through our unusually strong engineering organization, and then to effect manufacturing economies through increased sales, which are made possible by better distribution facilities, thus enabling us to offer the public still greater quality than they have received heretofore and at lower prices, with mutual benefits to distributors and ourselves. In view of the recent business depression, I believe we can take no little pride in the fact that the sales of both the Locomobile and Mercer for the last 90 days have been considerably in excess of the sales of these companies in any corresponding period of former years. But improvements in both products, plus increasing costs of labor and material, have more than kept pace with the increased production and, except for the obvious duty of collaboration among manufacturers to restore the morale of business, even at considerable temporary sacrifice, there would be no justification whatever for a price reduction at this time.

"Nevertheless, we are convinced that such a procedure is today both sound and constructive and that the greatest ultimate profit is to be earned by taking a present loss. It is our earnest hope that before the period expires within which, under existing conditions, we can afford to maintain the revised price list, our business will have expanded sufficiently and our costs will have dropped enough to warrant our making the new prices permanent. If not, we shall have no recourse but to revise it again and, this time, upward."—Emlen S. Hare, president.

Hamlin-Holmes Motor Co.—"Our car is

in a class by itself as it is a front-driven car, and we do not believe that the inactivity that is now existing in the automobile industry will affect us in any way or do we believe it will affect any of them but a short time."

Business for Future Looks Good.

Holmes Automobile Co.—"We have guaranteed our prices to our distributors until Jan. 1, 1921, and do not feel that there will be any change in our prices beyond this period unless we can see a material reduction in commodity prices. If there is, of course it is always our attitude to give the benefit of this reduction in cost to our distributors. Business for the future looks very good to us. On our new models, which we have greatly improved, the demand at the present time is very brisk. We do not look for any let-up in the demand; as a matter of fact we look for greatly increased sales."

Hupp Motor Car Corporation—A telegram to the Hupmobile Co. of New England from the Detroit factory reads: "Prices of Hupmobiles are based on costs of labor and material. Until such costs are lowered there can be no reduction in the price of our product without sacrificing quality, which we will not do. We will guarantee present list prices until March 1, 1921."

International Motor Co.—"The demand for motor trucks is maintaining its steady increase in spite of what would seem to be adverse general market conditions."

Jackson Motors Corporation—Prices guaranteed to July 1, 1921.

Jordan Motor Car Co.—"The Jordan Motor Car Co. has from the beginning maintained a policy of constant improvement in its product, aiming at a high degree of service to Jordan owners. It will continue to be the Jordan policy to command the respect and confidence of the public by adhering to this permanent ideal of service. Knowing this to be the only guarantee of success, in view of the present world-wide demand for service at lower cost, the Jordan Co. makes its contribution to this justifiable public demand."

Kentucky Wagon Manufacturing Co.—Prices of Dixie Flyer guaranteed to May 1, 1921.

Business Will Increase After Shows.

Kenworthy Motors Corporation—No increase or decrease in prices as this concern has just gotten into production in the last couple of months. In regard to business prospects, the president, C. Y. Kenworthy, writes as follows: "We feel that business will be quiet for the next three months, but will steadily increase after the national automobile shows. We believe there will be an arbitrary reduction in prices, but it will be necessary for high grade cars to advance their prices again possibly after the first of the year on account of the fact that those that have reduced have mostly done so to encourage sales, and not because they have been able to get an immediate reduction on all materials. If there is any noticeable reduction in high grade cars in general it will be because of the price of labor being reduced as well as food stuffs and household necessities."

Lafayette Motors Co.—"Lafayette prices, which were very recently announced, of course will not be reduced. In establishing our present prices we speculated on a downward trend in our costs and assumed that six or eight months from now we shall be operating under improved manufacturing conditions. These prices reflect an average estimated basis of cost over a period of several months. If they were based on costs today they would be considerably higher. If our premise is not substantiated and our production costs remain at their present high level, a price increase will be necessary. It is our policy to build a car which is stable in quality and consequently in price. Price stability was uppermost in our minds when we allowed ourselves to be influenced by a forecast and an anticipated equalization of labor."

Lexington Motor Co.—"We are only listing three models, as the programme on the balance of the models which we will produce has not been definitely settled. The change in price of the Model S touring car took effect Oct. 1. The change in price on the Lex-Sedan took effect Sept. 10. We are guaranteeing our present prices to distributors to and including Jan. 1. We had already made this announcement on Aug. 2. We are very optimistic as regards the future of the automobile business, and in our opinion, while there is a temporary slow-up in sales, we believe that immediately after the presidential election sales will again resume their normal state."—Jay Dewey, general sales manager.

Reductions Represent Overcharges.

President Frank B. Ansted states, in addition: "In our opinion, all reductions so far represent overcharges exacted from a market clamoring for more production. We have not heretofore made our prices on the basis of what the market would bear and are unwilling now to make a reduction because others are surrendering excessive profits. Model S is intrinsically 20 per cent. more expensive than Model R pre-war model. On this basis Model S is now priced less than 17 per cent. higher than pre-war prices. Most other companies making cuts are producing exactly the same models as before the war at 30 to 50 per cent. more than prewar prices, after the recent cuts."

Liberty Motor Car Co.—Reduced prices guaranteed to July 1, 1921. "It is the belief of officials of the Liberty Motor Car Co. that conditions will greatly improve in the automobile business. We believe that the total consumption of cars for next year will be greater than this year's, especially in the case of cars similar to the Liberty Six. Following the presidential election and completion of the handling of the crops, we believe a reaction will set in strongly in our favor, especially since car manufacturers, such as ourselves, have readjusted prices to the lowest possible levels. We think that the buying public will manifest its confidence in us by a great deal of buying. Following the National shows in New York and Chicago and with the coming of spring, we look for an especially big stimulus in sales of cars."—Verne E. Burnett, advertising department.

Lincoln Motor Car Co.—Commenting on price reductions, Wilfred C. Leland, vice president and general manager, said that he could foresee no condition for a long time that would permit any reduction in the price of the Lincoln car, and he added that conditions which seemed to warrant reductions in some instances had already been anticipated by his company, and that those conditions had been taken into consideration in establishing the recently announced Lincoln prices.

McFarlan Motor Corporation—Vice President B. M. Barrows states that his company brought out a new model, the first of July, of longer wheelbase, higher power and more careful detailed coach work, in which was embraced all the reduction in prices of both labor and material that could be hoped for or expected in the next season; consequently no comparison in prices can be made.

Reduction Caused by a Psychological Factor.

Maibohm Motors Co.—"We have issued a statement to our distributors and dealers stating that we do not anticipate any change of price before Jan. 1, and also guaranteeing our distributors protection if it is necessary for us to make a change. We believe we are in bearing with the other automobile manufacturers when we state that the recent price reduction has been caused more by a psychological factor than because of any other reason. It is very evident that, before the manufacturers can make any great reduction in price, both labor and material will have to be materially reduced. Therefore, I believe that I am stating the opinion of the officers of the company when I give it as my opinion that the Maibohm will always be priced just as low as possible, depending upon conditions which will be beyond our power to control."—W. W. Jeffrey, sales department.

Mitchell Motors Co., Inc.—Prices unchanged. Guaranteed to March 1, 1921.

Monitor Motor Car Co.—Prices unchanged.

Nash Motors Co.—"Our policy has always been to give the consumer the best automobile and best truck we could build at the least possible cost. We have never asked a dollar more simply because we could get it. In view of the fact that there is no reduction today in the price of materials or labor entering into Nash products and that there is no possibility of any reduction for some time to come that can substantially affect manufacturing costs, the policy of the Nash Motors Co. will be to absolutely maintain its present prices on both passenger cars and trucks to at least July 1, 1921. Our prices have never been inflated and, therefore, cannot be reduced. For example, the increase in Nash cars since 1917 has been 31 per cent., while the average increase in the cost of automobiles during that time has been 76 per cent., and living expenses generally, according to government figures, have increased 104 per cent. Our increase has really been only 24 per cent. when you consider that cord tires and other equipment have been added as standard."—C. W. Nash, president.

Ohio Motor Vehicle Co.—No reduction in price of Ferris cars.

Olds Motor Works—Prices guaranteed from Oct. 1, 1920, to July 1, 1921. Those makes that had a "war price," had to come down. Oldsmobiles were priced on costs. Things have settled to normal.

Packard Motor Car Co.—"The Packard Co. has not reduced its prices and does not expect to inasmuch as the manufacturing costs of its vehicles cannot permit of any reduction at this time. In the event of a future reduction, however, we have insured our prices up to July, 1921, in such a way as to give our customers the benefit of such a reduction should one occur."—A. G. Medlicott, assistant to the general sales manager.

No Economic Grounds for Reduction.

Paige-Detroit Motor Car Co.—Announcement is made by Harry M. Jewett, president, of new prices which went into effect on Sept. 27. "There are no economic grounds to justify these reductions in price," said Mr. Jewett. "The price of Paige cars has always been based on the cost of first class materials, expert workmanship and a fair profit. Materials from which cars are now being made were, of course, purchased months ago. There has been no reduction in cost since then. In fact, basic factors, like steel, transportation and coal have gone up. However, to support what seems at this time a worthy movement and to contribute a telling blow to the high cost of living, the Paige is willing to make its own sacrifices; and, at the new prices we are announcing, will cheerfully accept a loss."

Pan-American Motor Corporation—Prices, which were reduced $200 on all but the sedan G 6-55 model, are guaranteed to July 1, 1921.

W. A. Paterson Co.—Prices unchanged and guaranteed to March 1, 1921. "There has been no change in the price of material up to this time that would justify us in lowering our prices. There seems to be a trend that way, but it will be quite impossible for us to make a reduction until we in turn have had lower prices from our source of supply. In our opinion the present depressed condition, which applies not only to this industry, but even down the line to retail business of every description, will not change materially until the financial situation in this country has been adjusted. We naturally feel that too much of our money has gone abroad, leaving our banks very low on reserves and on deposits. Until a change has been brought about in that direction there will not be any very great improvement in the business conditions generally."—W. R. Hubbard, treasurer.

May Be Necessary to Increase.

Peerless Motor Car Co.—"The policy of pricing Peerless product has been fair to the purchaser and no attempt has been made to establish the very high prices which have been possible since the war. This policy will be evident by comparing Peerless prices with the prices charged for competing products during the entire cycle of price advance and at the present time. This policy has resulted in an excellent demand from users and has prevented accumulation of excessive stocks. Costs are still rising, and it may be necessary for us to again increase our prices, although we hope this will not be necessary. We cannot reduce prices under present conditions and certainly do not intend to do so."

Piedmont Says Must "Stand Pat."

Piedmont Motor Car Co.—"We have advised our agents that we cannot reduce the price of our car and must "stand pat." Our assumption is based as follows: Although some manufacturers can reduce prices and have done so, there are others who cannot, and we belong to the latter class. Our cars are built up to a standard, from which the price is set, after allowing ourselves a small margin of profit. Increases in both material and labor cost, from time to time, since our last prices went into effect, together with additional cost of refinements and improvements that have taken place in the meantime, have reduced the so-called small profit to a minimum. In fact, we are only breaking even at present day prices. There are only two ways in which we could reduce the price of our cars. First, material and labor costs would have to become normal, and there is no immediate relief in sight for either of these conditions inasmuch as the price of food and clothing must drop before labor prices decrease. The steel market still has a tendency upward instead of downward. The next solution would be to cheapen our product, and this, we refrain from doing. We believe that the prospective purchaser will consider value before price, and we believe further that salesmanship and the merit of the product will have more bearing than the price on future sales. It is our opinion that the manufacturers who are now reducing their prices have been profiteering during the war period, and although they are reducing their prices, we believe they are still making a handsome profit.

"It is our opinion also that a reduction in price may bring a few immediate sales, but as soon as the novelty wears off we believe sales will be as scarce as ever. We are not speaking for the industry as a whole, but we are giving you our unbiased opinion as it affects us. It is our aim to give the best dollar for dollar value of any product on the market, and in order that we may give this value we must uphold our present day prices. If we were to cheapen our product in order to reduce the price, in all fairness to the customers, we would be obliged to advise them accordingly, and we know they do not want a cheaper product."—H. W. Kriner.

National Motor Car & Vehicle Corporation—Contemplates no reduction in price. Distributors and dealers authorized to guarantee all retail buyers that if any reduction was made the factory would refund the amount of such reduction until July 1, 1921. "While not attempting to speak for other manufacturers, states President George M. Dickson, "it is certain that the prices of National cars cannot come down until there has been a material future reduction in the costs of material and labor."

Demand Rapidly Returning to Normal.

In regard to the business outlook, Fred Wellman, advertising manager of the National Corporation, writes as follows: "Now that the recent price flurry that disturbed the automobile industry is about over, we find that the demand for our cars is rapidly returning to a more normal basis. Our production of closed cars for the fall and winter months is proceeding about as usual, and we anticipate no difficulty in going through with our scheduled plans. It is a little early to make predictions for next year; however, at the present rate of improvement, business promises to be unusually good. The automobile shows will prove as big a factor in stimulating the demand as usual, we think, inaugurating a selling season that we expect to be more successful than any we have yet experienced."

E. A. Nelson Automobile Co.—New prices undetermined.

Noma Motor Corporation—No reduction.

Nordyke & Marmon Co.—The following announcement is made through Frank E. Wing, New England distributor of Marmon cars: "There is no real reason for any automobile manufacturer to reduce prices at this time unless they have been receiving an excess profit. Marmon won't cut prices because labor conditions and high cost of raw materials will not permit it. Walter C. Marmon, president of the Nordyke & Marmon Co., has wired to all dealers, stating that there will be no reduction in the price of Marmon cars, and that the price is guaranteed until July 1, 1921. He adds, that the Marmon car has never been sold because of its price, but because of the car itself. In comparing the Marmon car prices during the price advance period with those of other makes of cars, you will see that no attempt was made by Nordyke & Marmon Co. to get the very high prices that were possible during and since the war, which means that they are never influenced by price fluctuation on any other make of cars. Quality and individuality have always been foremost in the minds of the designers of the Marmon. Because of the quality of workmanship and material entering into the manufacture of the Marmon high-speed motor, the highest honor possible to be conferred upon any industrial organization was given to the workers of the Nordyke & Marmon Co. during the period of building the Liberty motor. It is the intention of this company to work with the idea of trying to improve the Marmon car rather than to cut the quality, which would be the only way they could cut price."

Norwalk Motor Car Co., Inc.—Price on Model 4-30 KS five-passenger pleasure car reduced $100; prices on Model 25 E one-ton and 35 E 1½-ton trucks are unchanged; guaranteed to March 1, 1921.

Oakland Motor Car Co.—"At this time when the public mind is disturbed by sensationally announced price reductions of automobiles and other merchandise and commodities, we desire to give assurance to those who require personal passenger transportation, such as provided by the Oakland Sensible Six, that we do not anticipate reducing the price of our cars. Starting with the production of the raw material required, and continuing through to the finished product, over 80 per cent. of the cost of an Oakland Sensible Six is labor. Over 80 per cent. of the cost of all other automobiles produced in large quantities is labor. When wages paid to labor are reduced, or when labor produces more per man, then may manufacturers of honestly priced automobiles legitimately consider the reduction of their selling prices. We have not heard of any instance where automobile workers are receiving lower wages. If wages may be lowered eventually, we see no immediate trend in that direction. In the production of so essential a factor in our economic life as the passenger automobile—increasing as it does the personal efficiency of owners by nearly 57 per cent. —we believe the workers, whose toil produces the vehicle, should be largely beneficiaries of the constructive character of their work. If abnormal demand has been responsible for over-enthusiastic expansion and inflated profits in certain instances, the wage earner should not be made to suffer as he must if powerful forces effect lower automobile prices whether or no. True enough, there have been many instances of inflated prices.

Belated Shaking Out of Abnormal Profits.

True enough, abnormal profits must be eliminated. And that is what has been going on all around you recently—the price reductions you have witnessed in automobiles and other merchandise are the belated shaking out of the abnormal profits. The normal profits are still there. Manufacturers whose goods have been priced on actual cost to produce, plus normal profit, have no inflated figures with which to appeal to the uninformed public in sensational announcements of 'price reductions.' Prudent, studious buyers will not be misguided by erroneous principles. We are able to say, with great conservatism, that the present price of the Model 34 C represents an increase, due solely to increased cost of labor and material of 27.4 per cent. (Since 1915.) Larger production each year has kept this increase at a low figure. Compare this increase with the increase of other automobiles and with commodities—with the things you buy every day. Nowhere have we been able to find a standard article of merchandise that has increased as little in selling price as the Oakland Sensible Six. In the event of unexpected reductions in the cost of the labor and material that enter into the construction of the Oakland Sensible Six to a point where we may properly and legitimately reduce the list price of our cars between Oct. 1, 1920, and May 1, 1921, we will refund to every Oakland purchaser who buys within the above mentioned period of time the amount of such reduction."

Will Not Sacrifice Quality.

Pierce-Arrow Motor Car Co.—In connection with the announcement of price increase, Col. Charles Clifton, chairman of the board of directors, made the following statement: "This increase in price is dictated solely by our determination to make no sacrifice in the quality of the Pierce-Arrow car. We have made this new schedule operative Oct. 15, 1920, in order that present orders covered by contracts can be filled. It must be understood that our problems are not similar to those of the manufacturers of popular priced cars, where quantity output decides the price. We make a comparatively limited number of passenger cars, aimed to appeal to a discriminating patronage. We cannot attempt to apply economies of quantity production that would be readily acceptable in models selling at lower prices. Like all manufacturers, we are eager to market our product at as low a price as possible, commensurate with a reasonable return on the investment, but must naturally regard the maintenance of quality as the factor of determining importance."

Pilot Motor Car Co.—Has not reduced the prices of its cars and does not intend to do so. On the other hand, it does not intend to increase the prices unless it should build, at some later date, a larger model, which would naturally sell at a higher price. Has guaranteed that there will be no decrease until July 1, 1921.

Premier Motor Corporation—Has not reduced prices and has guaranteed them to Jan. 1 on the present models. "The prospect for future business is more or less an unknown quantity. When we say future, we mean the next 60 or 90 days. After that we believe that the buying American public will readjust themselves and that we will have several years of sane and prosperous business. We do find that even now we're able to sell more closed cars than we can manufacture. On open cars the situation is entirely different and while we find that our distributors are making quite a few sales, they are not reordering to any extent this time of year. We believe that any automobile manufacturer that has been working on a conservative basis and is in position to finance himself until after the first of the year will easily make up the losses that necessarily must come with the present depression."—E. W. Hurd, director of sales.

Rauch & Lang, Inc.—Has made no change in prices of old models of Rauland cars, but expects to increase on its new series.

Reo Motor Car Co.—No reduction possible at this time. Prices guaranteed to April 1, 1921.

Revere Motor Car Corporation—No reduction.

Root & Vandervoort Eng. Co.—No reduction on R. & V. Knight cars. Guaranteed to Jan. 1.

Public Will Not Go Back to Stage Coaches.

Saxon Motor Car Corporation—"We have not changed our prices, inasmuch as the present prices when announced were based on present costs of labor and material with a legitimate margin of profit added, and inasmuch as we have not been taking advantage of the public demand we have no excess profits to deduct from our list prices. We do not believe there is anything the matter with the automobile industry other than the hysteria and panic that some manufacturers seem to be in who have apparently been caught profiteering and who have hastened to take the industry before the public and nailed it to the cross as an industry in which profiteering has been unbridled and rampant. Naturally, such actions in any industry tend to seriously disturb public confidence in the industry and where there is lack of confidence there is usually lack of buying and we believe that just as soon as automobile manufacturers as a whole recognize the value of public confidence and recognize the sound and basic principles of soundly priced merchandise and are able to reflect to the public that this industry is operated by men who are prepared to operate on a legitimate basis, buying will commence again because we do not believe that the public as a whole are at all inclined to go back to horses, trolley cars and stage coaches. We believe that there are just as many people in this country who want automobiles and intend to buy them as there ever were and probably more every day. But we cannot blame the public for not buying cars on what to them appears to be a falling price market. Cut prices are the psychological requirements when there are overstocks of merchandise and overstocks of merchandise usually result from two causes: Either because the public has laid off the merchandise because its value is not properly reflected in its price or else because the producers have produced far in excess of the normal demand for the particular merchandise. We do not know of any industry in which price cutting has stimulated business. We do know of many instances where price cutting has had the reverse effect.

"As to the prospects for future business, we believe it rests entirely with the automobile manufacturers as to how soon they want to establish themselves in public confidence so that the buyer may purchase an automobile with the assurance or at least with the confidence that he is not going to pay one price today only to find himself out on a limb, as far as prices are concerned, tomorrow."—C. H. Page, director, sales advertising service.

Sayers & Scovill Co.—New prices guaranteed to April 1, 1921.

Scripps-Booth Corporation—Prices unchanged and guaranteed to May 1, 1921.

Automobile Business Singled Out by Bankers.

Skelton Motors Corporation—Price on Skelton automobiles was increased $50 last May, since which time no increase or decrease has been made, and there will be no decrease unless there is a reduction in the price of material. Price is guaranteed to Jan. 1 and in special cases extended to March 1, 1921.

"We do not anticipate very much activity in the buying of automobiles until at least after election and in fact believe it will be some time during the spring of 1921 before conditions will become so improved as will make it possible for manufacturers to get into a reasonable production. Banking conditions have gradually become such that it is utterly impossible for automobile men to secure loans upon new automobiles and in almost every case we find bankers demanding that automobile distributors and dealers reduce their loans at almost any cost. While all businesses seem to have felt the heavy hand of curtailments of credit, the automobile business seems to have been especially singled out as being more or less non-essential and the cause of the extension of credit to be tightened."—W. A. Chapman, vice president and general manager.

William Small Co.—Prices on Monroe cars guaranteed to spring.

Standard Steel Car Co.—Prices on Standard cars are unchanged and guaranteed to April 1.

Stanley Motor Carriage Co.—"This reduction on each model of $925 from the previous list price is not warranted by costs, since there has been no corresponding reduction in materials, labor or transportation. We believe, however, that good business and public sentiment, demanding an end to abnormal prices, dictate reductions which will command the cooperation of dealers, buyers and material makers, and thus assist in restoring business to its normal, healthy state. Because of Stanley stored power, control by throttle only, the ability to burn low-grade fuels and our uninflated production, we were perhaps in stronger position to maintain prices than any other manufacturer save one, and he initiated this movement."—P. Warren, vice president.

Waiting for Prices to Reach the Bottom.

Stanwood Motor Car Co.—No change in prices. "As to present conditions, this is a dull time of the year in general and in particular the action of the Federal Reserve bank slowed up the automobile business and Ford's cut in price put the finishing touches on the job by making people hold off in their purchases of automobiles until they felt that the prices have really reached the bottom. It seems to us that the spring will bring some life into the automobile business, but decline in prices of products of every kind are going to slow up sales until the bottom actually has been reached. We look for no miracle to happen after election, which has nothing to do with present conditions, and we look forward to a very quiet year in 1921."—N. D. Thompson, Jr., president.

Will Increase Quality Rather Than Decrease Price.

F. B. Stearns Co.—Statement of George W. Booker, president, to Stearns-Knight dealers: "Answering your inquiry as to the possibility of a decrease in price of our cars, you are advised that absolutely no decrease in our present prices can be made. It is an absolute fact that cars we are producing today are costing us more than they did two months ago. It is equally true that material going into cars which we will manufacture beginning Jan. 1, 1921, will be even greater, and the present indications are all favorable to an advance in prices at that time. You of course know that when prices on automobiles were being advanced by leaps and bounds, that this company kept its prices at a reasonable level, and that the total increase in our price has been less than 10 per cent. since we began the present model two years ago. This is against the advance of other manufacturers, as you are aware, ranging anywhere from 30 per cent. to possibly 70 per cent. It is a fact, easy of verification, that the advance in materials of all kinds has been a larger percentage than that we have applied to our product. A reduction by a few manufacturers can have no bearing on the general situation. There are some manufacturers who have been charging prices too high and there are also some manufacturers who have had over-production and expansion, both of which were more than conditions warranted—such manufacturers have had to come down to somewhere near the level of others who have not over-priced or over-produced. The policy of this company has been and will continue to be: If at any time the cost of our car decreases we shall put it into the car in added quality where possible, leaving the price as it is, though this much-to-be-desired condition of costs seems to the writer far off. You know we have from time to time made improvements since we began the present model, even when materials were at their highest, though we made no advance in our prices for such improvements and additions. You are assured that there will be no decrease in the price of the current models of Stearns motor cars, and I think that any cut in price by other manufacturers will not affect us in the least, for the good and sufficient reason that our car has been and is honestly priced, and we believe is the most under-priced car built in America, and that like quality cannot be purchased within a range of $1000 to $1500 of our prices, and that like efficiency cannot be purchased at any price."

Stevens-Duryea, Inc.—No reduction in prices.

Studebaker Corporation—"Our plants have operated at capacity all year, and we have unfilled orders for more than 6000 cars. Nevertheless, we believe it highly desirable that lowering of prices be encouraged, and we are anticipating at this time our ability to purchase materials at lower figures during the coming year, to improve labor efficiency, and to increase our present volume of business, all with the effect of lowering the production cost of automobiles. Existing wage rates will be maintained at all plants, which at present are employing 15,000 persons. Our sales are running at the rate of $100,000,000 a year."—A. R. Erskine, president.

Stutz Motor Car Co. of America, Inc.—Prices unchanged and guaranteed.

Uncertain of Permanently Good Results.

Templar Motors Corporation—"To reduce prices without regard to conditions prevailing, simply because some one else has cut them, would be as uncertain of permanently good results as it is most certainly unwise business and unjust to both workers and stockholders."—Harry W. Anderson, sales manager.

Velie Motors Corporation—Each purchaser of a Velie car is insured by a bond, issued by the company, against increase between now and July 1 next. A. J. Shorey, president of the New England Velie Co., states that if the prices of materials do not decline it is his opinion that prices will once more have to advance, and this may be necessary in the next 60 or 90 days. "Velie prices have always been indicative of a real intrinsic value in automobile construction," continues Mr. Shorey. Never has Velie been over-priced due to an exceptional demand. Never has Velie exacted more than a deserved and living profit."

Westcott Motor Car Co.—No guaranty on present prices. "Prospects for fall and winter business are very uncertain.

Willys-Overland Co. — Accompanying the announcement of substantial reduction in the prices of motor cars, John N. Willys made the following statement: "We could not possibly have taken this action unless we felt thoroughly justified in anticipating reduced costs of materials, against which conditions our companies have made provision. It has been commented that the automobile business has been profiteering. The profit in proportion to the increase in prices has been much less in this industry than prior to the war. After two months of personal investigation of conditions abroad I am firmly of the opinion that this country cannot hope to develop a healthy business and be able to compete with foreign markets unless we reestablish merchandise selling prices more nearly on a par with the conditions existing prior to the war."

Winton Co.—"We have not reduced the price of our cars, nor recently increased them, but we guarantee the present price until the first of March, 1921. It is our idea that money will be easier shortly after election and that trade may have something of its normal character by the first of January."—Charles W. Mears, advertising manager.

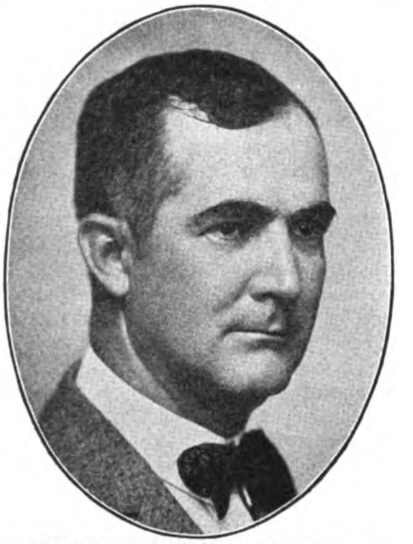
MOLTER BATTERY SERVICE.

A cooperative service plan by which storage battery dealers throughout the country can purchase storage batteries at production cost is now stated to be an accomplished fact through the efforts of the Molter Service of Chicago, Ill. This concern markets the M M battery, which is hand made throughout and carefully assembled from the highest grade of materials.

A postal card addressed to the Molter Service, 1513 Kimball building, Chicago, Ill., will bring full details of this service plan by return mail to anyone interested.

Remarkable Progress of Cooper Rubber Company

I. J. Cooper, President of Cooper Corporation, Cincinnati, O.



H. H. Brenner, General Manager of Cooper Corporation, Cincinnati, O.

J. W. Brumbaugh, Vice President of Cooper Corporation, Cincinnati, O.

FROM a small company, capitalized at a few thousand dollars, to a $3,000,000 corporation in less than 10 years is the remarkable record established by a concern in the automotive field, the I. J. Cooper Rubber Co., Cincinnati, O., now conceded to be one of the largest distributors of automobile tires and accessories in the country. The business of this company had its humble inception in a small store in Cincinnati, O., in September, 1911, with tires and tire sundries as its only distributing products. Due to its policy of dealer cooperation and the quality of its merchandise, the business expanded to such dimensions that additional stores were opened in Dayton, Columbus and Indianapolis. About the same time it was decided to add a complete line of automotive equipment. In January, 1919, branches were opened in Cleveland, Toledo, Memphis, Knoxville and Nashville, thus enabling the company to serve more efficiently the business that had been built up around these points.

In 1917, storage batteries and parts were added to the business, the Cooper storage battery was developed and production and distribution started. Within two years the manufacturer was unable to supply the demand and it was determined to provide for a certain source of supply. Accordingly, a company was incorporated under the name of the Cooper Storage Battery Manufacturing Co. in August, 1919. The site for the factory was selected, machinery installed and the month of October of the same year saw this company in actual operation. In less than a year the sales for the Cooper battery reached such proportions that additional buildings were required, doubling the space and equipment for production. One entire building, which has just been completed, will be given over entirely to the manufacture of battery parts for all makes of batteries.

The factory, starting with a capacity of 25 batteries, now has facilities for manufacturing 600 a day. At the present time over 1000 service stations represent the Cooper storage battery in the territory controlled by the I. J. Cooper Rubber Co. and its distributors.

In April, 1920, the Cooper Corporation was formed through the consolidation of the I. J. Cooper Rubber Co., the Cooper Storage Battery Manufacturing Co. and the Giant Tire & Rubber Co.—the last mentioned concern being a manufacturer of rubber products, such as reliners, tire repair kits, patches, etc.

Sales up to the present time indicate that the business the Cooper corporation will do in 1920 will amount to approximately $10,000,000.

The success of this mammoth organization can be attributed to the far-sighted merchandising principles of its president, I. J. Cooper, and his associates, H. H. Brenner, general sales manager, and J. W. Brumbaugh, vice president.

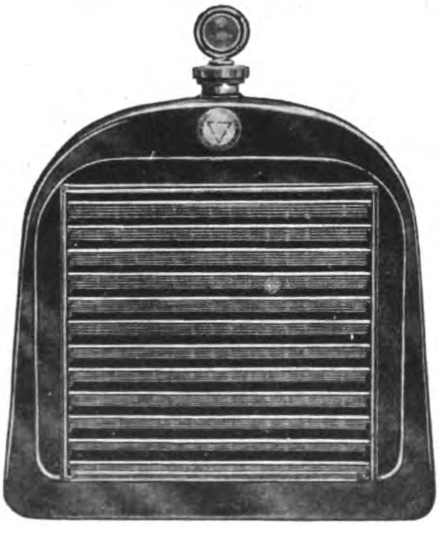
NATIONAL CHAIN MOTOR SERVICE CORPORATION.

The National Chain Motor Service Corporation, with offices at 739 Boylston street, Boston, which was organized several months ago to establish a chain of repair shops all over the country, recently opened its first station at 128 Cambridge street, Charlestown, Mass. The formal opening was in the nature of a house warming for the stockholders and directors of the organization. John C. Speirs, formerly general manager of the Autocar Co., now president of the Service Corporation, met the guests and took them on a tour of inspection of the shop. It has a floor area of 24,000 square feet on two floors and is of modern brick and cement fireproof construction. It is in the very heart of the heavy trucking district and well located to secure business from the many concerns in the vicinity.

When completely equipped the Charlestown station will be supplied with a Universal milling machine, 24-inch shaper, 20-inch by four-foot and 14-inch by six-foot lathes, 30-inch radial drill, 20-inch upright drill, 16-inch sensitive drill, floor grinder, bench grinder, No. 2 and 3 arbor presses and 22-ton press.

LARGER OUTPUT OF UNIVERSAL RADIATOR SHUTTERS.

The Auto Metal Parts Co., Des Moines, Ia., maker of the Universal Radiator Shutter, has reorganized its business in order to increase its manufacturing facilities. The executives of the company report that during its two years in business it has never been able to take care of the volume of orders for the shutter, and from now on only six models will be produced for the following makes of motor cars: Buick, Chevrolet, Dodge, Ford, Nash and Overland. Concentrating on these models will enable the concern to care for the large production required to equip this field.



Universal Radiator Shutter, Made by the Auto Metal Parts Co., Des Moines, Ia.

Sheboygan, Wis.; Side Garage Co., South 21st street and Indiana avenue; two-story public brick garage, 44x120; $55,000.

The **WASHBURN** *Torch*

A Real Measure of $25.00 Worth

The real measure of value is *not* how much you pay for a thing, but how much it will pay *you*.

We have nothing to conceal in the price of the Washburn Torch. It is $25.00, from your jobber or from us. This price is arrived at in exactly the same manner that you arrive at *your* prices—cost plus a fair profit.

Consider the Washburn Torch as an investment. As previous advertisements have informed you, the Washburn is a gas-and-air-burning torch developing 5300 degrees of heat from Prest-o-lite gas and compressed air (2 lbs. pressure or over). A range of 4000 degrees of this intense heat may be controlled instantly to just the heat you require. The flame is always *needle pointed* and never pops out. The extra tips furnished make the Washburn an Oxy-Acetylene torch when you so desire.

Here you have in *one* torch all that can be found in *any* torch—and then some! A soldering tip, and combination torch-and-soldering tip does away with your soldering iron and blow torch.

With the Washburn Torch in your possession you are instantly ready for every job that comes into your shop requiring soldering, light welding, lead burning, brazing or oxy-acetylene work. You assign highly paid men to work of this kind. When you put into their hands a tool that enhances their skill, saves their time, applies to any job and does a *better* job, you are not long in earning the price of that tool. One demonstration is enough to prove that *the Washburn Torch is your money's worth.*

The outfit includes Complete Washburn Torch, Mixer (gas and air regulator) two hose lengths, hose connections, four varied oxy-acetylene tips, and combination torch-and-soldering tip. Get it from your jobber, or from us direct if he can't supply you. Complete information for the asking.

KHK
OIL SIGNAL

KHK
OIL SIGNAL

DEALERS!

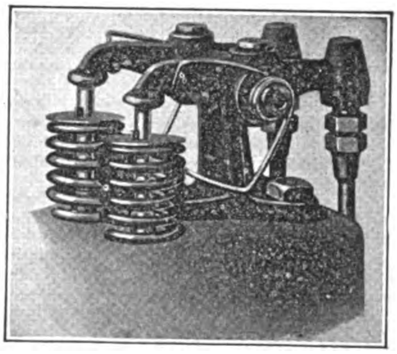
Here's Another Fast Selling KHK Accessory

**"When Your Oil is Low
Your Horn Will Blow"**

Automatically starts horn blowing when oil supply is low. Insurance against burned out bearings, scored pistons and cylinders. Fits all cars. A novel, practical accessory that sells on sight. Popular price. It's the only practical automatic oil signal on the market. Easily attached and no complicated parts to wear or get out of order. Be the first dealer in your town to show this new accessory. It will pay you.

**STOP THAT NOISE
WITH**

KHK
Valve in Head
MOTOR SILENCERS



Guaranteed to eliminate from 75% to 90% of that clacking noise caused by the action of push rods and rocker arms in Buick, Chevrolet, Oakland, Oldsmobile, Scripps-Booth motors. Adds pep to motor. Eliminates continual tappet adjustment. Dealers say it is the fastest selling accessory they ever saw.

Milwaukee, Wis.; Packard Motor Car Co., 35th street and Grand avenue; one-story garage and repair shop, 80x150; $30,000.

Concerns Engaged in Distribution of Automotive Equipment

The names published below were submitted through various sources, and from the viewpoint of many manufacturers of automotive equipment, supplies, accessories, etc., are listed as jobbers. It must be admitted, that from the standpoint of manufacturers generally there are great variances as applied to the term "jobber." However, as this list contains the names of concerns who are recognized by many manufacturers as jobbers, it is only reasonable to assume that all producers seeking the patronage of the trade will draw their conclusions from their own point of view as to what concerns are entitled to the distinction of being a jobber.

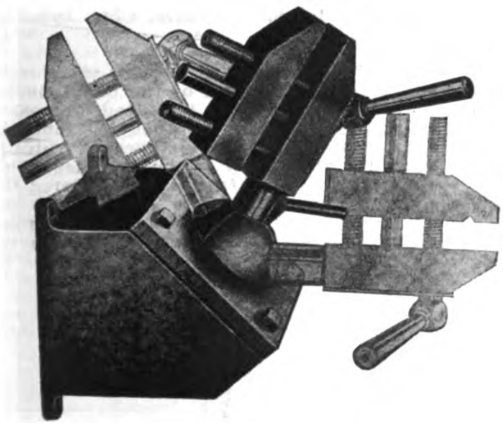
ACCESSORIES, EQUIPMENT AND TOOLS FOR THE GARAGE AND REPAIR SHOP

The Grip-Tite and Giant Handi-Vise Combination is a patented bench tool that appeals to repairers and mechanics in the service station and machine shop because of the many unusual uses for which it is adapted. The Grip-Tite may be fastened to the work bench and the Giant Handi-Vise, fitting the ball socket, allows the vise to be turned to any convenient position and locked while work is being performed. The Handi-Vise consists of two heavy jaws made of wrought steel, while the jaws, gears and screws are case hardened and finished. The jaws of the Handi-Vise are opened and closed by means of the center rod, which in turn operates the end screws through a train of gears enclosed in the jaw made integral with the vise support. A locking device is located at the end of the first screw, which prevents the screws from allowing the jaws to loosen when work is being held in them.

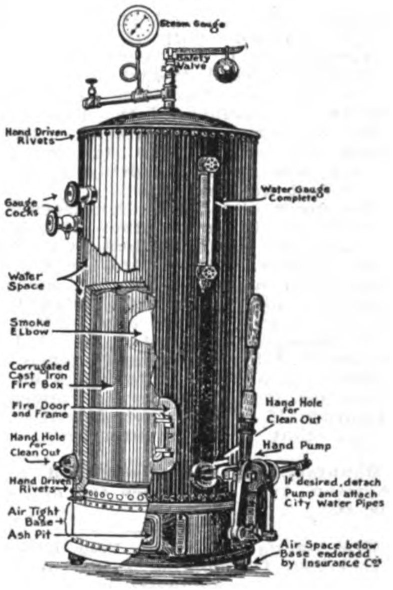


Many other useful and novel devices are manufactured by this manufacturer which fill admirably the needs of the repairer or mechanic in the service station and repair shop. Among these may be mentioned the Newman tail stock turret, Newman adjustable pull feed, Newman tool post turret, knurling tool, four-in-one changeable drill head and the Newman spot light bracket.

All tools made by this company show original design, are made of the best of materials obtainable and are accurate to a thousandth of an inch, it is stated. Tools of this type have a tendency to lessen the time required to perform a given operation, at the same time increasing the margin of safety of the mechanic or repairer using power machinery.

Manufactured by the Newman Manufacturing Co., Cincinnati, O. Prices and literature on request.

The Gate City Steam Generator is constructed from one piece of sheet steel with a cast iron head and corrugated fire box. The base is also cast iron and sheet steel and is raised from the floor as a protection against fire. There are no tubes to clog up with soot or burn out and leak. The fittings are the best that money can buy and the hand pump can be placed either on the right or left side, or it can be connected to city water. Each generator is provided with three hand-hole plates easily accessible for cleaning out purposes, which may be necessary from lime or other deposits from the water used.



It is stated that the chief point in favor of the Gates city generator lies in its steaming qualities due to the corrugated fire box and direct water contact with all fire exposed surfaces. Garages, service stations and all branches of the automotive trades will find this generator very satisfactory for heating and steaming purposes, the manufacturer states.

Manufactured by the Pechstein Iron Works, Keokuk, Ia. Prices and literature on request.

The Newson Tire Valve is a patented article which has been on the market for some time and offers features that should recommend it to the trade, chief among them being that it is leak proof, which the manufacturer guarantees even in the large sized pneumatic tires used on many of the heavy trucks. The plunger passes through the valve stem and is equipped at the lower end with a rubber gasket, held in place by a metal band crimped over a flange so that it cannot collect dust or get out of place. This rubber gasket rests on the valve seat, which is countersunk into the swaged bottom of the valve. The air pressure in the tube, together with the spring in the valve stem, draws up the plunger, sealing it air tight. As a further insurance to make it 100 per cent. leak proof the cap nut screws on to the top, locking the plunger.

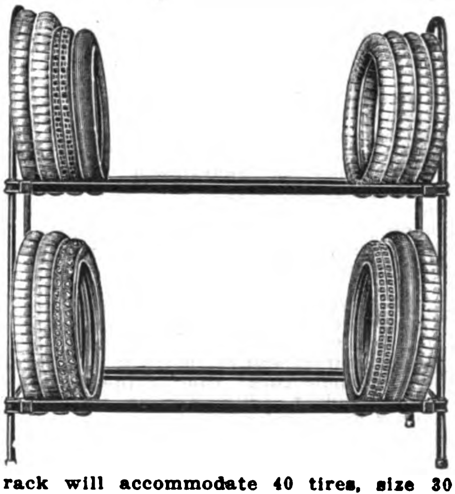
All parts of the valve are made of brass, plated and machined to S. A. E. standards. They are assembled in the tube in the same manner as the ordinary valve. Every valve, it is stated, is tested and carefully inspected before leaving the factory, thus insuring uniform quality and reliability.

SNAP LOX
DUST CAP
"IT JUST SNAPS ON"

FOR AUTO TIRE VALVES

Sold by the R. T. Sales Co., 3847 West Madison Street, Chicago, Ill. Prices and literature on request.

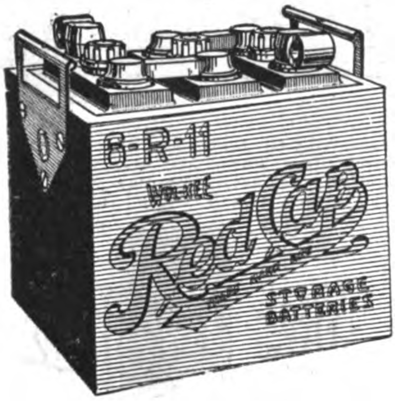
The Dow Stock and Display Rack for Automobile Tires, shown in the illustration, is especially designed and constructed to display automobile tires of all sizes in a very attractive manner. This rack will accommodate 40 tires, size 30 by 3½ inches, and larger tires in proportion to their sizes. The rack is made of steel tubing and can be set up by anyone without the aid of tools.



Manufactured by the Dow Wire and Iron Works, Louisville, Ky. Prices and literature on request.

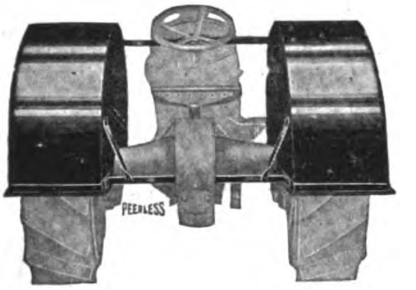
The Red Cap Storage Batteries are manufactured for replacement purposes where starting and lighting systems are used in passenger cars and trucks. It is stated that this battery has a longer life as compared to other batteries of similar price and that the batteries are built especially heavy to take care of the abnormal shocks to which batteries are subjected.

The manufacturer has gone into the details of compiling data for replacement literature and advertising matter which is claimed to be second to none. A generous advertising campaign has also been planned for the dealers handling this line, which is guaranteed to get business. There is a Red Cap dealer located in nearly every city throughout the country so it is possible to obtain batteries of this popular make without much effort.



Manufactured by the Wolke Lead Battery Co., Louisville, Ky. Prices and literature on request.

Peerless Tractor Fender. Many tractors when they come from the factory are not equipped with fenders and for this reason there is a wide demand for tractor fenders, which may be purchased separately. A fender especially adapted for use on the light weight tractor such as the Fordson, is now on the market. It is made of heavy gauge steel, finished in two coats of lustrous black enamel and furnished with the necessary irons and bolts to hold it firmly to the tractor. Such a fender is essential to the protection of the operator and engine and, furthermore, adds greatly to the appearance of the tractor.

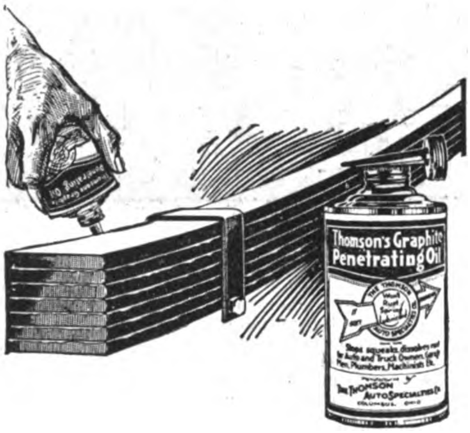


The Peerless guaranteed fender for Fordson tractors is one of the best and information regarding it will be forthcoming to all who address inquiries to **Department 8, Corcoran Manufacturing Co., Cincinnati, O.**

Thomson's Graphite Penetrating Oil is a new product which should appeal particularly to all motorists who desire maximum comfort and efficiency in the operation of their cars. One of the most annoying noises, while driving the car, is caused by squeaky springs, which are not only harrowing to the nerves, but are actually damaging to the springs. Rusty or gritty springs will wear out quickly; they cut hundreds of miles from the life of the tires and they will put a car into the second hand class long before its time.

It is well known that one of the best of all lubricants for springs is graphite, but applying graphite in the old way is mean, dirty work. The leaves must be wedged apart in some way to insert the graphite and, if the spring is rusted, it should be taken apart and each leaf polished, a long, disagreeable job.

Thomson's Graphite Penetrating Oil supplies the graphited lubricant easily and quickly. A few drops squirted on the edge of each leaf will rapidly work through the spring and in only a few minutes will come seeping through on the other side. This oil dissolves rust and it is claimed will clean springs as thoroughly as if the leaves were taken apart and polished. It carries pure graphite in solution, depositing it as a dry film on the surface of the leaves. The graphite lubricates perfectly, while the liquid element of the oil evaporates quickly, leaving a dry spring, which will not collect dirt and dust.



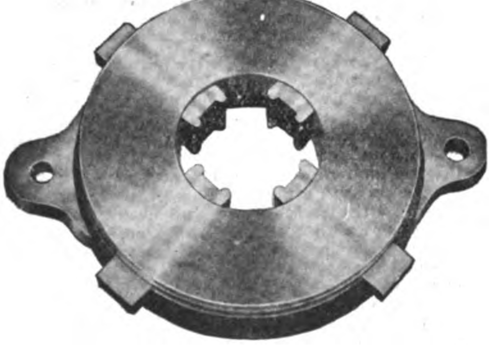
Thomson's Graphite Penetrating Oil
The Thomson Auto Specialties Co.
Stops squeaks, dissolves rust
for Auto and Truck Owners, Garage Men, Plumbers, Machinists Etc.
The Thomson Auto Specialties Co.
Columbus, Ohio

Thomson's Graphite Penetrating Oil may be put to many other uses around the garage. It will instantly release frozen brakes and equalize brake linings without the need of taking off wheels or heating joints. It is also stated that a few drops will release any bolt or pin, even when it has rusted so hard that otherwise it is impossible to move it. It is ideal for shackle bolts and king pins.

The oil is sold under a money-back guarantee if it does not do all of the things that the manufacturer claims for it.

Manufactured and distributed by the Thomson Auto Specialties Co. of Columbus, O.

Messenger's Universal Vise is a universal tool for holding round or square parts of the automobile when work is being done upon them. It is the invention of Jack Messenger, a practical automobile mechanic of Des Moines, Ia., and embodies several features which place it in a class by itself, it is stated. The Universal vise has four movable jaws that are adjusted by a revolving handle, two and one-half turns of which will move the jaws from the minimum capacity of one-quarter of an inch to the maximum of 4½ inches or the reverse.

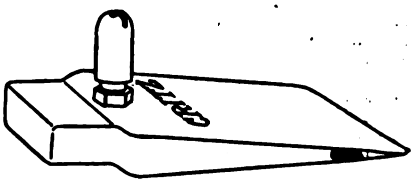


Pistons, gears, differential housings, Ford transmission drums, wheels, wheel hubs and axles, crank, cam and drive shafts are some of the parts for which this vise is especially adapted. It also makes an excellent drill press vise.

The Universal vise is furnished with two sets of jaws, one for holding enameled and highly finished parts without scratching or marring; another for ordinary rough work. The vise weighs only 50 pounds, is three inches high and occupies a bench space of only 12 inches in diameter.

Manufactured by the Auto Metal Parts Co., 246-6-8 East Locust Street, Des Moines, Ia. Price, $40, complete, with full instructions for use.

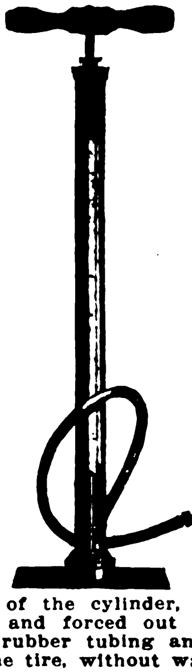
The Critz Spring Lubricator consists of a wedge-shaped attachment to the Critz lubricating system with which it is possible to force grease or oil between the spring leaves after the leaves have been separated with a jack. The oiler is wedge shaped, is made of drop forged steel and tempered. When the oiler is in place the lubricator is attached to the nipple and the lubricant forced between the leaves.



CRITZ SPRING LUBRICATOR

Manufactured by the Critz Manufacturing Co., Inc., Santa Maria, Cal. Price on request.

The Fapco Force Air Pump, while manufactured in the form of the usual single-cylinder air pump, it is stated, yet offers many new features not usually found in air force pumps of this type. A valve is provided at the top of the cylinder which cuts off the air after it has entered the cylinder, preventing its escape into the atmosphere, while the plunger, on its upward stroke, allows it to pass into the lower part of the cylinder, where it is compressed and forced out through the connecting rubber tubing and valve fitting into the tire, without waste.

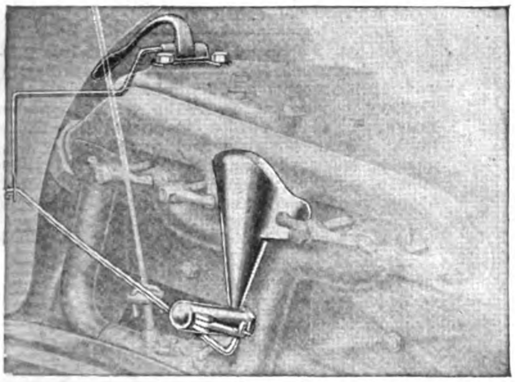


It is claimed that the Fapco force air pump will pump a tire to the desired pressure quickly and without great effort, and is so simple that a child would find no difficulty in operating it. Nothing but high grade materials enter into its construction.

Manufactured by the Force Air Pump Co., Jefferson, Ia. Price, $5.

The Footair Gas Saver and Accelerator for Ford Cars is an attachment which is screwed into a hole drilled and threaded in the engine intake manifold and is connected through suitable linkage to an accelerator pedal located on the floor boards under the dash. A funnel and fastening are also provided which allow the entrance of fresh air to the Footair attachment, while a valve governs the flow of air into the intake manifold.

The manufacturer states that when the car is running on a good road at 20 miles an hour, stepping on the accelerator and opening the air valve will cause a Ford to immediately increase its speed to between 25 and 30 miles an hour without changing the throttle position on the quadrant, showing that the admission of air alone causes increased speed. It is further stated that the device will naturally save gasoline, causing the engine to show greater mileage for the amount of fuel consumed. It is easily attached in a few minutes time and becomes a permanent part of the engine.



Manufactured by the American Automotive Accessories Co., Baltimore & Ohio Railroad and Blue Rock Street, Cincinnati, O. Prices, ready to attach, $6.

Ebonite is the trade name adopted for a line of lubricants stated to be specially adapted for use in passenger car, truck and tractor transmissions, timing gears and differentials. The manufacturer states that by its own private process there is retained in Ebonite every atom of lubricating value and quality found in petroleum, and that nothing, such as graphite, cork, filler or other foreign substance, is added to it in any form.

BAYERSON OIL WORKS
EBONITE
FOR TRANSMISSIONS
ERIE PENNSYLVANIA

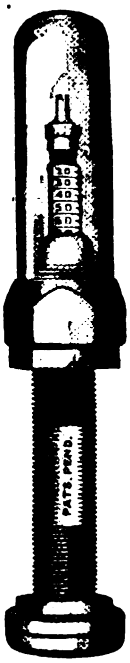
Ebonite is said to be a distillate residue of the highest grade petroleum pure oil; nothing more. Ebonite, it is further stated, spreads a film coating or resilient cushion over and between the gear mesh, which stays there and prevents metal to metal contact in a surprising degree, with corresponding reduction of noise and wear on the parts in play.

This lubricant is specially recommended for use in timing gears, transmissions and differentials of old cars where the parts have become worn and noisy. One filling of a tight transmission case, it is claimed, is sufficient for an entire season.

Ebonite is guaranteed to be exactly as represented. Instructions for its use accompany each barrel or container.

Manufactured by Bayson Oil Works, Erie, Pa. Prices and literature on request.

The Tirometer Valve Gauge is simply constructed, while the working parts are very few, consisting merely of an indicator mounted on a piano wire spring. A rubber valve passes through this spiral spring and connects with the valve itself. The pressure of the air in the tire expands this spring to the proper point on the gauge and is stated to be accurate up to within one pound Each gauge is tested and one pound variation is the maximum allowed.

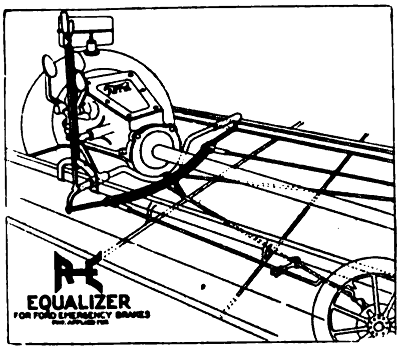


The gauge is covered by a transparent dust cap made of flint glass, which is tested at a pressure of 5000 pounds. The glass is especially thick and will, it is claimed, withstand all the shocks to which it may possibly be subjected. All metal parts are brass, nickel plated.

Manufactured by the Tirometer Corporation of America, Charleston, W. Va. Prices and literature on request.

The Roose Emergency Brake Equalizer for Ford Cars is an equalizing bar which fits across the frame side members and to which the emergency brake rods are attached.

The Emergency brake lever is attached to the equalizer at each end and causes, the manufacturer states, the brake to be applied to the rear wheels with equal pressure. Three highly tempered coiled springs prevent the equalizer from becoming noisy and also act to release instantly when pressure is removed from the lever.

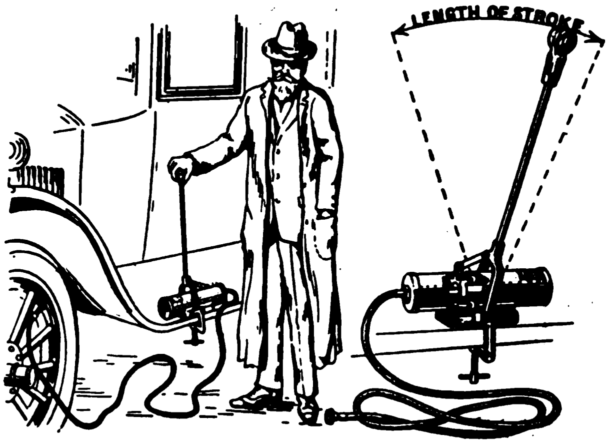


The R-E Equalizer is guaranteed by the manufacturer for the life of the car to which it is attached and, it is claimed, may be installed in 10 minutes time by any one without the use of tools.

Manufactured by the Roose Manufacturing Co., 827-33 West Main Street, Louisville, Ky. Price, $1.50.

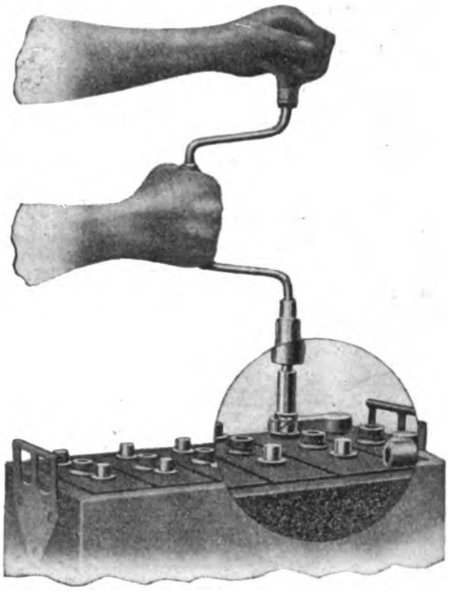
The Durabilt Roller Bearing Tire Pump is stated to be the result of more than two years of experimenting and testing under the most severe conditions and is designed for motorists who demand the best that money can buy.

The Durabilt roller bearing tire pump is attached to the running board of the car by clamps and is operated by a vertical handle, easily worked from a standing position and may be readily manipulated by a woman. The pump is double acting or duplex and works at all times, it is stated, against only half the pressure of the tire. It is small in size and can easily be stored in a tool box or under the car seat.



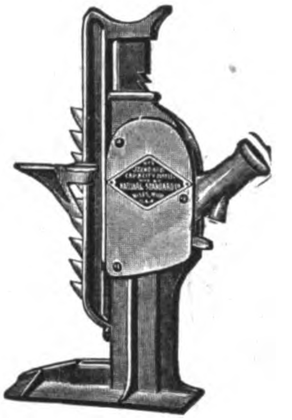
Manufactured by Winstead Hardware Manufacturing Co., Winstead, Conn. Price on request.

The Storage Battery Link Cutter is a device that may be used with an ordinary brace for cutting the lead from storage battery posts to facilitate the removal of the connecting straps or links. It is especially designed for this type of work and service stations catering to battery trade should find it very useful. It is patented and is so constructed as to remove just the proper amount of metal so that the link can be easily taken off without injuring the post or the surrounding metal of the link. The posts are left in practically the same condition in which they were when assembled by the manufacturer, it is stated. Links removed in this manner, it is claimed, allow the repairer enough space to remove the plates easily from the cells.

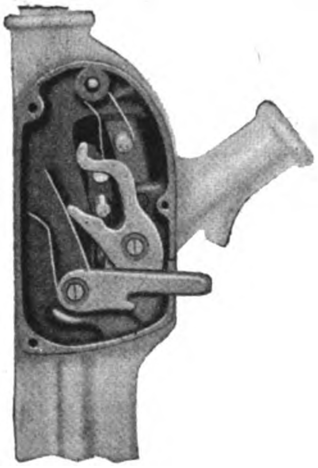


Manufactured by the Auto Electric Sales Co., 2540 Hennepin Avenue, Minneapolis, Minn. Price $5, shipped either C. O. D. or cash with order, as desired.

Standard Automobile and Truck Jacks are manufactured for a discriminating trade which wants the best regardless of price. The manufacturer of the Standard line of jacks states that they are made as simple as it is possible to build a reliable jack and that as few parts are employed as is consistent with good engineering principles.



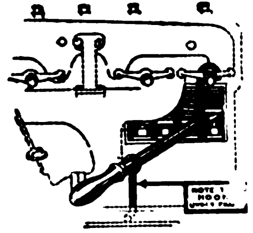
Flat springs are used to operate the levers instead of coil springs, and that one lever is used, instead of two or three, in the operating mechanism, which makes a construction which is not liable to get out of order easily.



All jacks are guaranteed against defective workmanship for a period of one year from date of purchase and will be repaired or replaced free of charge at the factory.

Manufactured by the National Standard Co., Niles, Mich. Prices on request. Jobber and dealer trade solicited.

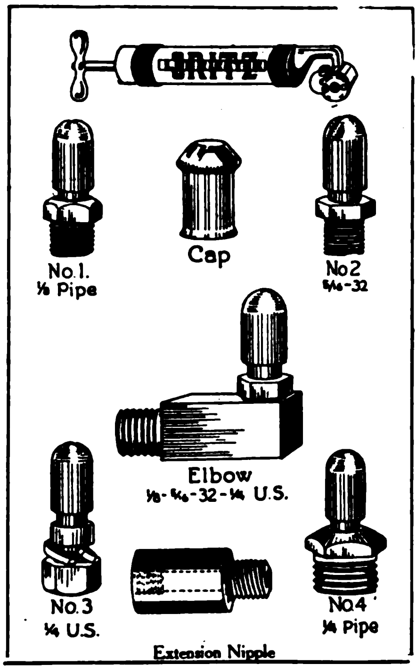
The King Valve Lifter for Ford Engine Valves consists of a special hook which fits over the manifold bolt, while the lifter proper is a rod provided with a forked end and a wooden handle. It is stated that with this device it is possible to remove all valve pins in one minute and replace them in 2½ minutes without removing the carburetor or hot air manifold. The exceptionally thin lifting end of the valve lifter provided with a special recess makes it easy to insert under the spring to replace pin without slipping.



Manufactured by the King Pressed Steel & Manufacturing Co., Newton, Mass. Price $1.

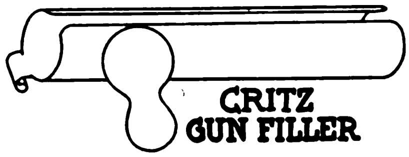
The Critz Lubricating System consists of a lubricator, the necessary nipples which take the place of the regular grease and oil cups, elbows, nipple extensions and spring metal dust cups.

It is stated that the lubricator used in this system is capable of producing a pressure of 500 pounds, which will be found sufficient to force the grease where needed; that 10 to 15 minutes is all the time required to thoroughly lubricate the car with this system, thus saving a considerable amount of time.



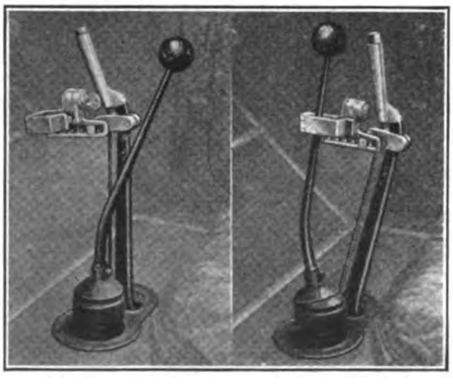
It is claimed that this lubricator will handle oil as well as grease and deliver it where needed without danger of having the oil spill out of the lubricator.

A special filler for the lubricator is provided which enables the operator to replenish the grease cup without inserting the lubricator in the grease. It is claimed that with this system the operator is saved from soiling his clothes or hands while greasing the car.



Manufactured by the Critz Manufacturing Co., Inc., Santa Maria, Cal. Prices and literature on request.

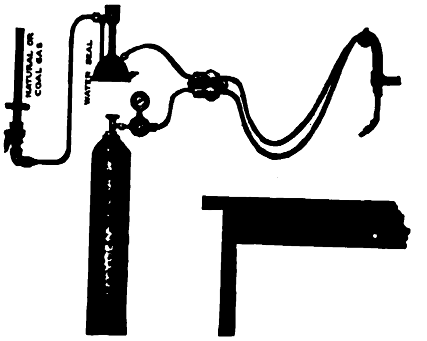
Lucia Gearshift and Emergency Brake Lock is a new device for cars equipped with a hand emergency brake and gearshift lever located in the center of the front compartment of the car. The lock is attached permanently to the emergency brake lever and is adjustable to fit the gearshift lever. In stopping the car the gearshift lever is simply thrown into reverse and the lock snapped shut. It is unlocked with a special Corbin key. The lock is said to conform with the usual fire regulations allowing the car to be parked and locked in neutral in fire zones.



It is stated that the lock cannot be easily sawed through, as it is constructed of case hardened metal, while the mechanism is four-tumbler Corbin.

Manufactured by the Lucia Manufacturing Co., Inc., 1123 Broadway, New York City. Price on request.

The No. 20 Imperial Lead Burning Outfit is designed for use with illuminating gas and oxygen and consists of one type F oxygen regulating valve with 15-pound pressure gauge; one Imperial hydraulic back pressure valve and purifier for coal gas or natural gas; 35 feet of 3/16-inch special rubber hose; one type "L" bench block with two needle valves; one type "L"-2 Imperial lead burning torch with tips No. 3, 4, 5 and 6; one wrench; all packed in an individual carton, including full instructions for use.

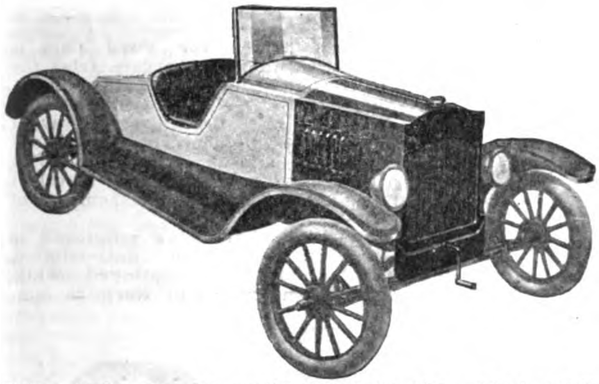


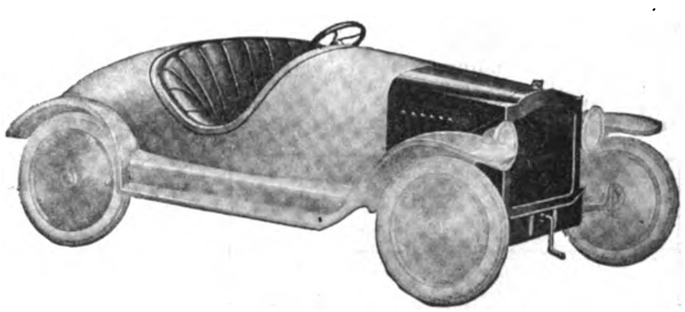
Manufactured by the Imperial Brass Manufacturing Co., 1200 Racine Avenue, Chicago, Ill. Prices and literature on request.

Duplex Foldables, with the side-stay feature, include many useful articles for the motorist in such a form that they are easily folded or collapsed and carried in small space in the car. The line includes such articles as water pail, folding wash basin, toilet kit and wall pocket lunch baskets, folding tunnels, water buckets, fishing creels and minnow buckets. All articles are made of heavy canvas, water proofed and fitted with metal parts of spring steel, which are guaranteed to be rust proof.

Manufactured by the Planet Co., Westfield, Mass. Prices and literature on application.

Dunham Speed Bodies for Fords are made in two styles, the Symphony, a sport roadster type, and the Aristocrat, a roadster type equipped with an aeroplane top.





Either body can be easily fitted to the Ford chassis and class and quality are added to each Ford so equipped.

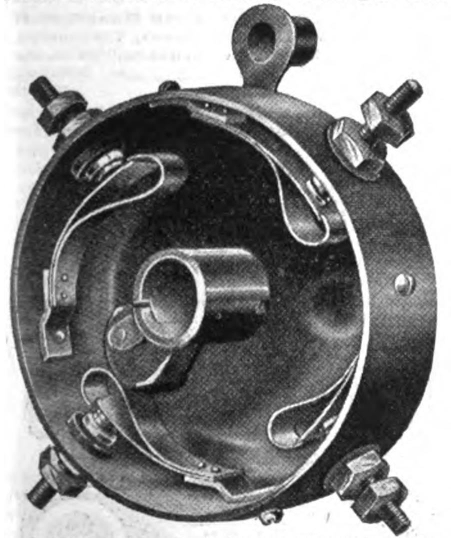
The body is constructed of steel, 22-gauge stock throughout, while the sills are two by six inches, with one-inch floor boards. All bodies are highly finished, painted standard red and striped with black, while the shell and hood are painted black to match the fenders and baked as a protection against engine heat.

The upholstery covering is Dupont's Fabrikoid, a pliable, handsome leather substitute, and done in French-pleat style. Cushions are the over-stuffed type of unusual thickness, with five rows of oil-tempered coiled springs. The outfit also includes a new shell for the radiator.

Manufactured by the Thomas Dunham Co., Aurora, Ill. Prices and literature on request.

The New Parker Timer for Ford Engines has recently been placed on the market after exhaustive tests covering many thousands of miles over all kinds of roads and under all sorts of conditions. The manufacturer states that this timer, once installed, will easily outlast the car; that on account of its construction dust and oil cannot enter and that the device is intended to operate without oil of any kind.

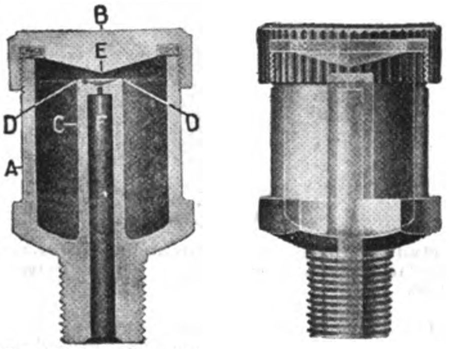
A sliding block of fiber is fitted to the camshaft collar which, in operation, strikes against the larger flat spring when making the contact. A shorter flat spring, equipped with a point, makes contact with that of the terminal post of the timer case. The manufacturer states that this construction gives an absolute positive contact at exactly the right time and that it is electrically correct in detail. The timer case is made from a one-piece stamping and the dust and oil proof collar fits the case at the rear.



Manufactured by the Automotive Specialty Sales Co., 212 Lane Street, Dallas, Tex., and 620 Consumers' building, Chicago, Ill. Price to the consumer, $3.75.

The Blooming Cup is a trade name given by the manufacturer to a new line of oil cups which, it is claimed, are being used quite extensively by the manufacturers of passenger cars and trucks.

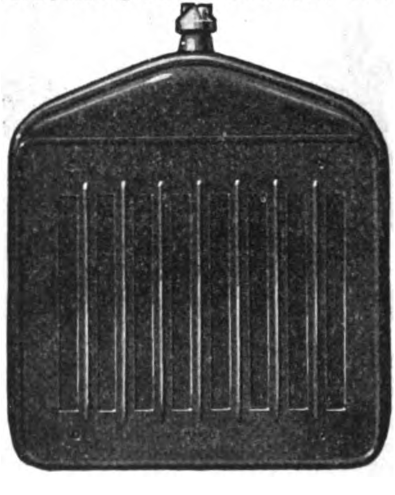
The action of the cups is stated to be quite different from those generally used, as the oil is conveyed into the bearing principally by the motion of the car. The cup is filled full of oil, the excess flowing through the tube which extends nearly to the top of the cup and is provided with a small opening in the upper end through which the oil passes. This serves to flush the bearing when the cup is filled, the excess oil seeking the level of the top of the tube. The cap is fitted and screwed down, and after this the action of the vehicle on the road causes the oil to move around, a portion catching on to the inverted cone on the under side of the cap from which it drips into the opening of the tube and passes to the bearings. It is stated that oil is supplied only when the vehicle is in motion.



Different styles of fittings are supplied which adapt the oiler to any part of the vehicle requiring lubrication.

Manufactured by Bloom Flusher Co., Tiffin, O. Prices and literature on request.

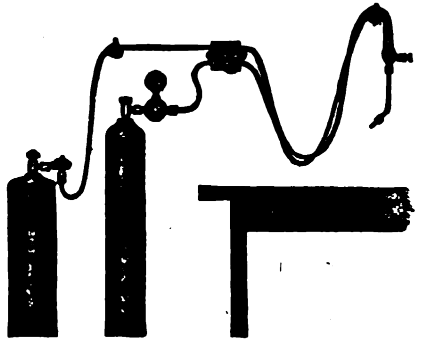
The New Amco Shutter for Ford Cars has been designed as an all-weather device, which can be applied to the radiator of Ford passenger cars and trucks. Twelve different adjustments are provided, which allow the front of the radiator to remain entirely closed or partially closed as desired, and, it is stated, the shutter can be adjusted to any degree of temperature. By the use of the Amco shutter heat is retained under the hood during cold weather and the engine, it is claimed, starts more easily and operates to better advantage. After a few moments driving the shutter can be partially opened, allowing the colder air to enter. It is made of the best of material throughout.

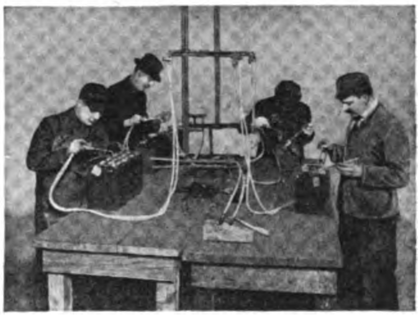


Manufactured by the American Metals Corporation, Indianapolis, Ind. Prices on request. Dealers and jobbers interested should write for special proposition.

Imperial Lead Burning Equipment is used principally for storage battery work, light brazing and welding, repairing radiators, melting platinum and other light work where an intense heat is not required.

With this equipment it is possible to get a wide range of flame from a needle point suitable for burning the smallest terminal to a large flare for finishing work, the manufacturer states. All the extra equipment required is a tank of compressed oxygen of a capacity of 100 cubic feet, dissolved acetylene gas in cylinders of 40 to 100 cubic feet capacity, and hydrogen gas in cylinders of 100 foot capacity, all of which can be obtained from supply stations located in various centers throughout the country.

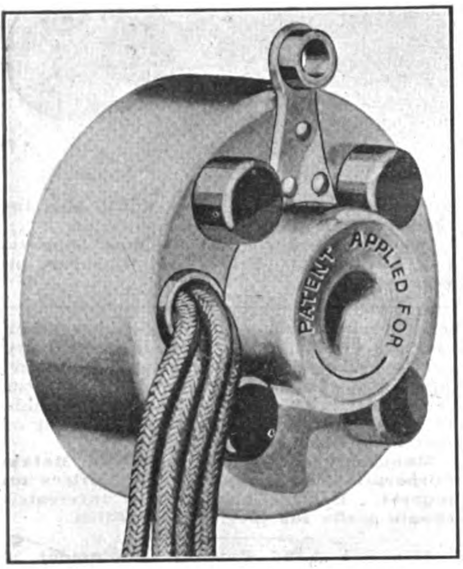




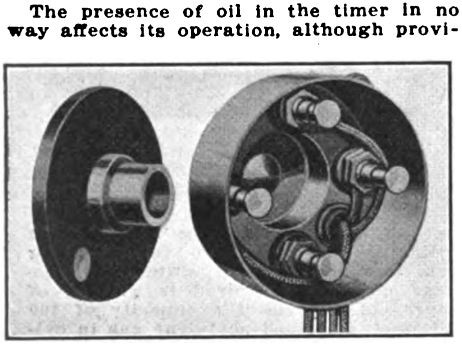
Manufactured by the Imperial Brass Manufacturing Co., 1200 Racine Avenue, Chicago, Ill. Prices and literature on request.

The Scofield Timer for Ford Cars. A distinguishing feature of this timer is the fact that all electrical connections are inside, no terminals being exposed, thus elminating any danger of short circuit by reason of accumulated oil and dirt, and removing the possibility of terminal connections working loose from vibration.

The terminal binding posts are of rigid and substantial construction and are provided with springs which keep the terminal in close contact with the rotating member. In fact, this timer provides for a quarter inch of end play in the camshaft and an eighth inch of side play. The rotating member carries an oversize, hardened steel contact, which is set into a fiber disc, and by this construction the effect of centrifugal force is entirely avoided, with wear reduced to the minimum, as the contact area "wipes" across the heads of the posts with only sufficient pressure to insure a perfect electrical contact.



The presence of oil in the timer in no way affects its operation, although provision is made for draining off excess oil that may accumulate. The rotating member, in fact every detail of construction, conforms to the standard employed in high grade magnetos.



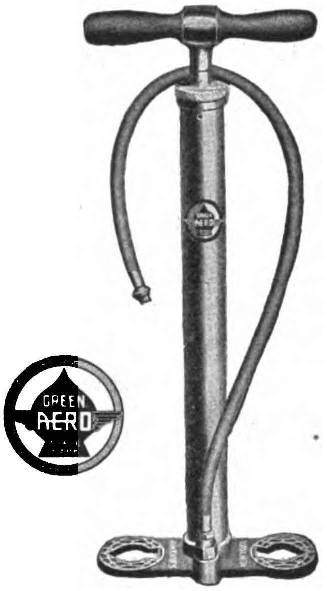
This timer can be easily and quickly installed. No special fittings are required and as wiring is furnished already connected, it is only necessary to bolt the rotator to the camshaft and attach the timer shell in the usual way.

Manufactured by the Schofield Manufacturing Co., Cleveland, O. Price, complete, with wires attached, $4. Usual discounts to the trade.

The "Green Aero" Tire Pump is manufactured especially for a discriminating trade which demands the best that money is able to purchase in hand pumps. The pump embodies many special features, it is stated, not found in the usual run of hand pumps.

The cylinder of the pump is made of the highest quality cold-rolled welded steel, while the cap and base are of brass and best quality pure gray iron respectively.

The hose is of tough durable rubber, duck pump tubing, five-ply, 27 inches in length, built for excessive abuse and pliability. Other parts of the pump are made of the best grades of material obtainable and are built in a workmanlike manner. The pump is finished in green enamel, while the handle forms a convenient grip for the hands and is finished with a high gloss enamel.



Manufactured by S. Blickman, 190 Lafayette Street, New York City. Price, $4.50.

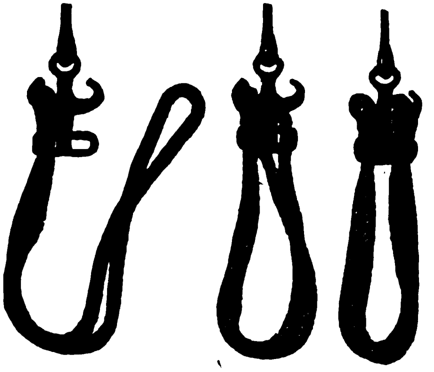
The Auto Towing Cable consists of a steel wire rope 25 feet long, provided with loops at the ends to which is attached a patented double hook fastener. Manila rope loops are provided for attaching to the car, which are held in position by a cast metal loop when attached to the hooks. When the rope ends wear out they can be easily removed. It is stated that the Auto Towing Cable is of sufficient size and strength to handle all operations in connection with towing passenger cars and medium weight trucks. The manufacturer issues a booklet which illustrates many suggestive uses for the Auto Towing Cable, and shows how the different hitches may be made to get the stalled car safely back on to the road again.

American Steel & Wire

Auto Towing Cable

FOR PASSENGER CAR SEREVIC

Patent applied for



Manila Loop attached. Always remains in Hook. Can be detached when loop wears out.

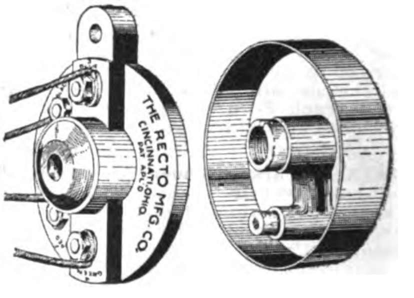
Other end being inserted. Large ring provided to easily insert loop, tho water and sand soaked.

End of Loop hooked—ready for towing. Quadruple strength — firmly attached. No loosening and dropping the tow.

Manufactured by the American Steel & Wire Co., 208 South La Salle Street, Chicago, Ill., and 30 Church Street, New York City. Prices and literature on application.

The Recto Timer for Ford Cars is stated to be a radical departure from the usual timer construction for this engine. The timer case is made of insulating material and has been designed to prevent the timer wires, which are held with lock washers, from coming in contact with each other, the fan belt, or any metal, it is stated, preventing short circuits and grounding.

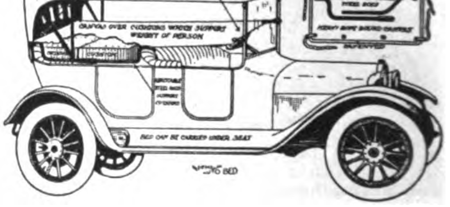
Instead of a roller being employed to make contact, a "Corban" anti-friction, non-sparking brush is employed, while the track is constructed of Formica laminated material. The body of the timer is made of Bakerlite and insulating material to which the wires are attached by suitable connectors.



It is stated that the timer needs no oil, and that the flat inside surface can be cleaned and smoothed off with sandpaper without removing the wires. The "Corban" brush, it is claimed, pushes grease and dirt before it, making positive contact and wipes away the spark, functioning similar to a brush on an electric generator.

Manufactured by the Recto Manufacturing Co., 23 West Third Street, Cincinnati, O. Price, $3.50; new brushes, 30 cents each.

The McMillin Patent Auto Bed weighs only 16 pounds and folds into a compact bundle about four inches in diameter and two feet long, small enough to be carried under the back seat when not in use. As shown in the cut, the outfit consists of two adjustable iron rods or pipes, which fit between the backs of the front and rear seats, one at each side, supporting the cushions of the car. The heavy canvas, which forms the bed is rope bound and provided with brass eyes, fitted with short lengths of rope, which are fastened at the back to the top hangers and at the front to the windshield as shown or to the side lamp brackets. Ford and Chevrolet cars require a somewhat different arrangement as the seat cushions will not fit between the front and rear seats, but overhang the top of the front seat. In this case the head of the bed is supported by long straps from the rear bow of the car. It is stated that this form of bed is very much in demand by motorists who make long tours and find it desirable to camp by the wayside nights.

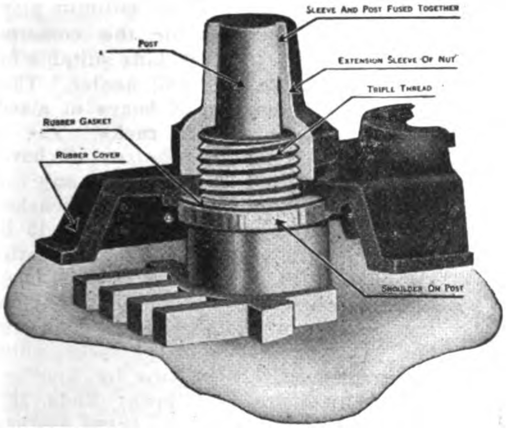


TOP MAY BE EITHER UP OR DOWN
NO BOLTS OR SCREWS - SIMPLY STRAP CANVAS TO SIDE BRACKETS AND WINDSHIELD
ALL THERE IS TO IT
CANVAS OVER CUSHIONS WHICH SUPPORT WEIGHT OF PERSON
BED CAN BE CARRIED UNDER SEAT

Manufactured by the MacKenzie-Waterhouse Co., Inc., 717 East Pike Street, Seattle, Wash. Price for Fords and other five-passenger cars, $20; seven-passenger cars, $22.50.

The Latest Improvement on Cincinnati Batteries consists of the locking nut, which is first screwed down on the post clamping the cover firmly against the rubber gasket inserted on the shoulder of the post. This type of fastening, it is stated, absolutely prevents the nut loosening from vibration, but at the same time is readily removable in case of repairs. Seepage of acid from the cells is thus prevented, while it still retains all the advantages of having the sleeve molded to the cell, without the disadvantages of this type of construction.

A process has also been perfected whereby dry separators can be used in assembling the cell plates which permits the manufacturer to send the batteries to his distributors in larger quantities, it is claimed, enabling the dealer to carry a larger stock on hand without fear of damage to the batteries. When the battery is finally delivered to the customer, it is claimed that it is in as freshly a charged state as though it had just been shipped from the factory, resulting in a much longer life to the battery and a more satisfied customer.



Manufactured by the Cincinnati Storage Battery Co., Morman Avenue, near Madison road, Cincinnati, O. Prices on request.

The United States Automobile Oil Gauges operate on the Bourdon tube principle and are made in two general types—one with a brass case and the other with a pressed steel case, with nickel plated ring. These gauges are equipped with independent, non-corrosive movements mounted direct on the gauge socket. It is stated that they cannot be thrown out of adjustment as the gauge is being screwed into position. The teeth in the segments and pinions are cut on special precision machinery.

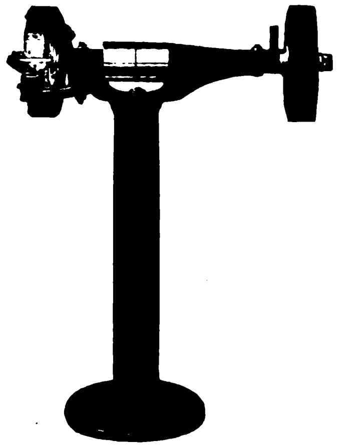
U.S. GAUGE CO N.Y.

United States gauges, on account of the care in their construction, are claimed to be extremely accurate and are being utilized by many of the larger users of this type of automotive equipment, as they are considered, after many severe tests, to be very reliable.

Manufactured by the United States Gauge Co., 37 Liberty Street, New York City. Prices and literature on request.

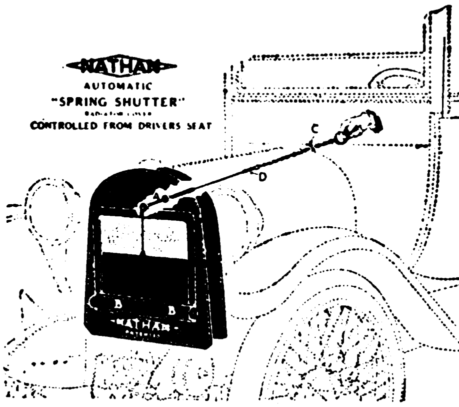
The Vulcanizers' Special Grinding and Buffing Machine, No. V-5, is a very practical machine of light weight and low price designed especially for tire repair and general repair work. The extended bearing, which is a part of the machine proper, supports the spindle so as to prevent vibration, and at the same time allows an unusually long distance between the wheels, a point which appeals to tire repairers, as it permits the cleaning and roughening of the larger size tires without coming in contact with the stand or wheel at the opposite end of the shafts. The machine is regularly furnished with tight and loose pulleys, but can be supplied with tight pulley if desired. It is equipped with guard and tool rest for grinding and includes guard for buffing if desired.



Manufactured by the Clisbe Brothers Manufacturing Co., Plymouth, Ind. Price on application.

The Nathan Automatic Spring Shutter Radiator Cover has been designed to be used on the radiator of any car during cold weather, and it is claimed that with them it is possible to positively regulate the temperature of the cooling medium automatically from the driver's seat.

The device consists of a Nathan cover which fits over the radiator shell at the sides and partially covers the front. In the open space at the front near the bottom, is fitted a roll curtain, which is fastened to the shell at the bottom. A cord passes upward from the center bar of the curtain, through a flexible tube between the radiator fins or sections, and over the top of engine to a hole in the dash. On the driver's side of the dash is a hook conveniently placed, over which the pull cord or chain is fastened after the curtain has been raised to the desired height. It is stated that the curtain can be adjusted equally as well by the driver, when the car is in motion, by simply loosening the chain from the hook and dropping the curtain to the desired point.



The shutter is guaranteed as to material and workmanship and should any part prove defective the company will replace it free of charge.

Manufactured by the Nathan Novelty Manufacturing Co., 55 Fifth Avenue, corner 12th Street, New York City. Priced according to the car for which it is wanted. Literature and prices on request.

The Williams "Agrippa" Adjustable Boring Tool Posts for Multiple Bars is furnished with either sleeve or plain bar, one each 45 degree and 90 degree cutter and hardened wrenches. Each post accommodates a wide range of bars; commercial sizes of bar steel are adaptable for either bars or cutters without machining, it is stated.

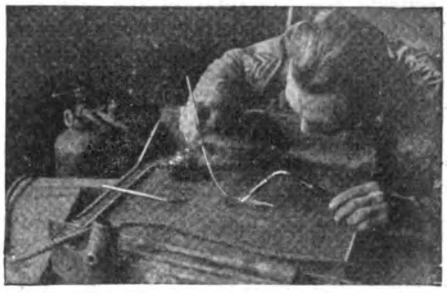
The height of the bar can be quickly and easily changed by means of the knurled ring at the bottom, which will raise or lower the base to suit the conditions. The posts, rings and swivels are made from a carefully selected grade of tough, strong steel. The posts are subjected, after forging, to a refining process, or heat treatment, which greatly increases their stiffness and strength, also reducing the liability of springing.

The screws, threaded United States standard, are made of a special grade of steel, hardened and tempered.

Manufactured by J. H. Williams & Co., Brooklyn and Buffalo, N. Y. Prices and literature on application.

The Washburn Torch has been designed for repairing storage batteries, in fitting terminals, repairing radiators, aluminum welding, brazing, soldering, etc. Other methods have been devised and patented for these purposes, but the Washburn torch manufacturer states that this device has many features that make it a decided improvement over other methods.

The Washburn torch consists of a compound burner and uses a very large proportion of compressed air in mixture with a small portion of acetylene gas (Prest-O-Lite), consuming about 11 times more air than gas by weight. The flame of the torch is very intense, is easily manipulated and, in appearance, is needlelike. This feature directs the heat at a well localized point and consequently protects the surrounding portions of the work. In lead burning operations this feature is very desirable as well, as when soldering in close quarters and where it is not desirable to heat the surrounding surfaces.



The Washburn torch has received specially favorable comment from Perdue university, upon which the manufacturer bases many claims.

Manufactured by the Washburn Burner Corporation, Kokomo, Ind. Prices and literature on request.

Desirability of Systematizing the Stock Room

MODERN good practise demands that all departments of a business be managed efficiently if the establishment as a whole is to operate with the least overhead expense and the greatest profit. Much has been said, and justly so, about the value of show rooms and how to develop business along that line, but not so much attention has been paid to the back end of the store or shop. This part of the business needs careful supervision, especially in these times when the items of expense for labor, materials and equipment are so large. Not only does the stock on hand itself represent money, but its proper arrangement, so that it is readily accessible to workmen or salesmen at a minute's notice when wanted, also means much in the saving of time and unnecessary work.

It is also a desirable factor that, while enough stock be carried to supply all ordinary demands with a proper surplus to guard against inconvenience in an emergency, no great amount of capital be tied up in "dead" stock or in overstocking in any particular line.

Some Specimens of Labels Supplied by the Haddon Bin Label Co., Haddon Heights, N. J.: 1, Perpetual Inventory Label on Which Record Can Also Be Kept of Amount Used or Sold in a Given Time; 2, Metal Label Holder Containing Card with Number of Part; 3, Cut of Part May Be Cut Out of Catalogue and Pasted on Label; 4, Shows Card for Fastening on Edge of Shelf Directly Above or Below Article.

The place of business of the accessory dealer or repair man in some measure reflects the character of the owner. A well-arranged and well-planned store or shop, even if the equipment for taking care of the stock be simple and inexpensive, may be, generally speaking, considered a correct index of the business-like mind and habits of its owner. Proper provision for storage will enable the owner to carry a large variety of stock in small quantities and within a limited area, so that the total investment will be as small as possible, except when a dealer may find it advantageous to buy ahead in order to forestall a rise in price.

The building of racks and stock bins is a comparatively simple matter. While it is, of course, possible to obtain ready-made bins or units of metal, for the early stages of the stock room wooden bins are much to be preferred. They should be low enough, if space permits, so they can be easily reached without the need of a step ladder, and the arrangement should be of the unit or sectional type, whether of wood or other material, so as to admit of the addition of units or sections as need demands without the disarrangement of the existing system.

There should be a definite space, shelf, bin, box location or position for each kind of material, and they should be marked and indexed so that there will never be a moment's doubt as to just where an article is to be placed or found.

In equipping or furnishing a stock room, the bins can be built against the walls where only a small amount of stock is carried, but where the business has increased or the nature of the articles carried demands more space it may be necessary to have a number of sections and aisles between them, the bins being placed back to back, so that two sets of bins open in one aisle. As light is an important factor, it is a good plan, where partitions are necessary, to make these of wire screening.

The modern method, as stated before, is to build the bins in sectional units on the same plan as a sectional book case or filing cabinet, and they can be arranged in any convenient size, height or width to fit any particular location. Sectional bins are made in convenient sizes to suit any particular business. Some make the units three to four feet long, 12 inches deep and 10 inches high for one row of bins, or 20 inches high for two rows of bins in the one unit. Partitions are made six, eight, 10, 12 or 18 inches apart to accommodate each class of material.

For heavy fittings, seven-eighth inch planed material should be used, while for the lighter articles the sectional units can be made of strong half-inch lumber. As wide boards, such as 12-inch, are very expensive, it is more economical to use two pieces of lumber, each six inches wide, to make a 12-inch box. One of the most inexpensive materials recommended for this class of work is what is known as sheathing boards, which are one by eight-inch North Carolina pine, 14 feet long, and planed only on one side. Lumber planed on four sides costs about twice as much.

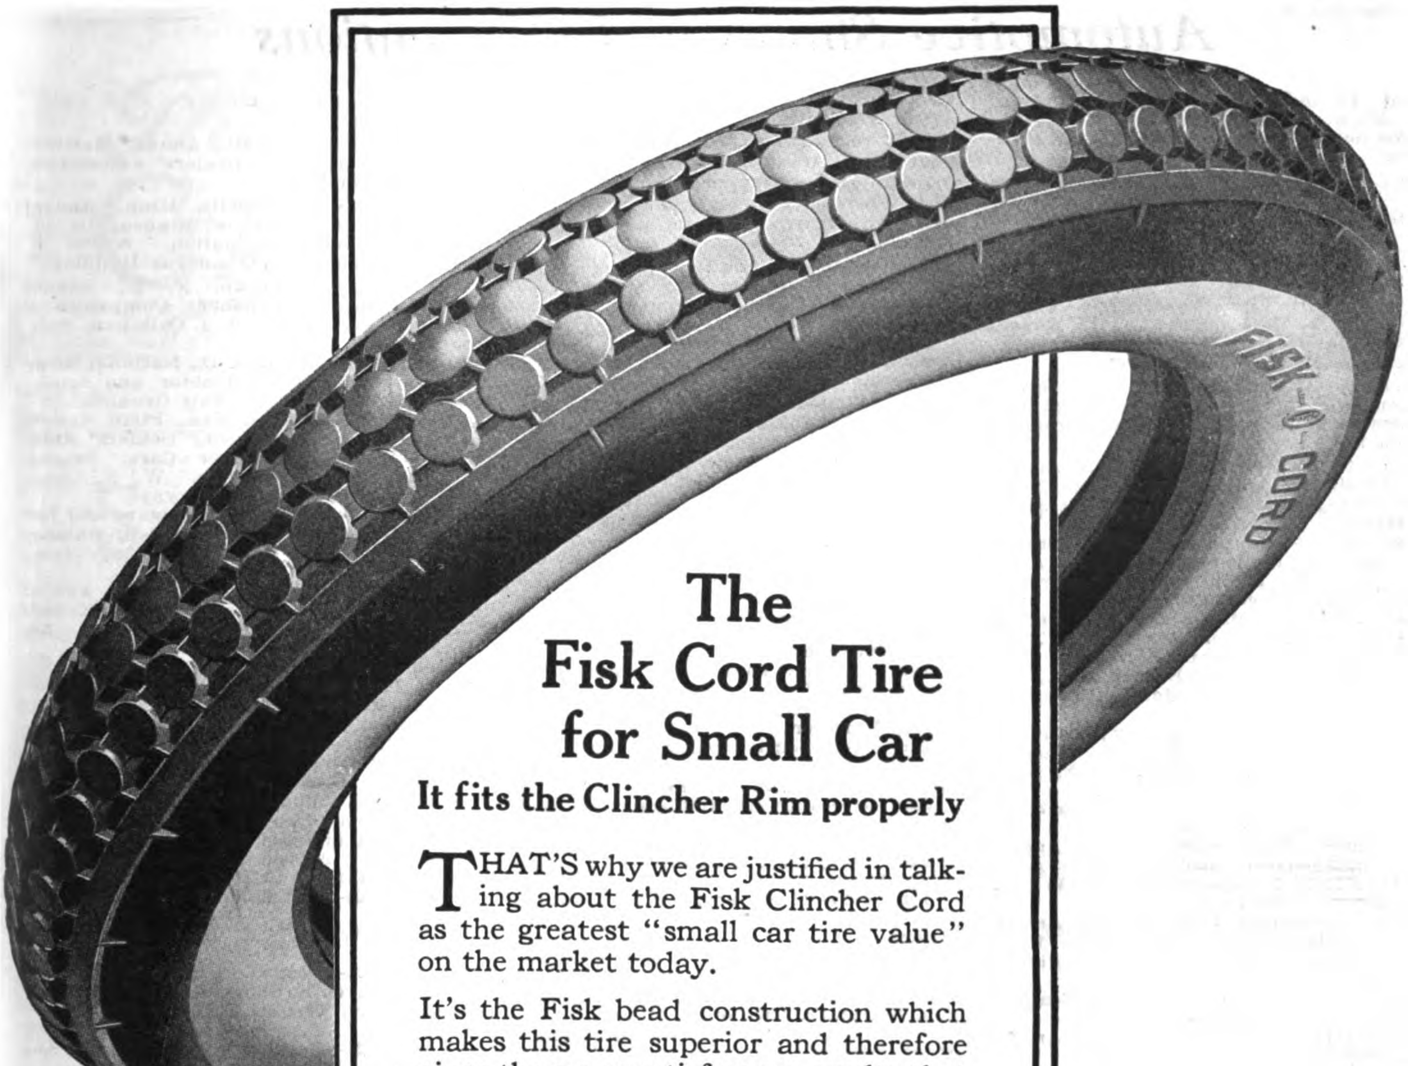
A recent Ford service bulletin gives detailed instructions for the construction of a series of stock bins suitable for either the large or small dealer. They consist of a number of boxes of standard sizes supported on racks. The dimensions of the three sizes of boxes permit them to be arranged in any convenient order. The outside dimensions of these boxes are: Large size, 13 by 26 inches; half size, 13 by 13; quarter size, 6½ by 13. The boxes may be made of half-inch wood, crating lumber, packing boxes or any other light strong lumber. The dimensions of the racks, which are made entirely of two by four-inch yellow pine, are as follows: Ends, 26¼ inches; sides, 111 inches—three sections of 52 inches each, with overhang of 7½ inches at each end to permit bracing for additional strength. Strips one-half by 2½ inches, are nailed around the racks at the bottom. The up and down space between the frame work is 13 inches.

This is a neat, compact, flexible system, and one that can be expanded or contracted at will. The stock in the bins or boxes being below the level of the eye, the full value of the light is obtained in all parts of the stock room.

In order to obtain the greatest efciency in any system of storing parts and other stock, each bin, box or compartment should be plainly and properly labelled. The old method of stencilling on the outside of the bin was expensive, inflexible and consumed a great deal of time. The more modern plan is to fasten lacquered tin card holders on the outside of the compartments and slide label cards with transparent celluloid covers into the holders.

The Haddon Bin Label Co., 206 West Atlantic avenue, or Box 449 Haddon Heights, N. J., makes a specialty of supplying these label holders and markers at a moderate price, and is prepared to meet all requirements in this line.

If the stock bins are properly labelled the goods can be stored away by anyone who can read the labels and numbers, and no expert help is necessary. The labels also simplify the matter of taking inventories at any time. Labels are also designed for fastening on the edge of shelves, which include the name of part, its number and price. The labels may be as simple or elaborate as desired, from a simple number or name to a stock inventory ticket to be used for keeping a perpetual inventory of stock on hand and also to keep a record of the exact amount of any articles used or sold in a given time. The principal requisite is that the bins be kept properly labelled in some suitable way.



The Fisk Cord Tire for Small Car

It fits the Clincher Rim properly

THAT'S why we are justified in talking about the Fisk Clincher Cord as the greatest "small car tire value" on the market today.

It's the Fisk bead construction which makes this tire superior and therefore gives the same satisfactory results that Fisk users are getting from the big Fisk Cord straight-side tire.

It is the ONE Clincher Cord you can sell with the same confidence you have when you put out the straight-side Cords. You know the bead construction must be right as well as the quality.

March 12-19—Boston, Mass., 18th Annual Automobile Show, Boston Automobile Dealers' Association, Mechanics' Building. Chester I. Campbell, Manager, 5 Park Square.

March 14-19—Trenton, N. J., Sixth Annual Passenger Car and Truck Show, Trenton Automobile Trade Association, Second Regiment Armory. Frederick Perry, Jr., Manager, West, State and Willow Streets.

March 15—Fort Worth, Tex., 24th Annual Southwestern Exposition and Fat Stock Show. Passenger Cars, Trucks and Tractors. M. Sasson, Jr., Secretary.

March 20-26—Torrington, Conn., Show, Company M, State Armory. J. J. Callahan, Manager, Box 1186, Pittsfield, Mass.

April 8-9—Gloversville, N. Y., Annual Gloversville-Johnstown Automobile Show, State Armory. J. J. Callahan, Manager.

The ACCESSORY and GARAGE JOURNAL

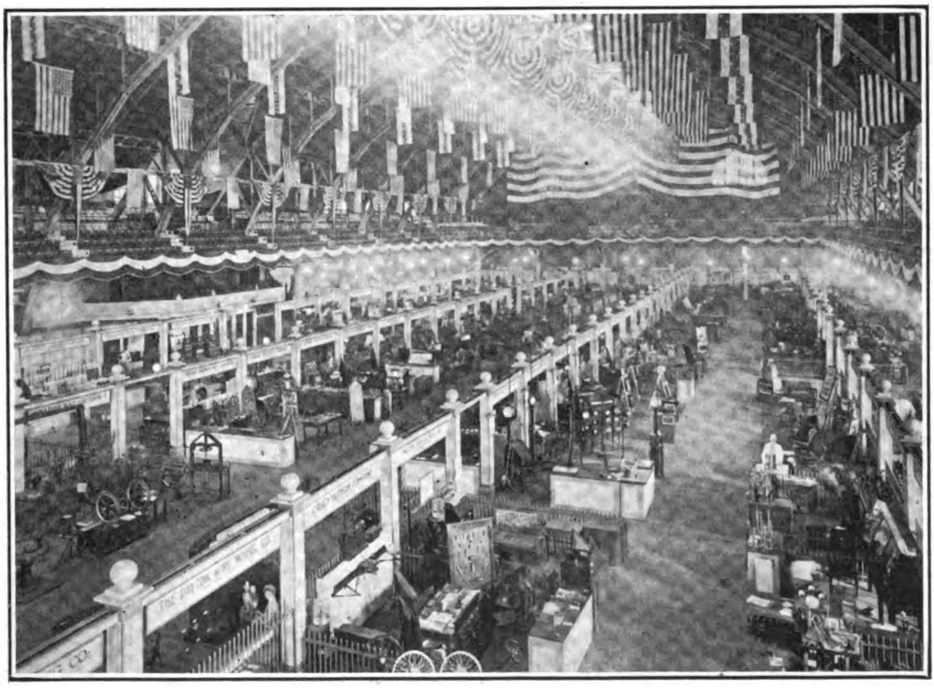
VOL. X. PAWTUCKET, R. I., NOVEMBER, 1920 No. 7

Spirit of Cooperation and Attitude of Optimism

Manifested by Jobbers and Manufacturers at Big Convention and Show of Automotive Equipment Association—Exhibits Unusual in Number and Comprehensiveness and Marked Interest Denoted by Large Attendance at Sessions.

ALTHOUGH on account of a combination of circumstances that have arisen in the business world during the past several months, some of which have had an especial deterrent effect on the automotive industry as on many other activities, it was not anticipated that the amount of business directly attendant on the big exhibition and convention of the Automotive Equipment association in the Chicago Coliseum, the week of Nov. 15, would equal in immediate volume that of last year, the meeting may be characterized as distinctly optimistic in tone, and a majority of the manufacturers and jobbers represented expressed themselves as well satisfied with the interest aroused and results achieved.

Surely, in point of comprehensiveness of exhibits and the spirit of cooperation manifested by the various important interests concerned in the manufacture and merchandising of automotive products, it may well be considered as a wonderful show. But it could not perhaps be truly characterized as a big buying show. But manufacturers seemed for the most part confident that with the opening of the spring season, trade conditions will again approach normal and may even be stimulated to a point beyond the most sanguine expectations.



General View of Accessory Exhibits at the Annual Exhibition of Automotive Equipment Association in Chicago Coliseum.

The bare statement that there were over 200 manufacturers of automotive products represented in the exhibits and that the convention opened with an attendance of fully 600 jobbers and manufacturers, emphasizes the scope and importance of the Automotive Equipment association as a powerful factor in furthering the mutual interests of automotive jobber and dealer.

The first speaker at the convention was Alfred Reeves, general manager of the National Automobile Chamber of Commerce. He commented on the readjustment situation and presented figures on the essentiality of the automobile. He saw a great future for the automotive equipment branch of the industry in the fact, as he stated it roughly, that only half the cars in use have all the equipment they should have to operate with full efficiency.

The principal speaker from outside the industry was the Hon. Medill

McCormick. United States senator from Illinois. He expressed a hope for a readjustment of government activities and expenditures so that the excess profits tax could be repealed without substituting another burden on industry. He stated his opposition to the proposed merchandise tax and said that, if it developed that federal revenues would be insufficient with the full repeal of the excess profits tax, he would favor its gradual reduction to the point of elimination.

In his valedictory as retiring president, R. R. Engelhart advocated an appropriation for active propaganda to further a movement for better highways.

The association took two steps which may be considered as strengthening cooperation between the jobber and manufacturer members: First, the election of a manufacturing member as president for the first time, and by passing a measure limiting all future applications for membership to those included in the wholesale only classification. The election of President Stranahan lays further emphasis on the question of cooperation which was first recognized some time ago in the raising of manufacturers from associate to full membership.

There was little promise of any immediate decline in prices, the manufacturers pointing to high raw material costs as an obstacle, while several jobbers urged that the manufacturers find some way to meet the countrywide public demand for lower prices on everything. The manufacturers' division declined to attempt stimulation of sales by guaranteeing prices. It also refused to lengthen wholesale discounts. However, there was indication that some manufacturers, individually, may adopt the guarantee policy.

The manufacturers, in their separate session Thursday afternoon, could not see their way clear to meet the suggestions of the jobbers that freight charges be absorbed or price differentials established to remove the hardships placed upon jobbers far removed from the centers of manufacture.

The manufacturers asserted that the freight rate question was too complicated for adjustment in their offices. They felt that jobbers would have to work out their own problem of estimating increased freight costs under the new rates and passing the charges on to consumers.

Committees Appointed.

The association approved a recommendation of the directors for appointment of a committee to work for the interests of the organization on federal taxation and other legislative subjects.

The committee on assisting the trade, which was inactive last year, was reestablished to take a hand in inducing a more favorable attitude toward the industry on the part of the newspapers and to work generally for better trade conditions.

Following is the full personnel of the committees:

Legislative.

R. A. Stranahan, Chairman, Champion Spark Plug Co., Toledo, O.

FINANCIAL REPORT IN BRIEF.

Assets of the Association Nov. 1, 1920	$88,656.35
Exhibitors' Fund	48,790.50

Credit Department Report, July 1, 1916, to Oct. 15, 1920.

Total number of claims made through association	10,840
Total amount of claims	$703,788.15
Total amount of claims collected	$447,170.59
Total number of claims collected	5,952
Percentage of claims collected	55%
Percentage of total amount of claims collected	63%
Total amount of disputed claims reported	$69,565.96
Total amount of disputed claims collected	$33,827.80
Percentage of disputed claims collected	48½%

C. M. Bunnell, Edison Lamp Works of General Electric Co., Harrison, N. J.

A. J. Grimm, National Lamp Works of General Electric Co., Cleveland, O.

Activities of Various Committees.

Fred R. Hall, chairman of the standardization committee, urged members of group committees to devote themselves more actively to the task of preparing standards and recommended practises for merchandise in the 19 groups into which products of the industry have been divided. He stated that a great deal of work would have to be done before the committee could make a final report to the association. Standardization of packing, stamping and shipping is one of the problems of the committee and questions of standardization of sizes and elimination of some types and sizes of equipment also will be taken up. Where the manufacture of articles of vehicle equipment are concerned the committee will confer with the S. A. E. He also asked for cooperation on the part of manufacturers to aid the group chairmen in making the standardizations representative of the industry.

The vigilance committee reported that it had arranged to cooperate with the Advertising Clubs of the World in investigation of cases of unfair dealing which may come up.

The association having gone on record in favor of the open shop at Del Monte last June, the labor committee urged support of the open shop principle by association members whenever occasion arises.

State vice presidents who made reports told of rapidly gaining strength of state jobber and dealer associations. Acknowledgment was made of the cooperation of the National Automobile Dealers' association in building up dealer associations.

The association sent a telegram to President-elect Harding, congratulating him on his election and offering cooperation in constructive solution of business problems.

Unsanctioned Shows.

A recommendation of the board of directors that members be prohibited from exhibiting at shows not sanctioned by the association was recommitted to the board for further consideration after several jobbers had protested against being barred from local and sectional shows. There was a sentiment among manufacturers, however, that they should be given the support of the association in declining to spend money and time on many of these shows.

The manufacturers declared the airplane business had not yet reached a stage of development to warrant jobbers handling equipment.

The convention voted to send out a questionnaire to all jobber members to determine the average cost of doing business.

Association Prosperous.

A brief summary of the financial condition of the association, given elsewhere, shows it to be prosperous.

The summer meeting will be held at Mackinac island, at the northern end of Lake Michigan, July 4-9, and the next annual convention and business exhibit will be held in the Chicago Coliseum, Nov. 14-19, 1921. In order to allow more time for business talk on the exposition floor between manufacturers and jobbers, the next fall convention will begin Monday morning, the opening day of the show, instead of Wednesday, as was the case this year. This, it is expected, will induce jobbers to arrive in Chicago earlier and remain all the week, as the convention meetings will be cut down in length and spread over five days.

Enjoyable Social Function.

As to the more social side, the Chicago Association of Automotive Equipment Manufacturers entertained the delegates and ladies at Aryan Grotto with an amateur theatrical performance. Under the direction of Howard E. Patterson of the Warner-Patterson Co., the regeneration of a "gyp" jobber was shown in a playlet, "Going Right," enacted by members of the Chicago association.

New Members Elected.

The following new members were elected:

Jobbers—Clemons Auto Supply Co., Eau Claire, Wis.; Farrar-Brown Co., Inc., Portland, Me.; Hendrie & Bolthoff Manufacturing and Supply Co., Denver, Quinn & McGill Motor Supply Co., Denver.

Manufacturers—Clayton & Lambert Manufacturing Co., Detroit; Crawford Manufacturing Co., Richmond, Va.; Cincinnati Ball Crank Co., Cincinnati; Dover Stamping and Manufacturing Co., Cambridge, Mass.; Greb Co., Boston; Kennedy Manufacturing Co., Van Wert, O.; Miles Manufacturing Co., Newton, Ia.; Spencer-Smith Machine Co., Howell, Mich.; Storm Manufacturing Co., Minneapolis; Slaymaker Lock Co., Lancaster, Pa.

The only resignation received was that of the Northern Electric Co., Ltd., Montreal, Can., which concern is going out of the jobbing business.

Brief Descriptions of Displays

Anderson Co., South Bend, Ind.—Complete display of Anco products, in the Annex building, including such well known Ford accessories as Anco Triple-Duty ball thrust bearings, timers and Hot Spot manifold.

Indiana Lamp Co., Connersville, Ind.—Full line of Indiana lamps, also introducing the new Insert Reflector. W. F. Thoms, vice president, and W. E. Ray, assistant secretary and treasurer, were in attendance.

Cincinnati Auto Specialty Co., Cincinnati, O.—Featured the Stik-tite Frost King appliances and Stik-tite windows, as well as latest additions to the line, including seat protectors, lettering and trade marks for Casco tire covers, etc. The company was represented by A. W. Conner, president; G. L. Holmes, eastern representative, and E. R. Christense, western representative.

Boyle Manufacturing Co., Los Angeles and San Francisco, Cal.—A very attractive display of service units, adjustable luggage carrier, camp grates, various sizes of gasoline cans and canteens, etc., Vice President L. M. Boyle and wife, Los Angeles; T. M. Gardner, manager, and Frank James, San Francisco, demonstrated the line. A blue miniature canteen was given as a souvenir.

Wainwright Engineering Corporation, Connersville, Ind.—Had its display at the Congress hotel and showed a complete line of pistons. The new Essex piston met with favor. Dan V. Shaw, sales manager, reported very favorably upon the business accomplished at the show. Those present were H. A. Wainwright, vice president and general manager; R. S. Longstaff, P. G. Barnard, Verne Triddy and H. L. Hardwick, salesmen.

Cincinnati Ball Crank Co., Cincinnati, O.—A complete line of Ford accessories at the Congress hotel. V. A. Davison, general sales manager and J. K. Gilchrist, sales manager of automotive equipment, were in attendance and took particular interest in showing the new bumper bar and shock absorber. Both articles were given to the trade for the first time at the show. These will be added to the well established line. A. B. Breeze, general manager, and W. W. Peterson, district manager, and Clifford Green, president, were also in attendance.

Advance Felt & Cutting Co., Chicago, Ill.—A complete line of gaskets in felt, cork and leather. The booth was located at a point where visitors were sure to see it and they were made acquainted with the Advance line by several well informed attendants.

Madison Kipp Corporation, Milwaukee, Wis.—Madison Oil Kipps attracted considerable attention. The displays were designed to show by the most practical method what this type of lubrication could do for the man who had experienced trouble with spring lubrication. The booth was arranged on a business like basis and those who came went away thoroughly impressed.

New Light-Lite Spot Lamp.

Corcoran-Victor Co., Cincinnati, O.—Had an attractive exhibit of their various line of lamps. The new "Light-lite" spot lamp, as well as the new Ford tool box came in for an unusual amount of attention. The following gave every visitor their personal attention: J. A. Muir, vice president and sales manager; L. J. Habbell, service manager; W. E. Early, C. A. Bessonette, L. K. Cohn, salesmen: J. V. Wilson. New England representative; Paul Barnard, Ralph Longstaff and H. L. Hardwick, Pacific coast representatives.

F. H. Lawson Co., Cincinnati, O.—Had an unusual display and created considerable amount of attention by their white "skeleton" Ford, which allowed the display to advantage of the line of Ford fenders, hoods, running boards, etc. Additions to the line of garage specialties were seen, including filter cans, measurers, pails, etc. Those in attendance were J. A. Buhr, secretary and sales manager; H. L. Jillson, central representative; H. W. Babcock, special representative; J. A. Ryan, western representative, and F. J. Nudermiller, Detroit representative.

Continental Auto Parts Co., Columbus, O.—A fine display of garage equipment, including the new Universal straightening press and Ford assembling table. The display was in charge of J. H. Staley, president; J. B. Shelby, treasurer; D. V. Booher, sales manager; Bob Renner and V. E. Line, and J. W. Staff, sales agent for the Northwest.

H. & D. Co., Inc., Crawfordsville, Ind.—Booth created much attention on account of demonstration of the shock absorber in a rough road test. D. M. Peck president; G. H. Fostick, vice president; D. M. Kerr, manager; H. H. Walters, sales manager, and D. K. Vars from the sales department were explaining the new standard rear clip, as well as the pin lock and oilers, which are the new added features to the shock absorber.

Corcoran Manufacturing Co., Cincinnati. O.—Well known Peerless line of radiators, fenders and tool boxes for Ford cars. The new disc wheel for the Ford car was also introduced. Those in charge were W. R. Hughes, secretary and treasurer and sales manager; Martin Murray, B. C. Pittenger and W. R. Dorney.

Double Fabric Tire Co., Auburn, Ind.—Comprehensive display of tires, patches, reliners and tubes. Representatives present: W. H. Willennar, president; A. L. Murray, secretary; C. C. Marston, treasurer; C. L. Stebbins, sales manager; F. D. Higgins and S. G. Biddle.

K-D Lamp Novelties.

K-D Lamp Co., Cincinnati, O.—Novelties were seen in the way of spot, side-bullet, fender and parking lamps, in addition to the sterling regular line. E. W. Driemeyer, president; H. R. Kerans, secretary and sales manager; Ray Swinburn and Horace Eckhouse were in attendance. Match box holders were presented as souvenirs.

Thomas J. Corcoran Lamp Co., Cincinnati, O.—The 495 spot light, which is the latest addition to the well known Corcorlite line, was featured. In attendance were T. J. Corcoran, president; G. P. Doll, treasurer; C. J. Wuebler, secretary.

Northwestern Chemical Co., Marietta, O.—One of the most attractive booths in its particular field. An addition to the Norwesco products was presented, the kakhi mohair top dressing and lining dye. Officials present were: F. R. Hall, president and manager; I. D. Cross, western sales supervisor; V. V. Casey, eastern sales supervisor; L. D. Speed, central sales supervisor; S. E. Samuels, New England salesman; C. C. Mun, Chicago salesman.

Perkins-Campbell Co., Cincinnati, O.—Was featuring the new Buffalo hide fan belt and a new beaded tire cover, which have been added to the regular lines. Those stationed at the booth, assisting President Milton Campbell, were J. P. Mills, Herman Kemmell, C. A. Hampe, Fred Treffz, H. E. Witherspoon, Frank Lynn, T. E. Lynn and Frank Leboy.

Havwood Tire & Equipment Co., Indianapolis, Ind.—Displayed a full line of general tire repair equipment and has added the Giant truck mold. Some of the new underslung parts for Ford cars were also introduced. W. H. Haywood, vice president, and E. L. Baker, assistant to the president, were in charge.

New Reo Carburetor Demonstrated.

Wheeler-Schebler Carburetor Co., Indianapolis, Ind.—This booth was located in the main aisle just inside the main entrance. The new "A" Reo carburetor was demonstrated in addition to the regular line. H. J. Reade, acting general manager; E. A. Stone, sales manager, and P. H. Weer, assistant manager, received the visitors.

Auto Compressor Co., Wilmington, O—This exhibit attracted considerable interest from its resemblance to a jewelry shop. The new 15 cubic foot air compressor, especially designed for the large garage, and the three cubic foot compressor for the moderate sized garage were shown completely nickel plated and highly polished, these being simply additions to the well established Oro line. J. W. Lawhead, president, and E. S. Lee, sales manager, were ably assisted by E. J. McNerny and R. O'Keefe, western and eastern salesmen.

Van Briggle Motor Device Co., Indianapolis, Ind.—In charge of R. C. Haskett and was featuring a new model shock absorber.

Seasonable Steer-Warm Device.

Interstate Electric Co., New Orleans, La.—Specialized on Steer-Warm device with the slogan "Drive your car this winter in comfort." Those in attendance were S. B. Corby, manager; P. Stern, president, and A. R. Moulin and J. G. Garrigan, salesmen.

Continental Piston Ring Co., Memphis, Tenn.—This booth seemed to be imbued with the spirit of the trade name of its product, "Hi-Speed." Fine souvenirs in the form of telescopic pencils were distributed. B. G. Covington, president; M. E. McCadden, secretary and treasurer, and T. McCadden, field director of sales, as well as E. K. Stalons, A. J. Lindenberger and D. A. Hawley, were busy extolling the merits of the Hi-Speed Anti-Leak piston ring line.

Columbus Varnish Co., Columbus, O.—This booth was attractively decorated with a large number of sales helps, including large display cards, posters and other printed matter, explaining the slogan "Make old cars look like new." The Peerless line of automobile specialties includes mohair top dressing, leather top dressing, lining dye, cushion dressing, cylinder enamel, touch-up black, gasket shellac, friendly japan, liquid wax and rim paint. The attendants were S. W. Hanna, P. W. Williams, C. M. Simpson and W. S. Duckwall.

Raybestos Brake Lining.

Raybestos Co., Bridgeport, Conn.—An interesting feature at this booth was a moving picture exhibit which showed graphically the process of the manufacture of Raybestos brake lining, "The Brake Lining with the Silver Edge." Those present were M. F. Judge, sales manager; Frank Crook, Henry Irvin, H. F. Reid, Harry Dishman, A. C. Stamin, W. E. Washburn, Jr., Ed Elliott, William Huber and Irwin Bennet.

New Era Spring & Specialty Co., Grand Rapids, Mich.—The well known line of New Era bumpers and springs was shown, and particular attention was given to a new finish on bumpers, consisting of a combination black and enamel. The ever genial Smalley Daniels was assisted by George Daniels, L. D. Kent and Herbert Reid.

Culver-Stearns Manufacturing Co., Worcester, Mass.—A very striking silent salesman for the dealer and garage man was a feature at this booth. It was in the form of a cabinet displaying, in an attractive manner, a large assortment of plugs, receptacles, sockets, caps, etc. The merits of the Culver-Stearns line of lamps, fittings and switches were explained by Fred Culver, J. H. Faw of New York and M. A. Bryte, Chicago distributor.

The Metal Stamping Co., Long Island, N. Y.—Showed the Lyon spring bumper as well as automobile top hardware, curtain fasteners and lights and other accessories. A new line of easy, handy bolt cutters were exhibited for the first time. To meet the trade were John F. Galvin, president; John F. Galvin, Jr., vice president; G. Albert Lyon and William R. Noyes.

New Asbestos Clutch Facing.

Russell Manufacturing Co., Middletown, Conn.—Line of hood and radiator lacing, anti-squeak webbing, brake lining, belting, transmission, etc. A new clutch facing of compressed asbestos fiber, which is claimed to materially reduce the cost of this kind of product, was shown for the first time. Representatives present were Edward Merritt, John Mollam, C. C. Conner and L. J. Marley.

Waldon-Worcester, Inc., Worcester, Mass.—This was one of the largest exhibits at the show and the display of Walden-Worcester wrenches was made in well arranged cases and dealers' show boards. Assisting W. S. Bellows, general manager, on the reception committee, were L. H. Bellows, John Craig, H. H. Seward, T. R. Stenberg, L. H. Craig, S. C. Barnes, L. A. Raasch, R. K. Flanagan, E. L. Edwards, H. A. Adams and George R. Williams.

Hastings Manufacturing Co., Hastings, Mich.—The established line of Hastings rear curtain lights, and single and double-expansion rear tire carriers for Fords, heavy duty truck tire carriers, cradle type tire carriers and Ford spring bumpers was shown. Those in attendance were H. J. Ford, sales manager; F. V. Coolahan, A. Crothers and C. P. Matter.

Fitzgerald Manufacturing Co., Torrington, Conn.—Full representation of "Bound Edge" and "Never Leak" copper asbestos cylinder head gaskets was made, with F. M. Rowan, factory representative, and W. A. Kilmartin, in charge.

Champion Ignition Co., Flint, Mich.—Champion spark plugs, represented by W. S. Isherwood, sales manager, and A. G. Newbauer.

Kales Stamping Co., Detroit, Mich.—Kales Hindview mirrors and Kales timer for Fords, the latter being seen for the first time. The company was represented by R. M. Pierce and W. J. Lithuser.

Tiltlok Steering Wheel Co., Detroit, Mich.—Full line of products shown at 1256 Michigan avenue, under the supervision of B. F. Nickerson, R. L. Hanrahan and I. J. Monohan.

Globe Manufacturing Co., Battle Creek, Mich.—New Globe Super Two-Stage compressor shown at 1537 South Michigan avenue, with J. G. Phillips in charge.

Lockwood-Ash Motor Co., Jackson, Mich.—Sterling spark plugs. The attendants were William Drake, A. L. Lockwood and W. L. Ash.

Thermoid Rubber Co., Trenton, N. J.—Thermoid brake lining, clutch facing, radiator hose, universal joints and universal discs for automobiles, motor trucks and tractors. The company was represented by H. J. Campbell and T. W. Cramer.

Apco Manufacturing Co., Providence, R. I.—Fine line of Apco trade marked goods in charge of a competent corps of representatives.

Monroe Auto Equipment Manufacturing Co., Monroe, Mich.—Monroe Self-Oiling tire pumps and sedan spot light brackets, among other equipment. General Manager C. S. McIntyre was in charge.

Spencer Smith Manufacturing Co., Howell, Mich.—Showed at the Congress hotel a full line of light weight semi-steel pistons for all models of cars. The representatives were W. M. Smith, vice president, and A. W. Lines, sales manager.

Coryell Jack Co., Pontiac, Mich.—Heavy duty jacks, shown at New Southern hotel, with Ray R. Larnard in charge.

Klaxon Horn Equipment.

Klaxon Co., Newark, N. J.—Showed Klaxon horn equipment in a particularly attractive booth. The merits of the product were explained by D. A. McConnell, president; R. L. Wilkinson, sales manager; C. E. Vaughn, assistant sales manager; E. A. Tate and Ross Hopkins.

Clover Manufacturing Co., Norwalk, Conn.—Featured Clover valve grinding and lapping compound, and Clover cylinder lapping tool. President E. B. Gallagher was assisted by E. B. Mix and G. A. Fish.

No-Leak-O Piston Ring Co., Baltimore, Md.—A special business touch was given at this booth by the presence of a stenographer for the accommodation of the company and its guests. A large number of sales helps were shown dealers, among which was an automatic "Beloplican," an electric device for show window displays, holding seven pictures, which are automatically changed every few seconds. The corps of salesmen was headed by President J. E. Norwood, and consisted of the following: F. J. Holmes, L. G. Matthews, L. E. Malicon and John E. Norwood, Jr.

Davis-Young Soap Co., Dayton, O.—Banked around this booth, arranged in a very effective way, were cans of Buckeye cleanser, a well-known product of this concern. Visitors were greeted by C. F. Young, president; H. H. Heidbrink, sales manager, and J. E. Gill

Motor Specialties Co., Waltham, Mass.—The goods featured by this company were demonstrated by A. Fraser, sales manager; G. N. Jordan, W. M. Reynold and A. E. Gorman.

Service Products Co., Springfield, Mass.—Line of electrical and mechanical automotive service station equipment in charge of R. B. Miller, general manager; C. A. Cable, sales manager; C. Ringwald, chief engineer, and R. C. Heron, superintendent.

Curtis Two-Stage Compressor.

Curtis Pneumatic Machinery Co., St. Louis, Mo.—Had on display a full line of air compressors, and showed for the first time the new Two-Stage Model B Compressor, some of the equipment being in actual operation. W. C. Hecker, vice president; J. Macksey, advertising manager; L. C. Blake and C. C. Main were in attendance. Dealers' helps of various kinds were shown.

Bonney Vice and Tool Works, Allentown, Pa.—A special exhibit of complete Ford body irons in one package, which contained every screw, bolt, nut and washer needed by an owner for building a Ford body at home. A full line of drop forged wrenches, pliers for pulling out lead plates in batteries, and a fine twister for straightening fins on a Ford radiator were also shown. Visitors were greeted by S. F. Durham, vice president; C. E. Wood, sales manager, and J. C. Greagon.

Central Brass and Fixture Co., Springfield, O.—Showed its line of "Buckeye" automobile accessories, which includes bumpers, Ford tire holders, shock absorbers, spark plug wrenches and spring repairers. R. T. Patterson and James Turner welcomed the trade.

Universal Reboring Tool.

Universal Tool Co., Detroit, Mich.—Demonstration of the new power attachment for Universal reboring tools, which permits of reboring the cylinders without removing block from chassis. This attachment takes power from any source by means of a flexible shaft. This company also had on display a full line of reboring tools, including Ford and Fordson main bearing replacement equipment shown in a beautiful case. Visitors were greeted by R. E. Roseberry, president; E. H. Herman, assistant general manager; J. F. Nebrick and W. J. Sparling.

Accesso Manufacturing Co., Boston, Mass.—First showing of the "Accesso" line, which includes safety steering control for Fords, a trouble lamp magnetized by current from the car battery, which permits of having light at any part of the car. A designed license and registration certificate of novel design, as well as a motor driven oilless gear pump for Fords. H. G. Coyles, sales manufacturer, was in attendance.

Frank Mossberg Co., Attleboro, Mass.—Had on display the well known Mossberg wrench and was showing for the first time some new Ford and Fordson tractor wrenches. This booth was very attractive with its display cases. To greet the trade here were F. P. Chase, treasurer; E. W. Scott, H. E. Ring, R. W. Jones, Frank Lynn, Louis Lewis, J. E. Colley, W. E. Minnich.

Black & Decker Manufacturing Co., Baltimore, Md.—Complete line of portable electric drills. A new bench drilling stand which takes any Black & Decker drill from ⅜ inch to ⅞ inch inclusive, also made its debut. The booth was made attractive by a large number of dealers' helps and included in this showing was a complete window display. This had a three-panel background, cut out and figures; also window display stands. This window trim is given free to stock jobbers. The trade was taken care of by S. D. Black, president; R. W. Proctor, sales manager; G. W. Brogan, advertising manager; R. G. Ames, G. A. Dodge, C. D. O'Dell and H. C. Slinglull.

Statements from Manufacturers on Trade Outlook

Business Approximately Normal.

From my observations and what I have heard others say, I have come to the conclusion that conditions today are as good as any other year at this season. The present so-called depression is somewhat psychological and is due to a form of hysteria on the part of buyers of merchandise.

The public is buying and will continue to buy those things in normal demand. Jobbers and dealers, if they will analyze the situation, will find this to be a fact, but their fear of being caught with an overstock on which they might suffer a loss is holding back what could be made a most satisfactory business.

The idea of depression in accessory lines originated largely in the mind of the trade itself and has caused many to withhold orders of goods actually needed and in demand. Naturally this idea has been absorbed to some extent by the public and its reflection has resulted in strengthening the idea.

Business in the automotive industry with few exceptions is approximately normal if we would let it be. What cannot be found or purchased at regular dealers or jobbers is sought and can be secured through cut-rate and get-rich-quick channels. It is this type of retailers who are reaping our harvest because they are the real students of human nature.

For those in the trade who are recognized as legitimate business men and for the jobber the following will result unless a change of attitude is taken:

The opening of the season will find depleted stocks and, in many cases, empty shelves. Demand for 1921 will be the normal plus the restocking demand. This may cause a rush of orders, swamping manufacturers as well as jobbers. The same condition we passed through in recent years may result. In order that this may not occur, manufacturers as well as jobbers and dealers should proceed without undue conservation so that when the demand breaks there will be no delay in getting under way.

The A. E. A. convention has done much to put this thought over and with the support of the individual, as well as the trade press, I am sure we will be able to get back on a safe and sane basis in time to prevent any real trouble.—**Jno. W. Anderson, The Anderson Co., South Bend, Ind.**

Expects Good Spring Trade.

I honestly believe that the spring business will open up in full swing and conditions will be back to normal within a short period.

The jobbers' shelves are pretty well cleaned and it is reasonable to assume they will have to be replenished.—**E. I. Secor, Ashland Products Co., Ashland, O.**

Big Year for Equipment Industry.

We believe that the year of 1921 will be the biggest year we have ever had in the garage equipment business. Great interest was shown by the dealers and jobbers in new equipment and dealers in particular are realizing the importance of giving efficient service and are laying their plans to purchase proper tools at the earliest possible moment as conditions justify. There is no doubt the distributor of equipment who has his stock on hand for the spring rush will realize on this demand.

The attendance at this show surpassed our expectations. We have met many new dealers and jobbers and have renewed our acquaintance with the old ones. It seems they all are very optimistic and I believe, since this attitude was manifested, it will go a long way in stimulating the spring buying.—**J. H. Staley, President, Continental Auto Parts Co., Columbus, Ind.**

An Optimistic View.

We have just had report from our force of salesmen in attendance at the A. E. A. show, the substance of which causes us to assume an optimistic view in regard to the future.

Everyone is familiar with conditions that have existed during the last few months. However, we have received during the present show more inquiries and more indications of future orders than at any previous show. Old accounts assure us that they will do a larger volume of business on a more substantial basis with dealers that survived the present crisis.

Prospects are exceedingly favorable for the future distribution of substantial automobile accessories.—**B. G. Covington, President, Continental Piston Ring Co., Memphis, Tenn.**

Bright Prospects for Coming Season.

The prospects for early spring business look exceedingly bright and encouraging. The dealers and jobbers that called upon us gave us their undivided attention and seemed very much interested. I noted that this spirit was not only manifested with us, but with all other exhibitors. Naturally, being stimulated with this spirit, we are more than optimistic. We have endeavored to pass this feeling along.
